COPYRIGHT STATEMENT

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted materials including foreign works under certain conditions. In addition, the United States extends protection to foreign works by means of various international conventions, bilateral agreements, and proclamations.

Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

The Columbia University Libraries reserve the right to refuse to accept a copying order if, in its judgement, fulfillment of the order would involve violation of the copyright law.

AMENDMENT OF THE FAIR LABOR STANDARDS ACT

TUESDAY, SEPTEMBER 25, 1945

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON EDUCATION AND LABOR,
Washington, D. C.

The subcommittee met, pursuant to notice, at 10 a. m., in room 357, Senate Office Building, Senator James M. Tunnell, presiding.

Present: Senators Tunnell, Thomas, Ellender, Guffey, Aiken, and Smith.

Also present: Charles Kramer, consultant to the committee.

Senator TUNNELL. The committee will please be in order. This is a meeting of the subcommittee of the Committee on Education and Labor to take up consideration of S. 1349, a bill to provide for the amendment of the Fair Labor Standards Act of 1938, and for other purposes. It has been suggested that the bill should be placed in the record at this point.

(S. 1349 is as follows:)

[S. 1349, 79th Cong., 1st sess.]

A BILL To provide for the amendment of the Fair Labor Standards Act of 1938, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Fair Labor Standards Act of 1938 (herein referred to as the "Act") be, and it is hereby, amended as follows:

1. Section 2 of the Act is hereby amended to read as follows:

"SEC. 2. (a) The Congress hereby finds that the existence, in industries engaged in commerce or in the production of goods for commerce, of labor conditions detrimental to the maintenance of the minimum standard of living necessary for health, efficiency, and general well-being of workers (1) causes commerce and the channels and instrumentalities of commerce to be used to spread and perpetuate such labor conditions among the workers of the several States; (2) burdens commerce and the free flow of goods in commerce; (3) constitutes an unfair method of competition in commerce; (4) leads to labor disputes burdening and obstructing commerce and the free flow of goods in commerce; and (5) interferes with the orderly and fair marketing of goods in commerce.

"(b) It is hereby declared to be the policy of this Act, through the exercise by Congress of its power to regulate commerce among the several States, (1) to correct and as rapidly as practicable to eliminate the conditions above referred to in such industries without substantially curtailing employment or earning power; and (2) to provide for the maintenance of reasonable wage differentials between interrelated job classifications in such industries."

2. Section 3 of the Act is hereby amended by amending subsection (m) thereof to read as follows and by adding the following additional subsections:

"(m) 'Wage' paid to any employee, except members of the crew of a vessel, includes the reasonable cost, as determined by the Administrator, to the employer of furnishing such employee with board, lodging, or other facilities, if such board, lodging, or other facilities are customarily furnished by such employer to his employees.

"(n) 'Job classification' means those occupations within an industry or subdivision thereof requiring a similar degree of training, experience, and skill.

"(o) 'Unskilled job classification', as applied to any industry or subdivision thereof means a job classification which does not require previous training or experience."

3. Section 6 of the Act shall be amended to read as follows:

"SEC. 6. (a) Every employer shall pay to each of his employees who is engaged in commerce or in the production of goods for commerce wages at the following rates—

"(1) during the first year from the effective date of this section, not less than 65 cents an hour;

"(2) during the second year from such date, not less than 70 cents an hour;

"(3) after the expiration of two years from such date, not less than 75 cents an hour; and

"(4) at any time after the effective date of this section, not less than the applicable rate or rates (not in excess of 75 cents an hour for unskilled job classifications) prescribed in the applicable order of the Administrator issued under section 8.

"(b) This section shall take effect upon the expiration of one hundred and twenty days from the date of enactment of this Act."

4. Section 7 of the Act shall be amended to read as follows:

"SEC. 7. (a) No employer shall, except as otherwise provided in this section, employ any of his employees who is engaged in commerce or in the production of goods for commerce for a workweek longer than forty hours unless such employee receives compensation for his employment in excess of the hours above specified at a rate not less than one and one-half times the regular rate at which he is employed.

"(b) No employer shall be deemed to have violated subsection (a) by employing any employee for a workweek in excess of that specified in such subsection without paying the compensation for overtime employment prescribed therein if such employee is so employed—

"(1) in pursuance of an agreement, made as a result of collective bargaining by representatives of employees certified as bona fide by the National Labor Relations Board, which provides that no employee shall be employed more than one thousand hours during any period of twenty-six consecutive weeks,

"(2) On an annual basis in pursuance of an agreement with his employer, made as a result of collective bargaining by representatives of employees certified as bona fide by the National Labor Relations Board, which provides that the employee shall not be employed more than two thousand and eighty hours during any period of fifty-two consecutive weeks, or

"(3) for a period or periods of not more than fourteen workweeks in the aggregate in any calendar year in an industry found by the Administrator to be of a seasonal nature,

and if such employee receives compensation for employment in excess of twelve hours in any workday, or for employment in excess of fifty-six hours in any workweek, as the case may be, at a rate not less than one and one-half times the regular rate at which he is employed."

5. Section 8 of the Act shall be amended to read as follows:

"SEC. 8. (a) With a view of carrying out the policy of this Act by reaching, as rapidly as is economically feasible without substantially curtailing employment, the objective of a universal minimum wage of 75 cents an hour for unskilled job classifications in each industry engaged in commerce or in the production of goods for commerce, and to provide for the maintenance of reasonable wage differentials between interrelated job classifications in such industry, the Administrator shall from time to time convene the industry committee for each such industry, and the industry committee shall from time to time recommend the minimum rate or rates of wages to be paid under section 6 by employers engaged in commerce or in the production of goods for commerce in such industry or subdivisions thereof.

"(b) Upon the convening of an industry committee, the Administrator shall refer to it the question of the minimum wage rate or rates to be fixed for such industry. The industry committee shall investigate conditions in the industry and the committee, or any authorized subcommittee thereof, may hear such witnesses and receive such evidence as may be necessary or appropriate to enable the committee to perform its duties and functions under this Act. The committee

shall recommend to the Administrator the highest minimum wage rates for the industry which it determines, having due regard to economic and competitive conditions, will not substantially curtail employment in the industry, and which will maintain reasonable wage differentials between interrelated job classifications in such industry.

"(c) The industry committee for any industry shall recommend such reasonable subdivisions within any industry as it determines to be necessary for the purpose of fixing for each subdivision within such industry the highest minimum wage rate for unskilled job classifications (not in excess of 75 cents an hour) which (1) will not substantially curtail employment in such subdivision and (2) will not give a competitive advantage to any group in the industry, and shall recommend for each subdivision in the industry the highest minimum wage rate for unskilled job classifications which the committee determines will not substantially curtail employment in such subdivision. The industry committee shall further define such reasonable job classifications within such industry or subdivision thereof and shall recommend minimum wage rates for such job classifications (other than unskilled job classifications) at such levels as it determines to be necessary for the purpose of maintaining reasonable wage differentials between the minimum wage recommended by it for unskilled job classifications and the wage rates for interrelated job classifications in such industry or subdivision thereof. In determining whether subdivisions should be made in any industry, in making such subdivisions, in determining the minimum wage rates for such subdivisions, in defining job classifications and in determining minimum wage rates for job classifications, no classification or determination shall be made and no minimum wage rate shall be fixed, solely on a regional basis, but the industry committee and the Administrator shall consider among other relevant factors the following:

"(1) competitive conditions as affected by transportation, living, and production costs;

"(2) the wages established for work of like or comparable character by collective labor agreements negotiated between employers and employees by representatives of their own choosing; and

"(3) the wages paid for work of like or comparable character by employers who voluntarily maintain minimum-wage standards in the industry.

No classification shall be made under this section on the basis of age or sex.

"(d) The industry committee shall file with the Administrator a report containing its recommendations with respect to the matters referred to it. Upon the filing of such report, the Administrator, after due notice to interested persons, and giving them an opportunity to be heard, shall by order approve and carry into effect the recommendations contained in such report, if he finds that the recommendations are made in accordance with law, are supported by the evidence adduced at the hearing, and taking into consideration the same factors as are required to be considered by the industry committee, will carry out the purposes of this section; otherwise he shall disapprove such recommendations. If the Administrator disapproves such recommendations, he shall again refer the matter to such committee, or to another industry committee for such industry (which he may appoint for such purpose), for further consideration and recommendations.

"(e) No minimum wage rate for unskilled job classifications of less than 75 cents an hour, contained in an order issued under this section prior to the expiration of two years from the effective date of section 6, shall remain in effect after such expiration and no order fixing a minimum rate for unskilled job classifications of less than 75 cents an hour shall be issued under this section with respect to any industry on or after such expiration.

"(f) Orders issued under this section shall define the industries, or subdivisions thereof and job classifications therein to which they are to apply, and shall contain such terms and conditions as the Administrator finds necessary to carry out the purposes of such orders, to prevent the circumvention or evasion thereof, and to safeguard the minimum wage rates established therein. No such order shall take effect until after due notice is given of the issuance thereof by publication in the Federal Register and by such other means as the Administrator deems reasonably calculated to give to interested persons general notice of such issuance.

"(g) Due notice of any hearing provided for in this section shall be given by publication in the Federal Register and by such other means as the Administrator deems reasonable calculated to give general notice to interested persons."

6. Section 12 of the Act shall be amended as follows:

"SEC. 12. (a) After the expiration of one hundred and twenty days from the date of enactment of this Act, no producer, manufacturer, or dealer shall ship or deliver for shipment in commerce any goods produced in an establishment situated in the United States in or about which within thirty days prior to the removal of such goods therefrom any oppressive child labor has been employed: *Provided*, That a prosecution and conviction of a defendant for the shipment or delivery for shipment of any goods under the conditions herein prohibited shall be a bar to any further prosecution against the same defendant for shipments or deliveries for shipment of any such goods before the beginning of said prosecution.

"(b) No employer engaged in commerce or in the production of goods for commerce shall employ any oppressive child labor in or about or in connection with any enterprise in which he is so engaged.

"(c) The Chief of the Children's Bureau in the Department of Labor, or any of his authorized representatives, shall make all investigations and inspections under section 11 (a) with respect to the employment of minors, and, subject to the direction and control of the Attorney General, shall bring all actions under section 17 to enjoin any act or practice which is unlawful by reason of the existence of oppressive child labor, and shall administer all other provisions of this Act relating to oppressive child labor."

7. Section 13 of the Act shall be amended to read as follows:

"SEC. 13. (a) The provisions of sections 6 and 7 shall not apply with respect to (1) any employee employed in a bona fide executive, administrative, professional, or local retailing capacity, or in the capacity of outside salesman (as such terms are defined and delimited by regulations of the Administrator); or (2) any employee engaged in any retail or service establishment the greater part of whose selling or servicing is in intrastate commerce; or (3) any employee of a carrier by air subject to the provisions of title II of the Railway Labor Act; or (4) any employee employed in the catching, taking, harvesting, cultivating, or farming of any kind of fish, shellfish, crustacea, sponges, seaweeds, or other aquatic forms of animal and vegetable life, including the going to and returning from work; or (5) any employee employed in agriculture; or (6) any employee to the extent that such employee is exempted by regulations or orders of the Administrator issued under section 14; or (7) any employee employed in connection with the publication of any weekly or semiweekly newspaper with a circulation of less than three thousand the major part of which circulation is within the county where printed and published; or (8) any employee of a street, surburban, or interurban electric railway, or local trolley or motor bus carrier, not included in other exemptions contained in this section; (10) any switchboard operator employed in a public telephone exchange which has less than five hundred stations.

"(b) The provisions of section 7 shall not apply with respect to (1) any employee who during the greater part of any workweek is engaged in work with respect to which the Interstate Commerce Commission has established qualifications and maximum hours of service pursuant to the provisions of section 204 of the Motor Carrier Act, 1935; or (2) any employee of an employer subject to the provisions of part I of the Interstate Commerce Act.

"(c) The provisions of section 12 relating to child labor shall not apply with respect to any employee employed in agriculture while not legally required to attend school, or to any child employed as an actor in motion pictures or theatrical productions."

8. Section 16 of the Act shall be amended as follows:

"SEC. 16. (a) Any person who willfully violates any of the provisions of section 15 shall upon conviction thereof be subject to a fine of not more than $10,000 or to imprisonment for not more than six months, or both. No person shall be imprisoned under this subsection except for an offense committed after the conviction of such person for a prior offense under this subsection.

"(b) Any employer who violates the provisions of section 6 or section 7 of this Act shall be liable to the employee or employees affected in the amount of their unpaid minimum wages, or their unpaid overtime compensation, as the case may be, and in an additional equal amount as liquidated damages. Action to recover such liability may be maintained at any time within five years from the accrual of such liability in any court of competent jurisdiction by any one or more employees for and in behalf of himself or themselves and other employees similarly situated, or such employee or employees may designate an agent or representative to maintain such action for and in behalf of all employees similarly situated. The count in such action shall, in addition to any judgment awarded to the plaintiff or plaintiffs, allow a reasonable attorney's fee to be paid by the defendant, and costs of the action.

Senator TUNNELL. The first witness is Secretary Schwellenbach.

TESTIMONY OF HON. LEWIS B. SCHWELLENBACH, SECRETARY OF LABOR

Senator TUNNELL. You may proceed in your own way, Mr. Secretary.

Secretary SCHWELLENBACH. Mr. Chairman and gentlemen of the committee, a bill such as the one before the committee today raises many questions of a technical nature. I shall give the committee my general thoughts on some of the proposed changes in the Fair Labor Standards Act, but I shall leave to Mr. Walling and to Mr. Hinrichs the task of elaborating upon the statistical and economic data which the committee desires for its consideration of the measure.

Congress in 1938 did not intend that a 40-cent minimum should represent the final goal in Federal minimum wage policy. That minimum represented, rather, a reasonable beginning toward the ultimate goal: "A minimum standard of living necessary for health, efficiency, and well being of workers." That language is taken from the original act. It was recognized in 1938 that an annual income of $800, which full employment at a 40-cent rate would bring, did not achieve the objective of a minimum American standard of living. Since 1938 the country has proved its capacity to produce a national income far beyond prewar levels. The productivity per man-hour in manufacturing has greatly increased. Now is the time to take a further step in achieving for each worker a minimum wage that will more adequately assure his health, efficiency, and general well-being.

I favor the minimum wage provisions of S. 1349: I believe that 65 cents an hour is necessary in justice to that large group of low paid wage earners who have never received sufficient income to maintain their American standard of living. The enactment of such a law in my opinion will prove beneficial to other economic groups in the Nation.

In judging the question of the proper hourly wage rate which should be established as the legal minimum, a number of factors must be taken into account. Among these factors are the cost of living, the capacity of business to pay the wage and whether there will be inflationary effects.

We all know that the cost of living has risen since the enactment of the Fair Labor Standards Act. This has an important bearing on the minimum wage question. It means that in terms of real wages even the inadequate goal of 40 cents an hour has not been achieved. At present the increase in prices and the cost of living have canceled out one of the objectives sought in the enactment of the 40 cents minimum in 1938, in that it will not purchase the same goods and services that it would purchase in 1938.

A substantial part of the proposed increase in the minimum wage is required, therefore, merely to reestablish the congressional objective of 1938.

The remainder of the increase represents what I have described as an advance toward the goal of a minimum American standard of living.

The committee will probably receive detailed testimony on the question of the money amount required for a minimum budget. I doubt whether any of that testimony will show that 65 cents an hour, representing $26 for a standard workweek, and $1,300 for a year of work, will be sufficient to meet the minimum budget of the average workingman.

A minimum standard of living supported by a guaranteed wage at the suggested level will strengthen our economy by maintaining national purchasing power.

We have learned that wages must be viewed not only as labor costs but also as an index of our purchasing power.

The money received by wage earners through the operation of the minimum wage law will in the main be expended on such items as food and clothing. At low income levels, a greater proportion of the budget is allocated to these necessary items of living. There will be numerous business enterprises, which will be affected by these expenditures. Retail stores and other agencies of distribution will be called upon to sell goods which would not otherwise have been bought; factories and other processing establishments will be required to manufacture these goods; and ultimately, the farms will have a larger demand for their cotton, wheat, and other products. These are the activities that make for a sound economy. They are the backbone of our American principle of free enterprise. No one questions that. I believe that our experience with the present act justifies the assertion that a minimum wage law is a vital factor in their achievement.

An increased minimum wage should also assist our system of free competitive enterprise in working out its true functions. We will not secure the most efficient production of goods and services by permitting competitors to outrival each other in wage cutting. Just as our law makes monopoly an illegal means of stifling competition, so should the law rule out the payment of substandard wages which cause unfair competition. Our high wage economy has shown that it can outproduce low wage economies by maintaining a higher degree of productive efficiency. Placing a floor under wages means that wage cutting must be replaced by a search for greater efficiency. The direction of our economic effort along these lines should produce more and better goods and services and stabilize our economy.

I believe that we can take action to eliminate substandard wage conditions and to preserve purchasing power without destroying business or causing inflation.

There are many industries which pay the bulk of their workers above 55 cents an hour. These industries will not be substantially affected by an increase in the legal minimum to 65 cents an hour.

Only a small percentage of substandard wage earners receive less than 50 cents an hour. For all practical purposes, therefore, the 65 cents minimum will increase actual compensation of employees of the low-wage group by 1 to 15 cents depending on their rate of pay.

These wage increases will not register a directly proportionate effect on costs of production or prices. In the first place labor is only a part of the total cost of production. In many industries the cost of materials, overhead, and other factors represents a greater portion of the total cost of production than labor. Secondly, improvement of technical processes and increases in efficiency of production will tend to absorb the increase in the hourly rate of pay.

The sections of the bill providing for the maintenance of reasonable wage differentials between interrelated job classifications, through use of the industry-committee procedure, raise a number of questions. One which occurs to me, for example, is whether the kind of industry committee which has been functioning under the Fair Labor Standards Act is properly qualified to handle the technical work of job analysis and classification. Another problem is the possible effect of the proposal upon established labor relations in well-organized plants and industries where collective bargaining is the method used for handling wage differentials. I am sure that this committee will wish to study these and other related questions.

I will say to the committee that Mr. Walling, the Administrator, is prepared to present in detail a discussion of these two problems which I simply point out.

The bill proposes to delete sections 13 (a) (10) and 7 (c) of the Fair Labor Standards Act which provide for the exemption of certain agricultural processing industries from minimum wage and overtime pay requirements.

I am in favor of this proposal.

The extension of the minimum-wage requirements of the law to employees in agricultural processing industries is necessary for the reasons I have given with respect to the need for raising the minimum wage to 65 cents an hour. This segment of our wage earning population is entitled, equally with all others, to attain a minimum American standard of living. Full production and employment cannot be attained if this group does not receive the protection of an adequate wage floor. Furthermore, the business enterprises in these industries should also be provided with a uniform basis of competition with regard to the minimum wage.

I believe that extension of minimum-wage coverage in the agricultural processing industries is more feasible at this time than when the Fair Labor Standards Act was enacted because there has been an upward revision in the wage structure.

I am also of the view that this is a favorable time to narrow the overtime exemption for agricultural processing industries. During the reconversion period, there will be temporary unemployment in those industries which require time to change over to peacetime production. Agricultural processing industries for the most part are not subject to this difficulty, however, since they produce the same goods in war and peace. It is, therefore, reasonable to provide these industries with an incentive to employ more people in their regular operations.

I do not believe that the application of the overtime provisions will result in undue hardship. Agricultural processing industries which are of a truly seasonal character and cannot expand their labor forces during periods of peak production are eligible for a partial overtime pay exemption under section 7 (b) (3) of the act. This section provides that employers in industries found by the Administrator of the Wage and Hour Division to be of a seasonal nature

are not subject for a 14-work-week period to the requirement of time and one-half after 40 hours but must pay time and one-half for hours over 12 in 1 day or 56 per week.

The section of the bill with respect to child labor would change the present coverage provisions to conform them with those applicable to minimum wages and overtime. In other words, the amendment would establish an absolute "prohibition" against the employment of "oppressive child labor" as that term is defined in the act. At present the only prohibition is against the shipment of goods in commerce which were produced in establishments in or about which oppressive child labor was employed. The limitations of the present provisions were well illustrated in the recent Western Union case before the United States Supreme Court.

The socially desirable purposes of the child labor prohibition should be achieved, in my judgment, to the fullest extent of congressional power. This is especially true at this time when the labor supply is expanding.

I approve of the principle of establishing a uniform, Federal statute of limitations for damage suits brought by employees under section 16 (b) of the act. At present, the period of limitations depends on the law of the State in which the cause of action is brought. There is extensive variation among the States as to the applicable period, with consequent unequal effects on the competitive position of employers.

The Department of Labor has previously expressed the position in a letter to this committee, that it considers 3 years to be an appropriate period of limitation.

Senator TUNNELL. Now, as I understand, you made the statement that the 40-cent standard had not been attained. You mean by that, that many are not paying the 40-cent rate per hour?

Secretary SCHWELLENBACH. I made that statement in reference to agriculture. We have violations, of course, and cases are being brought in reference to violations, but I did not mean without a violation of the present act there was any widespread payment of less than 40 cents an hour.

Senator AIKEN. Is there any place where you can get agricultural labor for less than 40 cents an hour now?

Secretary SCHWELLENBACH. Not right now.

Senator AIKEN. You mean previous to the war?

Secretary SCHWELLENBACH. Yes.

Senator AIKEN. I think that is true. Agricultural labor, in my part of the country, cannot be gotten for less than 60 or 70 cents an hour.

Secretary SCHWELLENBACH. It is reasonable to assume that that is not a condition that will prevail after the labor market is supplied with more labor.

Senator AIKEN. The supply is not increasing at all, so far.

Secretary SCHWELLENBACH. You understand, Senator, this is not agricultural labor itself; it is agricultural processing labor.

Senator AIKEN. I understand. Is it not a fact that the level of agricultural wages is approaching the level of industrial wages in a good many sections now?

Secretary SCHWELLENBACH. Undoubtedly.

Senator AIKEN. I mean the level of the take-home pay. Perhaps not the hourly wage but the take-home pay seems to be about the same in agriculture in New England now as the take-home pay of ordinary labor in industry.

Secretary SCHWELLENBACH. Undoubtedly that is true. It seems to me that we must assume that is not a permanent condition.

Senator AIKEN. I am speaking of agriculture. You referred to the closing of the gap in processing plants, for processing agricultural products. Some months ago I had complaint of boys being drafted from poultry plants on farms in what appeared to be a violation of the Tydings amendment. In talking with General Hershey's office I learned they had a definition holding that a farm that operated an incubator was not defined to be a farm but a processing plant. I asked them where they got that definition and they said from the War Labor Board. You would not consider that a farm that had an incubator on it, that hatched its own chickens, was a processing plant, would you?

Secretary SCHWELLENBACH. Not personally, I would not.

Senator AIKEN. These people claimed they got the definition from the War Labor Board that a farm with an incubator on it was not a farm but a processing plant. If the War Labor Board gave that definition it was wrong, in my opinion.

Senator ELLENDER. Mr. Secretary, as I recall it, President Truman, in his message to Congress some time ago, advocated a reasonable upping of the minimum wages. Are you speaking for the Administration now?

Secretary SCHWELLENBACH. Yes, sir.

Senator ELLENDER. Is it your view that 65 cents per hour is a reasonable upping of minimum wages?

Secretary SCHWELLENBACH. Yes, sir.

Senator ELLENDER. You realize that is an advance of more than 60 percent over the present rate.

Secretary SCHWELLENBACH. No; I do not think that is correct.

Senator ELLENDER. How is that?

Secretary SCHWELLENBACH. I do not think that is correct.

Senator ELLENDER. It is now 40 cents. I am speaking of the legal rate.

Secretary SCHWELLENBACH. It is a statutory advance of 62.5 percent; yes.

Senator ELLENDER. That is what I am talking about. It is a little more than 60 percent over the statutory rate.

Secretary SCHWELLENBACH. Yes.

Senator ELLENDER. Do you consider that reasonable?

Secretary SCHWELLENBACH. Yes. I do not agree with you that it results in an actual increase of 62.5 percent, because, as I pointed out, the numbers that are receiving less than 55 cents are comparatively low.

Senator ELLENDER. That is under present war conditions?

Secretary SCHWELLENBACH. Yes.

Senator ELLENDER. Some are now attempting to write into the law a minimum wage of 65 cents for the first year on up to 75 cents at the end of the third year. During the war, when we had full employment, the minimum was fixed at only 55 cents. I am just wondering what is going to happen if you now make it 65 cents and progressively to 75

cents after two years when under full employment during the war we reached a goal of only 55 cents?

Secretary SCHWELLENBACH. I do not quite understand where the question leads.

Senator ELLENDER. How do you expect industry in the future, when there may not be full employment, to pay a minimum of 65 cents when only recently, in the last 2 or 3 years, with full employment, with all the wheels of industry turning, the minimum was raised to only 55 cents. Do you expect conditions to get better so that industry can pay more after the war than during the war? Is that your argument?

Secretary SCHWELLENBACH. I do not think you can say just because industry did not pay 65 cents during the war that they could not have paid 65 cents during the war.

Senator ELLENDER. What effect do you think the raising of the legal minimum by over 60 percent will have on industry itself, particularly the part of industry which is engaged in the manufacture of clothing, the canning industry, and manufacturing of that kind?

Secretary SCHWELLENBACH. I do not believe it is going to have any difficult effect upon them.

Senator ELLENDER. You do not?

Secretary SCHWELLENBACH. No. I was here in 1938, and I remember what we were told, what the effect was going to be when we put it at 40 cents.

Senator ELLENDER. I can tell you what the effect was in New Orleans on the clothing industry. We had, as I recall, four large factories there that manufactured wearing apparel and there is only one left; the rest have closed.

Senator AIKEN. Because they did not think they could afford to pay the 40 cents?

Senator ELLENDER. That is correct, according to the correspondence I have had on the subject. It all came about when under the law the minimum wage was upped from 30 to 40 cents almost overnight. The law contemplated a gradual rise to 40 cents over a period of several years, but instead of taking that course, I think 2 years after the law was enacted the minimum wage was jacked up to 40 cents by the industry committee which was composed principally of northern representatives. As soon as that was done I know that one of the leading manufacturers of cotton goods, located in New Orleans actually closed.

Senator AIKEN. Can they buy for less in New Orleans than they can in Washington, or Boston?

Senator ELLENDER. I assume so. The cost of living is not as great. Rents are not as high and the fuel bill to keep warm in the winter is much less.

Senator TUNNELL. What are the number of hours worked in a week in New Orleans?

Senator ELLENDER. Now?

Senator TUNNELL. Yes.

Senator ELLENDER. 40 hours. Now, I am not the witness; I am not prepared to go into too many details. I will cheerfully answer any questions that I can.

Senator TUNNELL. What I was getting at—and I will ask this directly so there will not be any question as to the propriety of it: Mr. Secretary, is there any difference, so far as the statistics show, in the prices for living commodities in the North and in the South? Can you answer that, or is that a question that some other witness will answer?

Secretary SCHWELLENBACH. I think Mr. Hinrichs will answer that question. He is prepared fully to answer all the questions on statistics. I am not a statistician.

Senator SMITH. I would like to ask, Mr. Secretary, whether, in arriving at the 65 cents, you studied the variations in living costs throughout the entire country?

Secretary SCHWELLENBACH. We did.

Senator SMITH. You think that the 65-cent figure that you arrived at could be met by industry throughout the entire country?

Secretary SCHWELLENBACH. That is the conclusion that I reached. Now, the presentation of the detailed figures will be made by Mr. Hinrichs.

Senator SMITH. I hope the figures are put in the record. I am interested in it to the extent that you are not putting some areas of the country in the position where they cannot employ people at that wage.

My further question is whether you will present the relationship of the collective bargaining question to the statutory wage increase?

Secretary SCHWELLENBACH. Mr. Walling is going to present that in detail, and the experience that the Division has had in regard to that.

Senator SMITH. Making allowance for the difference in conditions in the different sections of the country, I am wondering how far we should go in raising the floor here and how far it will interfere with collective bargaining, which seems to me to be of first importance in labor relations.

Secretary SCHWELLENBACH. I think you will find at least the two leading organized labor groups are in favor of this bill.

Senator SMITH. Both A. F. of L. and C. I. O.?

Secretary SCHWELLENBACH. That is my understanding.

Senator SMITH. I would be interested in that.

Senator ELLENDER. Mr. Secretary, pursuing the line of questioning I submitted a while ago, do you know why it was that the minimum wage was not made higher during the war than the 55 cents agreed upon?

Secretary SCHWELLENBACH. You mean as an economic proposition?

Senator ELLENDER. During the war we had full employment and the cost of living was fairly reasonable. Have you any idea why it was that the minimum wage was not actually fixed at 65 cents, as you now propose should be done by law?

Secretary SCHWELLENBACH. A very large percentage was between 55 and 65 cents, you understand that.

Senator ELLENDER. I understand that, but what I am asking about is why the wage was not made 65 cents instead of the 55 cents actually agreed upon.

Secretary SCHWELLENBACH. It is just a matter of bargaining between employers and employees.

Senator ELLENDER. How is that?

Secretary SCHWELLENBACH. It was just a matter of bargaining between employers and employees. If you are going to have a minimum wage you have got to take into consideration the element of desirability of a certain amount.

Senator ELLENDER. The minimum wage of 55 cents must have had some basis, otherwise it would not have been agreed upon; isn't that true?

Secretary SCHWELLENBACH. Yes; that is true. When it was down below 25 cents it presumably had the same sort of basis and we fixed it at 40 cents.

Senator ELLENDER. Yes. I am speaking of the basis that moved those in power to make it 55 cents during the war. I am wondering what your basis is for making it 65 cents after the war?

Secretary SCHWELLENBACH. Those in power, you understand, during the war did not fix any minimum wage or any maximum wage, except on the matter of inflation during the war period. They worked out what was known as the Little Steel formula and held the line at a certain amount. The cost of living went up beyond that.

Senator ELLENDER. I understand. But you do not anticipate the cost of living will rise unless the wages rise, do you?

Secretary SCHWELLENBACH. There are a number of elements that make up inflation, including the item of cost of labor. I do not believe that this particular raise in this type of wage level will result in inflation; no.

Senator ELLENDER. Will you not agree that it will cause a rise in the cost of living?

Secretary SCHWELLENBACH. In a very narrow field.

Senator ELLENDER. What field is that?

Secretary SCHWELLENBACH. The field in which you are interested, I will admit.

Senator ELLENDER. How about agricultural wages? Don't you think this is going to have the effect of raising agricultural wages, particularly in the South, to a greater amount than they now are?

Secretary SCHWELLENBACH. Agricultural processing wages; yes, sir.

Senator ELLENDER. Then there will be competition between wage earners who work in agricultural processing and in the fields. As you know, during this war, there was much competition for industrial workers, and it was difficult for the farmer to obtain workers. I received a letter from a Nebraska potato farmer who stated he had to pay as much as $15 a day for labor to gather potatoes, because of the competition that existed between industrial labor and farm labor. You grant that that was the case, don't you?

Secretary SCHWELLENBACH. Yes; that certainly is true.

Senator ELLENDER. If that be true, cannot you see it is bound to increase the cost of agricultural labor, and with that it will increase the cost of farming, and with that an increase in the cost of living?

Secretary SCHWELLENBACH. No; I do not think that necessarily follows. I think that situation, as I said to Senator Aiken, is a temporary one.

Senator ELLENDER. Mr. Secretary, do you believe that it is possible to maintain present prices or the present cost of living, I should say, and at the same time increase wages as proposed by the bill under consideration? Do you think it is possible to do so?

Secretary SCHWELLENBACH. Yes; I do.

Senator ELLENDER. I wish you would tell us how.

Secretary SCHWELLENBACH. Because every time you increase your wage levels you find a higher amount of productivity. You do not just simply add on and translate that into prices. Industry finds a way, and always has found a way, to convert higher wages into higher productivity.

Senator ELLENDER. Let us take our present legal minimum wage of 40 cents, and let us assume that the war had not occurred and that in 1940 we had increased the wage to what you now propose, to 65 cents or over 60 percent. Do you mean to say that that would increase productivity in proportion to what the wage was increased?

Secretary SCHWELLENBACH. No. If you simply had a 40-cent level and everybody was getting 40 cents or less, I do not think you could justify an increase now of 62.5 percent, but there is just one weakness in your question, and that is you assume that the war did not occur and the fact is we did have a war.

Senator ELLENDER. You say, however, by paying more wages it means more productivity. It means more incentive for labor, as I understand, for the man who works, and thereby his productivity is increased.

Secretary SCHWELLENBACH. Yes.

Senator ELLENDER. I do not mean to impose on you in a field not covered by your writtten statement, and if the question I am going to ask cannot be answered by you, I will ask it of someone else. Where did you get your information, or may I ask, how did you come to the conclusion that 65 cents was the rate that should be fixed as a minimum wage for the first year, 70 cents for the second year, and 75 cents for the third year and thereafter?

Secretary SCHWELLENBACH. Well, it was suggested originally—I am not being facetious—it was suggested originally by Mr. Pepper, Mr. Kilgore, Mr. Myers, Mr. Wagner, Mr. Chavez, Mr. Magnuson, Mr. Guffey, Mr. Mead, Mr. Murray, and Mr. Thomas of Utah. My task was simply to examine their suggestion and see if I agreed with it.

Senator ELLENDER. Suppose they made it 80 cents—I know some would like to see it 80 cents now—would the fact they are advocating it lead you to the belief that it was the true minimum?

Secretary SCHWELLENBACH. No; although I do have considerable confidence in those gentlemen.

Senator ELLENDER. How is that?

Secretary SCHWELLENBACH. I do have considerable confidence in those gentlemen.

Senator ELLENDER. Yes.

Secretary SCHWELLENBACH. Suppose they said 80 cents; certainly I would not be forced to accept it as the true minimum, if the figures did not justify it.

Senator ELLENDER. Senator Smith had asked you the question a while ago as to whether or not you had studied the effect that this minimum wage would have all over the country. I recall when I first came in the Senate—and you were in the Senate when I first came there—we had WPA legislation up, and I recall very well that the workers in the South who did the same chores as the workers in the North and Northwest and Northeast, who handled the wheelbarrow the same way, who ditched here and there, were paid, I think, $19 a month in contrast to the fellow from the Northeast who got $44, and the fellow from the West who got $54, as I recall. In any event, there was a great difference in the amount of wages paid to the various WPA workers throughout the country, depending upon the section of the country in which they lived. I think that the distinguished witness voted for a proposition of that kind. Isn't that true, Mr. Secretary?

Secretary SCHWELLENBACH. I do not think we ever had the wage differentials of WPA up.

Senator ELLENDER. Yes; we did.

Secretary SCHWELLENBACH. There was a lot of discussion about it in the Senate.

Senator ELLENDER. I remember distinctly that I tried, and many other Southereners tried, to get a few more crumbs than the $19 that WPA workers were getting down there.

Senator TUNNELL. I would like to ask if there is any difference in the value of the work between the southern worker and the northern worker?

Senator ELLENDER. I think the war has shown that in the South they are equal to any of the workers of the North, and they are surpassing many of them. It is a nice thing to keep in mind that a lot of your Northeast industries have found their way down South.

Senator TUNNELL. They are looking for lower wages.

Senator ELLENDER. I would not say that; I would say it is because they had better opportunities.

Senator TUNNELL. That is what they say.

Senator ELLENDER. One of the main inducements that caused them to go down there was because they went where the raw material was—the cotton. That is why a good many cotton mills went down there. On the other hand, labor was more plentiful and living conditions were cheaper.

Senator TUNNELL. Then, you agree, Senator, that being the case, that the minimum wage should be the same all over the country, that is, the level of wages should be about the same, if the workmen are equal in ability?

Senator ELLENDER. Certainly; there is no doubt about that. I am not questioning that at all. But, aside from other objections that I will discuss in the course of these hearings, the thing that bothers me is the sudden upping of the wage, you understand, that I fear will be destructive. It will cause the same situation as we had when the original Wage and Hour Bill was passed in 1938. I was on the committee that considered the bill; I was present when the hearings were held that formed the basis of that law, and I was on the conference committee. I believe that a very good case was made to show that the South at the time could not stand a shift in basic wages, or minimum wages, I mean from 25 to 40 cents, unless some transitional period occurred.

Senator TUNNELL. What do you think is the basic reason for the wage differential, and particularly the agricultural wage differential, between the South and Northeast and West?

Senator ELLENDER. For one thing, there is this difference: There is more employment in the South the year round than you have in the North. If we had to handle our farms in the South as they are handled up North, we could afford to pay higher wages down there because we would employ hired help for a much less period of time to do the job. In order to retain labor they must be employed the year around.

I paid my way through college by working in North and South Dakota wheat fields. Farmers worked about 6 months of the year, and the rest of the time because of the cold winters the ground could not be worked and they had a hard time keeping their livestock from freezing. There was not constant work for all hired help the year round

and the farmer-owner did not give employment the year round. In the State of Wisconsin, also in the State of Minnesota and, I imagine, in your State, a farmer cannot work the year round because of the cold. In the South, as I have indicated, we have more continuous employment. Most hired help live on the farm and it is necessary to give steady work.

A bricklayer, or a carpenter, does not get as much per hour in the South as he would get in the North, because in the South the employment is more steady. Half of the time, or I would say one-third of the time, a bricklayer in the North cannot work because of weather conditions. Mortar freezes. Carpenters cannot get steady employment for the same reason.

Senator TUNNELL. If he lays as many bricks, why should not he get the same pay?

Senator ELLENDER. If he lays as many bricks in 9 months as the one in the South lays in 12 months, I think they should be paid on the same basis.

Senator TUNNELL. You mean on an annual basis?

Senator ELLENDER. Yes. That is one of the reasons why I fear that sufficient study has not been given to the proposition of making a minimum wage apply all over the country.

Senator AIKEN. I want to dispel any idea that the North does not work the year round.

Senator ELLENDER. Senator Aiken, that may be true as to the farmer himself, the individual owner.

Senator TUNNELL. I might suggest to the Senator if he moves North a little more, on one of those farms, he will find they work pretty much the whole year.

Senator ELLENDER. I grant that as to the farm owner himself, but I am talking about the laboring man, the hired help.

Senator TUNNELL. The farmer does not grow in winter in the South, does he?

Senator ELLENDER. Yes. In South Dakota I recall working for a farmer where it required 28 men to operate the farm for a period of about three months in the summer. Do you think he needed the 28 men in the wintertime?

Senator TUNNELL. There are seasonal occupations both in the North and South, and when you have seasonal crops in the South you have seasonal occupation.

Senator ELLENDER. We have more continuous employment.

Senator TUNNELL. Some of you do and some of you do not.

Senator ELLENDER. The vast majority of them do. There is always something to do on a farm in the South. I do not mean only by the management but by the many, many employees who are hired on a yearly basis.

Senator AIKEN. What the Senator says is true in regard to wheat and perhaps cotton. It is not true of dairy farming, where you require the same amount of labor the year round.

Senator TUNNELL. Mr. Secretary, is there any ground for the different minimum wage in different sections of the country, or has that question been considered?

Secretary SCHWELLENBACH. No; I do not think so. We go back to the same argument that we went through in 1938, about differentials and the objections which the members of the Senate from the South

had. If we are going to build up a national economy on the basis of purchasing power sufficient to consume the products of our industry and agriculture, we cannot do it upon the basis of having one portion of the country say, "We just cannot go along with the rest of the country on minimum wage rates."

Senator TUNNELL. Notwithstanding my question, I agree with Senator Ellender, that the person in the South is entitled to as good a wage, as high a wage as the one in the North. Now, if there is a lower standard, is not that one of the things that we are trying to correct?

Secretary SCHWELLENBACH. Is it the Senator's position that we should have the same standard all over the country? I did not quite understand that that was his position?

Senator ELLENDER. I did not take that position, although I would like to see it. I do think before any minimum wage is written into law by the Congress that working conditions and the like ought to be considered as they exist in various parts of the country. As I indicated a moment ago, Congress went on record, since I have been in the Senate, that in the payment of wages for WPA workers there was a differential fixed between the South and the North and the West. Now, if conditions prevailed then as to cause that differential, my question is: Why should not the same thing prevail in respect to minimum wages? I want to know why. I would like to have the Secretary give us some evidence on the subject.

Secretary SCHWELLENBACH. I think the Senator will remember that my position always was against the wage differentials in WPA, and it was not those of us from the Northwest, at any rate, who were causing the differentials.

Senator ELLENDER. I do not pretend to know what the vote of the Senator was on that.

Secretary SCHWELLENBACH. I do not think we ever actually voted upon it. The thing I can remember is that we were always giving blank checks to Mr. Roosevelt and Mr. Hopkins, letting them do it. I made a speech one day criticizing the differential as between one portion of my State and another portion of my State.

Senator ELLENDER. I want the record to show that some amendment was put in and there was a vote on it. I remember it distinctly.

Secretary SCHWELLENBACH. You may be right.

Senator ELLENDER. As I recall, the usual handful of southerners who were adversely affected were the only votes for it. The Northeast, North, and West piled up on us and swamped us. What you are trying to do now is to make us take a dose which may eventually destroy a lot of southern industry, that has moved from the Northeast to the South. I am confident that it will deter further industrial expansion in the South.

Senator AIKEN. Is that why industry moved from the Northeast to the South, to get the benefit of the lower wages that prevailed there?

Senator ELLENDER. That may have been one of the reasons, but, as I said, the main reason was to get nearer the raw material markets. In other words, a lot of manufacturers said, "Why pay enormous rates to bring cotton to Massachusetts when we can build a factory around the cotton fields?"

Senator AIKEN. If that is the reason, why does not the wool industry move to Idaho or Colorado?

Senator ELLENDER. It might be cheaper to move wool than cotton. Wool is grown over a wider area than cotton. I did not go into that subject.

Senator TUNNELL. Let me ask you this: If the bill is for minimum wages only and if there is a variation, then it is not as to the minimum. The minimum, as I understand it, is being paid in all sections pretty largely. You say there are some violations. There are some industries that do not seem to be covered by it, but the minimum law is being met in one section as it is being met in another. The maximum is where there is a difference, as I understand it.

Secretary SCHWELLENBACH. Yes.

Senator ELLENDER. The minimum has been fixed by law the same all over the country, has it not?

Secretary SCHWELLENBACH. Yes.

Senator ELLENDER. Certainly. What the Senator is talking about is the 55 cents, I believe, that was made under WLB regulations through some most ingenious method. That is what you have in mind, is it not?

Secretary SCHWELLENBACH. No, I am just referring to the figures which will be presented showing the comparatively small percentages that are receiving less than 50 cents now, and that it is not a 62.5 percent increase in actual wages as at the present time.

Senator TUNNELL. What I am saying is that the minimum wage is not what is disturbing us now, because the minimum wage law is being generally observed, but there is a maximum much above the minimum which is required by law and which is being paid in many sections of the country; isn't that right?

Secretary SCHWELLENBACH. Yes.

Senator AIKEN. You stated, Mr. Secretary, that you did not think raising the minimum wage in accordance with this bill would raise consumer cost. I assume that you base your reasoning on the general level of cost, because it seems self evident that on items where the labor cost is high an increase in wages would result in some increase in the cost of those products.

Secretary SCHWELLENBACH. Yes; I said that to Senator Ellender, that there were items in which it would result in an increase.

Senator AIKEN. The fact that we have devised means of producing many items much cheaper than we ever did before would offset the higher price of those consumer goods where an increase in cost would be necessary?

Secretary SCHWELLENBACH. That is the position that Mr. Hinrichs will present to you.

Senator AIKEN. How much importance do you give to the maintenance of purchasing power in increasing the minimum wage of the country?

Secretary SCHWELLENBACH. Well, my philosophy is that in this country we can produce all that we need and that our problem is one of maintaining the power to consume. You cannot maintain the power to consume without purchasing power, and you cannot maintain purchasing power and have large segments of the population receiving less than is necessary in order to have a reasonable standard of living.

Senator AIKEN. Your theory, in brief, is that productivity without a market is no good at all; is that right?

Secretary SCHWELLENBACH. Yes.

Senator ELLENDER. Mr. Secretary, to follow through the question that Senator Aiken asked you about the cost, let us be a little specific. Do you mean to say that by increasing the cost in the cotton mills in the South by 60 percent that will not increase the cost of production?

Secretary SCHWELLENBACH. We are talking now about the danger of inflation, that phase of the question. I insist that we have to take the figures as they now exist and not the figures that existed in 1938.

Senator ELLENDER. You do not expect that the cost of production will be maintained now as during the war, do you?

Secretary SCHWELLENBACH. Not in the lines in which it was being maintained during the war. We are hopeful that we can reconvert and keep everybody at work, and we can only do that if we have purchasing power in this country. We cannot maintain that purchasing power and have a lot of people getting substandard wages.

Senator ELLENDER. Have you any idea, or have any of your statisticians figured out how much more it will cost to clothe and feed an individual now than it did before the war?

Secretary SCHWELLENBACH. Yes. Mr. Hinrichs will present those figures. The figures are not available as a complete set of figures. There are so many elements that must be taken into consideration and that cannot be found out, but he will present, in the fields in which there can be reasonably accurate statistics, the answer to that question.

Senator ELLENDER. You still insist that increased wages to the extent that you now propose to do will not increase the cost of living?

Secretary SCHWELLENBACH. Except in a very narrow field, which will be explained to you by Mr. Hinrichs. I am frank to admit that this situation must be taken into consideration and weighed against the maintenance of purchasing power in this country by increasing the wages of these people.

Senator ELLENDER. Have you any idea as to the proportion of the cost of labor in the manufacture of, let us say, canned goods or wearing apparel, from the time it leaves the cotton field or the wool farm, if it is wearing apparel, to the time it is distributed, and then the cost of canning tomatoes, things of that kind, from the time it leaves the farm until it reaches the consumer?

Secretary SCHWELLENBACH. I haven't now. I remember for a number of years every Wednesday morning in the Committee on Agriculture, we would hear a detailed statement about that from one of our friends on the committee, and I did know all of the figures at that time, but I do not remember them now.

Senator ELLENDER. And the old man was probably right, the man you had in mind, was he not?

Secretary SCHWELLENBACH. Well, we disagreed with him on a number of things.

Senator ELLENDER. I just cannot get into my head the conclusion that you have reached—the statement that I saw in print on two or three occasions, the one that caused, I believe—the retirement of Mr. Davis—that wages can be considerably increased without increasing the cost of production. I believe Mr. Davis denied he made the statement that wages could be increased 50 percent without increasing the cost of production. However, he is an advocate of increased wages; he is one who went to the extreme, as I recall it, when he allegedly made the statement that we could increase wages up to 50 percent without in any manner interfering with the cost of production, or increasing the cost of living. I am quoting what I saw in the newspapers. How any man can come to that conclusion, I just cannot see.

Senator TUNNELL. Here is something I would like to know. I do not know whether you are the one to ask it of, or whether Mr. Hinrichs is the one, or someone else. The question that Senator Ellender asked is based on the assumption that wages now are 40 cents an hour and he says this bill will raise those wages more than 60 percent. Now, if the wages are 40 cents an hour we should know about that, and if they are more than 40 cents an hour I would like to know that. I would like to know how much of a change it is. For myself I would like to know to what extent the minimum of 65 cents would in fact raise present wages.

Secretary SCHWELLENBACH. Well, Mr. Hinrichs has figures as to employees receiving from 40 to 45, 45 to 50, 50 to 55 cents, and the percentages and numbers of people in manufacturing who are receiving those wages at the present time. They will be presented to you very definitely. That is where I cannot agree with the Senator from Louisiana when he talks about this being an increase of 62.5 percent in wages. It is not.

Senator ELLENDER. I am talking about the minimum fixed by law. I will not be too certain about this, but as I recall the sugar factories in southern Louisiana have been paying the minimum of 40 cents and I believe they will pay up to 45 cents this year. I am not certain about that, but I believe it is 45 cents. If you increase the minimum to 65 cents, don't you know it is bound to increase the cost of producing sugar? Don't you know unless they can get more for their sugar it is going to affect the economy of those factories?

Secretary SCHWELLENBACH. You are asking me to assume they are only paying 45 cents, I do not know that. That is like asking me to assume it is 40 cents and going up from there to 65 cents. Taking the over-all picture, there is not an increase of 62.5 percent.

Senator ELLENDER. I may be wrong about that, but it is my understanding that during the last winter the minimum wage paid in the sugar factories was either 40 or 45 cents an hour. Now, assuming that that is true, by forcing those people overnight to pay 65 cents an hour, don't you know that it is bound to increase their cost of production?

Secretary SCHWELLENBACH. Assuming all of your facts to be correct, yes, but I am not willing to accept the assumption. You say the minimum paid in certain sugar factories is 40 cents. Now, until you know what percentage of the employees of that sugar factory were getting 40 cents and what percentage were getting 45 cents, what percentage were getting 50 cents, what percentage were getting 55 cents, and what percentage were getting 60 cents, you do not have any accurate picture as to whether or not there is a real relationship between the cost of production and an increase to 65 cents. I cannot answer until I get those other facts.

Let us carry it to an extreme, let us suppose that out of 500 employees there were only 10 getting 40 cents, and a comparatively

small number 45 cents—the figures which will be presented on the over-all picture will show very small percentages receiving those amounts—until you know what percentage in the sugar business receive the 40 cents and what percentage receive 45 cents, nobody can answer you as to whether it will have any effect on the cost of production.

Senator ELLENDER. Unless you know the number employed, I grant you that.

Secretary SCHWELLENBACH. Yes.

Senator ELLENDER. Let me go just a step further back, to the production of raw material to make that sugar. Today, the wage is around $3 a day in the fields, in the harvesting of sugarcane, as against $1.75 2 years ago. Now, don't you know that by increasing the cost of harvesting to that extent it does increase the cost of production considerably?

Secretary SCHWELLENBACH. Undoubtedly.

Senator ELLENDER. And don't you know that the Federal Government had to come in and subsidize in order to meet that difference? Now, suppose the Government does not come in and subsidize, as in all probability it will not after June 30, 1946, what is going to become of your producer of sugar if he is compelled, because of competing with industrial labor, to continue to pay the $3 per day for sugarcane field labor? At the moment, the farmer receives $3.80 a ton and subsidies to the extent of about $3.50 for his raw cane. How can he maintain himself unless his prices are considerably raised? Or, may I say, unless the consumer pays a higher price for sugar?

Secretary SCHWELLENBACH. You are going right back to the assumption in one of your earlier questions that I refuse to accept, that the present agricultural labor situation is going to continue as a permanent situation. You are just assuming that there will still be competition. I was not here, but my understanding from reading the newspapers way out where I was is that one of the bases of the claim of agriculture for subsidies was that through the war effort the Government was going in there and taking your agricultural labor and you had to pay more for it, and since the Government was taking them for the war effort therefore the Government should subsidize part of your cost.

Senator ELLENDER. That is right.

Secretary SCHWELLENBACH. I do not think you can assume, as you do assume in your question, that the same situation will exist now that the war is over.

Senator ELLENDER. And why not? If you have full employment, as you are now proposing to do in the bill that we are discussing today in Congress? Will not there be competition between field laborers as against industrial laborers? Are not they going to seek to get the best wage possible for their work?

Secretary SCHWELLENBACH. If we can have full employment, as envisioned by the full employment bill, we will have purchasing power in this country sufficient to purchase the products of agriculture and you will not be worried about that question.

Senator ELLENDER. I predict then, that it will be necessary for you to go down the line and increase the cost of producing what the workingman wears and what he eats, so that with a minimum of 65 cents

in the long run he will not be better off than with the minimum of 40 cents or 55 cents he is now receiving.

And here is something else that is going to occur, to my way of thinking, if we continue to raise wages and, in turn, to raise the cost of production: A time will come when we will not be able to compete with foreign countries in obtaining foreign trade. I believe that both industry and labor ought to try to work it out from this point of view, to maintain our standard of living by reducing the cost of production.

Now, I pose this question to you: Insofar as the standard of living is concerned, what difference does it make if I can buy for $5 today what 6 months ago cost me $8? That does not in any manner affect the standard of living, and yet it does have this effect: It makes it possible to reduce the cost of production so that we can obtain a fair share of foreign trade and at the same time take up the slack in unemployment. I can foresee, as Secretary Wallace has said on many occasions, that if we can develop a foreign trade to the extent of ten billion dollars that will mean 5,000,000 employees that can be taken care of in this country. But I say to you if we continue to raise wages here and there in an effort to raise the standard of living, that is simply going to make it so that, in my opinion—I may be all wrong—the cost of production will be so great that we will not be able to get our fair share of foreign trade.

Senator TUNNELL. Let me ask this: When you are taking it from the laborer, are you not holding down the standard of living of the people who are doing the work?

Secretary SCHWELLENBACH. Was that a question?

Senator TUNNELL. Yes.

Secretary SCHWELLENBACH. My answer is "Yes." Of course, the Senator from Louisiana and I for 4 years used to have these arguments every Wednesday morning in the Committee on Agriculture, and I have not enjoyed anything so much for a long time as I have this morning. While we disagree, I have the highest respect for his point of view.

Senator AIKEN. Mr. Secretary, Senator Ellender was showing some concern over what would happen in the sugar industry if the minimum wage is raised. Is it not a fact that the sugar industry was subsidized before the war when the minimum wage was 40 cents an hour?

Secretary SCHWELLENBACH. Yes, that is true.

Senator AIKEN. Do you think it may be necessary to subsidize some industries after the war in order to assure a safe amount of production in this country? It comes to my mind the Senator from Louisiana was the principal advocate of subsidies on the Committee on Agriculture. I am wondering why the same remedy that did good, in his opinion, during the war could not also be equally good after the war, if it is found necessary?

Secretary SCHWELLENBACH. I do not think, as the Secretary of Labor, it is within my province to answer that question, and I do not think that I should answer the question.

Senator AIKEN. I think you mentioned you were on the Committee on Agriculture.

Secretary SCHWELLENBACH. Yes.

Senator TUNNELL. I remember the question of sugar subsidies was raised 50 years ago.

Secretary SCHWELLENBACH. Yes. I do not like to answer the question because it is entirely outside of my province.

Senator TUNNELL. Are there any other question of the Secretary?

Senator SMITH. I would like to ask one question, Mr. Chairman.

Senator TUNNELL. Yes.

Senator SMITH. Do you think, Mr. Secretary, that along with the question of raising wages we have to take into consideration the matter of price ceilings, in other words, price controls? Do you think price controls are consistent with our attempt to raise the standard of wages?

Secretary SCHWELLENBACH. I think there is nothing inconsistent, as far as this raise is concerned, with price controls. This does not mean raising the roof; it is simply putting a floor under constructive wages. If this meant a general raise all over I would have to agree with the Senator from Louisiana that it would inevitably raise the cost of production, and inevitably we would have to take off some price controls. I think this is a slightly different question. Here you are simply putting a floor below which we should not go, for a decent living, in paying our workers.

Senator SMITH. What I want to get at is whether figures are going to be shown that can be applied country-wide without interfering with employment. It would be more serious if a man had to go out of business because this went into effect. Unemployment is much more serious than lower wages.

Secretary SCHWELLENBACH. Of course, you are going to hear the argument made, no doubt, that the adoption of this bill will result in serious unemployment. We heard exactly the same argument when we passed the original bill. While there have been, as Senator Ellender points out, certain instances of closing, there certainly have not been anywhere near what we were told when we passed the original bill. The adoption of the minimum wage law has not harmed industry in this country at all. I think you must take the history of the last 7 years into consideration, as to the effect on industry during that period—probably eliminate the war years, but take the history up to the time of the war. We were told in 1937 it would result in widespread unemployment if we put in a 40-cent minimum. I am sure the committee wants to hear all of the testimony and will give consideration to such testimony, but I suggest, in evaluating that testimony, you should take into consideration what we were told when we passed the original act and the results that actually occurred after the passage of the original act.

Senator SMITH. I want to see that evidence. I agree with you, we want to raise the standard of living of our people, and we also want to raise the consuming power so we can consume what we produce. Those things are interrelated. Whether you can dissociate that from the price business is a question to me. We are going to have a real problem there. I have never been convinced you can run it all by Government control. I question in my own mind now whether we should continue price control, or whether we are in any danger if we do not. You talk about runaway inflation and talk about price control, but I think if the law of supply and demand were allowed to move in, it might be wiser.

Senator ELLENDER. Mr. Secretary, did I understand you to say price control is not inconsistent with the raising of the wages as provided in this bill?

Secretary SCHWELLENBACH. Yes, I do not think there is anything inconsistent with it.

Senator ELLENDER. In other words, we will be able to maintain the prevailing ceiling even though we increase the minimum wage to 65 cents. Now, as a matter of fact, isn't it true, or doesn't it follow, that if you increase the minimum wage, let us say, from 50 or 55 cents to 65 cents, that those in the upper brackets, by collective bargaining, will ask for an increase for equally as much to be fixed for them as a raise?

Secretary SCHWELLENBACH. Yes, I assume they will ask for it.

Senator ELLENDER. Very well. Now, suppose our price controls are removed and we eliminate subsidies; don't you know in that case the cost of living is going to increase considerably?

Secretary SCHWELLENBACH. Yes, if we can assume all the things you assume or that you predict, undoubtedly the cost of living will go up.

Senator ELLENDER. What is that?

Secretary SCHWELLENBACH. If we can assume all of the things you assume and predict, undoubtedly the cost of living will go up.

Senator ELLENDER. You do not think Congress is going to continue a subsidy for farmers of almost $2,000,000,000 a year, do you?

Secretary SCHWELLENBACH. I do not know. I cannot answer that question.

Senator ELLENDER. I predict the cost of living is going to rise to such an extent that it is going to absorb all you are trying to do now for labor, and then some.

Senator TUNNELL. Your position, as I understand it, Mr. Secretary, is based on the fact that you distinguish between the legal minimum and the actual payments?

Secretary SCHWELLENBACH. Yes, sir.

Senator ELLENDER. All of which is born out of war.

Senator TUNNELL. Not all of it.

Senator AIKEN. Mr. Secretary, if you assume this great increase in cost of living, assuming all of the things which Senator Ellender assumes came to pass, you would also have to assume there would be no improvement in production, processing, and distribution machinery; isn't that true?

Secretary SCHWELLENBACH. Yes, that is correct.

Senator AIKEN. And we know there has been a development in the processing and distribution of food products that has done away with a great deal of the loss which had formerly occurred in the shipping and processing of strawberries. If, as he says, raising the minimum wage increases the price of sugar slightly, that would be balanced by the fact that the development of new processes of preserving strawberries and other foods that require sugar would be so much more efficient that it would offset the increased cost of sugar itself. I think, again, I am testifying instead of interrogating.

Senator TUNNELL. Senator Thomas has been very silent here, and I thought I would like to ask if he has any questions.

Senator THOMAS. I think, Mr. Chairman, maybe I ought to say this: The minimum wage is never anything that is for the benefit of all workers in all industries. When we passed the Fair Labor Standards Act, the average wage earner who was properly organized was way

above the 25-cent minimum, so the law did not do him much good, but it did do a great deal of good to the exploitable and exploited, very low paid labor. I think if you do not look upon the aim of this bill as taking care of the group that is not able to take care of itself, that we forget the real purpose of a minimum wage. Now, we know that there were, comparatively speaking, very few people who were getting less than 25 cents an hour when we passed the act, but we also knew that there were thousands of persons who were getting less, and the act was for their benefit.

This act, too, has its humanitarian aspects. The person who is already getting 75 cents an hour is not going to get any benefit from it, but the person who is just getting 40 cents is going to be benefited by it.

Senator SMITH. May I ask the Senator a question right there?

You suggest that those benefited are really those outside of the labor organizations which can adequately bargain to protect their own members?

Senator THOMAS. In presenting the bill to the Senate that statement was actually made, Senator. It was made in this way, that where collective bargining has been able to function, and it has functioned, this bill would not be helpful, but the bill is helpful to those persons who cannot use the agencies of collective bargaining.

Senator SMITH. I agree with you. I think women in the sweatshops may not be organized and such poor people may be exploited where the employers are ruthless.

Senator THOMAS. The take-home piecework, for example, in the manufacture of baseballs is an extremely interesting item of that kind.

Senator TUNNELL. If that is all, thank you, Mr. Secretary. We will ask that Mr. Hinrichs be the next witness.

TESTIMONY OF A. F. HINRICHS, ACTING COMMISSIONER OF LABOR STATISTICS, ACCOMPANIED BY DR. DOROTHY S. BRADY, COST OF LIVING DIVISION, AND DR. ROBERT J. MYERS, WAGE ANALYSIS DIVISION

Senator TUNNELL. Mr. Hinrichs, will you give your name and position to the stenographer?

Mr. HINRICHS. A. F. Hinrichs, Acting Commissioner of Labor Statistics.

Senator TUNNELL. All right, Mr. Hinrichs, you may proceed.

Mr. HINRICHS. Mr. Chairman, with your permission, I would like to introduce Dr. Dorothy S. Brady, the Head of our Cost of Living Division, and Dr. Robert J. Myers, who will be here in a moment, in charge of our Wage Analysis Division. I shall be talking chiefly about the cost of living and wages as they bear upon the problems of the bill, and while out of 10 or 12 years of experience in the Bureau of Labor Statistics I have acquired a certain expertness in both of those fields, there may be certain questions that I would like to turn to my real authorities for a definitive answer.

Senator TUNNELL. I am glad to hear from those who really know.

Senator ELLENDER. Will you give us your background, Mr. Hinrichs?

Mr. HINRICHS. I have been with the Bureau of Labor Statistics since 1934. In the period from 1934 to 1940, I was the Chief Economist of the Bureau of Labor Statistics. One of my primary concerns throughout that period was with studies of the cost of living and studies of standard family budgets and of actual expenditures. The other of my chief concerns was with wage studies. Both of these types of data are included in my testimony today.

Senator ELLENDER. What is your educational background?

Mr. HINRICHS. I received my Ph.D. from Columbia University, New York City, in 1923. I taught for 2 years as instructor at Columbia. I was, for about 3 years, the director of research for the New York State Bureau of Housing and Regional Planning. I was on the faculty of Brown University from 1927 to 1934 as associate professor of economics and statistics, and simultaneously was director of the Brown Bureau of Business Research. Since 1940, I have been in charge of the work of the Bureau of Labor Statistics. During the war period I acquired a larger familiarity with the cost of living than I would have wished for, had I had my way during these last few years.

Senator ELLENDER. Have you ever worked on a farm?

Mr. HINRICHS. I have worked on a farm, but I would not like to say I have been dependent for my support on farm work. I worked as a boy on a farm.

Senator ELLENDER. Have you ever worked in a factory?

Mr. HINRICHS. Only for one summer.

Senator ELLENDER. The testimony that you are now giving is based purely on statistics that you and your force have gathered through the Department of Labor, as I understand it.

Mr. HINRICHS. Yes, with consideration of all other evidence that has come into the picture over some century or more of study of this problem of living standards. We would, for example, regard it as relevant to an appraisal of the emergency budget that I shall describe to you to know that back in 1790 in England there was a gentleman who developed a budget for which he pled very earnestly. This would have allowed every family oatmeal and milk. By general consent that kind of a budget today would be regarded as a rather inadequate living. It may be interesting to know however, that the emergency budget of WPA consisted, to the extent of more than 50 percent, of the equivalent of oatmeal and milk.

I presume it is the ultimate objective of minimum wage legislation to insure at least a minimum standard of living to the family of every regularly employed worker. In that connection, then, two questions are relevant to the establishment of a particular minimum wage:

First of all; Will the minimum wage yield a minimum standard of living?

Second, Is it practicable to establish such a minimum?

If I may, I would like to address myself first to the question of the cost of a minimum standard of living and its relationship to the wage rates set forth in this bill.

Senator TUNNELL. You are not going to confine yourself now to the written statement, I take it?

Mr. HINRICHS. I shall be glad to be interrupted, sir, at any time.

Senator TUNNELL. Just take your own course.

Mr. HINRICHS. I planned to move fairly closely with this written statement, but I am delighted to be interrupted at any time if a question arises. If further testimony is desired than that covered in the

written statement, I can answer at least certain questions from other data on the table before me.

I would like to start, so far as this minimum standard of living is concerned, with a statement of expert opinion. A minimum wage of 40 cents as established in 1938 could not have been regarded as adequate for the support of a family even at minimum levels. At that time a 40-cent wage might conceivably have yielded as much as $800 a year. That presupposes 2,000 hours of work at the 40-cent rate. It would be the exception rather than the rule that any man would have an opportunity to gain that much employment during the course of the year.

The lowest cost budget that I know anything about was an emergency budget priced by the WPA in 1935 and costing on the average $903 in 59 representative cities. By 1938 prices had risen, so that this budget would have cost about $925.

That emergency budget was not intended to result in adequate or safe living. It was in every sense a budget for an emergency in family living. It was described at the time as a budget which—

> might be questioned on the grounds of health hazards if families had to live at this level for a considerable period of time.

Even budgets planned for relief families were often more adequate, for relief agencies normally do try to provide for emergencies as they occur. This budget provided for absolutely no emergencies and would have been more likely than not to result in malnutrition. It is significant for our present purposes only because it demonstrates how utterly inadequate the standard permitted by 40 cents was.

In 1938, however, there were cases of wages of 10 cents an hour or less and many cases where less than 20 cents an hour was paid. Under such conditions it may have been necessary to limit the immediate goal of the act to the establishment of the 40-cent minimum. With reference to that goal it is clear that it was only a way-station on the road to a decent standard.

Senator SMITH. Mr. Chairman, may I ask a question right there?

Senator TUNNELL. Yes, Senator.

Senator SMITH. Are you distinguishing at all between the wages received by a man with a family and a man without a family?

How about a boy selling papers, or something, who may be glad to make a little money?

Mr. HINRICHS. I am talking throughout about the minimum cost for the maintenance of a family.

Senator SMITH. I wanted to get it straight. Might I ask you: Were the wages as low as 10 cents an hour where a person had a family to support?

Mr. HINRICHS. Yes, many. Simply because there are 130 million people in the United States, the number getting 10 cents was quite large even though that was not a common wage at that time; but wages in the cotton-textile industry, in the knit-goods industries, in lumbering operations, in tobacco stemmeries of 15 cents and less than 20 cents an hour were found in significant proportions. There was a rather large concentration of wages at that time in many industries at 20 to 25 cents an hour, and for many industries at that time 30 cents looked like big money. We do know of large numbers of instances where those low wages did constitute essentially the sole support of a family.

Where wages at the level prevail there is of course the most intense pressure on the wife of the family to supplement the family income, irrespective of her home duties and irrespective of the age of her children. Therefore as you go down the income scale among the chief earners, you do find increased participation in the labor market by women with infant children. That, I take it, is a condition that we would like to correct.

Senator SMITH. You feel if we can raise that minimum there would be less competition in the labor market and probably the alleged 60,000,000 job figure might be lowered?

Mr. HINRICHS. Yes, I am certain there would be less pressure on married women to come into the labor market.

Now, the bill you have before you, S. 1349, provides an immediate minimum of 65 cents and a minimum within 2 years of 75 cents an hour. These minima would permit of earnings for a fully employed worker of $1,300 now and $1,500 in 2 years.

Most of the discussion which I have heard in the last few minutes has centered around the 65-cent minimum. I have carried my own thinking in this presentation in terms of the relationship of the upper limit, the 75-cent minimum, to living standards. Please bear in mind, therefore, if I do not correct myself as I go along, that you are talking, when you say 65 cents, about the $1,300 standard.

The statistical evidence of the inadequacy of the standard that would be permitted by a $1,300 or $1,500 family income seems to me to be almost overwhelming. I think it can be said, and I would say as a matter of expert opinion, that for a family to obtain a minimum standard of adequacy a worker must either earn more than 75 cents an hour or must work many hours of overtime, or else two or more people in the family have got to have jobs.

Now all that I can say in my capacity as an expert with reference to that figure of $1,500 as a minimum is that we do not know how much more than $1,500 would be required. The Bureau of Labor Statistics is making a study of precisely this subject with funds appropriated for the first time this year, and the results of that study are not going to be available for a number of months.

We do know that an adequate budget costs more than $1,500, which is the immediately relevant question. I can suggest, from my experience and from our statistics, two tests of that statement. First of all, let us take the standard budget approach.

Senator AIKEN. Mr. Hinrichs, for what size family is the budget of $1,500 insufficient; a family of four?

Mr. HINRICHS. A man, wife, and two children. I would hesitate to say it was adequate for a man, wife, and one child; but I simply do not know how much higher you have got to go. I am thinking in terms of the family of a man, wife, and two children.

Senator ELLENDER. When you say a minimum of $1,500, you mean for city folks or country folks? Just exactly, what is your yardstick there in reaching that conclusion? What class of people or employees do you have in mind?

Mr. HINRICHS. We are talking about urban wage earners.

So far as the rural standard is concerned, I would prefer to have that described by the Department of Agriculture.

Senator ELLENDER. Let us say the rural wage earner, then. Let us take one living in Tennessee, in a town of 3,000, and one living in New

York City, what difference, if any, will you make in the budgets of two families, that are of the same number?

Mr. HINRICHS. The range of the difference of costs is very much narrower than it is ordinarily believed to be, Senator Ellender. I can identify the figures, as I shall in a moment in my testimony, as a range of $1,500 to $1,800 between the lowest cost city and highest cost cities of which we had any knowledge in 1943.

Senator ELLENDER. What population of cities do you have in mind?

Mr. HINRICHS. The $1,500 was Mobile; the $1,800 was related to New York City, Washington, D. C., and San Francisco.

Senator ELLENDER. Have you made any studies as to urban localities where the population is, say, 1,500?

Mr. HINRICHS. We worked back in 1935 and 1936 in a group of small towns both in the North and in the South. That study showed that the size of community may make at the most something like a 10-percent difference in the cost of the budget as against living in a large city.

Senator ELLENDER. When you say size of community, do you mean progressively? For instance, 1,500 persons, 5,000 here, 10,000 yonder, and 7,000,000 in New York? What do you mean by that? 10 percent of what?

Mr. HINRICHS. That budget costing, let us say, $1,500 in a city of more than 100,000 population might be expected to cost about 10, possibly 15, percent less in communities of 2,500. The break is by no manner of means as sharp as you would believe it to be. As a matter of scientific accuracy we were forced to note in our study that differences in costs in communities of the same size were so much greater than average differences for communities of different size considered as groups, that the latter differences could not be regarded as proved by the data. The most conspicuous difference in cost is the difference in rents in large and small communities. You also have some lower cost in the smaller town due to the possibility of using home-grown food. On the other hand, certain kinds of commodities are likely to cost more, not less, in the small community. Would I be correct, Dr. Brady, if I said furniture is an example of that sort of thing?

Dr. BRADY. Yes.

Mr. HINRICHS. You purchase that in a small community either at relatively high cost because of the low rate of turn-over in the store or else it is a substantial inconvenience to purchase it by going to the city, or else you have the alternative that is also open to the city family of purchasing at the same price from a mail-order house.

Senator ELLENDER. Do I understand the testimony you will give now is based on costs in Mobile and Washington?

Mr. HINRICHS. Among other evidence that I am offering, we have figures for Mobile and Washington. There are also figures for some 32 other large cities. All that I wanted to say here was that at the time that the WPA was developing this emergency budget, it also developed what was called a maintenance budget. At the time that the maintenance budget was developed it was perhaps a reasonably adequate standard to apply in answering the question of whether a given wage for common labor was adequate to maintain a family.

It is significant to note that in 1941, before prices began to rise substantially, that budget cost about $1,500. I am going back here to the period of 1941, in a discussion of the cost of that budget, because up to that time the dislocation of the market had been so slight that there was no question in anybody's mind of the ability of the Bureau of Labor Statistics to measure changes in the cost of living. The pricing of that particular budget was discontinued by the Bureau after June 1943, because we knew that under wartime conditions our figures for that budget were too low, and we could not safely estimate the cost of a maintenance budget without going out and doing a completely new pricing job from the ground up. At that time, namely in 1943, the cost of that budget, which we knew to be too low, was at least $1,500 in the city with the lowest cost, namely Mobile, and more than $1,800 in the highest cost city, which was New York City. The general average would have fallen somewhere in between, in the neighborhood of $1,700.

Now, I think much more significant than those figures which I have given are the results of a special analysis which we have just completed to serve the needs of this committee. We have studied at various times the expenditures and savings of urban wage-earning families, and we found that the average break-even point for urban families with two or more persons was about $1,425 in 1935–36, and about $1,475 in 1941, and $1,950, after income taxes, in 1944. We do not think that any drastic shift has occurred between 1944 and 1945.

Senator AIKEN. Mr. Hinrichs, do you include in these costs such things as dentists' bills and education?

Mr. HINRICHS. In that maintenance budget there was a small allowance for medical costs and for the costs of dental care. There was nothing for education. It was assumed that there were public schools, that all books and school supplies were free. If a family happened to have a talented child and wanted to give it music lessons they either arranged that through a settlement house or they took it out of their food budget, as some of them did.

Senator AIKEN. You assume children under 18?

Mr. HINRICHS. Yes.

Senator AIKEN. There was no allowance for sending them to business school or college?

Mr. HINRICHS. No. Now, these figures on the break-even point I think are extremely significant. Those figures mean that even in 1941 any large group of families with incomes of less than $1,475, which is just about the amount that would be permitted by the 75-cent minimum, that any large group of such families in the aggregate spent for goods and services more money than they received. Some families of course broke even and in some years they saved money, but, by and large, the pressure of living costs at those levels is so great that the group as a whole has gone into debt.

Now, I have not lived as factory worker, but I have lived among factory workers. I know something of the way in which the factory worker and his wife apportion their funds and I can assure you that insofar as my knowledge extends they are the most careful managers that I know anything about. Your farm families are also ex-

tremely careful managers. The low-income families of the United States are not wastrels. This business of running continuously into debt is one of the things which constitutes the major bugaboo for the wife of any wage earner. I know of no more significant test of the burden of a minimum standard of living than the point at which families go into debt and stay in debt on the average year-in and year-out because they are unable to get down to the point where they balance their budget. I tell you at the present time that the break-even point is running in the neighborhood of $1,950.

Now, I am talking about information derived from a small sample. I will not fight with you whether the break-even point is $1,900 or $2,000, or $1,800 even, if you like. I do tell you that the break-even point for families in the United States at present is substantially above the highest level fixed by the highest minimum wage proposed in this bill.

Senator ELLENDER. How did you go about sampling the families in these various cities?

Mr. HINRICHS. It was a very carefully selected sample. It is small, but drawn in a random fashion, which experts would agree would give you results which should be accurate within a comparatively small percentage. When I say that I do not want to insist that the break-even point is $1,950 rather than $1,800, I have gone far beyond the errors of sampling.

Senator ELLENDER. As to those that were in debt, as you say, or are still in debt, what was the cause of that? Did you find out what they were purchasing or what they were contracting to purchase?

Mr. HINRICHS. There were a large variety of factors that contributed to that. In a major emergency any large doctor's bill in a single year is very likely to throw the family over the borderline.

Senator ELLENDER. Was that the chief factor that caused it?

Mr. HINRICHS. May I ask Dr. Brady, who has great familiarity with the details, to continue with that?

Dr. BRADY. These figures, in the first place, apply to families of different sizes, and in addition to the group that would have large medical bills during the year and not be able to pay the doctor out of income of less than $1,500, at least to pay him completely, you have all of the families with large numbers of children spending more than their income at these low-income levels. In fact, if you were to take families of five you would find that the break-even point comes at an even higher level than this average of all sizes, families of two or more persons in the family. I think perhaps those are the two principal things. You will also find in the group of families below this break-even point, large numbers who actually are attempting to help their less fortunate relatives, such as parents who live in some other community, or sending home money to the family on the farm, and that type of thing. You will also find some of them doing what Mr. Hinrichs suggested a minute ago, attempting to help a child through business school or college. So, all of these things that are not provided for in our notion of what a minimum standard is in terms of budget

for a family of four help to throw families into the class that accumulates certain amount of debts during the year.

Senator TUNNELL. There is not a family that does not have some extraordinary expense, where a child breaks an arm, or eyes have to be examined, or sicknesses of some sort occur.

Dr. BRADY. And those things come almost at the rate of one extraordinary expense a year we find on examining these schedules, so you have to assume something is likely to happen each year.

Mr. HINRICHS. There is one final test that I think can be applied to the current adequacy of a $1,500 budget, which I am suggesting only because it is the top limit provided for in the bill. That test is the proportion of urban families now living on less than this amount. Nineteen urban wage-earner families out of 20 had more than this amount in 1941.

Senator ELLENDER. Nineteen out of 20?

Mr. HINRICHS. Nineteen out of twenty. That does not prove that present wages are adequate, for only about three out of five families with incomes of $1,500 to $2,000 achieved this level through the earnings of one worker. The other families had two or more persons working to earn less than a living wage between them. However, it seems to me that this figure of 19 out of 20 does mean if you consider the way families are living as any guide to the determination of adequacy, that $1,500 for a family is a very low standard to aim for.

Senator TUNNELL. Dr. Hinrichs, I hate to interrupt you. You can be back tomorrow, can you not?

Mr. HINRICHS. Yes, sir; at your convenience.

Senator TUNNELL. It is now 12 o'clock, and we all feel we should be back in the Senate at the convening of the session.

Mr. HINRICHS. May I insert the tables in the record, which bear on my last statement?

Senator TUNNELL. They may be inserted.

(The tables referred to are as follows:)

TABLE 1.—*Total money income—Urban wage and salary families of two or more persons: Percent with less than specified amounts of income (prewar and war)*

Annual money income	Percent of urban wage and salary families of 2 or more persons	
	Prewar 1941	War 1944 (preliminary)
Under $500	3.1	0.3
Under 1,000	13.0	2.1
Under $1,500	26.9	5.5
Under $2,000	46.3	13.5
Under $2,500	64.4	25.3
Under $3,000	79.3	39.0
Under $5,000	95.5	81.0
All urban wage and salary families of 2 or more persons	100.0	100.0

TABLE 3.—*Earners per family Urban families of 2 or more persons, by number of earners, by annual money income—1941*

Annual money income	Percent of families of 2 or more persons with—		
	Two or more earners	One earner	No earner
Under $500	28.2	46.2	25.6
$500 to $1,000	35.9	46.2	17.9
$1,000 to $1,500	29.3	62.8	7.9
$1,500 to $2,000	37.2	61.1	1.7
$2,000 to $2,500	37.8	59.3	2.9
$2,500 to $3,000	50.7	49.3	0.0
$3,000 to $5,000	67.7	31.7	0.6

Source: U. S. Department of Labor, Bureau of Labor Statistics.

Senator TUNNELL. We will meet again tomorrow at 10 o'clock.

(Whereupon, at 12:01 p. m., an adjournment was taken until 10 a. m. Wednesday, September 26, 1945.)

AMENDMENT OF THE FAIR LABOR STANDARDS ACT

WEDNESDAY, SEPTEMBER 26, 1945

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON EDUCATION AND LABOR,
Washington, D. C.

The subcommittee met, pursuant to adjournment, at 10 a. m., in room 357, Senate Office Building, Senator James M. Tunnell presiding.

Present: Senators Tunnell, Ellender, Guffey, La Follette, Aiken, Smith, Morse, and Myers.

Senator TUNNELL. The meeting will please come to order.

Mr. Hinrichs.

TESTIMONY OF A. F. HINRICHS—Resumed

Senator TUNNELL. You were in the midst of your testimony yesterday, Mr. Hinrichs. You may proceed, if you will.

Mr. HINRICHS. I had indicated yesterday that I was going to address myself first to the question of the adequacy of the living standards which would be afforded by even the 75-cent rate to a family depending upon the earnings of a single worker. I had concluded my testimony on that point, except insofar as the committee may have questions.

I may say, in summary, that, insofar as I know, the evidence is conclusive on the subject that even the 75-cent rate will not produce an adequate minimum living standard at the present time, and that the inadequacy of the family living under conditions of the 65-cent rate is overwhelmingly demonstrated. The extent of that inadequacy is such that even were there to be a reversion to substantially lower price levels than now prevail—and I do not believe that that is going to happen—the standard of living afforded by the 75-cent wage would be a bare minimum.

Senator ELLENDER. What period of time does the information cover to demonstrate that a minimum of 75 cents per hour is inadequate?

Mr. HINRICHS. Those are materials which have been compiled at various times from 1935 to date.

Senator ELLENDER. Are you able to say how much would have been required in 1935?

Mr. HINRICHS. At that time it would probably have been in the neighborhood of $1,300 to $1,400.

Senator ELLENDER. Were not all commodities at a very much lower price at that time as compared to the present?

Mr. HINRICHS. They were at very much lower prices than they are now, yes.

Senator ELLENDER. How much lower?

Mr. HINRICHS. About 25-percent lower than they are today. The present level of commodity prices is about 32-percent higher than it was in 1935.

Senator ELLENDER. You mean at the present time?

Mr. HINRICHS. At the present time, yes.

Senator ELLENDER. You mean that the living costs in 1933——

Mr. HINRICHS. I said 1935, sir.

Senator ELLENDER. Or 1935 were only 28 percent lower than they are today?

Mr. HINRICHS. About 25 percent lower than they are today.

Now, if you turn that figure the other way around it becomes a different figure, sir. They are now 32 percent higher than they were in 1935.

Senator ELLENDER. You economists manipulate figures so I cannot follow you.

Senator TUNNELL. It is not hard to follow, Senator. If you take the percentage on the lower base it is higher than it is if you take it on the higher base.

Senator ELLENDER. I am asking particularly on the living cost, the cost of living. I think there is a big difference of opinion between the Labor Department figures and the CIO and A. F. of L. groups' figures as to the difference in the cost of living from 1941 to 1944 or 1945.

Mr. HINRICHS. There is no question as to the fact that the CIO and other labor groups as well disagree with the figures of the Bureau of Labor Statistics. Our figures have been subjected to a good deal of searching analysis. I have a great deal of confidence in them. Those figures, however, relate very particularly to the changes in prices that affect the average wage-earning family. They are not compiled, and never have been compiled, from the point of view of showing the effect of changes in prices on the very lowest income groups of the country, such a group, for example, as would have been affected by a 40-cent minimum wage. The level of income back in 1934–35, to which our figures refer, was an income in the order of about $1,500.

Senator ELLENDER. Now, Mr. Hinrichs, as I understand, you stated a while ago that the cost of living in 1933 was 28 or 33 percent—what figure did you use?

Mr. HINRICHS. I used the figure showing that the current prices are about 32 percent higher than they were in 1935. May I give you some figures, Senator, that will clear up your point?

Senator ELLENDER. I want to get something in my head first, if I can. You say the prices of goods in 1935 were only 32 percent lower than they were in 1944, or whatever year you used.

Mr. HINRICHS. May I give you some figures I think will clarify the question, Senator?

Senator ELLENDER. Well, the thing I want clarified is this, if you do not mind: I have seen figures showing that the cost of living from 1941 to 1944, I think, increased 23 to 28 percent, as I recall them, and you now say that the increase in cost of living from 1935 to 1944 was only——.

Mr. HINRICHS. 32 percent.

Senator ELLENDER. Now, will you explain that to us?

Mr. HINRICHS. Yes. Various dates have been used here. Let me just indicate for certain key dates what the figures for our index show. We base our index on the average level of prices through the period 1935–39. There was some fluctuation in those years, in some years higher and in some years lower. Taking that period 1935–39 and calling the prices in that period 100 percent we find that the lowest level of prices since the First World War came in June of 1933 at which time our index stood at 90.8. By 1935 prices had risen from that low of the depression; by March 1935 the index stood at 97.8.

Senator ELLENDER. Now, in terms of cost of living, can you translate that into a stated percentage to demonstrate how much the cost of living increased?

Mr. HINRICHS. That would mean that during that period prices had risen about 7½ percent. The difference in points on the index for the two dates, 7 divided by 90.8 gives your answer of a 7.7 percent rise.

Senator ELLENDER. Very well.

Mr. HINRICHS. Now, between 1935 and 1939, as I say, there was a minor rise and a minor fall in prices. There was no substantial change in prices until the beginning of 1941. In January of 1941 our index stood at 100.8. Now, relative to the 1935 figure that I gave you, that means that there had been a further rise in the cost of living by January 1941 of about 3 percent.

The rapid rise in prices occurred from 1941 to the spring of 1943, which was the time of the hold-the-line orders. By May of 1943, our index of prices stood at 125.1. That is roughly 25 percent higher than in January of 1941.

After the hold-the-line order was issued and after certain subsidies with respect to food prices, prices on the average fell very slightly. I said that in May 1943 the index stood at 125.1. In February of 1944 the index stood just a little lower, 123.8.

Since those early days of 1944 there has been a slow but on the whole rather persistent rise of prices, and the index for July 1945 stands at 129.4. That is at about 28 to 29 percent higher than the level of the index in January 1941. Now, that is the story as told by the figures of the Bureau of Labor Statistics.

Senator ELLENDER. If the index was 90 in 1933, as you have indicated, and it is 129.4 now, or the last figures you have, would that mean a rise in the cost of living of 39.4 percent?

Mr. HINRICHS. That will work out at an increase of about 44 percent from 1933 to 1945.

Senator ELLENDER. If the increase is 44 percent, as you say, from 1933 to 1945, how much would it have required in 1933 to maintain the standard of living that you are now suggesting?

Mr. HINRICHS. I am sorry, I will have to refer back to my testimony of yesterday, Senator. I said with reference to the amount that is required to maintain an adequate standard of living at the present time, that the Bureau of Labor Statistics cannot say how much more than $1,500 is required today. We are currently engaged in making a study of that subject with an appropriation made this last June. That study is under way. The results of that study cannot be made available for a number of months. I therefore have no way of tell-

ing you whether you are talking about $1,600 or $1,700 or $1,800 or $2,000, or $2,500.

Senator ELLENDER. Let us take any figure you desire. Let us take $1,600, if you will. If it requires $1,600 under present conditions to maintain a family, as you have indicated, with the cost of living 44 percent less in 1933, how much would it have required in 1933 to maintain such a family?

Mr. HINRICHS. I think it probably takes more than $1,600 at the present time.

Senator ELLENDER. Take $3,000. I don't care what figure you take. What I want to put into the record, if I can, is how this cost of living formula is worked out for you. In other words, if the cost of living was 44 percent less in 1933 than it is now, I would like to have that decrease in the cost of living translated in what the living costs of a family, say, of four would have been at that time.

Mr. HINRICHS. Yes. I said that prices today are about 44 percent higher than they were in 1933.

Senator ELLENDER. That is right.

Mr. HINRICHS. You have now asked me how much lower prices were in 1933 than they are today, and that involves simply turning the figures around. The answer is that prices can be described as being either 30 percent lower in 1933 than they are today, or that prices today are 44 percent higher than they were in the earlier period. Therefore, if you take the $1,600 figure that you suggested but which may be too low for a current figure, and deduct 30 percent from that you would come out with the figure of $1,120, if my arithmetic is correct.

Senator ELLENDER. I thought you said the figure was 44 percent. That is that the cost of living in 1933 was 44 percent less than 1944 and not 30 percent.

Mr. HINRICHS. Senator, I am sorry if I don't make myself clear. Let us start with the price of cotton. Cotton was 5 cents a pound in 1932, or lower; is that right?

Senator ELLENDER. That is right; that is, for the raw material.

Mr. HINRICHS. It is about 20 cents a pound today.

Cotton prices today are about 300 percent higher than they were in 1932.

Senator ELLENDER. Now, that is for the raw material.

Mr. HINRICHS. I am trying to do the arithmetic.

Senator ELLENDER. I say that is for the raw material. When you convert that into the cost of the shirt that I am wearing——

Mr. HINRICHS. Maybe we ought to strike that from the record. I did not want to talk about the price of cotton as such.

Senator ELLENDER. No. You take raw cotton at 4 cents, and then you say today it is 300 percent higher, but that the price of 4-cent cotton was not properly reflected in the cost of the material that was made from it.

Mr. HINRICHS. That illustration was selected in all innocence, Senator. I will change it to a cotton shirt that used to cost a dollar and it now costs $2.

Senator ELLENDER. That is just an assumption on your part.

Mr. HINRICHS. It is awfully close to the truth. That means that the price of shirts have increased 100 percent. Now, when you turn the question around and say how much less did shirts cost back in

the good old days when you could pay a dollar for a shirt the answer is they cost 50 percent less than they cost today. That is, it is now $2, it was $1, and a dollar is 50 percent less than $2. That is what I am doing with the index figures that I was talking about.

Senator ELLENDER. Using your own method, you have indicated the cost of living in 1933 was 44 percent less than it is now.

Mr. HINRICHS. 30 percent, Senator.

Senator ELLENDER. I am taking your own index. You gave us an index a while ago in 1933 that showed 90 under 100; is that true?

Mr. HINRICHS. Yes.

Senator ELLENDER. And today it is 29.4 over 100. 29.4 plus 10, what does that make?

Mr. HINRICHS. That makes an increase in that period of——

Senator ELLENDER. 30 percent?

Mr. HINRICHS. I am sorry, 44 percent. If you divide 129 by 90 you will see that it comes out as 1.44. That means a 44 percent increase.

Senator ELLENDER. I may be a little confused with figures.

Senator TUNNELL. I think the Senator is basing his percentage on different things from the witness. Now, you take your shirt; there was a 100 percent increase in that shirt, and then it is a 50 percent reduction to get it back. It depends on which way you are going.

Senator ELLENDER. I am not much at figures, I may be confused a little bit, but as I understood you to say—and if I am wrong, you may say so—you said that the cost of living in 1933 was 44 percent less than it is now. Is that a true statement?

Mr. HINRICHS. It was 30 percent less than it is today.

Senator ELLENDER. What is the 44 percent figure that you gave a while ago?

Mr. HINRICHS. The 44 percent figure answers the question how much higher is the cost of living today than it was back in this period when prices were very low.

Senator ELLENDER. That is the very point I am making.

Mr. HINRICHS. The 30 percent figure, Senator, is the one you want to use.

Senator ELLENDER. Why not the 44?

Mr. HINRICHS. Because that corresponds to the 100 percent increase in the price of the shirt. You see, we started with very low prices.

Senator ELLENDER. I would rather apply it to the cost of living. That is the point that I want to try and develop if I can.

Mr. HINRICHS. May I help you in just a second, sir, with a pencil?

Senator ELLENDER. Surely. Besides me, you will have to convince 92 Senators aside from those present.

Mr. HINRICHS. In 1933, we started with an index figure of roughly 90, and today the index is 129. To find out how much higher the prices are today than they were in 1933, we want to divide the present figure, which is 129—that corresponds to our $2 for the shirt—by the figure of 90, which is where he started from and which corresponds to the price of a dollar per shirt. When we divide 129 by 90 we find that we have a figure of 1.44. Now, that can be interpreted to mean a 44 percent increase in prices from the time when they were very low.

Now, your problem today is not to start from 1933, when prices were low, but to start with prices as we find them today, when prices are high. You want to see how much less we would need than we do today if prices went back to the 1933 levels. So in order to answer your question we simply turn our figures around and we say prices today are 129. But back in 1933 they were only 90, so we divide 90 by 129, just the way we divided the dollar that we used to pay for the shirt by the $2 we now pay for it, and we come out then with a figure of just about 70. Now, that 70 means that prices in 1933 were 70 percent as high as they are today, or you can say that prices in 1933 were 30 percent lower than they are today. That is saying the same thing.

So, what you want to do is to say that starting with this $1,600, if prices were 30 percent lower than they are today, how much would it cost to buy the goods that you can buy today with $1,600. Now, 30 percent of $1,600 is $480. We subtract that and you come out with an answer of $1,120.

Now, if you started with a $2,000 figure today you would take off $600, or say $1,400. If you go still higher to the $2,500 figure you still take off 30 percent. But it becomes a larger figure in dollars; so the answer is $1,750.

Senator SMITH. Doctor, will you put in the record the items that go to make up the index? I mean just an outline of how you make up the index.

Mr. HINRICHS. Yes.

Senator SMITH. Is that the same index you are using for the 90 percent figure as for the $1,600 cost of living figure?

Mr. HINRICHS. Except as it has been absolutely necessary to make certain modifications due to the disappearance of goods in wartime.

Senator SMITH. I was just interested in having the record show what you considered in developing the index.

Mr. HINRICHS. We will submit a description of the index which we have published.

(See exhibit A, p. 63.)

Senator SMITH. Does your index vary from indexes gotten up by other groups, such as the National Association of Manufacturers? I am confused when one says this is the cost of living and another says this is the cost of living, when one says there are so many unemployed and another says there are so many unemployed. We want to get to a norm so we can have accurate figures as a basis on which to draw a conclusion.

Mr. HINRICHS. The only other national index of the cost of living that I know of is one maintained by the National Industrial Conference Board. The changes shown by that index are very similar to the changes shown in our index.

The index that the Bureau of Labor Statistics compiled was studied, so far as its accuracy is concerned, first by a committee of the American Statistical Association which rendered a report and found the index accurate. The President, in November 1943, appointed what came to be known as the President's Cost of Living Committee, under the chairmanship of William Davis, with two labor men and two employers serving on that committee. Mr. Davis, himself, appointed a committee of experts to advise him. That committee of experts studied

the work of the Bureau of Labor Statistics, studied all of the evidence that the labor organizations were able to offer, and found, in the fall of 1944, that the Bureau of Labor Statistics index does measure with substantial accuracy the influence of price changes on the cost of living of an average wage-earner family in the United States. They found that there were certain kinds of changes which had occurred in the market, which are probably not adequately measured by the Bureau's index. The most notable of those was the influence of quality deterioration on the effective cost of goods. In connection with quality deterioration the President's experts estimated that the effect of that, had we been able to fully measure it, might have amounted to one and one-half to two and one-half points on the index.

In addition to the influence of quality deterioration which the Bureau had recognized in its publications but had said it was unable to measure and had been advised by these experts not to try to measure, in addition to that there were other small factors for which the committee estimated a maximum allowance that it might be necessary to make. These experts for the President's committee came to the conclusion that for many purposes it was going to be wise to add an allowance of something like 3 to 4 points of rise to the 28 or 29 points shown by the Bureau's index since 1941. So it may be more accurate to say that influence of price changes on an average wage-earner family has amounted to something like 32 or 33 percent rather than the 29 percent shown by the Bureau of Labor Statistics figures.

The whole history of that case was subsequently reviewed by the new Secretary of Labor on his coming to office, and he issued a statement on the subject the other day in which he announced his appraisal of the substantial accuracy of the Bureau's figures as a measure of the influence of price changes on the cost of living for the average wage-earner family.

(The statement referred to is as follows):

(At a press conference on July 17, 1945, Secretary of Labor L. B. Schwellenbach announced he would have a study of the cost of living index of the Bureau of Labor Statistics made by Assistant Secretary of Labor Carl Moran. That study now has been completed, thus the Secretary is making public this statement.)

UNITED STATES DEPARTMENT OF LABOR,
September 6, 1945

STATEMENT OF LEWIS B. SCHWELLENBACH, SECRETARY OF LABOR, REGARDING THE COST-OF-LIVING INDEX

(Compiled by U. S. Department of Labor Bureau of Labor Statistics)

1. The alertness, intelligence, honesty of approach and technical competence of the staff of the Bureau of Labor Statistics is beyond question. I am satisfied on this score from the examination made by Second Assistant Secretary Carl Moran and the investigations by the American Statistical Association Committee and the Technical Committee on Cost of Living.

2. The presently named Cost-of-Living Index measures the influence of average retail prices of selected commodities and services on the cost of a fixed standard of living for an average family of moderate income in large cities of the United States.

3. For what it is designed to measure, the present index is scientifically accurate. The several expert reports made by disinterested statistical authorities in 1943 and 1944 demonstrate this.

4. The present index will be continued because it is worth while to have a measure of the influence of price changes on living costs.

5. The name of the present index has been changed to Consumers' Price Index for Moderate Income Families in Large Cities, as originally recommended a number of months ago by the Bureau of Labor Statistics. This should end the confusion and controversy caused by misunderstanding of what the index is designed to measure and by the use of the index for purposes for which it was not adapted.

6. The index should not try to reflect all the other factors that also influence family expenditures. There is no way of determining statistically whether changes in total expenditures are necessary or voluntary. Periodic field studies of actual expenditures and purchases, rather than an index, is a more accurate method of determining the way in which families are living, and consideration will be given to instituting such studies.

7. Consideration will be given continuously to changes in the Bureau's program; in such determination, two general principles will govern;

(1) A definite, specific, and concrete objective should be served by the compilation of any statistics. The objective sought must be sufficiently worthwhile to justify the time, effort, and expense involved. It is essential to ascertain what statistics are of most value, and produce them; that can best be done by continuous consultation with all interested parties.

(2) The Government, management, and labor need facts of unquestioned accuracy to determine labor policies. The United States Department of Labor will continue to meet that need. The Bureau's figures would be valueless if either incompetently assembled or deliberately arranged to prove a predetermined conclusion. Research must not be prostituted to policy; instead, policy must be based on true facts determined by honest and competent research.

Mr. HINRICHS. Here I would like to point out, if I may, one rather important fact. The goods that the Bureau of Labor Statistics priced were the goods which were purchased prior to the war by an average wage-earner family, a family with an average wage-earner income. At that time the average was in the neighborhood of $1,500 to $1,550. We have not attempted to price, and have not had the resources to price a budget for a family that was attempting to live on $800, which would have a minimum wage-earner family with one worker fully employed at 40 cents.

Now, it is known that the factors which have operated during wartime have tended to bring about a greater increase in the cost of living for the lowest income families among the wage-earner group than they have for the average. There are several reasons why that would be the case. In the first place, food, which has risen more than any other item in the family budget except clothing, constituted a more important portion of the budget of the very low wage-earner family than it did of an average wage-earner family. There are offsetting factors. That means that the errors caused from that point of view are less than they might be thought to be in the first instance. All we know is—and we are quite sure about it—the influence of food price changes would somewhat raise the cost of living index for the lowest income groups.

Secondly, one of the most important changes that occurred in connection with clothing prices has been not the increase in the price for a standard article but the disappearance of the lowest-priced merchandise which was bought by the lowest income groups. The trouble with my figure for the dollar shirt that became $2 is that what was the dollar shirt has tended to disappear almost entirely from the market. It has been more profitable to manufacture what was formerly a $2.25 shirt to sell for $3.25 now. But the fact that it has been necessary to go from low-priced merchandise to higher-quality merchandise has imposed a very special burden on the lowest income

families. The housewife who used to buy a 97-cent house dress just cannot find that kind of garment any more in the market, and if she is coming into the market she comes in for a house dress which is priced today well above $2. It is that kind of thing which makes these cost-of-living figures of ours inapplicable to a family that was earning $800 back in 1939 or 1941. That we know. Everyone is in complete agreement on that one point.

Now, I think I would rather leave the contention of the labor groups that the cost of living for an average wage-earner family has risen by more than 40 percent from 1941 to them rather than to try to argue their case for them. I think they are incorrect in their contention. That is not merely a personal opinion; it represents essentially a paraphrasing of the experts of the President's committee. The labor groups, however, do not admit the findings of those experts as being adequate to the kind of case that they are arguing.

Senator SMITH. I think we are going to be confused here if we have different experts arriving at different conclusions. I think we ought to have a clear basis so we can intelligently arrive at a solution of the problem.

Mr. HINRICHS. May I put it this way, Senator, as a contribution. You started with a minimum wage of 40 cents in the law of 1938. Taking into consideration only the changes in prices, as measured by the Bureau of Labor Statistics, which is probably the most accurate immediate guide that is at hand, you would find that 40 cents was no longer worth what it was back in 1938, but to get anything like equivalence for that 40-cent figure, you have probably got to go to a figure of 55 cents or higher.

Senator SMITH. I think that is clear enough. Your point is then, that by any of your indexes you would reach that point.

Mr. HINRICHS. Yes.

Senator SMITH. I hope that ultimately we will get indexes that the experts are agreed upon.

Mr. HINRICHS. You do not wish it any more earnestly than I do. I had hoped that this issue was long dead and buried.

Senator TUNNELL. Would it not make a difference as to what particular item a family's living standard was based on? That is, if the major item in a particular family were food then of course there would be one rise, and if it is in clothing then there might be a higher rise. You cannot get a mathematical certainty as to what these are in every instance, can you?

Mr. HINRICHS. No. There are certain items that have been rather stringently controlled. Rents, for example. Rents have been under control almost from the beginning, and they moved comparatively little. The difficulty in connection with rent has been not that the rent of an individual house has been raised. However, if a family was evicted from the property in which it was living or if it chose to migrate to a new community, it became impossible, in view of the housing shortage, to find a house at a rent that was anything like the rent that it had formerly paid.

Fuel, electricity, and gas prices have tended to go down during the war rather than to rise. So that at one end among the items consumed by a family you have items which have risen comparatively little, while at the other end you have items like food and clothing which have risen more than 40 percent on the average.

Then, in those groups you have even more divergent movements. The rise in bread prices has been comparatively small. The rise in vegetable prices has averaged something like 100 percent during the war. The same thing applies to many of the clothing items we have in our index, which shows a rise of more than 100 percent during the war. Women's house dresses are an example.

So you are dealing, as you pointed out, with an average figure. Taking the average figure and its impact on relatively high wage groups, or medium wage groups, even that influence has mounted to a rise of more than 30 percent, about 32 percent, since the 40-cent figure was enacted into law, and to that 32 percent figure you may want to add 3 or 4 points, for factors that cannot be measured but whose influence on living costs has been guessed at by the President's committee.

Senator TUNNELL. Are your figures based on the necessary needs or the average cost?

Mr. HINRICHS. They are based on the changes that we find in the prices in the stores where wage earners ordinarily buy.

Senator TUNNELL. Then, this is the average, is it?

Mr. HINRICHS. Yes. When I was talking yesterday in terms of the current inadequacy of the $1,500 income to support a family, I was speaking in terms of necessary costs, with the most painstaking kind of shopping.

Senator TUNNELL. The necessary cost then is the minimum cost, is it not?

Mr. HINRICHS. It is in the order of a minimum cost, without provision for emergencies, without provision for any of the little foolishnesses that people inevitably allow to creep into their spending, even if it only amounts to an unnecessary nickel for gum, that I am sure is not in any of the budgets that are built up. They are strictly necessary costs. The most I can say about that is that that necessary cost in any kind of budget that I could think of as tolerable is certainly more than $1,500. There is not a shred of evidence that it is as low or could not conceivably be as low as $1,300.

I want to go back to a point I made yesterday on the matter of the necessity of these budgets. You will remember that I discussed the point at which families are actually going into the red. That is an awfully significant social measure. If the cost of goods is so high and the average family income is so low that a large group of families is voluntarily choosing to operate on a deficit basis, you know at that point you are getting awfully close to something that needs to be regarded socially as the minimum acceptable standard of living. Even before the war that figure was nearly $1,500. At the present time that break-even point is in the neighborhood of $1,950 for goods and services alone. Now, we need to add to that $1,950 figure something like $100 for income taxes that would be paid by a family at those levels. So, in terms of gross income the break-even point today is above $2,000 rather than below it.

Senator TUNNELL. Does that not take us to this point, that the family that lives within that class is living below a health standard?

Mr. HINRICHS. I think that is an absolutely safe assumption, yes, because health is going to be the last thing that the family will protect. The length of time that you can allow teeth to go is enough to ruin the teeth of the future population of one-third of the United States.

Senator TUNNELL. And that family is living below what you say can be done with a minimum expense?

Mr. HINRICHS. That is correct.

Senator ELLENDER. Mr. Hinrichs, to go back to the subject that we were talking about a while ago——

Senator TUNNELL. The arithmetic?

Senator ELLENDER. Yes. I was dealing in percentages, and as I understand now the table that you used, this index, does not deal in percentages. Am I right in that?

Mr. HINRICHS. No, our figures on the changes in the cost of living are in percentage form.

Senator ELLENDER. I am talking about the table that you used to reach that percentage. For instance, when you said awhile ago that in 1935 assuming that it was 100, then 1933 would be 90 and 1944 would be 129.4. What were you dealing with? Were you dealing with percentages or just your index figures?

Mr. HINRICHS. As I understand them, Senator, they are the same. I have been requested to put into the record a full description of the way in which this index is compiled. That will show not only what commodities are priced but it will also show in rather simple form the way in which they are put together and the way in which that index is built up.

Senator ELLENDER. Do you insist then that the index that you have been talking about, which shows that it was 90 in 1933 and 129.4 in 1944, that that does deal with percentages?

Mr. HINRICHS. Yes, and from that you can get the percentage change of prices.

Senator ELLENDER. That is what I could not get in my head, and I cannot get it in my head yet, because to me if it is 10 percent under in 1933 and 29.4 percent over in 1944, that adds 39.4 and not 30 percent.

Senator TUNNELL. I do not think you will ever get that straight, Mr. Hinrichs.

Mr. HINRICHS. No.

Senator ELLENDER. That may be true. I do not see how you can be dealing with percentages in this table that you have given us. You might use the figures to obtain the difference in percentages from time to time.

Mr. HINRICHS. Well, we are taking average prices in 1935 to 1939 as 100 percent. May I go back to my shirt example, please?

Senator ELLENDER. No; there is no use to go over all that territory again. It is not necessary. I believe, maybe, some easier method should be worked out so we can understand. I know I do not, and I know I studied quite a bit of mathematics at college. Maybe not enough to cope with you. But it is plain to me if the figures you have given us deal with percentages, in the cost of living, then assuming it was 10 under the 100 in 1933 and it is now 129.4 in 1944, that you would add the 29.4 to the 10 that it was under in 1933, which would give you 39.4 and not 30 percent. But let us leave that subject. That is the way it looks to me.

Now, let me ask you this, Mr. Hinrichs:

Would you be able to put in the record for us the amount of earnings, the average amount of earnings, of industrial workers during, let us say, in 1929, or just before the depression, so as to make a com-

parison with the figures that you now say are essential? I think you said a minimum of $1,500, and maybe up to $1,800 per year is now necessary. Can you give us such figures so we can make a comparison?

Mr. HINRICHS. Please do not let my testimony be interpreted as saying that the standard of adequacy that I have set up corresponds to the level of earnings of all people in the United States, either now or at any other time. One of the tragedies in this country is that for a substantial portion of the population we have not yet managed to achieve adequacy.

(The figures referred to are as follows:)

Average weekly factory earnings

1929 average	$25.03	1944 average	$46.08
1933 average	16.73	1945 July	45.42
1939 average	23.86	1945 August (preliminary)	41.81

Source: U. S. Bureau of Labor Statistics, Department of Labor.

Senator ELLENDER. That is the next question I was going to ask you. The United States has been classified—and is—as the nation that has made more progress than any other nation in the world. Our standard of living is high in contrast to other countries. Can you point out any period in our history where this millennium that you are now advocating has ever existed, that is, where working men and their families had all the things that they would derive from the standard that you are now setting up for them?

Mr. HINRICHS. Certainly not. I have always assumed that that was one of the things we were striving for with respect to the wage earners and farmers of this country. One of our hopes is that we are going to achieve a minimum standard of adequacy for the population of the United States. It is only within a comparatively few years, Senator, that the dream of adequacy for all people in this country could have been anything except a dream.

Senator ELLENDER. It is not a dream. All admit we are the most prosperous nation in the world, that we have made more progress in most sciences, in our social standards of living than any other country in the world. I do not know of any other nation that has the standard of living that we have. Do you know of any that have a better standard of living?

Mr. HINRICHS. I think at the lower end of the scale standards of living are higher in Sweden and in New Zealand, and possibly in Australia.

Senator ELLENDER. I understand that the government in New Zealand is somewhat socialistic. The Government pays all doctors a salary. The Government pays for many other things. You do not want that in this country, do you?

Mr. HINRICHS. The method of achieving a decent standard of living is certainly a matter that has to be worked out by the Congress. It would be presumptuous for me to say how you should go about it. I came not to argue for the development of an adequate standard of living for the people in the United States—that would be more properly the function of the Secretary of Labor, although I am glad to offer support to his objective in that respect—but rather to lay before you such information as I have in my possession. All I can say to you on that score is we cannot rest comfortably with the assumption

that an adequate standard of living can be attained with an income of less than $1,500, and I am sure that it is substantially more than that. That, at least, constitutes a definition of our goal. I think it would be tragic, in the light of whatever information is available, if we set a goal which is lower. Now, the question of whether that goal can be attained is another kind of story, but it is important not to delude ourselves that the goal itself is too high. I assure you there is no evidence to support the belief that the goal of a $1,500 income for every family in the United States is too high a goal to strive for.

Senator ELLENDER. But you are trying to reach that, as I indicated yesterday, by continuing to increase wages, are you not?

Senator TUNNELL. Just a minute. Isn't that an unfair assumption? This man is here to give us certain facts. Now, you are arguing as to a form of government, as to whether he believes in socialism. He is not here to discuss politics; he is here to discuss figures.

Senator AIKEN. Mr. Chairman, I hope we will not reach the point where we have to choose between socialism and feudalism in this country.

Senator TUNNELL. It does not seem to me that is within the scope of this man's testimony.

Senator ELLENDER. Will you repeat the last question that I asked him? I did not know that I was trespassing on the committee.

Senator TUNNELL. You are trying to tell the witness that some country has socialism, asking him if he is in favor of socialism.

Senator ELLENDER. No. I will repeat the question. If you want to draw a conclusion of that kind, it is up to you. I asked him if there was any country that had better than we had, and he mentioned New Zealand.

Senator TUNNELL. He said, "Yes."

Senator ELLENDER. Yes; he mentioned New Zealand.

Mr. HINRICHS. Let me, in that connection, if I may, Senator, just introduce one chart by way of background to my answer.

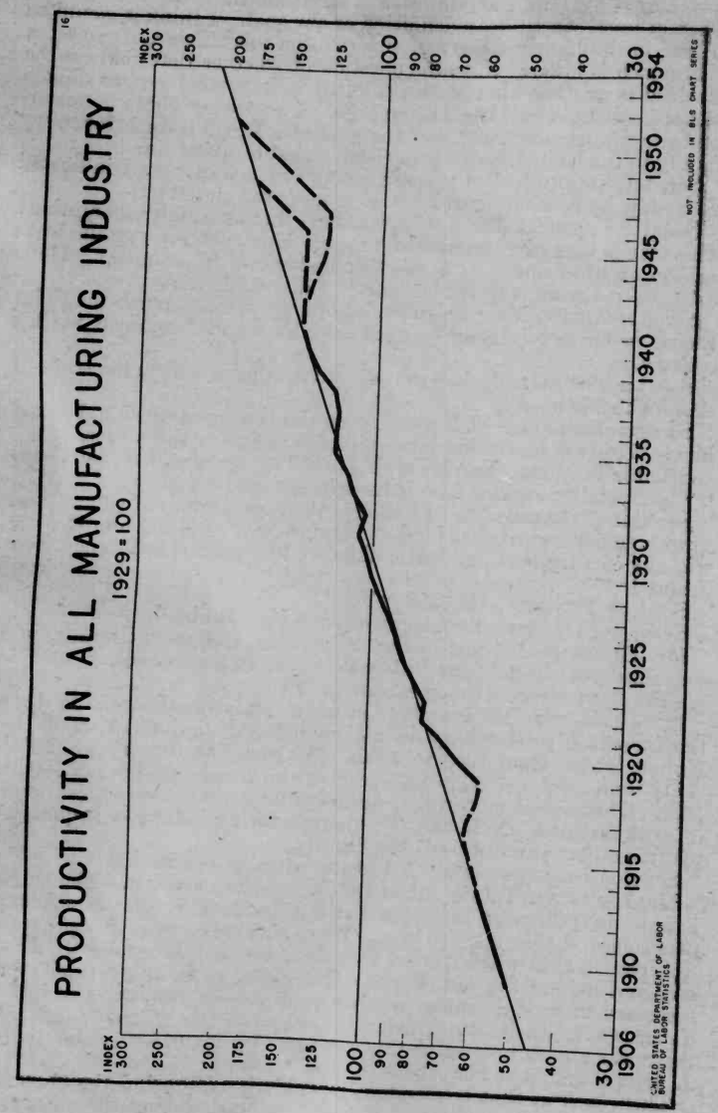
(The chart referred to appears on p. 46.)

Mr. HINRICHS. This is a chart in which we have attempted to show the increased productivity in all manufacturing industries of the United States from 1909 to 1940. The red line that rises on this chart from a point of 50 in 1909 reaches and crosses the level of 100 by 1929. That means that in that period of 20 years the output per hour of work doubled. Now, in some manufacturing industries it quadrupled; in others, it was raised only slightly.

Senator ELLENDER. That is because of mass production?

Mr. HINRICHS. Taking all of the factors into account. The thing I want to call your attention to in this chart is the tremendous persistence of that upward rise. There was only one interruption of that rise in that whole period that we know anything about. That occurred during the last World War when, as in this war, it was necessary to produce under conditions that were conducive to inefficiency, not to efficiency. During the period of the World War itself, there was almost no rise, so that productivity in 1919 was essentially no greater than it had been back in 1914.

Then, look at that tremendously rapid rise following the close of the war as the technology that had developed during the war was pushed into normal manufacturing operations. The rate of increase



in productivity in that period from 1919 to 1923 was more rapid than the increase in any other period of our history of which we have any record. You will find the reason for that if you will go back and look at the figures for machine tool production in those years, when industry was retooling after its inability to purchase equipment during the war.

Now, that rise in output per man-hour, which involved doubling that output in the 20-year period continued again almost without any interruption up to 1939 and 1940, that is until the outbreak of the Second World War. At that time the output per hour was about 30 percent higher than it had been in 1929.

Now, this thing that has happened in the past, that has characterized all industrial development in the United States from the beginning of the nineteenth century to date, is going to go on happening. That is not a mere prophesy. I am not sitting down and looking at what has happened in the past and saying because it happened in the past it is going to happen again, I am looking at actual technological developments which have been proved practicable and which are going to be introduced by the manufacturers of the United States, including the cotton textile industry, including the streamlining of production in the cotton garment industry—I am looking at developments that we know are going to happen in the next decade just exactly as they happened in the past.

Now, the nature of the major technological developments change, of course, from decade to decade, but this underlying capacity to produce more with less effort is one of the fundamental characteristics of our country. It runs through every line of production. It includes agricultural production. There is the story in agriculture, as indicated on this chart.

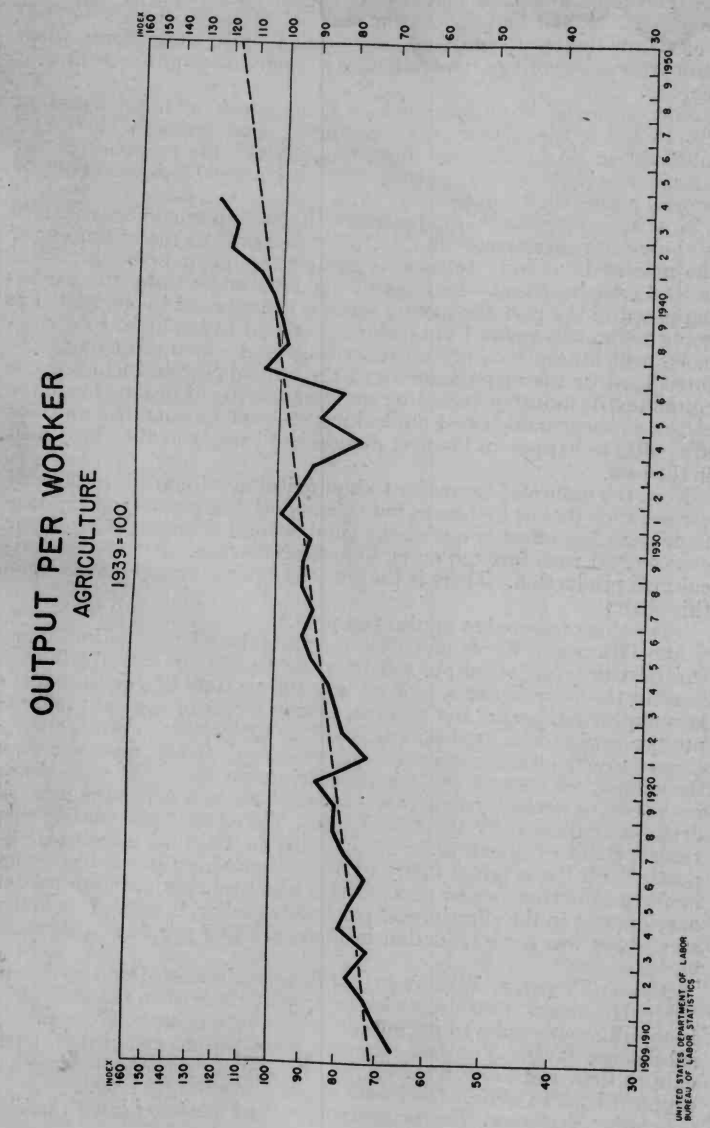
(The chart referred to appears on p. 48.)

Mr. HINRICHS. We cannot describe agricultural production as accurately, in terms of output per hour, as we can for manufacturing, because the hour is not a unit of accounting time in agriculture; it is sunup to sundown. But you can talk in terms of agricultural output per worker who has been employed in agriculture. While the increase in agricultural output per worker is a little less dramatic than the output we showed for manufacturing workers, you will notice in the case of agriculture there was a rise—that is, a persistent upward drift—as indicated by the dotted line. The output per worker rose from a point of about 70 in 1909 to 100 in 1929, an increase of 30 points from the original figure of 70, or something like a 40-percent increase in output per worker. There was probably an even greater development in the effectiveness per hour of labor, because, I am quite sure, there was some reduction in hours worked per day in these 20 years.

Senator TUNNELL. When was that drop, as indicated on this chart?

Mr. HINRICHS. That drop was the drop of 1932, when the only place in which an unemployed person could survive was back on the family subsistence farm. You had so many more people engaged in agriculture than you knew what to do with that the output per worker dropped back to almost the levels which prevailed in 1909.

Senator ELLENDER. The price structure had a lot to do with it, too, at that time, did it not?



Mr. HINRICHS. I think the primary factor there, Senator, was simply the enormous increase in back migration from the cities to the farms. As far as I know, that is the only period in our history when the flow of migration has been from the cities to the farms rather than from the farms to the cities. I say "the only period in our history"; I cannot go back of 1800 in my economic history, but I can document it from there on. In that period of intense unemployment, 1931 and 1932, there was no way in which people could survive in an urban environment if they were unemployed. If they had family connections that enabled them to move back onto a farm for their subsistence, many of them did. You therefore got that altogether unusual and tragic building-up of surplus agricultural population.

Senator TUNNELL. The country was filled with farm novices. They were not familiar with the work.

Mr. HINRICHS. Yes; and surplus hands. If a textile mill hired 50 percent more people than they needed the output per hour would go down. That was what was happening on these farms.

Now, notice how production per worker went up by the late 1930's. Actually, one of the phenomental things, one of the things which saved our lives during the war, has been enormous expansion of output per worker on the farms during the war. It has gone well above anything that one would have expected as a normal trend.

I do not want to go into this indefinitely, but I do want to indicate how universal the increase in productivity is. Here is a chart for mining, showing the same kind of upward drift, again doubling the effective output per worker of work in a period of 20 years.

(The chart referred to appears on p. 50.)

Mr. HINRICHS. And here is a chart for railroads.

(The chart referred to appears on p. 51.)

Senator AIKEN. Do you expect that increase in production to continue after the war?

Mr. HINRICHS. Certainly. What is to stop it?

The automobile industry had to cut gears. They can now use a powdered metal that makes it unnecessary to cut a gear, they can mold it to the shape that they want.

Senator AIKEN. That means men will work less hours to produce the same amount which was necessary before the war, and if they work less hours to produce what the country needs it means they have to have an increase in their base rate of pay in order to maintain anywhere near the same standard of living which they had previously.

Mr. HINRICHS. Well, there certainly has to be an increase of wages and of earnings in order to furnish the market for this volume of goods that would be produced.

Senator AIKEN. If all industrial workers continued to work 48 hours a week after the war, would they overproduce, produce more than could be consumed, at a price which would cover the cost of production, plus a fair profit to the manufacturer?

Mr. HINRICHS. No.

Senator ELLENDER. During the war we produced, as I recall the figures, with 6,000,000 less farmers one-third more than we did prior to the war. Here last week I noticed from press reports where Secretary Anderson is contemplating a decrease of our food production to some extent for the next period.

Mr. HINRICHS. I cannot comment on that.

Senator ELLENDER. That ought to answer Senator Aiken's question.

Mr. HINRICHS. I cannot comment on our agricultural policy.

Senator AIKEN. I think we may anticipate a substantial decrease in the demand for food, particularly perishable foods like milk, when we permit the purchasing power of the consumers to drop below a reasonable point.

Senator ELLENDER. I do not believe there is a man present who sincerely believes that the potential industrial capacity of our country can be absorbed by our people even at higher wages. Higher and higher wages will increase the cost of production and thereby cut off, as I tried to point out yesterday, much of our foreign trade. I cannot for the life of me see how we can cope with the British, with Australia, Canada, the Scandinavian, and other countries of Europe if we continue to increase the cost of producing the goods that we expect to sell to them. I believe we can approach the problem from another angle by decreasing the cost of production where we might increase our exports to $10,000,000,000 and thereby make available work for 5,000,000 employees. Now, that, to me, sounds sensible. As I pointed out yesterday I do not see why it should affect our standard of living at all if today one can fill his bread basket with goods that will cost $5 when 8 months ago or a year ago that same amount of food would have cost $8.

Mr. HINRICHS. Senator, I do not want to imply any contradiction of your idea that decreasing prices are one way and a very important way of improving living standards in this country.

Senator ELLENDER. Don't you think the same goal can be attained in that way?

Mr. HINRICHS. When I examine the incomes of the lowest wage earner group and of the farm groups of this country I give you the best expert opinion that I can; it is that you cannot attain a decent standard of living for the people in those groups, even primarily, via the general-price-decrease route. I think that one of the things that we must hope for is that out of the expanding capacity to produce, out of the expanding capacity to reduce cost, if you like—that is what my productivity figures here show for agriculture and all of the other industries—that out of that increase in productive capacity we will divert proportionately more of the possibility of increased income to the low-income groups than we do to the high-income groups. Now, I do not believe in the political feasibility of taking away from one and giving to another. I am perfectly sure, if we actually are going for this goal of adequacy for the farmer or for the low-wage-earner group, that we have to get there via the route of allowing these people to get more, percentagewise, out of increased capacity than comes to me.

I would not expect my standard of living to rise in any kind of socially minded economy. It probably will, because I do not think we have quite gotten to the point where we could make up our minds really to devote all the increased potentiality to produce to raising standards for those at the bottom of the heap. Perhaps it is not economically possible to devote the whole of our increased potential capacity to produce, which is the thing I am pointing out here, to the lowest-income groups, and I include in that category both farmers

and wage earners. But I would hate to see those groups left without special assistance on the income side. I do not think they would benefit adequately by any kind of possible price reductions, which incidentally would be shared by me as well as by those lower-income groups.

Senator ELLENDER. How would you take care of, let us say, the hundreds of thousands of one-horse farmers that we have spread through the South who cannot afford, because of the size of the farm, to purchase and operate these labor-saving devices that a larger farmer can utilize economically? You admit they should be helped but no plan of help is indicated in the bill.

The same question may be asked as to the thousands of small business men who hire from 5 to 10 employees and who cannot afford to install these labor-saving devices that Ford and other large industrial producers can avail themselves of. How can you take care of that situation?

Mr. HINRICHS. I am sorry, sir, I am not an expert in agricultural economics.

Senator ELLENDER. You seem to be an expert on prices. You desire to make all wages go up and up and up so as to attain a minimum standard of living. It strikes me you ought to determine what effect your proposal is going to have on the one-horse farmer who is the backbone of the South in agriculture, and also the thousands of small businessmen in this country who employ from 5 to 50 men, who are the very life of our economy and who are dependent on a market for their goods. If you make it so that their labor costs are so great that they cannot compete, with those who are able to install labor-saving machinery, I am just wondering when your scheme is going to lead us to and what effect it will have on our economy.

Mr. HINRICHS. Senator, I have never suggested that I wanted prices to go up.

Senator ELLENDER. How is that?

Mr. HINRICHS. I have never suggested that I wanted prices to go up. You, of course, are unfamiliar with my personal record during the war period and the work I have had to do in an advisory capacity in connection with the control of inflation, but that record would speak for itself. It would be utterly impossible for me to conceive of advocating an inflation of prices. I think the consequences of inflation would be desperate. I hope your goal of decreasing prices can be attained. I think it would be a mistake in the postwar period if we were to assume that all prices must be treated in just exactly the same way. During the war it has been enormously difficult to allow the lowest income groups to increase their standards of living because of the fact that that increase, there being no additional goods available, has had to come out of the living standards of groups that were higher up the scale. I think you are going to find cases in the postwar period when there is going to be an expansion of productive capacity, in which it will be necessary to allow some price rise. This may be the only way to get truly adequate income in connection with personal services, in connection with some of the lower priced goods that are put on the market in the clothing field, in connection perhaps even with some agricultural products. I would hope, on the other hand, that in the fields of durable-goods production, mass production areas

in which relatively high wages now prevail, that prices would come down rather than up, in response to an increase in productivity. We are going to have to share the gains we make over the next two decades. Part of those gains in effective capacity to produce ought to result in higher cash incomes to the producers; part of them should result in decreased prices that would benefit all people in the community.

Senator ELLENDER. I am not trying to argue with you that if the methods followed by mass production advocates are entertained by industry you cannot continue to decrease the unit cost of certain articles, and so forth, but in doing that you are resorting to plans by which you do away with a lot of labor. As I pointed out to you a while ago, in the cane fields of Louisiana we have an example of what will happen. I am just wondering if all of the large sugar planters in my State buy cane-cutting machines for say $3,800, which I think they cost each—it takes three men to operate one, and it saves the labor of 60 men. Then, they go a step farther and obtain cane loaders that cost probably $2,500, maybe less, each, and operate those cane loaders with one man and save the labor of 24, I repeat, I am just wondering what is going to become of those people who find themselves—and they will soon find themselves—without jobs in the cane fields in my State? I am satisfied that such examples can be multiplied time and again.

Senator AIKEN. Mr. Chairman, Senator Ellender is assuming a condition which actually existed in the Northeast in the dairy industry a few years ago. In 1937 the price of milk went down—and the Senator from Wisconsin, Senator La Follette, knows this, too. The price of milk actually went down to 1 or 2 cents a quart and thousands of dairy farmers were faced with bankruptcy. Some of them did fail. Those conditions, however, forced them to organize themselves, and they organized farm cooperatives. Today, well over 90 percent of all of the milk produced in my State is sold through the farm cooperatives, and probably 50 percent of the purchases are made through the farm cooperatives. I got a report from one of the dairy co-ops this morning, and it stated that 82 percent of the price which their milk sold for was returned to the farmer. That is in comparison with some 52 percent that was returned when they sold through proprietary dealers. Organizing as they did saved the economic lives of thousands of them. They were called Socialists by certain people for doing so, but it did save their lives. I think I would prefer to have a high standard of living and good income and be called a Socialist rather than be down in the bottom of the ditch and be called a Democrat or freeman or whatever else you want to call them.

I think there are great possibilities for the farmers in all parts of the country to organize themselves into cooperatives. It is, to my mind, the highest type of private enterprise. It is not socialism in any way. They are only called Socialists by those people who are getting rich off the labors of the farmers and do not like to see their unearned source of income disappear.

Now, Mr. Hinrichs, there is some information I would like to have, if it is possible for you to get it. Yesterday, Senator Ellender showed a great deal of concern over the effect that a raise of the minimum wage would have on industry in Louisiana, and indicated when the minimum-wage law was enacted prescribing the minimum wage of 40 cents an hour, or worked up to 40 cents an hour, that some industrial establishments in Louisiana were forced to shut down. Now, I do not doubt

but what some establishments, which may have been hiring labor very cheaply, or, as some people think, exploiting labor, were forced to close down, to change their ways of doing business. I do not think we should survey the effects from that point of view alone, of its effect on individual cases.

I wonder, Dr. Hinrichs, if you have any figures showing what change, if any, has taken place in the number of people gainfully employed in industry, or the amount of industrial work which has been done in Louisiana since the enactment of the minimum wage law or since it was raised to 40 cents an hour?

Perhaps you better take since the enactment of the law, which started out with 25 cents an hour.

Mr. HINRICHS. The figures for Louisiana that I have begin with the average manufacturing employment in 1939. At that time there were about 99,000 wage and salary workers in the manufacturing industries of Louisiana. Employment increased, very slightly between 1939 and 1940. It then began to increase more rapidly, and the greatest increase was between 1941 and 1942. By the end of 1943 employment in manufacturing had risen to about 176,000, in the fall of that year. Part of that expansion of course was represented by the increase in shipbuilding and aircraft. In those two industries there were about 44,000 or 45,000 more people employed in the fall of 1943 than had ben employed in 1939. But even aside from the expansion in aircraft and shipbuilding, there had been an expansion of something like 30,000 workers in manufacturing industries in Louisiana.

Senator AIKEN. That is other than shipbuilding?

Mr. HINRICHS. That is other than shipbuilding.

Senator ELLENDER. Well, we had a munitions plant in Minden, La., that hired 10,000 people and that has practically closed down.

Senator AIKEN. The minimum wage law would not prevent Louisiana from having a tremendous growth of industrial production.

Senator ELLENDER. Naturally, the war has given full employment, and, of course, that gave vent to the establishment of many industries. I predict that the passage of the bill we are considering will deter manufacturers from building new plants or adding to those already in existence. There may be improvements in existing plants so as to reduce the unit cost of production, but without giving more employment.

Senator AIKEN. Dr. Hinrichs said there was a slight increase in industrial employment between 1939 and 1940.

Mr. HINRICHS. It was almost negligible.

Senator AIKEN. There was no decrease?

Mr. HINRICHS. There was no decrease.

Senator AIKEN. How does this increase of some 76 percent in Louisiana compare with the increase in the country as a whole? Have you any comparison between the increase in Louisiana and the increase in industrial employment, say, in my own State of Vermont, which was not particularly affected by the minimum wage law?

Senator SMITH. You are speaking of the war period now, Senator?

Senator AIKEN. Any period.

Senator SMITH. It seems to me the increase in the war period would be influenced by the way the Government put the plants around the country.

Senator AIKEN. Dr. Hinrichs said there was an increase of 30,000 employees other than the shipyards, which was principally a war industry.

Senator ELLENDER. In Louisiana?

Senator AIKEN. Yes.

Senator ELLENDER. What about the munitions plants? We had in my own little town a small munitions plant that hired 400 people, and it is not now in operation. We had another boat-building plant that hired 500 men and it is closed. New Orleans had several munitions plants and they are not now in operation but I understand they have converted into something else with a much reduced labor load. I think they employed from 2,500 to 3,000 and now it is about 200. In Minden they employed 10,000, and they are closed today, or we may have 150 guards around there now protecting the grounds. I could multiply such examples many times to show that it was the impact of war that caused the expansion indicated.

Senator AIKEN. Nevertheless, Doctor, can you give the figures for my own State?

Mr. HINRICHS. In the case of Vermont, you were employing about 27,000 people in manufacturing industries in 1939. There was an expansion in Vermont which came earlier than in many parts of the country, reflecting an increase in the machine-tool industry. You reached a peak of about 37,000 in 1942, and have been at the level of about 31,000 to 32,000 since the fall of 1944. That is the expansion over the whole period has been from something like 27,000 to 31,000, which is 10 or 15 percent.

Senator AIKEN. It seems to me that would indicate what happened to the question of wages. We had in Louisiana, despite the fact that some concerns had to watch their wages, a greater increase than my State had. Have you the increase in the country as a whole, the percentage of increase in industrial employment?

Mr. HINRICHS. The increase has been not quite as great as was the increase in Louisiana during that period of 1943 and early 1944. Manufacturing employment is up about 70 percent.

Senator AIKEN. Mr. Chairman, what I hoped to show was that an increase in wages does not destroy industry as a whole. In fact, I would say if industries paid good wages it would definitely benefit them by eliminating the competition of those who would work under sweatshop conditions and keep their employees in a poverty-stricken condition all the time.

Senator ELLENDER. In order to make more complete the picture that Senator Aiken started to paint, I wonder if you have any figures as to the number of industrial employees prior to 1939 in the various Southern States? Let us see whether or not there has been a steady growth, as you have indicated, as reflected during the war.

Mr. HINRICHS. Yes. I will be glad to submit for the committee's consideration a study which I made based on the census figures covering the period 1929 to 1937. At that time one of the outstanding facts was that the two main centers of industrial development in the United States were the southeastern States and the Pacific Coast States; 1929 and 1937 were two periods of relatively high levels of employment, and that is the reason for selecting those periods. Employment in manufacturing industries for the country as a whole tended to be slightly higher in 1937 than it was in 1929.

Senator ELLENDER. You do not have the figures available at the moment?

Mr. HINRICHS. Not here. There was about a 20 percent expansion in the southeast in manufacturing employment.

(See Exhibit B—"Trends in Manufacturing Employment, 1929 to 1937," p. 77.)

Senator ELLENDER. Of course, that was due, was it not, primarily to the fact that many industries from the northeast moved to the southeast?

Mr. HINRICHS. As far as I know, the developments in the Southeast in the 1930's have not represented the literal removal of a plant from the Northeast to the Southeast. I think that the period in which second-hand machinery was put in boxcars and on flatcars and shipped south was back before the period of the World War, or perhaps immediately after the war. The strongest industrial development that has come in the South has come out of the development of new plants with new capital, much of it local, and with excellent efficiency. I would say that the development in that period of the thirties in the Southeast represented a strong trend toward industrial development in an area that certainly needed it and that has the resources for industrial development.

Senator ELLENDER. Now, in placing these figures that you contemplate in the record, would it be possible for you to give us some figures for some particular city, such as New Orleans, let us say, from 1935 to 1939, both inclusive, or Savannah, or Montgomery?

In other words, as I understood Senator Aiken's point, it was to show that the change in the minimum wage from 25 cents up to 40 cents had no effect at all, but, on the contrary, I believe his contention is that it probably accelerated it. So, if you do not mind, while you are putting figures in the record, let us have a few as I have indicated. Let us not only cover the period from 1929 to 1939, but let us relegate it to some period when the wages and hours law became effective until, let us say, 1940.

Mr. HINRICHS. I can furnish figures for New Orleans and Savannah. Would I be incorrect, Senator, in my assumption that New Orleans has been one of the outstandingly important ports and commercial centers in the United States, but that manufacturing has played a small role in the economy of New Orleans, a smaller role than it has in some of the other large manufacturing centers? When I speak of all the cities in the United States, my memory occasionally plays tricks on me, but I did not remember that New Orleans had been one of the outstanding manufacturing centers.

There are other southern cities for which I will also be very glad to submit figures that I think may subject the thing to an even better test. I am not trying to evade submitting the figures for New Orleans, you will have them, sir, but I would not look to New Orleans for an exclusive test.

(The figures referred to are as follows:)

Employment in the New Orleans metropolitan area, and cities of Savannah, Ga., and Montgomery, Ala.

	Employment aggregates			Employment indexes (1937=100)		
	1937	1938	1939	1937	1938	1939
New Orleans metropolitan area	20,700	19,300	19,700	100.0	93.2	95.0
Savannah, Ga. (city only) [1]	1,911	----------	1,362	100.0	----------	71.3
Montgomery, Ala. (city only) [1]	2,601	----------	2,507	100.0	----------	96.4

Tampa, Fla	98.4	104.6	110.0
Washington, D. C	97.2	98.7	111.0

Source: U. S. Bureau of Labor Statistics, Department of Labor.

Senator ELLENDER. I made the statement yesterday, and I think it can be verified. As a matter of fact I have the data in my office somewhere, that of four concerns that were engaged in the manufacture of clothing two closed and there are only two there now. In respect to the lumber industry, why, a lot of those mills have closed because of this change, so is the case of these engaged in the gathering of resin and turpentine, and industries of that nature. We have had a decided decline in the number of factories and establishments due to the sudden shift in minimum wages.

Senator TUNNELL. Right there, when these figures are furnished, I would like to ask that we have the rate of wages that were paid at that time by those four companies, we will say, or in that neighborhood, if you cannot get them from those four companies, and the rate that is paid now in that community.

Mr. HINRICHS. I will see what I can do on that. That last may entail a little more difficulty as far as our data are concerned. I doubt that they can be gotten.

I would like to call your attention to one thing, Senator Ellender, if I may. I do not want to contradict your statement as to the effect of the minimum wage on a particular group of plants that I do not know as individual plants. I would like you to bear in mind, in looking at the employment figures in some of these industries that you have mentioned, the effect of the relatively low wage levels that had prevailed in those industries upon the ability of those industries to recruit labor. I am quite sure you will find, for example, that in connection with the cotton textile industry, which I know fairly well, that the decline of employment which has occurred in the last 3 years is probably primarily attributable not to absence of orders or the inability of the mills to sell profitably within the present market, but is due much more to the fact that workers who formerly had no alternative opportunity for employment have had an opportunity to move from the cotton textile mills to some of your munitions plants. I would be astonished if that were not one of the very important causes for the decline of employment in lumber in the South.

Senator ELLENDER. There is no doubt about that. For instance, you had a lot of cotton-mill workers who learned how to work on a drill press, or who learned welding, things of that kind; they learned that, I think, in some little 6 weeks' course that the Government gave through the South and other parts of the country. I understand the minimum wage there was $1.25 per hour—I am not certain—and of course you could not blame anybody from going from a job paying only 45 to 50 cents an hour to one paying $1.25. That is over now; the holiday is over; we have got to go back to normalcy.

Mr. HINRICHS. I was talking a day or so ago with the operator of a group of mills, some located in the North and some in the South, who was saying that his chief present difficulty was in recruiting adequate labor for his orders on hand, either in his northern mills or in his southern mills.

Senator ELLENDER. Well, that was due to the fact that industries at that time were competing with each other in the labor market. As you know, when the war broke out, or before the war, in 1940–1941, welders were at a premium, and because of that higher wages were paid to those kind of workers than was paid to others. Such employment at much higher wages was a big drain on the lumber and turpentine industries, the cotton mills, the woolen mills, and also the sugar mills, in fact to many other industries paying less wages.

As a result of this labor shift from the cane fields and cane factories of Louisiana in the last 3 years some fellow invented a cane-cutting machine that is operated by 3 men and can do the work of 60 men. A cane loader was invented last year which can be operated by 1 man and does the work of 24 men, I think. Now, all of that has been done because of the shift of labor, and I believe that the higher wages demanded and actually fixed by law had something to do with it also.

Mr. HINRICHS. The news you have just given about the improvements of technology in the cane fields is one of the most encouraging things I have heard in a long time, because the method through which you get an opportunity substantially to increase the standard of living of people in the United States is to enable them to do a given amount of work with less labor, so that those who continue to be employed can be paid higher wages while those who are released are available for the production of alternative kinds of products. I think what you have been saying would make possible the payment of substantially higher wages than have prevailed for agriculture and would give higher rewards to the farmer, and God knows he needs them.

Senator ELLENDER. That may be true as to the men who operate the machines. In other words, it is a decided advantage to the planter for him to pay $10 a day to the operator of a cane loader that saves the labor of 23 men at $3 a day each. The question is: Where will these 23 men who used to load cane at $3 a day go for employment? I am just wondering what is going to become of them.

Senator TUNNELL. The same question came up when the tractor was invented.

Senator ELLENDER. And the automobile.

Senator TUNNELL. The tractor plowed as much as 200 horses.

Senator ELLENDER. That may be true. The tractors were turned from the fields in 1933. Farmers were on the verge of bankruptcy. Business was at a standstill. We had the greatest depression that ever struck us, and my fear is if we continue to make it impossible for industry to expand in a normal and on a sensible basis we will have a greater depression 5 years from now than we had in 1933. We may decrease the unit cost of production, but that is usually accomplished by labor saving devices and at the expense of the labor market. Larger plants can be built that will use the same amount of labor as a smaller plant, but produce more goods at a cheaper unit cost.

Sure, that is right. The tractor is a big labor-saving device, there is no doubt about that. It not only displaces farm labor but those who raise horses and mules. All of this means that sooner or later we will have to get some way to take care of those people who have been displaced.

Senator TUNNELL. Are there any questions?

Senator SMITH. Mr. Chairman, I would like to ask whether the witness has finished this very interesting report that he started yesterday? I don't know whether he has gone all the way through it. I was interested in some of the points here that he mentioned this morning. Have you finished your testimony?

Mr. HINRICHS. The staff of the committee had asked me to make available certain materials with reference to currently prevailing wages. The last page of my prepared testimony deals with the distribution of wage rates at the present time. I will be very glad to present that or to have it inserted in the record, depending on the convenience of the committee.

Senator SMITH. I am interested in the basic question, whether the minimum wage we are discussing is going to tend to unemployment in any part of the country. We do not want to throw people into unemployment if we make this too high. On the other hand, I am impressed with this reference to the cost of living as the basis for the new minimum wage.

You are talking constantly of the cost of maintaining a family. Do we need to establish the same minimum wage for an individual earner which we propose when we are using the family cost of living as our yardstick? I do not think you make any distinction, but I am a little troubled by what seems to be a difference from the standpoint of living costs.

Mr. HINRICHS. I do not know any way in which you can make a distinction. I do know in every one of the low wage industries you find large numbers of people engaged in those industries who are in fact the sole support of a family or else where the wife is forced to work simply because of the complete inadequacy of the husband's earnings.

There may very well also be individuals in those industries who do not have to support a family, although one of the things that is most striking in the studies which we have made and which also the Women's Bureau has made, is the extent to which people are dependent on the earnings of girls who are working, for example, in which the girl's earning is essentially the support for the family. The mere fact that the person is relatively young, unmarried and wears a skirt does not always distinguish her in her responsibilities from the male of the species. But I would not know, frankly, how to advise you if you wanted to separate the two categories and establish one wage for the support of a family and another wage for the support of people who are responsible only for their own support. Some countries paying low wages to all workers then have the state give a family allowance to the man with children. Even the level of cost for a single person is higher than is generally believed, although the Women's Bureau is better informed than I am on the cost of the budget for a single person.

Senator SMITH. We want to find a basis on which the family can live in decency in this country, but I cannot reconcile the figure in my own mind that you use for the support of a family with the figure for the support of a person without a family.

Senator TUNNELL. There are so many millions who do have families and who are not aided by any other salary or wage that it seems to me you pretty nearly have to consider the fellow with the family who is the sole wage earner. I do not want to interrupt.

Mr. HINRICHS. Now, if I may pursue this point, I have said that it is my expert opinion that the evidence is conclusive on the side of the desirability of a standard of living even higher than would be represented by the 75-cent minimum wage, if there is any way in the world in which that can be done.

On the side of the practicability of a 75-cent wage, or 65-cent wage, you have obviously got to start by looking at the wages which are now being paid. There are certain points in connection with wage information where I think you can say conclusively that a 65-cent or 75-cent minimum wage is immediately and obviously feasible. There are other points where you find that there are substantial numbers of people earning less than 65 cents. However, the fact that a number of people are earning less than 65 cents is not conclusive evidence that the wage cannot be paid. In order to determine feasibility in those areas you have got to study a whole series of factors, in which other people are much more expert than I. You, undoubtedly, are going to hear testimony on that subject. But you have got to take into account the existing profits in the industry, the feasibility of small price increases if they are indispensable to the attainment of your objective, the prospects for further increases in labor productivity, the contrast between the cost of production under efficient methods of production, and the cost of production currently obtaining with less efficient methods of production.

All of those factors have got to be taken into account before you are in a position to say, that a 65-cent wage is not feasible. So, what my wage information I think shows, to be precise about it and to distinguish it from the dogmatism which I took from the standard of living, is that in certain areas I can identify the definite feasibility of 65 cents, and I can identify the areas to which you may want to extend your studies.

Now, with that as a background, let me just review what the distribution of wages is in the manufacturing industries at the present time. For a variety of reasons, partly due to the minimum-wage legislation which we had on our books which made it possible and, indeed, mandatory to get wages up to at least 40 cents by 1945, partly due to price rises and the general increase of wages during the war, there has been a very marked change during the war in the number earning less than the minimum figure of 40 cents an hour. In January of 1941, for example, there were a little more than 1,500,000 wage earners in manufacturing industries who were making less than 40 cents an hour, and another 1,400,000 who were making between 40 and 50 cents an hour. Those figures are shown in the first column of the first table of the statement which I distributed yesterday. That means that about 3,000,000 people were making less than 50 cents an hour back in 1941.

Senator AIKEN. How many were employed then, Doctor?

Mr. HINRICHS. About 9,500,000 in manufacturing industries. That is, a little over 30 percent at that time.

Now, in every industry covered by the Wage and Hour Administration a wage of 40 cents an hour, which is the maximum that it can order, has been ordered. So that it is fair to say that at the present time there are virtually no wage earners in manufacturing industries who are legally paid less than 40 cents an hour, and, actually—while I cannot speak on violations of the law—the pressure of the market has been such that, generally speaking, manufacturers have wanted to pay more than they were required to pay by the minimum wage law—not less. I therefore cannot give you any significant figure for the number now earning less than 40 cents an hour. At the present time only about 330,000 people in all manufacturing industries, out of a total of 12,000,000, today are earning less than 50 cents an hour. That is, it is a mistake to assume that the legal minimum at this moment has anything to do with the going wage structure. If you would ask as of today how much can manufacturing industry afford to pay as a minimum wage, without any question whatever, it would seem to me you could more or less start by saying, "Well, what are they paying?" They are paying that much. They are paying that voluntarily. The answer is there is almost no manufacturer paying any of his workers today less than 50 cents an hour.

Senator ELLENDER. Isn't that due to the fact that these manufacturers were in full production and that a little above 50 percent of their business was with the Federal Government as a purchaser? They took no chances. Could you compare such a condition with that which will prevail when we return to normal times?

Mr. HINRICHS. I am not completely expert here, Senator.

Senator TUNNELL. I understand that there are a number of witnesses who have come here from a distance. They are being kept at more or less of a hardship to them. We will hear those witnesses tomorrow, and we will ask Dr. Hinrichs not to come tomorrow morning. We will hear him at a later date, if that is agreeable to him.

Mr. HINRICHS. I will be here at your convenience, Senator.

Senator TUNNELL. Very well. We will recess until tomorrow morning at 10 o'clock.

(Whereupon, at 12:01 p. m., an adjournment was taken until 10 a. m., Thursday, September 27, 1945.)

EXHIBIT A

UNITED STATES DEPARTMENT OF LABOR
Frances Perkins, *Secretary*

BUREAU OF LABOR STATISTICS
Isador Lubin, *Commissioner* (on leave)
A. F. Hinrichs, *Acting Commissioner*

DESCRIPTION OF THE COST OF LIVING INDEX OF THE BUREAU OF LABOR STATISTICS

(Prepared in the Prices and Cost of Living Branch
Aryness Joy Wickens, Chief, December 1, 1943)

The Bureau of Labor Statistics cost-of-living index is designed to measure changes in the prices paid for goods and services by city families wth moderate incomes. It is a price barometer, not a measure of changes in the total amount spent for family living.

The cost-of-living index was first issued in February 1921. It covers prices and rents as of the 15th of each month. The final national index is usually published about the 15th to the 20th of the following month. Thus the index for October, covering prices as of October 15, was completed by November 20.

The index measures the changes in prices of food, clothing, rent, fuel, housefurnishings, transportation, personal services, and a variety of miscellaneous goods and services purchased by families of moderate income.

CITIES COVERED BY THE COST OF LIVING INDEX

The national cost-of-living index represents cities of more than 100,000 population. It is often referred to as a "34 city index." In fact, however, for 4 months of the year (March, June, September, and December) the index is based upon changes in food prices in 56 cities and changes in prices of all other important goods and services in 34 cities. For the other 8 months of the year the index is calculated on the basis of food prices in 56 cities and prices of other commodities and services, with the exception of rents, in 21 cities. Rents, which in most cases have changed slowly since OPA rent control became effective, are obtained quarterly.

The cities covered are listed below:

Thirty-four large cities[1]

Atlanta	Jacksonville	*Pittsburgh*
Baltimore	*Kansas City, Mo.*	Portland, Maine
Birmingham	*Los Angeles*	Portland, Oreg.
Boston	Manchester, N. H.	Richmond, Va.
Buffalo	Memphis, Tenn.	*St. Louis*
Chicago	Milwaukee	*San Francisco*
Cincinnati	*Minneapilis*	*Savannah*
Cleveland	Mobile	Scranton
Denver	New Orleans	*Seattle*
Detroit	*New York*	*Washington, D. C.*
Houston	Norfolk	
Indianapolis	*Philadelphia*	

[1] Indexes are prepared each month for the cities which are italicized, and quarterly for the other cities listed.

Food Survey cities, in addition to the 34 large cities

Bridgeport, Conn.
Butte, Mont.
Cedar Rapids, Iowa
Charleston, S. C.
Columbus, Ohio
Dallas, Tex.
Fall River, Mass.
Jackson, Miss.
Knoxville, Tenn.
Little Rock, Ark.
Louisville, Ky.
Newark, N. J.
New Haven, Conn.
Omaha, Nebr.
Peoria, Ill.
Providence, R. I.
Rochester, N. Y.
St. Paul, Minn.
Salt Lake City, Utah
Springfield, Ill.
Wichita, Kans.
Winstom-Salem, N. C.

These 56 cities include 81 percent of the population of American cities of more than 100,000 population and the 34 large cities over 72 percent.[2]

The map (map 1) shows that these cities are concentrated in the large industrial areas. There are 11 States that are not represented in the national index, as well as a number of industrial areas made up of small communities, such as the coal-mining, textile, and metal-mining centers.

OTHER CITIES SURVEYED FOR CHANGES IN THE COST OF LIVING BUT NOT INCLUDED IN THE NATIONAL INDEX

As a part of its recently expanded program to collect cost-of-living data for the use of war agencies, the Bureau also collects information on changes in retail prices and the cost of living in other communities. Local cost-of-living indexes which are not incorporated in the national index have been compiled for 32 additional cities and are estimated from partial data for another 7, making 73 in all. Reports are not available as promptly for these cities as promptly as for those in the national index. The additional cities include 20 small cities selected to be generally representative of all cities of 5,000 to 50,000 population, and 12 war production centers, both large and small, in which the impact of war activities on the prices paid by consumers has been important. They are listed below:

Small Cities

Battle Creek, Mich.
Bloomington, Ind.
Chester, S. C.
Clarksburg, W. Va.
Clinton, Iowa
Falls City, Nebr.
Globe, Ariz.
Goldsboro, N. C.
Jonesboro, Ark.
Lebanon, Pa.
Mattoon, Ill.
Oconto, Wis.
Oswego, N. Y.
Stillwater, Okla.
Torington, Conn.
Vicksburg, Miss.
Vineland, N. J.
Walla Walla, Wash.
Watertown, S. Dak.
Zanesville, Ohio

War Production Centers

Bridgeport, Conn.[3]
Charleston, S. C.[3]
Corpus Christi, Tex.
Gadsden, Ala.
Newark, N. J.[3]
Newport News, Va.
Omaha, Nebr.[3]
Phoenix, Ariz.
San Diego, Calif.
South Bend, Ind.
Vallejo-Benecia, Calif.
Wichita, Kans.[3]

[2] Of the 34 cities, 4 had a population of less than 100,000 in 1940—Manchester, N. H., Mobile, Ala., Portland, Maine, and Savannah, Ga. With the possible exception of Manchester, these are now above 100,000, due to wartime expansion. Of the 56 food-survey cities, 8 in addition to these 4, were under 100,000 population, and 1 was under 50,000 in 1940. They were included in order to obtain better geographical representation. Indications are that price changes in the cities of 100,000 population and over are quite similar to those in cities of 50,000 to 100,000 population; and so, in combining city indexes, account has been taken in the weights of cities of this size surrounding the large cities.

[3] These cities are also included in the 56 cities in which the Bureau collects food prices each month.

Estimates of changes in the cost of living are also made quarterly for the following seven cities[3] for which current figures on foods, rents, and fuels alone are collected:

Dallas, Tex.
Knoxville, Tenn.
Little Rock, Ark.
Louisville, Ky.
New Haven, Conn.
Peoria, Ill.
Rochester, N. Y.

Rents are now being obtained in many cities at the request of the Office of Price Administration for use in evaluating its rent program.

GOODS PRICED FOR THE COST-OF-LIVING INDEX

A typical bill of goods and services that families buy is priced for the index. It has been constantly adjusted since March 1935 for necessary changes that have resulted from normal market developments as well as from the rapid wartime changes in consumers' goods available for civilians. Staple lines, many of which are still available, are the principal components of the index both in peacetime and in wartime.

The list of goods priced for the index includes 183 articles widely bought by workers' families and esential services which they use.[4] No luxuries are included. For many goods a number of different grades and qualities are priced, as, for example, in September 1943, when the index included prices for 342 different articles and qualities of articles.

The selection of articles to be priced was made on the basis of an extensive study of actual expenditures of over 14,000 wage earners' and clerical workers' families conducted by the Bureau in 1934–36.[5] Each family listed the goods it bought, including detailed purchases of food for the previous week, and gave the amounts spent for each class of purchases. Information was also obtained on income and on taxes and savings.

Since it obviously would be impossible to price everything consumers buy, a representative list was selected for the cost-of-living index. All essentials commonly bought by city families were included, and other goods were selected on the basis of the general demand for them and their importance in the total family budget.

Where any one of a number of articles in a given group, such as women's clothing, was chosen as representative of the group as a whole, selection was also based on the extent to which the price change of the particular commodity in the past had been typical of changes for the entire class which it represented. Thus, prices for women's cotton dresses are used to represent changes in the prices of cotton dresses, aprons, and coveralls. Coil bedsprings, whose prices usually move in approximately the same manner as the prices of other bedsprings, metal beds, and cots, were chosen to represent this entire group. Sheets, towels, and curtains were selected to represent other cotton household textiles, i. e., tablecloths, bedspreads, couch covers, and dresser scarfs. Changes in prices for adjusting and relining brakes, overhauling and repairing clutches, and for lubricating chassis of automobiles were chosen to represent changes in the cost of general repairs and maintenance of an automobile.

Foods priced.—The list of foods for which prices are secured includes all staple foods, such as bread, milk, butter, potatoes, cabbage, various cuts of meat, canned fruits and vegetables, and a few fresh fruits and vegetables, fish, and poultry. This list was not changed from March 1939 until March 1943, when seven foods were added, including hamburger, liver, rolled oats, and certain other foods which were bought in larger quantities because of rationing. Restaurant meals are not priced.

[4] For a complete list, see table II, appended.

[5] U. S. Department of Labor, Bureau of Labor Statistics Bull. No. 638, Money Disbursements of Wage Earners and Clerical Workers, 1934–36, Summary Volume.

The list of foods now included in the cost-of-living index is given below:

- Cereals and Bakery Products:
  - Flour, wheat
  - Macaroni
  - Corn flakes
  - Corn meal
  - Rolled oats
  - Bread, white
  - Bread, whole wheat
  - Bread, rye
  - Vanilla cookies
  - Soda crackers
- Meats:
  - Beef:
    - Round steak
    - Rib roast
    - Chuck roast
    - Liver
    - Hamburger
  - Veal: Cutlets
  - Pork:
    - Chops
    - Bacon, sliced
    - Ham, sliced
    - Ham, whole
    - Salt pork
  - Lamb:
    - Leg
    - Rib chops
  - Poultry: Roasting chickens
  - Fish:
    - Fish, fresh, frozen
    - Salmon, pink, canned
- Dairy products:
  - Butter
  - Cheese
  - Milk, fresh
  - Milk, evaporated
- Eggs, fresh
- Fruits and vegetables:
  - Fresh fruits and vegetables:
    - Apples
    - Bananas
    - Oranges
    - Beans, green
    - Cabbage
    - Carrots
    - Lettuce
    - Onions
    - Potatoes
    - Spinach
    - Sweetpotatoes
  - Canned fruits and vegetables:
    - Peaches
    - Pineapple
    - Grapefruit juice
    - Beans, green
    - Corn
    - Peas
    - Tomatoes
  - Dried fruits and vegetables:
    - Prunes
    - Navy beans
- Beverages:
  - Coffee
  - Tea
- Fats and oils:
  - Lard
  - Shortening other than lard:
    - In cartons
    - In other containers
  - Salad dressing
  - Oleomargarine
  - Peanut butter
- Sugar and sweets:
  - Sugar
  - Corn sirup

Clothing.—The clothing that is priced includes the customary purchases of the ordinary city family, such as men's suits, overcoats and topcoats, work clothing, and shirts; women's dresses, skirts, hats, and coats; shoes for men, women, and children; and various accessories. The only important groups not covered are infants' clothing and some kinds of boys' and girls' clothing.

Housefurnishings.—Changes in prices of furniture and housefurnishings are measured by the more important furnishings, such as living-room and dining-room suites, studio couches, mattresses and bedsprings; stoves, refrigerators, and washing machines; sheets, blankets, towels, and curtains; and certain china and glassware. So little furniture and equipment is now available in the market that many articles formerly included have been dropped from the list because they cannot be purchased now by the average family.

Fuel and light.—All kinds of fuel are priced, with particular emphasis on fuels that are locally important. Thus, in addition to coal, fuel oil, and kerosene, stove and fireplace wood is priced in New England, in the Pacific Northwest, and in other regions where it is widely used; and sawdust is priced in Seattle, Wash., and Portland, Oreg. Typical bills for gas and electricity are obtained in all the large cities. Ice for household use is also priced.

Rents.—The rental index now shows changes in the average rental bill for all types of family dwellings occupied by tenants. Boarding houses, rooming houses, or light-housekeeping rooms are not included.

Until the autumn and winter of 1942, information on rents was collected by the Bureau from rental management agencies, such as real-estate firms and trust companies. Since that time, in order to get more accurate figures, information has been obtained directly from tenants in all of the cities included in the Bureau's index.

Miscellaneous goods and services.—This group includes services, transportation, recreation, and a variety of household supplies. Transportation is represented by changes in bus, streetcar, and railroad fares and the cost of automobile maintenance. Before Pearl Harbor, changes in prices of automobiles and tires were also included.

Generally used services like laundry and dry cleaning, and personal services such as haircuts for men and haircuts and permanent waves for women, are included. Ordinary medical and dental charges—for example, the cost of an office and a house visit, a tonsillectomy, and prices of most commonly used drugs and prescriptions—are obtained. Changes in the cost of local admissions for movies, telephone rates, and the prices of daily newspapers are also part of this group.

CHANGES SINCE THE OUTBREAK OF THE WAR

It has always been the Bureau's policy to keep the list of articles priced for the cost-of-living index as nearly up to date as possible. Since the outbreak of the war, with the great change in kinds of goods on the market for civilians, it has been necessary to compute the index without many articles which had formerly been priced. Most important are automobiles and tires; some furniture and household equipment, such as washing machines and radios; and silk hosiery and other articles made of silk. New wartime substitutes, including rayon hosiery and ice refrigerators, have been added whenever they were generally available.

The following table gives a record of the adjustments made in the list of articles since Pearl Harbor, in order to keep the index in line with market developments. These adjustments were made in each of the 34 cities at various times, as the goods actually disappeared from retailers' stocks.

TABLE I

Article	Date	Action
Automobiles	Jan. 15, 1942	New cars dropped from entire index.
Do	June 15, 1942	Used cars dropped in eastern seaboard cities and weight cut in half in other cities.
Do	Dec. 15, 1942	Used cars dropped from index as gasoline rationing was extended to entire country.
Tires and tubes	Jan. 15, 1942	New tires and tubes dropped from index.
Do	Feb. 15, 1942	Used tires and tubes dropped from index in 5 cities in which they were not available for purchase.
Do	Mar. 15, 1942	Used tires and tubes dropped from the index in all other cities.
Automobile repairs	Jan. 15, 1942	Weight increased 10 percent in index.
Gasoline and oil	June 15, 1942	Weight reduced by one-half in eastern seaboard cities and by one-third in rest of country.
Do	Dec. 15, 1942	Gasoline and oil weight reduced by an additional 25 percent in cities outside eastern seaboard.
Do	Jan. 15, 1943	Gasoline weight reduced by 10 percent in cities of eastern seaboard.
Streetcar and bus fares	Jan. 15, 1942	Weight increased in all cities in accordance with reports ffom local transportation companies.
Automobile insurance and taxes	Dec. 15, 1942	Weight reduced 10 percent in index.
Fuel oil	do	Weight reduced one-third in limitation area defined in ration order No. 11.
Electric refrigerators	June 15, 1942	Dropped from entire index.
Gas refrigerators	do	Dropped from city indexes, as stocks have been exhausted in 30 of the 34 cities.
	Mar. 15, 1943	
Washing machines	June 15, 1942	Dropped from city indexes, as stocks have been exhausted in all of the 34 cities.
	Sept. 15, 1942	
Radios	June 15, 1942	Dropped from city indexes, as stocks have been exhausted in 30 of the 34 cities.
	Mar. 15, 1943	
Metal bedsprings	Sept. 15, 1942	Dropped from city indexes, as stocks have been exhausted in 24 of the 34 cities.
	Mar. 15, 1943	
Studio couches	Sept. 15, 1942	Do.
	Mar. 15, 1943	
Sewing machines	June 15, 1942	Dropped from city indexes, as stocks have been exhausted in 11 of the 34 cities.
	Mar. 15, 1943	
Vacuum cleaners	June 15, 1942	Do.
	Mar. 15, 1943	
Gas cook stoves	June 15, 1942	Dropped from city indexes, as stocks have been exhausted in 6 of the 34 cities.
	Sept. 15, 1942	
Silk stockings	Sept. 15, 1942	Dropped from city indexes, as stocks have been exhausted in all of the 34 cities.
	Dec. 15, 1942	
Rayon stockings	Sept. 15, 1942	Added to all city indexes.
Cotton hose for women and girls	Sept. 15, 1942	Do.
Silk yard goods and silk slips	June 15, 1942	Dropped from city indexes, as stocks have been exhausted in all of the 34 cities.
	Dec. 15, 1942	
Rayon yard goods and rayon slips	June 15, 1942	Weights increased as silk yard goods and silk slips were dropped.
	Dec. 15, 1942	
Mattresses	Sept. 15, 1942	Weights for innerspring mattresses dropped from city indexes, as supplies have been exhausted in all 34 cities.
	Mar. 15, 1943	
Do	Mar. 15, 1943	Cotton felt mattresses priced wherever available (22 cities).

Changes in descriptions of articles priced.—In addition to changes made in the basic list of items priced revisions of equal importance are made from time to time in the detailed descriptions of the items to be priced. Since 1942, with the rapid changes in consumer goods available to civilians, the Bureau has followed the policy of revising much more frequently than usual the descriptions used in obtaining prices for all of the articles included in the index. In September 1942, the description of 54 grades or qualities of articles priced were rewritten; in June 1943, 68; and in September 1943, 57, which included practically all the types of clothing, shoes, and furniture priced for the index.

SELECTION OF STORES FROM WHICH PRICES ARE OBTAINED

The stores from which prices are obtained are selected to be representative of those in which wage earners and other families with moderate incomes buy. They include the following:

Food.—A total of 1,129 independent food stores are canvassed in 56 cities, and 208 chain organizations or their branches, representing approximately 8,650 individual stores, report prices for various cities. Information is also furnished by 152 dairies and 340 bakeries. Thus, all told, the Bureau's reports on changes in food prices represent about 10,260 individual food dealers.

In the selection of food stores, independent stores are chosen from those districts where most residents are families of modern income. Moderate rent level areas located within the city proper, but within easy commuting distance of plants and factories, are selected, and all important racial and nationality groups are represented. In making the selection of these stores their sales volume is considered, so that the number of stores in each major size group (sales of less than $20,000; $20,000 to $50,000; $50,000 to $250,000; and over $250,000) is given its approximate importance in the city total, based on the latest information available from the Bureau of the Census.

Chain grocery organizations generally operate in all parts of the city, and their prices are, therefore, representative of the entire city. When both supermarkets and service stores are operated by a chain organization, prices for each type of outlet are obtained separately.

Currently the Bureau is reviewing the location of its stores in consultation with local representatives, adding stores where necessary and making plans to cover newly built residential areas around war plants.

Prices of other goods and services.—Prices for goods and services other than food are obtained from 3,900 stores and service establishments in the 34 large cities which families with moderate incomes patronize, including department stores, shoe and clothing stores, laundry and dry-cleaning establishments, beauty and barber shops, and automobile repair shops. These establishments are chosen on the basis of location, size and type of clientele, size and kind of store, the kind of operation—that is, chain or independent—and the kind of goods sold or services rendered. The selection is based on information obtained from local sources, such as trade organizations, records of public utilities, and newspaper surveys. As a rule the stores are located in the city proper, not in suburban areas, although reports for such services as laundry, shoe repairs, and barber shops are obtained in neighborhood shopping districts.

National, sectional, and local chains are covered as well as independent stores. Prices for shoes, clothing, and household equipment are obtained from department stores, men's clothing stores, family shoe stores, women's specialty stores, furniture stores, and utility-operated appliance stores. The list of these stores is also subject to continued scrutiny, and changes are made periodically.

Rents.—Rents are obtained for 54,000 dwellings in 34 cities directly from tenants.[6] As a rule, the selection of representative houses is now made by choosing sample blocks at random throughout the city, using census housing bulletins of block statistics or city block maps from which nonresidential blocks have been eliminated, and then either surveying the entire block or selecting homes at random within each block, depending upon the number of houses to be surveyed. The number of rental dwellings included varies by the size of city, with a relatively smaller representation in the large cities than in smaller ones.

HOW PRICES ARE COLLECTED

Prices for all articles except coal, gas, and electricity are collected by personal visits of representatives of the Bureau, who call upon merchants and obtain

[6] This varies as houses are sold or converted. Thus, in September 1943, the total was 52,000.

prices for the articles most nearly answering the description given in the Bureau's list.[7] Thus, the agent does not ask for the price of "a medium-priced shirt," but talks with the buyer about which shirt in the present stock most nearly answers this description:

"Shirt: business; broadcloth, combed yarn, 136 by 60 or similar construction; preshrunk; white; collar attached, may or may not have fused collar, full sized, well made; 28½ to 29 yards per dozen, based on 36-inch material and neckband size scale 14 to 17."

The Bureau's representatives are instructed to carry with them the prices reported in the previous month and a description of the article which was then priced, and note any changes. This procedure is followed in order to obtain, as nearly as is possible, reports on the same kinds and qualities of goods from one period to another.

The representatives are instructed to obtain prices actually charged, not nominal prices. If an article is not available, no price is obtained, unless the dealer is only temporarily out of stock and gives the price at which supplies were sold on the previous day or are to be quoted on the following day. In such cases a report is made to the Bureau. If a different product has replaced the one formerly priced, the agent obtains a complete description of the new product and prices for the current and preceding periods wherever possible.

As a rule the agent, as well as obtaining selling prices and quality information from buyers or department heads, examines the merchandise and checks price tags or listed prices. The Bureau has made a number of special tabulations comparing published ceiling prices and actual selling prices for the administrative use of the Office of Price Administration. These studies show numerous above-ceiling prices reported to the Bureau by local merchants. Thus, for pork, 25 percent of the prices reported were above ceilings in April 1943; 21 percent in May; 49 percent in July (following the second OPA cut-back of pork prices); and 40 percent in August.[8]

Prices for coal, fuel oil, wood, and gas are obtained by mailed questionnaires, supplemented by personal visits by agents at least once a year to make certain that reports are correct, and more often if necessary to correct errors. For electricity, the Bureau utilizes information assembled by the Federal Power Commission.

Food prices are collected by local residents of the 56 cities surveyed. They work on a part-time basis under the supervision of the Bureau's full-time agents and have been especially trained for this work. About 90 such agents were engaged in the price collection in September 1943. Many of these local representatives are housewives or persons engaged in some other line of work who are unable to accept full-time employment, but who can undertake part-time work for the Bureau. They have the qualifications and training equivalent to the civil-service classification of professional grades P–1 and P–2.

Rents are also obtained by part-time local agents (nearly 400 were employed in September) under the supervision of the Bureau's full-time staff. Prices of other articles, such as clothing and housefurnishings, where the definition of grade and quality requires considerable experience, are obtained by the 21 full-time trained field representatives on the Bureau's staff.

DETERMINING THE RELATIVE IMPORTANCE OF THE COST-OF-LIVING ITEMS IN THE INDEX

In order to give a true picture of changes in prices as they affect the cost of living, account must be taken of the relative importance of each item in the total family budget. Since bread is more important than cheese and both are more important than bananas, allowance must be made for that fact.

In making the Bureau's index, the importance of each article priced was determined city by city on the basis of actual reports collected in the 1934–36 survey of expenditures of wage earners and clerical workers, the same survey from which the list of goods was selected. Thus, pork and corn meal are bought in larger quantities in southern cities, while beef and lamb are more popular in northern cities. Housing and fuel take a smaller share of the budget in southern cities because of the differences in climate and in income. (It is partly for this reason that the Bureau follows the policy of computing local indexes which are then combined into a national picture.)

[7] For certain services, such as doctors' fees, information is obtained by telephone, with personal calls at longer intervals than once a month or once a quarter.

[8] In making such reports, the Bureau does not report the names of the stores charging above-ceiling prices, as it is a fact-finding agency, not an enforcement agency.

Moreover, since the list of articles priced is representative rather than exhaustive, each article priced has been given the relative importance in the budget both for the article named and for similar goods which in the past have shown approximately the same price trends. For example, five kinds of pork are priced—chops; bacon; ham, sliced and whole; and salt pork. These five are given an importance representing all pork prices. This is based on studies of the individual items and the selection of those which in general reflect the trend of prices for other cuts.

Adjustments in relative importance of goods because of wartime.—The war has brought great changes in the relative importance of the goods American city families buy, and the Bureau of Labor Statistics has adjusted its index accordingly. For example, after Pearl Harbor local public transportation became more important, when new automobiles and tires were no longer available to civilians under ordinary circumstances; an appropriate adjustment was made in each city index, based upon the best local reports available from public utilities on the increased use of busses and streetcars. At the same time, since automobiles were required to last longer, the relative importance of automobile maintenance costs was increased; gasoline was reduced as rationing proceeded; and prices of new automobiles and tires were dropped completely from the index. As already indicated, many articles of furniture and household equipment were also dropped, thereby increasing the importance of the items remaining in the index.

In March 1943 a revision was made in the importance of the various foodstuffs in the index and seven new foodstuffs, such as liver, hamburger, and grapefruit juice were added to the index because of their increased importance in the family budget. At that time, because of rationing of sugar, meats, and canned fruits and vegetables, a complete realinement was made in the food-price index to take account of changes in consumption. The revision was based upon the estimated amount of food of each kind available in the years 1935–39 in relation to the amount available for civilian consumption in the year 1943, obtained from data provided by the Department of Agriculture, the War Production Board, the Office of Price Administration, and other sources. The net result of this revision was to reduce greatly the importance of such items as bananas and tea, to cut down the importance of beef and canned goods, and to increase the importance of cereals, milk, and poultry.

The combined effect of these changes in the make-up of the index and the relatively greater rise in food prices than in other prices has resulted in a gradual increase in the importance of food in the estimated over-all cost of the family budget. Whereas in 1935–39 food comprised 35.4 percent of the family budget for families with moderate incomes, it is now estimated to represent over 41 percent of the total cost of the wartime family budget priced by the Bureau. In this connection, it should be noted that the cost-of-living index has never included income taxes and savings.

The list of goods priced and their relative importance in the index was tested by the Survey of Spending and Saving in 1942, which covered the buying of 1,300 typical American city families in the year 1941 and the first quarter of 1942.[9] It indicated that the basic pattern of buying had not changed materially from that of the mid 1930's. There has been no study of family expenditures since that time, and it is impossible to know exactly what has happened to the pattern of family buying under the impact of new taxes and higher prices. Undoubtedly the manner of living for many families is now different, but the over-all picture will probably not be greatly changed except for those obvious changes for which allowance has already been made in the index.

The attached table shows the importance of each item in the index, and of the major groups, in March 1943 (table II).

COMPUTING THE NATIONAL INDEX

After prices are collected, and the relative importance of each item is determined, the following general steps are taken in computing the index:

1. Average prices are computed for each grade of article or service for each city, and percentage changes in these prices from the previous period are calculated.

2. Percentage changes from the previous periods for the prices of each group of articles, for example, food or clothing, are computed for each city. Each item is given a weight equal to its importance in its group.

3. Percentage changes in prices from the previous period for all groups combined are computed for each city, with each group given a weight equal to its importance in the total.

4. The large city index is computed by applying this percentage change to the index for the previous period, resulting in an index based on the average for the years 1935–39 as 100.

5. Reports for the 56 foot cities are combined for the national food index. These are then combined with the reports for all other goods and services for

34 cities to make up the national percentage change for all cities. In this calculation the relative importance of the population represented by each city (with allowance for different levels of income and expenditures) is used as a basis for weighing to obtain a national average.

Each of these steps is illustrated below.

AVERAGING THE PRICES

After the prices have been collected they are sent to Washington for careful scrutiny and editing, and average prices are prepared for each of the grades of articles priced in each city. For food, the quotations obtained from chain stores are combined with quotations from independent stores in accordance with the importance of sales in these types of outlets based on the latest estimates from the Census Bureau and the comprehensive Food Margins Survey made by the Bureau of Labor Statistics for the Office of Price Administration in the autumn and winter of 1942-43.

For prices of other kinds of goods and services a simple average is obtained for each grade and quality priced in each city. For example, three types of men's hose are priced in all areas—cotton mercerized hose of plain color weighing around 2 ounces a pair; cotton hose of lower quality weighing about 2½ ounces a pair; and rayon hose with cotton reinforced heel and toe weighing about 1⅛ ounces per pair. The prices of each of these types are obtained in a minimum of four stores in each city. These price quotations provide the city average for each type of hose. Thus, in New York City in September the prices for the first type—cotton mercerized hose—ranged from 25 to 50 cents and averaged 43 cents per pair.

The price changes for the three types of hose in each city are combined to give a price change for all men's hose in accordance with the relative importance of each type in the budgets of wage-earner and clerical families. The money required to buy men's hose in the quantities used by such families in New York City was divided between the types in August of this year as follows: Out of each $10 outlay for hose (larger than would normally be spent), $1.50 would be spent on the first type, $6.38 on the second, and $2.12 on the third.

The average price of the first type in September was 1.2 percent above the average price in August. The second type showed an increase of 0.8 percent, and the rayon hose rose 5.9 percent. Thus the hose which cost $10 in August would cost a total of $10.19 in September, with an expenditure of $1.52 for the first type, $6.43 for the second, and $2.24 for the third. The increase over August for all men's hose thus amounted to $0.19 out of each $10 outlay, or 1.9 percent.

When price changes for different types of goods are combined into an index for a single group included in the cost-of-living index, the procedure is similar.

Thus in Detroit the average quantities of dairy products consumed by wage earner and clerical families required in May the division of each dollar spent for dairy products as follows: Butter, 26 cents; cheese, 8 cents; milk delivered, 45 cents; milk from the grocery, 15 cents; and evaporated milk, 6 cents. Between May and June the price of butter dropped 5½ cents because of the introduction of the subsidy, a decrease of 9.9 percent. The price of cheese decreased slightly, 0.3 percent from May to June; and prices for milk from the grocery decreased 0.7 percent; evaporated milk, 1.0 percent; while the price of delivered milk remained the same. The same quantities purchased for a dollar in May would have cost 97 cents in June—butter, 24 cents; cheese, 8 cents; delivered milk, 45 cents; milk from the grocery, 14 cents; and evaporated milk, 6 cents. Accordingly, the index of the prices of dairy products decreased nearly 3 percent from May to June.

COMBINATION OF COST-OF-LIVING INDEXES FOR THE CITIES INTO THE NATIONAL AVERAGE

To compute the national index for the large cities each city is given a relative importance based upon the population of the cities within the surrounding area. For the food-cost index this population distribution is computed for 56 cities, and for other group indexes for 34 cities. The relative importance of each city, as included in the index in March 1943, is shown in the attached table (table III).

Until March of this year these figures were based upon the 1930 census, but in March of 1943 the Bureau revised the weights for the several cities based upon the 1940 census and subsequent census estimates of population compiled from ration books issued.

THE COST-OF-LIVING INDEX

The national cost-of-living index, as well as the city indexes for the 34 large cities (but not for the other 39) are always shown on a 1935–39 base. That is, the

September 1943 index of 123.9 indicates that the retail prices of consumers' goods bought by American workers' families are 23.9 percent higher than they averaged in the years 1935–39.

The fact that an index for one city may be higher than another as compared with 1935–39 does not mean that the total spent for living is greater in one city than in the other, but rather that prices and rents have gone up more since 1935–39. Comparisons of the dollar cost of a family budget in various cities require a different type of statistical measure than an index of price changes, such as the cost-of-living index.

TABLE III.—*Population weights used for combing cost of goods other than food purchased by workers in 34 large cities into composite indexes for the large cities of the United States, as of March 1943*

BUREAU OF LABOR STATISTICS

Isador Lubin, *Commissioner*

TRENDS OF MANUFACTURING EMPLOYMENT, 1929 TO 1937

(By A. F. Hinrichs and Harry Brenner, of the Bureau of Labor Statistics)

There was a striking similarity in the number of wage earners employed in manufacturing establishments in the United States in 1929 and 1937. An average of 8,329,548 wage earners were employed in 1929 and 8,567,738 in 1937. This was an increase of 238,190 jobs, or 2.9 percent.

Because the grand totals are so similar in these 2 years, it is possible to study underlying shifts in manufacturing activity directly from the absolute figures for employment in the various industries and States. Both years were peak periods of business activity. By and large, the total employment in individual industries or in individual States shows little change between the 2 years. There are, however, outstanding exceptions: industries or areas that show considerable increases or decreases.

The present article is an analysis of the more significant of these shifts. On an industrial basis, the most striking fact is the divergent trend of industries manufacturing construction materials and the remaining manufacturing in-

dustries considered in combination. Fifteen building-material industries show a net decrease of employment from 861,953 in 1929 to 665,153 in 1937, a loss of 196,800 jobs, or 22.8 percent (table 1). If an allowance is made for decreased employment in structural-steel departments of steel works and rolling mills, not included in these figures, the total decrease amounted to about 226,000 jobs. On the other hand, in industries other than these 15, employment increased from 7,467,595 to 7,902,585, an increase of 5.8 percent. With the allowance for the influence of structural steel on these totals, the increase would be about 6.2 percent. This closely approximates the population increase from 1929 to 1937.

On a regional basis, the shifts were pronounced. Increases in total manufacturing employment were largely concentrated in Michigan and the adjoining States of Indiana and Illinois, in the States of the South Atlantic, South Central, and Southwestern regions, and on the Pacific coast. In general, the States in the northeastern section of the country had not returned to their 1929 levels of manufacturing employment by 1937.

TABLE 1.—*Number of Wage Earners Employed in Industries Manufacturing Building Materials, 1929 and 1937*

Industry	Number of wage earners		Percent of change
	1929	1937	
Lumber	419,084	323,928	−22.7
Clay products other than pottery [1]	93,657	65,226	−30.4
Planing-mill products	90,134	66,814	−25.9
Structural and ornamental metal work	54,947	38,814	−29.4
Marble, granite, etc	37,817	20,816	−45.0
Sheet-metal work	28,593	22,973	−19.7
Cement	33,368	26,426	−20.8
Plumbers' supplies	27,960	25,240	−9.7
Lighting equipment	23,580	21,743	−7.8
Concrete products	16,505	12,840	−22.2
Doors, shutters, etc., metal	9,557	8,408	−12.0
Lime	8,554	9,751	+14.0
Wall board, etc.[2]	7,462	11,590	+55.3
Roofing	6,027	7,418	+23.1
Window shades	4,708	3,166	−32.8
Total	861,953	665,153	−22.8

[1] Because of changes in classification, the clay-products industry was combined with the crucibles industry in 1929, and with the nonclay-refractories industry in 1937 in order to obtain comparable data.

[2] Because of changes in classification, the wall-board industry was combined with the gypsum-product industry in 1937 in order to obtain comparable data

CHANGES OF CENSUS CLASSIFICATION

Before census totals can be compared, the figures for 1929 must be adjusted to be made comparable with those for 1937. The unadjusted census total for 1929, 8,838,743 wage earners, is 270,000 higher than the figure for 1937. There were, however, 7 industries included in the Census of Manufactures for 1929 which were not treated as manufacturing industries in 1937.[1] Furthermore, though no allowance can be made for differences in the completeness of coverage, it is probable that the 1937 census somewhat understates the number of wage earners in that year.[2]

[1] The number of wage earners employed in these industries was, therefore, deducted from the 1929 total. The 7 industries, and their average number of wage earners for 1929 are: coffee and spice, roasting and grinding, 9,053; flax and hemp, dressed, 47; gas, manufactured, illuminating, and heating, 43,065; motion pictures, not including projection in theaters, 10,784; peanuts, walnuts, and other nuts, processed or shelled, 7,933; railroad repair shops, electric, 29,475; and railroad repair shops, steam, 368,681. In addition, the classification of wage earners in the turpentine and resin industry was so radically changed in 1937 that it was necessary to deduct the employment in this industry from the totals in both 1929 and 1937.

[2] The survey of activities of manufacturing establishments for 1929 was conducted in conjunction with the regular decennial census of population. A large staff of field employees was therefore available to make a door-to-door canvass of every establishment, thus insuring practically complete coverage. For the 1937 census, however, the field force was substantially smaller, and it was necessary to depend largely upon the returns of mailed questionnaires.

In most instances, this did not result in any significant loss of coverage. There are, however, certain industries—notably in the garment-manufacturing group—in which there is always a large turn-over of establishments, as well as frequent shifting of plant location. In such cases, the reliance upon the mailed questionnaire resulted in a substantial understatement of activities of the industry. To the extent that this was true of the 1937 Census of Manufactures, employment in 1937 was underestimated. While the net effect that this has upon the United States total is relatively minor, it is well to keep the point in mind when considering later discussions of changes in employment by State and industry.

In general, it is to be expected that loss of coverage for the reason just given will take place largely in the smallest establishments. Some idea of the effect of this loss may, therefore, be obtained from a consideration of the number of such establishments, and their relative importance as employers of labor. It will be found that while almost half of all the manufacturing establishments in 1929 employed no more than 5 workers, these plants accounted for only 3.3 percent of the total number of manufacturing wage earners. In 1937, only 41.0 percent of the establishments were of this size, and employed 2.0 percent of the wage earners. It may be assumed that part of this decline can be explained by the tendency toward elimination of the smallest sized manufacturing establishments. It thus seems safe to say that, even with a fairly large understatement of establishments, the 1937 census probably was less than 1 percent off in its wage-earner total.

[3] The actual decrease is somewhat less than 13,500 workers. In 1935, the Census of Manufactures made some changes in the classification of the silk and rayon industry, as a result of which some plants formerly classified in that industry were assigned to other industries. The number of workers in such plants cannot be determined exactly.

INDUSTRY TRENDS

Comparing employment in manufacturing industries in 1929 and 1937 on an industry by industry basis, one finds a limited number of industries outside of the building-material field, in which employment declined substantially. The list of those in which employment declined by as much as 5,000 people is given in the succeeding paragraphs.

Three industries show net losses in employment attributable largely to technological shifts—cigars, tires and tubes, and silk and rayon. Cigars dropped 28,000 people. This reflects an absolute decline in the number of cigars smoked and a rapid introduction of machine processes for hand processes. There is no reason to expect that there will ever again be as many people employed in the manufacture of cigars as were employed in 1929. The trend may very well continue down. Silk and rayon employed 13,500 fewer workers in 1937 than in 1929.[3] The silk industry has been declining and will probably continue to decline. Rayon can be handled with fewer workers than equal quantities of silk. Tires and tubes dropped 20,000 people, reflecting fundamental and almost revolutionary changes in both the process of producing tires and in the life of the tires produced.

There are three industries in which substitution has accounted for very substantial losses of employment. The first of these is manufactured ice from which industry 13,500 people were dropped between 1929 and 1937. Somewhere near this number of people appear to have been added in the manufacture of electric refrigerators. There were 13,500 people dropped in confectionery and ice cream. It was supposed that a fairly substantial part of the growth in the demand for confectionery and ice cream during the decade of the 1920's was attributable to prohibition. It is equally reasonable to suppose that the decline reflects, in part, the repeal of prohibition in 1933. In the manufacture of wooden boxes, 4,500 people were dropped. In this connection, it should be noted that the growth of the paper-box industry has absorbed nearly 10,000 workers.

It is not possible to account as definitely for declines of 19,000 wage earners in the furniture and wood-turning industries, of 7,300 in the production of rubber boots and shoes, and 7,100 in men's and women's hats and millinery, and of 6,800 in silverware, plated ware, and jewelry. There has been an absolute decline in the production of rubber boots and shoes. This may very well be connected with changes in our habits of living as induced by the automobile. The change in furniture and wood turning may be related to the lack of development of new homes as well as to some shift in consumer preferences. As regards hats and millinery, there may have been some change in style and consumer preferences, for there has been a continued growth in the employment of people engaged in the production of clothing generally. It is quite possible that this is one of the industries in which the use of a questionnaire in 1937, resulted in some underreporting.

The above 10 industries or groups of industries employed about 788,000 wage earners in 1929 and about 654,000 in 1937—a decrease of about 134,000 wage-earner jobs. The loss of these jobs is attributed, in part, to technological changes, in part to changes in consumer tastes. In order to make the list complete, one should perhaps add cotton textiles, employing an average of 435,400 in 1937 and 441,100 in 1929. The decline, much smaller relatively than in the other industries

listed, is large in absolute terms and accounts for more than 5,000 workers. Here then are possibly 139,000 jobs that disappeared on the basis of net changes of employment between 1929 and 1937.

The changes in classification within the census group, designated as "machinery, not including transportation equipment," are too large to allow one to trace changes in employment in the separate industries. The group as a whole shows little change.[4] There was probably a significantly large decrease in the number employed on radios that might be included in the list just completed.[5]

We are frequently told that what is needed in the United States is a new industry. Did any new industries develop between 1929 and 1937? The census gives evidence of only two industries in 1937 that employed as many as 10,000 workers which were essentially nonexistent in 1929. In the manufacture of alcoholic beverages of one sort or another, 62,000 additional people were employed. Virtually none had been legally so employed in 1929. Nearly 17,000 people were employed in the manufacture of synthetic resins and plastics. Only 3,500 workers were classified in this industry by the census in 1929.[6] Essentially, therefore, we may say that there was a growth of 76,000 jobs in the new industries.

Five industries, however, experienced an increase of employment of more than 40 percent between 1929 and 1937. While none of them may be regarded as a new industry, they are certainly indicating rates of growth sufficiently large to meet the desire that is expressed when we say that we need new industries in the United States. These industries were canning, which added 43,000 workers; stamped and pressed metalware, 21,000; rayon production, 16,000; aircraft, 9,000; and asbestos products, used largely for insulation, 5,000—a total growth in the five industries of 94,000 workers.

This is a growth within what may be described as new industries of 170,000 workers—substantially more than the decrease in all of the industries that were showing a fundamental tendency to shrink.

This does not complete the list of industries with growing employment. There were at least 11 that experienced a rate of increase of employment between 1929 and 1937 two to four times as great as the increase in population. These industries and their respective increases were blast furnaces, steel works and rolling mills, 83,000; baking, 38,000; men's clothing, 26,000; shirts and collars, 10,000; women's clothing, 55,000; converted paper products 26,000;

[4] Total wage-earner employment in the group as classified in 1929 was 1,091,269 and as classified in 1937 was 955,975. To achieve approximate comparability it is necessary to add to the figures for 1929, 14,416 wage earners making phonographs, carried in miscellaneous manufacturing in 1929; 9,784 wage earners on nonmechanical refrigerators and refrigerator cabinets, carried in the lumber group in 1929; and 1,784 wage earners on printer's and engraver's materials and in type foundries, carried in the printing and publishing group in 1929. It is also necessary to exclude from the 1929 total, 5,038 wage earners who were employed in plants classified in the gas machines and meters industry in 1929 and in the instruments and apparatus, professional and scientific industry in 1935 and, therefore, carried in the miscellaneous manufacturing group in 1937. This gives an adjusted total of 1,112,215 for 1929.

The corresponding total for 1937 is 1,100,484. This includes, in addition to the group total of 955,975 classified under machinery by the census in that year, 120,024 wage earners making foundry products and 24,485 wage earners in boiler shops who were carried in the iron and steel group by the census in 1937, but had been carried in the machinery group in 1929.

Two minor differences in classification in 1929 and 1937 are noted merely for the sake of completeness. In 1929 numbering machines were carried in hand stamps and stencils and brands. In 1937 they were carried as an unidentifiable but small part of cash registers, etc. On the other hand, taxicab meters were part of cash registers, etc., in 1929, and in 1937 were an unidentifiable part of instruments and apparatus in the miscellaneous group of industries.

[5] In 1929 the census showed 328,722 wage earners in electrical machinery and radios, and 14,416 in phonographs. In 1937 it showed 257,660 in electrical machinery and 48,343 in radios and phonographs. The totals for the three industries in combination have declined by 37,135. A decrease in radio employment may be safely inferred from changes in the value of radios and tubes produced. Though the classifications may have changed, the value of the products appear to have decreased by more than one-fifth. Whether or not there has also been a decrease in employment in electrical machinery, we cannot say. It should be noted that the manufacture of refrigerators (largely mechanical) employed 50,623 wage earners in 1937. In 1929 there were 16,883 in establishments primarily engaged in producing mechanical refrigerators, 9,784 in establishments producing nonmechanical refrigerators and refrigerator cabinets, and we estimate there were 5,731 engaged in manufacturing, refrigerating and ice-making machinery. These three groups, without any break-down, are combined in the 1937 total of 50,623. There was a large decrease in the production of commercial refrigerating and ice-making machinery between 1929 and 1937.

[6] Because of a change in classification of the indutsry in 1931, the figure of 3,500 workers in 1929 is not exactly comparable to the figure of 17,000 in 1937. If the data could be made comparable, the increase in employment in the industry would be somewhat smaller than 13,500.

chemicals, 17,000; glass, 11,500; rubber goods other than tires and boots and shoes, 8,000; leather products, other than boots and shoes, 7,000; cigarettes, 5,000—a growth of 286,000 in the number of wage earners employed in 11 industries.

An adjustment should be made in the steel figure. The net growth of 83,000 conceals decreases in some branches of steel production. There are no figures on the subject, but a loss of employment for 30,000 wage earners may be estimated because of decreased production of structural shapes, concrete reinforcing bars, and nails. The net growth for the balance of the industry was then not 83,000 but 113,000 wage earners. This would raise the total for these 11 industries (excluding steel for construction) from 286,000 to 316,000.

Finally, in terms of the industries which show growth of employment at a rate substantially higher than the rate of population growth, one should note knit goods with 22,500 and shipbuilding with 7,000.

All in all, therefore, in industries employing more than 10,000 workers in 1937 and growing substantially more rapidly than population, there was an increase of about 516,000 jobs in manufacturing—76,000 in 2 new industries; 94,000 in 5 industries with increased employment of over 40 percent; 316,000 in 11 industries, basically old, but still showing a net growth of employment 2 to 4 times as great as population; and about 30,000 in knit goods and shipbuilding. Against this "new industry" gain of 516,000 is to be offset the loss of 139,000 jobs in industries with substantial decreases of employment opportunity.

The net gain is 377,000 jobs in relatively large industries showing pronounced trends of employment.

The striking changes in manufacturing employment are thus confined to a relatively small list of industries. Decreases occurred in the total for 15 industries manufacturing building materials: 862,000 in 1929 to 665,000 in 1937. In the 11 industries with large decreases noted there were 1,229,000 in 1929 and 1,090,000 in 1937.[7] The 20 industries for which increases were noted employed 1,862,000 in 1929 and 2,347,000 in 1937.[8]

The remaining manufacturing industries showed smaller absolute changes than those that have been discussed. Some, of course, showed small decreases. Others increased. In general, outside of the building-materials industries and of the industries just listed as changing considerably, there were small gains. In the aggregate, they employed 4,378,000 in 1929 and 4,466,000 in 1937, a net gain of about 88,000 wage earners.

This means that in all manufacturing industries outside of the building-materials field, there was a net increase in employment of about 465,000 wage earners,[9] a gain of 6.2 percent. This large segment of employment—all of manufacturing outside of building materials—expanded almost exactly in proportion to population.

STATE TRENDS OF EMPLOYMENT

When the same adjustments were made in each State as were made in the national figures, it was found that manufacturing employment was greater in 1937 than in 1929 in 23 States and the District of Columbia, while declines were found in 25 States (table 2). The increases ranged from 1.1 percent in New Jersey to 27.4 percent in Michigan. Pennsylvania showed a drop of less than 0.1 percent, while the greatest decline (19.9 percent) was experienced in Arizona.

In general, the States in the northeastern section of the country had not returned to their 1929 levels of manufacturing employment by 1937. This condition was true in four of the six New England States, in two of the three Middle Atlantic States, and in Ohio and Delaware. On the other hand, consistent gains were registered in the South. With the single exception of Mississippi every Southern State east of the Mississippi River showed an increase. Most of these gains were quite large; in only two cases were they less than 10 percent.

[7] Not including radios, nonmechanical refrigerators, or ice-making machinery discussed above (p. 1311, footnote 5).

[8] These figures include structural steel in blast furnaces, steel works, and rolling mills. They do not include mechanical refrigerators discussed above (p. 1311, footnote 5), wall board and gypsum which in combination increased from 7,462 to 11,590 (see table 1), nor agricultural implements and tractors for which a 1929 to 1937 comparison is not possible.

[9] This figure represents the difference of 435,000 that is the net sum of changes in industries (including all of the iron and steel industry) other than building materials, plus an allowance of 30,000 decline in structural steel made in plants classified in steel works and rolling mills that should be attributed to a decline in building materials.

Two other regions show important increases. Michigan, as has been noted, had an increase of 27.4 percent. Small increases occurred in Illinois and Indiana. This gain reflects increased employment in the automobile and steel industries. The Pacific coast likewise experienced increased employment, notably in California and Oregon. Finally, as part of the growth of southern industry, one should note the increase of employment in the Southwestern States of New Mexico, Oklahoma, and Texas.

In general, with the exceptions just noted, employment declined in the States west of the Mississippi River. The Great Plains and Mountain States have a relatively small number of manufacturing wage earners and the declines involve relatively few workers. Increases occurred, however, only in Nevada and North Dakota, the only two States in the Union with less than 3,000 manufacturing wage earners in 1937. The decreases in the States bordering the Mississippi are significant.

TABLE 2.—*Number of wage earners employed in manufacturing industries, by State and geographical division, 1929 and 1937*

State and geographic division	Number of wage earners in all manufacturing industries [1]		Percent of change	Number of wage earners, excluding those in industries manufacturing building materials [1]		Percen of change
	1929	1937		1929	1937	
New England	1,081,122	1,022,350	−5.4	1,044,511	996,821	−4.6
Maine	68,820	75,464	+9.7	62,933	70,091	+11.4

United States	8,329,548	8,567,738	+2.9	7,467,595	7,902,585	+5.8

[1] Adjusted for comparability; see p. 1309.
[2] Does not exclude clay industry.
[3] Does not exclude cement, clay, lime, and lumber industries.
[4] Less than 1/10 of 1 percent.
[5] Does not exclude doors, etc., metal, and wallboard industries.
[6] Does not exclude cement industry.
[7] Does not exclude cement, clay, and lime industries.
[8] Does not exclude doors, etc., metal and roofing industries.
[9] Does not exclude cement, doors, etc., metal, roofing, and wallboard industries.
[10] Does not exclude clay, marble, planning-mill, and sheet-metal-work industries.
[11] Does not exclude cement, lighting equipment, wallboard, and window-shade industries.
[12] Does not exclude plumbers' supplies industry.
[13] Does not exclude clay, doors, etc., metal, wallboard, and window-shade industries.
[14] Does not exclude roofing and wallboard industries.
[15] To avoid disclosure, 13 wage earners in 4 plants in the turpentine and rosin industry were not deducted in the adjustment for comparability; 2 of the plants are in Louisiana, 1 in North Carolina, and 1 in Texas.
[16] Does not exclude lime and window-shade industries.
[17] Does not exclude lime, structural and ornamental metalwork, and window-shade industries.
[18] Does not exclude sheet-metal-work, structural and ornamental metalwork, and wallboard industries.
[19] Does not exclude lighting equipment and plumbers' supplies industries.
[20] Does not exclude cement and wallboard industries.

The gross changes in employment by States do not tell the full story. More exactly, a decrease does not always have the same significance. In some instance—as for example, Arkansas, Louisiana, and Mississippi—the decrease reflects a decline in some basic industry that is more than adequate to offset general tendencies to growth. In these three States the lumber industry in 1937 was still suffering from the depression of the construction industry, and losses of employment in this industry hide gains in a number of others. In other instances—as for example, in New England—the decrease of employment was concentrated in industries which, on a national basis, held their own. Thus, cotton textiles grew in the South, while declining in New England. Finally, in a few cases the declines reflect among other things the importance of an industry with a generally declining trend of employment—as for example, cigarmaking in Pennsylvania. Thus, it is necessary to relate the two trends—shift in industry and in location—into an integrated picture.

As has been noted, one of the major results of the depression which began in 1929 was the large drop in building construction. It is in this field that the continued lack of recovery has been most notable in its effect on manufacturing employment. In 1929, the building-materials industries employed 10.3 percent of all manufacturing wage earners in the country. However, their relative importance in the different States varied considerably. Thus, in Idaho they accounted for 78.0 percent of manufacturing employment, while Rhode Island had only 1.1 percent of its workers engaged in making building materials. These are not isolated extreme examples: In 7 States besides Idaho, these industries employed over 40 percent of the workers; Rhode Island was 1 of 6 States which had less than 5 percent of their workers in this field.

By and large the factors making for the decline in employment in the building-materials industries apply equally to every section of the country. On the other hand, as has just been shown, the extent to which workers depended for jobs on the activities of these industries varied considerably from State to State. For this reason, the State changes in all manufacturing employment from 1929 to 1937 are not truly comparable. The percentage changes are distorted unequally in accordance with the varying relative importance of a group of industries having in each State the same tendency to decline.

This consideration is made clear when one examines the last three columns of table 2, covering employment in manufacturing industries, exclusive of building materials. The number of States showing increases in employment from 1929 to 1937 rises from 23 to 32. In addition, Ohio and Vermont, which experienced fairly large decreases considering all industries, now show declines of less than 1 percent. In fact, all but 1 of the 16 States still exhibiting a drop in employment have percentage declines smaller than those shown before the adjustment. Similarly, in every case but one (which remains at the same figure) the percentage increases are greater.[10]

On a regional basis, the following main observations are noted: (1) Washington, where the lumber industry had declined severely, joins the other States of the Pacific coast in showing an increase; (2) every State in the South Central regions shows an increase, whereas without the adjustment Mississippi, Arkansas, and Louisiana had shown decreases; (3) in the West North Central and Mountain regions the percent of decrease becomes less than 1 percent.

In the following presentation of industry changes for each State, it was found necessary in many cases to give the figures as approximations. This occurs for two reasons: (1) In many cases, the census combines industry data for several States in order to avoid an exact or approximate disclosure of the activities of an individual company, and (2) industry classifications have changed so that 1929 and 1937 figures are not always exactly comparable. Part of the difficulty caused by the second reason has been obviated by combining data for two or more industries when the change in classification involved a simple transfer of plants making some individual product from one industry to another.

Northeastern region

It has been stated that the northeastern section of the country had not, in 1937, returned to its 1929 level of manufacturing employment. In fact, the net decrease during this period in the number of mnaufacturing wage earners employed in the Middle Atlantic and New England States amounted to 120,720 people. If the losses in the contiguous States of Ohio and Delaware are added to this figure, the net decrease is then no less than 139,555 jobs. This may be compared with a combined loss of only 55,981 jobs in all the remaining 17 States which suffered a drop in employment.

The major declines in this region occurred in New York, which was providing 66,354 fewer jobs in 1937 than in 1929, and in Massachusetts, where the corresponding figure was 51,473 jobs. In addition, Rhode Island, New Hampshire, and Ohio were also included among the 7 States which fell off by at least 5,000 positions.

On the other hand, there was a fairly large degree of growth in Connecticut, which in 1937 provided 13,907 more jobs than it had in 1929. Maine and New Jersey, the other 2 States which showed an increase in this region, together added only 11,321 workers.

In considering the specific industries which acccounted for employment changes in this area, it is found that the major variations occur in the group of industries manufacturing textiles and their products. The outstanding change is the marked decrease in the manufacture of cotton goods. This industry is unimportant in Vermont and the Census of Manufactures gives no separate data for that State. All the other States in the region, with the single exception of Maine, had fewer

[10] In the last three columns of table 2, the figures for all the States are not exactly comparable. As is evident from the table, the employment data were obtained by deducting from the total employment in the State the number of wage earners in the 15 building-materials industries listed in table 1. However, many of these industry figures were not shown for all States in the published reports of the Census of Manufactures in order to avoid disclosure of data for individual firms. Through the cooperation of the Bureau of the Census, these missing data were obtained by the Bureau of Labor Statistics to be included only in totals for the 15 industries which were then deducted from the State employment total. The possibility of exact or approximate disclosure arose again, however, for those cases in which either one or two industries were all that were not shown by the census. In such cases, it was necessary to omit some of the 15 industries in making the deductions. This procedure was followed for 18 States and the District of Columbia. In no case did the necessity for this procedure affect the significant results for any State. Altogether, the number of wage earners in building-materials industries not deducted amounted to 30,166 in 1929 and 20,525 in 1937. In 10 States and the District of Columbia, the number involved was less than 400 for each year.

Where more than one State in a geographic division has been treated in this manner, the employment totals and the percent of change for the geographic division are not based on the sum of the State figures shown, but represent the actual totals and percent of change when all building-materials industries are deducted from each State. When only one State in a geographic division has been handled this way, no regional totals are shown, but the percent of change, which is given, is based on the complete adjustment in each State in the region. Similarly the totals and percent of change for the United States are based on the complete adjustment in every State.

workers in the industry in 1937 than in 1929. In 4 States—New Hampshire, Massachusetts, Rhode Island, and Pennsylvania—the decrease amounted to at least 40 percent. All in all, cotton-goods plants lost about 53,000 wage earners in this area. Although this decrease is of considerable size, the industry as a whole showed very little change, since the South Atlantic States, plus Alabama, experienced a growth in cotton-manufacturing employment just about equal to the decline in the Northeast.

This region also suffered large declines in the production of silk and rayon goods. In this case, the most significant changes occurred in the Middle Atlantic States which lost in the neighborhood of 35,000 workers in this industry. In addition, Connecticut lost about 4,500 workers. A gain of about 6,000 in Massachusetts and Rhode Island hardly made up for the declines. These latter increases by the way, were not in long-established silk mills but represented primarily the conversion of cotton mills to the manufacture of rayon. They are thus partial off-sets to the large decreases in cotton goods noted in the last paragraph.

Although the Southern States experienced a gain of employment in silk and rayon manufacturing, this growth did not, as in the case of cotton goods, prevent a net decline in the industry as a whole. It is estimated that the increase in the South Atlantic States amounted to about 18,000 workers.

Besides these changes in cotton, silk, and rayon goods, there were significant movements in the manufacture of finished garments. The Middle Atlantic States, Massachusetts, and Connecticut are important centers of the garment industries. An increase of employment in establishments manufacturing women's clothing occurred in all 5 of the States and resulted in a net gain of about 42,000 jobs.

While there was a combined growth in these States in the manufacture of men's clothing [11] also, amounting to about 15,000 positions, there was one notable example of a decrease in employment—a drop of over 8,000 jobs in New York. This undoubtedly reflects an internal shift within the region, with business moving from the New York City area to the outlying States of Connecticut, New Jersey, and Pennsylvania.

Against the background of these major shifts may be presented the picture for each State in this region.

Considering first Massachusetts, the major industrial State in New England, it will be recalled that there occurred here a net decrease of 51,473 jobs. Supplementing the story of the decline of the textile industry there is found here a drop of over 7,000 employees in the dyeing and finishing, woolen and felt goods, and wool carpet and rug industries. It should be noted, however, that the increase of 2,512 jobs in the plants manufacturing worsted goods is almost exactly equivalent to the loss in woolen and felt goods. In addition, it is especially important to note the decrease of about 13,500 jobs in the manufacture of boots and shoes, including rubber footwear. There then remain several industries displaying smaller losses, of which a drop of 3,814 positions in foundries and machine shops is the largest numerically. On the positive side is found a growth in bakeries and in shipbuilding, which is general in the region.

The situation in Rhode Island is practically presented in its entirety if, to the story of the textile industries, an account is made of the employment of 3,058 fewer jewelry workers in 1937 than in 1929. The jewelry industry of Rhode Island is primarily concerned with the manufacture of cheap jewelry.

New Hampshire and Maine both show small decreases in paper and pulp, small increases in the manufacture of miscellaneous wooden articles, and, finally, a fairly evenly divided, combined increase of 6,807 men in boot and shoe factories. However, New Hampshire showed a net decrease of over 8,000 jobs, with the largest declines being 6,607 workers in cotton plants and 3,463 in plants making worsted goods. These losses represented mainly the closing down in 1935 of the Amoskeag mills in Manchester. Maine, on the other hand, showed a slight upward trend in both of these industries to help put it on the positive side of the ledger.

In Vermont, where the textile industries are not significant, the change in the State can be almost entirely accounted for by decreases in two of the building-materials industries—marble and lumber—and a decrease of over 900 jobs in the machine-tool industry. Offsetting these losses was a gain of over 2,000 workers in plants manufacturing woolen goods.

[11] There were such extensive changes in classification from 1929 to 1937 in the group of industries manufacturing men's clothing that it was necessary to combine several industries in order to obtain comparable data on a State basis. The State figures presented for men's clothing here and in other sections of this report therefore include plants manufacturing shirts, collars, work clothing, and men's furnishing goods, in addition to those making suits, overcoats, etc.

Connecticut, on the other hand, represents a situation of general change. There was a rather small growth in a large number of industries overbalancing a similar group of losses in other industries.

In New York State, the picture regarding the textile industries must be supplemented by the fact that millinery establishments reported over 6,000 fewer workers in 1937 than in 1929. However, the manufacture of women's hats in New York City furnishes an outstanding example of the situation referred to previously on comparability of coverage in the 1929 and 1937 Census of Manufacturers. This is an industry consisting mainly of a large number of small establishments which spring into existence overnight and have a short average life span. It is thus probable that the reported drop of 6,000 workers in this State is a considerable overstatement of what actually took place in the industry.

Outside the textile field, the main examples of lack of recovery to 1929 levels of employment in New York State are furnished by the establishments classified in the foundry and machine-shop, electrical-machinery, and radio industries. Together, this group of machinery industries lost over 20,000 workers in the State. The industries making building materials, as a group, dropped 15,695 workers, and plants making automobiles and automobile bodies and parts lost 10,547 employees. Cigar factories and knit-goods plants each lost about 5,500 workers. Book and job printing fell off considerably, and shipbuilding, which was growing in New England, dropped 2,200 men. Boot and shoe manufacturing decreased by about 3,300 workers. There were a great many other industries with small decreases.

In addition to the gain in the women's clothing industry, the main increases in New York State were shown by bakeries and steel works and rolling mills.

The most serious decline in employment in New Jersey is that which occurred in rayon and silk manufacturers. Employment decreased by about 11,400, more than half the total of 1929. This brought with it a corresponding drop in textile dyeing and finishing, amounting to about 9,500 men. There appears to have been a decrease of more than 2,500 within the electrical, radio, and phonograph industries. There was also a decrease of 2,500 in foundries and machine shops. However, in general, New Jersey seemed to experience a growth in a large number of miscellaneous industries which more than balanced the industries which declined. The growth in all branches of clothing manufacture, and particularly in women's clothing, was especially striking.

Pennsylvania in 1937 was back to just about its 1929 level of manufacturing employment. Steel workers and rolling mills were using over 20,000 more workers in 1937 than in 1929. Bakeries rose by over 4,000 workers, following the general trend shown for the industry, while boots and shoes contributed the other major increase. Offsetting these gains were the displacement of over 7,500 cigar workers due mainly to the substitution of machine-made for hand-made cigars; a drop of about the same size in foundries and machine shops; and a falling off of nearly 4,000 employees in establishments engaged in dyeing and finishing textiles. Knit goods, one of the largest industries in the State, barely held its own, actually showing a slight decrease of less than 1 percent, whereas for the country as a whole employment in the industry grew by 10.8 percent. Silk and rayon declined by about 20,300 and cotton textiles by 4,000.

Southern and southwestern regions

The pronounced rise of industrial activity in the South was the major factor contributing to the increase in manufacturing employment from 1929 to 1937. Considering the 16 States and the District of Columbia, which comprise the South Atlantic, East South Central, and West South Central regions, there is found a net growth of 205,432 jobs. More than 80 percent of this increase occurred in the South Atlantic region.

The only States in this area which did not gain in employment were Delaware, Arkansas, Mississippi, and Louisiana. The relatively small decreases which occurred in the latter three States were due primarily to the drop in lumber camps and sawmills. The loss in Delaware amounted to only 424 jobs. On the other hand, the 4 coastal States of Virginia, North Carolina, South Carolina, and Georgia each experienced a growth of over 20,000 in employment. Outside this area, only California and Michigan showed gains of this size, and the rise of 54,000 jobs in North Carolina was the second largest in the country.

In giving an over-all picture of industrial change in the South, one might tell almost the entire story by considering merely the cotton-goods and the lumber- and timber-products industries. Together they accounted for about 502,000 wage earners in 1929, or 35.2 percent of all manufacturing employment in this area. By 1937 this had dropped to about 495,000 wage earners, representing approximately 30.0 percent of southern manufacturing employment. This represented a decrease of 60,000 lumber workers and an increase of almost 50,000 employees in plants manufacturing cotton woven goods and cotton yarn and thread. Virginia was the only Southern State which showed an increase of employment in lumber mills, amounting to 900 workers. In 6 States the decrease in lumber mills was as large as 4,000 men, with Mississippi suffering the greatest loss—13,702 jobs. In cotton, on the other hand, Alabama, Georgia, and the Carolinas each provided at least 9,000 more petitions in 1937 than in 1929.

Supplementing the growth in cotton goods in this area, the other textile industries which recorded the most progress were in the fields of knit-goods manufactoring, where over 25,000 workers were added, and the manufacture of men's clothing which also added in the neighborhood of 25,000 employees. In the latter case, this amounted to an increase of over 50 percent. North and South Carolina were the only States which experienced any significant rise in the dyeing and finishing of textiles. Together they added over 11,000 jobs in this field.

Significant general increases appeared in the canning of fruits, with over 12,000 new jobs, and in bakeries, which added over 8,000 persons to their pay rolls, while steel works and rolling mills—in employing over 9,000 more people, mainly in Maryland and Alabama—followed the general trend shown by this industry.

The furniture industry, which, on a national basis, declined considerably in employment, and especially in the East North Central States, added almost 3,500 workers in the South. However, this increase was not general, and represented mainly a growth in North and South Carolina and Virginia where 4,416 employees were added. Five Southern States showed decreases in furniture manufacturing, the largest decline (over 1,000 workers) occurring in Maryland.

Special interest is attached to the manufacture of paper and pulp in the South in view of the recent developments in the possibilities of southern pine. The available data indicate an increase of over 4,500 employees in these two industries in this region, with Louisiana accounting for about one-third of this amount.[12]

Unfortunately, it is impossible because of the possibility of disclosure to obtain satisfactory State figures on the manufacture of rayon in the South. It is known, however, that Tennessee added 2,000 workers in this industry; it seems very probable that large increases were actually made in other Southern States also.

These general changes account for the major part of the explanation of individual State changes. By and large, there were few significant decreases outside the lumber industry. The remaining outstanding declines, however, consisted of a loss of 3,327 workers making motor-vehicle bodies and parts in Tennessee; 2,076 cigarmakers in Florida; 2,499 employees in petroleum refineries in Louisiana; 1,031 workers in boot and shoe factories in Kentucky; 1,019 men in the cast-iron pipe industry in Alabama; and 783 shipyard workers in Delaware.

Offsetting the decline in shipyards in Delaware was an increase of 4,554 jobs in this industry in Maryland, Texas, and Virginia. The addition of about 4,000 cigarette workers in Kentucky and North Carolina was far larger than the drop in cigarmaking in Florida. The remaining most notable examples of increase were the addition of over 10,000 workers in silk and rayon in North Carolina;[13] over 3,000 foundry and machine-shop workers in Texas; about 2,000 engaged in the refining of cane sugar in Louisiana; and, in Tennessee, a general growth in the boot and shoe, rayon and allied products, men's clothing, and heating- and cooking-apparatus industries.

Great Lakes region

The 5 States in the Great Lakes area, comprising the East North Central geographic division as defined by the Census of Manufactures, rank equally with the Middle Atlantic States in terms of industrial importance. Approximately 30 percent of the manufacturing wage earners of the country are employed in this region. In the entire region there was a net growth in manufacturing employment of 135,781 jobs from 1929 to 1937. Michigan alone gained 142,156 jobs and this gain of 27.4 percent was the largest in the country, both on a numerical and a percentage basis. While Indiana and Illinois also experienced a growth of about 16,000 jobs each, Ohio fell in employment by 18,411 and Wisconsin by 19,727 jobs.

[12] Where growth is as rapid as has been the case in southern kraft paper, the questionnaire method previously referred to may underestimate the increase between 1929 and 1937.

[13] The available evidence indicates that South Carolina also added a large number of employees in silk and rayon manufacturing. Information for 1929 and 1931 has been withheld by the census in order to avoid disclosure of data for individual establishments. However, in 1933, 591 wage earners in silk and rayon plants were reported in South Carolina. For 1937, the number is more than 7,100.

The proximity to coal and iron resources has made the Great Lakes region a center of the manufacturing industries engaged in fabricating steel. It is in these heavy industries that the most important changes in employment occurred in this area. The greatest increase took place in the plants manufacturing motor vehicles and motor-vehicle bodies and parts, which experienced a net growth amounting to over 60,000 workers. This was the result of an increase of 78,183 jobs in body and parts plants and a decrease of 17,353 jobs in assembly plants. Almost all of the gain in the body and parts section of the industry occurred in Michigan, where the increase amounted to 70,593 positions. In addition, Michigan was the only one of these States showing a gain in assembly plants, with 12,516 new workers.

The only other State showing any significant change in body and parts manufacturing was Indiana, where 7,628 new positions were available. On the other hand, Ohio, Indiana, and Wisconsin experienced a loss of almost 30,000 workers in assembly plants to offset the gain in Michigan.

The growth of automobile manufacturing in Michigan is particularly interesting in view of the previously accepted belief that the industry has been decentralizing. From 1929 to 1937, Michigan, the traditional center of the industry, increased its proportion of wage earners from 47.9 percent to 62.1 percent of all wage earners in the industry (table 3). The increased concentration in Michigan, however, occurred almost entirely between 1929 and 1933. In that period total employment in the United States in motor-vehicle and body and parts plants fell from 447,488 to 243,614. There was a decrease in Michigan from 214,368 to 151,200, but it was relatively less than the decrease in plants outside of Michigan, from 233,080 to 92,414. Thus, whereas Michigan had less than half the automobile employment in 1929, it had more than three-fifths by 1933. Between 1933 and 1937 employment expanded both inside and outside of Michigan. The 1937 proportions of the employment in Michigan were about the same as in 1933.

Between 1929 and 1933 the growth of concentration occurred in the Detroit industrial area (Wayne and Oakland Counties). Outside of this area in Michigan, employment declined from 55,931 to 25,083 or in about the same proportion as for the remainder of the country, while in the Detroit area the decline was from 158,437 to 126,117. Comparable figures for 1937 were not available.

In the city of Detroit, however, there was no increase in automobile employment. In 1929, 111,981 wage earners were employed in the automobile industry; in 1937, 111,715.

Table 3.—Employment in the Motor-Vehicle Industry, in the United States and in Michigan, 1929 to 1937

Year	Motor vehicles			Motor-vehicle bodies and parts			Total, motor-vehicle industry		
	Number of wage earners		Percent in Michigan	Number of wage earners		Percent in Michigan	Number of wage earners		Percent in Michigan
	United States	Michigan		United States	Michigan		United States	Michigan	
1929	226,116	108,796	48.1	221,332	105,572	47.7	447,448	214,368	47.9
1931	134,866	64,077	47.5	150,649	88,952	59.0	285,515	153,029	53.6
1933	97,869	59,725	61.0	145,745	91,475	62.8	243,614	151,200	62.1
1935	147,044	83,988	57.1	240,757	154,857	64.3	387,801	238,845	61.6
1937	194,527	121,312	62.4	284,814	176,165	61.9	479,341	297,477	62.1

The increased needs of the automobile industry probably accounted to a considerable degree for the employment of 46,555 additional workers in steel works and rolling mills of the Great Lakes States. This was due to an increase of over 6,000 in every State of the region but Wisconsin, which dropped 1,393 men. Similarly, plants making machine tools and machine-tool accessories gained almost 8,000 workers, with Michigan again showing the largest increase.

The picture in foundries and machine shops was the same as that in automobile-assembly plants. The net gain of 3,855 workers in the region represented a growth of 18,000 in Michigan and large decreases in the other four States. Three other industries in the iron and steel group—hardware, wirework, and stamped

ware—enjoyed substantial general increases in employment, with Wisconsin again being an exception in each case. It should be noted, however, that in the case of hardware, there was a loss of 1,020 jobs in Ohio and a slight decrease in Indiana.

In the food-products group of industries, there was a general growth of about 9,500 in both bakeries and fruit and vegetable canneries; on the other hand, Illinois meat-packing plants lost 3,500 men. Boot and shoe manufacturing gained in employment to the extent of 4,400 jobs, with Wisconsin again failing to follow the upward trend of the other States in the area.

The largest decrease in employment in this region took place in the manufacture of furniture. Only Ohio failed to contribute to the general drop amounting to 17,462 men.

In addition to these general trends, attention may be called to some of the other outstanding developments in each State. The growing use of mechanical refrigerators brought employment opportunities to over 6,000 workers in Michigan. On the other hand, this State lost over 6,200 jobs in plants making agricultural implements and engines and turbines.[14] Other outstanding declines took place in planing mills, cigar factories, and aircraft plants.

In Illinois, 3 of the building-materials industries—clay products, planing mills, and plumbers' supplies—experienced a net loss of 6,000 jobs. In addition, 13,845 workers in electrical-machinery and radio plants lost their positions; and the men's clothing industry dropped about 4,000 workers. Opposed to these declines is found an increase of over 5,000 jobs in the manufacture of agricultural implements and engines and turbines. Gains of over 2,000 workers in the manufacture of nonferrous-metal alloys and women's clothing are the largest of the remaining increases in Illinois.

Nonferrous-metal alloys experienced a large growth in Ohio also, amounting to 5,165 jobs. Glass employed 3,300 additional people. But the clay-products and pottery industries decreased by 8,700 jobs and rubber tires and tubes by 16,588—practically all in the Akron industrial area.

In connection with the rubber-tire industry, it may be noted that, while the industry declined in the country as a whole by about 20,000 wage earners, the drop in Ohio was relatively more pronounced than the national decrease. In percentage terms, the whole industry declined 24.0 percent from 1929 to 1937; Ohio declined 30.0 percent. It will be seen from table 4 that the tire industry suffered its loss on a national basis between 1929 and 1931 and that there has been a gradual recovery from 1931 to 1937. The same situation holds true for the State of Ohio and for the Akron industrial area (Summit County) until 1935. However, between 1935 and 1937, when the industry as a whole was still engaged in reemploying workers, this trend was reversed in Ohio and the Akron area. This is probably an indication of the increasing relative importance of other States in the manufacture of tires and tubes.

TABLE 4.—*Employment in Rubber-Tire and Inner-Tube Industry in the United States, Ohio, and Akron Industrial Area, 1929 to 1937*

Year	Number of wage earners		
	United States	Ohio	Akron industrial area
1929	83,263	55,307	51,135
1931	49,159	32,180	29,241
1933	52,976	35,621	32,514
1935	57,128	39,063	36,701
1937	63,290	38,719	35,525

In Indiana, the reduction of 3,400 men in wire drawing was second only to that in motor-vehicle manufacturing. In addition, there was a considerable decrease in such building-materials industries as clay, lumber, marble, and planing mills. Lumber also showed a sharp decline of 6,400 employees in Wisconsin. The loss of 2,200 knit-goods workers in Wisconsin is also worthy of special note.

[14] These industries must be treated in combination because of the transfer of tractors from engines and turbines in 1929 to agricultural implements by 1937.

Mountain and West North Central Regions

The 15 States comprising the Mountain and the West North Central geographic divisions experienced a decrease of 17,665 wage-earner jobs in manufacturing industries from 1929 to 1937. This decline of 3.5 percent was the result of a drop in employment in all these States except North Dakota, New Mexico, and Nevada. The fact that only 5 of the 15 States had as many as 25,000 employees in manufacturing industries indicates that, by and large, this region is not an important center of industrial activity. In fact, 6 of these States each provided factory employment to less than 10,000 wage earners.

In terms of absolute numbers of workers, no State in this region showed a very large change. The greatest decrease was in Kansas, where 4,322 workers lost their jobs, and the increase of 766 jobs in New Mexico represented the largest gain.

Missouri, the most important industrial State in this area, showed practically no change in total manufacturing employment from 1929 to 1937. The most significant shifts which occurred here were the addition of more than 1,500 wage earners in the manufacture of men's clothing, a decline of about 4,000 employees in building-materials industries, and the addition of over 2,000 workers in the electrical-machinery industry. Boot and shoe manufacturing, the largest industry in the State, added about 1,200 men. Other outstanding decreases occurred in the manufacture of heating and cooking apparatus, and motor vehicles, including motor-vehicle bodies and parts.

It is difficult to present a detailed picture for many of the remaining States. For the most part, the industry changes are small, seldom amounting to more than a few hundred employees. The general upward trends in bakeries and canning, and downward trends in lumber and other building-materials industries are still apparent.

Pacific region

On the Pacific coast, the regional increase of 35,412 workers is explained almost entirely by the growth of California as a manufacturing State. In fact, Washington suffered a decrease of 7,472 in employment, largely because the most important industry in the State, lumber, declined by almost 10,000 jobs. The most important gain in Washington occurred in paper and pulp mills. A similar gain in paper and pulp manufacturing, plus the fact that it was one of the very few States which showed an increase in the lumber industry, accounted to a large degree for the addition of 3,752 jobs in Oregon.

In California itself, the most notable development was the tremendous expansion in plants manufacturing aircraft and aircraft parts. Whereas only 1,277 workers were so engaged in 1929, by 1937 the number had risen to 11,520, thus making California the leading State in this industry. This development was accompanied by a general growth in almost all fields of manufacturing activity. Among the textile industries, the largest gains were recorded in the manufacture of men's and women's clothing, and knit goods. Bakeries' canneries, and slaughtering houses between them added almost 12,000 workers. Automobile plants, including those making bodies and parts, gained in employment by 2,664 people. Other large increases were recorded in structural and ornamental metal work, heating and cooking apparatus, glass, chemicals, and petroleum. The largest decrease took place in lumber, which dropped 3,845 workers. Of the building-materials industries, clay products and planing mills together dropped about 2,900 people. There was a loss of 2,324 workers making agricultural implements and engines and turbines.

NEW INDUSTRIES

A separate discussion has been reserved for two industries which may be considered as "new." In 1937, 63,351 workers were employed in making alcoholic beverages.[15] There was virtually no legal employment of this kind in 1929; the total shown by the census for this year was 1,670. Almost every State in the country was benefited by the resumption of activity in these industries after the repeal of the prohibition act. Table 5 gives the 1937 employment figures by State for each of the four industries.

[15] These employees were grouped in 4 industries by the Census of Manufactures, as follows: Liquors, malt, with 47,037 wage earners; liquors, rectified or blended, with 7,094 wage earners; liquors, distilled, with 6,215 wage earners; and liquors, vinous, with 3,005 wage earners.

TABLE 5.—*Employment in Industries Making Alcoholic Beverages, 1937*

State	Liquors, distilled	Liquors, malt	Rectified or blended	Vinous
Arizona	(1)	(1)	(1)	12

[1] Withheld to avoid disclosure.

New York, with 6,640 employees, and Pennsylvania, with 6,550 employees, were the leading States in such manufacturing in 1937. Over 20,000 workers were employed in beverage plants in the 5 States of the Great Lakes region, Ohio and Wisconsin each having over 4,000. The other States in which as many as 2,000 workers were hired in the industry were California, Kentucky, Maryland, Missouri, and New Jersey.

In 1937, 16,673 workers were engaged in the manufacture of synthetic resin. The earliest year for which comparable figures are available is 1931, when the industry employed 5,654 people. The industry has developed mainly in the northeast section of the country. Pennsylvania plants provided the largest number of jobs; the census indicated 2,524 wage earners there in 1937. New York and New Jersey, Connecticut and Massachusetts, and Delaware were the other leading States in the Northeast. The only State in another section of the country which witnessed an expansion in this industry was Illinois, which was reported to have 2,164 wage earners in 1937.

78595—45——7

CHANGES IN EMPLOYMENT, BY STATE

Table 6 presents, in summary form, the most important changes in employment in manufacturing industries for each State. No data appear for North Dakota and Nevada, since these two States have so few manufacturing employees in any industry.

It will be noticed that some of the employment figures are given as approximations. This procedure was necessary for some industries which the census has divided into subindustries, as well as in those cases in which it was necessary to combine several industries in order to obtain comparable data for 1929 and 1937. In either case, it was often found that, for a particular State, employment figures were given for some, and not all, of the industries which had to be combined.

In addition, it should be kept in mind that not every important change which actually took place is recorded in the table. To avoid disclosure of data reported by individual establishments, the industry statistics for particular States are, in many cases, omitted in the report of the Census of Manufactures.[16] In some instances, the industries so omitted are more important, in terms of wage-earner employment, than many of the other industries in the State for which separate figures are given. Attention has been called to this fact on a few occasions in the text, as in the case of silk and rayon manufacturing in South Carolina.[17]

TABLE 6.—*Changes in employment in manufacturing industries from 1927 to 1937, by States*

[3] Indicates that the actual employment figure or actual change is greater than the indicated number.
[4] Indicates an approximate employment change, when employment for 1929 and 1937 is given approximately.

AMENDMENT OF THE FAIR LABOR STANDARDS ACT

THURSDAY, SEPTEMBER 27, 1945

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON EDUCATION AND LABOR,
Washington, D. C.

The subcommittee met, pursuant to adjournment, at 10 a. m., in room 357, Senate Office Building, Senator James M. Tunnell, presiding.

Present: Senators Tunnell, Ellender, Guffey, Johnston, La Follette, Aiken, and Smith.

Also present: Charles Kramer, consultant to the committee.

Senator TUNNELL. The hearing will please come to order.

Mrs. Peterson, you had some witnesses, you said?

Mrs. PETERSON. I want to introduce Mr. Charles Ervin who is taking care of the witnesses for the CIO.

Mr. ERVIN. Mr. Chairman, I am here for the Congress of Industrial Organizations. I thought that you would like to hear from some of the workers in the shops—after having heard from the experts—whose future and whose present is very much tied up in this bill.

Without making any comments I will introduce as the first witness Mr. Burke of Lebanon.

Senator TUNNELL. All right, Mr. Burke.

Mr. ERVIN. Mr. Burke is right here. Mr. Burke has been 5½ years in the Army. He volunteered when the President issued his defense program. He has come back to work in the shop, and he will tell you just what his experience has been and why he desires you to pass this measure.

TESTIMONY OF CHARLES C. BURKE, AMALGAMATED CLOTHING WORKERS, LEBANON, PA.

Senator TUNNELL. Give your name and your residence, Mr. Burke, and where you work.

Mr. BURKE. My name is Charles C. Burke. I am from Lebanon, Pa., and I work in the Lustberg, Nast & Co. clothing company, as a spreader on mackinaws.

Senator TUNNELL. Where did you work before that when you were working, or did not you work before you went in the Army?

Mr. BURKE. I went to work 2 weeks after I came out of the Army. I worked in a garment factory, the Frackville Manufacturing Co., for 6 months also as a spreader.

Senator TUNNELL. How old are you?

Mr. BURKE. 27, sir.

Senator TUNNELL. You are a little older than I thought. I wanted to get you back to your youth. Now, tell us about your experience. What does a spreader do?

Mr. BURKE. Well, he fixes the edges and sees that all the wrinkles in the cloth are straightened out, and if there are any defects in the cloth we cut them out also.

Senator TUNNELL. You take out the wrinkles, is that it?

Mr. BURKE. Yes, sir. Frackville is a non-union company and they paid me 50 cents an hour for 6 months, and they promised me the second month that I would have a 5-cent raise. I am a married man, and I think I should be making more, because as a married man I can't live on $20 a week.

Senator TUNNELL. Are you saving any money?

Mr. BURKE. No, sir. It costs me $12.80 a week for room and board.

Senator TUNNELL. How do you figure that? Why do you say $12.80 instead of $12.90 or $12.75?

Mr. BURKE. Well, my rent is $7 a week. That is for one room. We have one meal at the place where we stay for which they charge us 40 cents a meal. That is for my wife and me.

Senator TUNNELL. You board; is that it?

Mr. BURKE. Yes, sir; that is, just one meal.

Senator TUNNELL. 40 cents for each one of you?

Mr. BURKE. Yes, sir; that is right.

Senator TUNNELL. That is $2.80 each a week for one meal.

Mr. BURKE. Yes, sir. Then, on Sundays they charge us 50 cents apiece.

Senator TUNNELL. That is $2.90 each then. You pay $7 rent?

Mr. BURKE. Yes, sir.

Senator TUNNELL. That is a week, is it?

Mr. BURKE. Yes, sir; that is right.

Senator TUNNELL. So that is $12.80 a week. Do you have any children?

Mr. BURKE. No, sir.

Senator TUNNELL. All right. Now, how do you get your other two meals a day

Mr. BURKE. Well, Saturday morning, when we are not working in the factory we work around the house, and we have two meals there sometimes during the week.

Senator TUNNELL. You have two meals?

Mr. BURKE. During the week. That is mostly on a Saturday, like we have Saturday dinner and Saturday supper.

Senator TUNNELL. You said it cost you $12.80. I was wondering whether you got the 14 meals for $3.

Mr. BURKE. No, sir.

Senator TUNNELL. That is what I thought. Do you mean your wife cooks the other 14 meals or prepares them?

Mr. BURKE. No, sir; because we just have the bedroom. I am not making enough money to go into housekeeping.

Senator TUNNELL. I see.

Tell us about how you do get these other 14 meals. Do you buy them?

Mr. BURKE. Yes; with what money we have and can scrape together, we buy them.

Senator TUNNELL. Don't you have the other 14 meals? Don't you eat?

Mr. BURKE. Yes, sir. Not like we should, though.

Senator TUNNELL. I can believe that. When you get 14 meals for $3 I don't suppose you do get so much, but I am trying to find out what arrangements you make about that. Do you go to a restaurant?

Mr. BURKE. Yes, sir; sometimes we go to restaurants. When I work five days a week we have our lunch.

Senator TUNNELL. How do you get the lunch?

Mr. BURKE. We buy it.

Senator TUNNELL. How do you pay?

Mr. BURKE. Well, sometimes we get lunch meat.

Senator TUNNELL. You do what?

Mr. BURKE. Sometimes we get lunch meat for the week.

Senator TUNNELL. What does that mean?

Mr. BURKE. Well, that costs something, sir.

Senator TUNNELL. What does it cost?

Mr. BURKE. Well, I don't know the exact amount.

Senator TUNNELL. Can't you give us some idea about these 14 meals?

You said it cost you $12.80 a week to get a room and 7 meals. Now, then, I am trying to find out from you how, with the other $3 you get 14 meals.

Mr. BURKE. Well, we don't eat 14 meals at the place where we rent.

Senator TUNNELL. I don't care where you get it. You must get it somewhere or else you don't eat, one or the other. That is 28 meals for the two of you, is it not?

Mr. BURKE. Yes, sir.

Senator TUNNELL. For $3.

Mr. BURKE. Yes.

Senator TUNNELL. Is there any place where you can get a 12-cent meal?

Mr. BURKE. Not now, sir; you can't.

Senator TUNNELL. "Now" is when you are hungry, isn't it?

Mr. BURKE. Yes; but sometimes I don't feel like eating. I am thinking of the wages I am getting. A man don't feel like eating when he worries about that very often.

Senator TUNNELL. How much does your wage amount to a week?

Mr. BURKE. Well, at 50 cents an hour, that is $20 a week.

Senator AIKEN. May I ask him if his wife works, too?

Mr. BURKE. Yes, sir; she works.

Senator AIKEN. You get $20 a week; what does she get?

Mr. BURKE. Oh, she gets around—40 cents an hour where she is working now.

Senator AIKEN. For how many hours?

Mr. BURKE. For 40 hours.

Senator AIKEN. That is $16 a week that she gets.

Mr. BURKE. Yes, sir.

Senator AIKEN. Out of that comes your social security?

Mr. BURKE. Yes, sir; and taxes.

Senator AIKEN. That amounts to 2½ cents now, I suppose. Are there any other deductions from your pay check?

Mr. BURKE. We can't take out bonds because we are not making enough.

Senator AIKEN. Do you get any meals at the plant or the mill where you work?

Mr. BURKE. No, sir; we don't.

Senator AIKEN. You get them all outside?
Mr. BURKE. Yes, sir; we carry our lunch.
Senator AIKEN. Your wife does not cook?
Mr. BURKE. No, sir.
Senator AIKEN. Do you get them from restaurants, or the neighbors—or where do you get them? That is what the chairman has been asking.
Senator TUNNELL. Yes; that is what I was trying to find out.
Mr. BURKE. As I was saying, we have supper there, and sometimes on Saturdays we have two meals. Well, during the week she charges us 40 cents each.
Senator AIKEN. 40 cents a meal?
Mr. BURKE. Yes.
Senator AIKEN. And on Sundays you pay more?
Mr. BURKE. On Sundays, sometimes, if we are around, we stay there for dinner, and she charges us 50 cents each on Sunday.
Senator AIKEN. What is the city you are from?
Mr. BURKE. Lebanon, Pa., sir.
Senator AIKEN. You buy your meals outside, then?
Mr. BURKE. Yes, sir; the rest of them. At noontimes in the factory we have a packed lunch.
Senator AIKEN. A factory lunch?
Mr. BURKE. No; a packed lunch.
Senator AIKEN. That you carry?
Mr. BURKE. Yes, sir.
Senator AIKEN. Where do you get that? At restaurants?
Mr. BURKE. No, sir; we go to the grocery store and buy lunch meat, something like that.
Senator AIKEN. That is what you mean by lunch meat?
Mr. BURKE. Yes.
Senator AIKEN. That would be canned, deviled ham, corned beef, something of that kind?
Mr. BURKE. No; we get Lebanon bologna; something like that.
Senator AIKEN. The two of you have $36 a week, less your social security and insurance taxes?
Mr. BURKE. Yes, sir; I have my Army insurance to worry about, too. That amounts up to $6 or $7 a month.
Senator AIKEN. You have recently been discharged from the Army?
Mr. BURKE. Yes, sir.
Senator AIKEN. How long ago?
Mr. BURKE. About 6 months, sir. I got out last November.
Senator AIKEN. How long were you in the Army?
Mr. BURKE. Five years and—let me see—I think it is around 3 months, something like that. Or a little more, I guess.
Senator AIKEN. How long have you been married?
Mr. BURKE. Well, we got married on January 27.
Senator AIKEN. Of this year?
Mr. BURKE. Yes, sir.
Senator AIKEN. That is all I have.
Senator ELLENDER. What kind of a room do you get for $7 per week?
Mr. BURKE. Well, it is a very small room, sir.
Senator ELLENDER. Is it heated for the wintertime?

Mr. BURKE. No, sir; we have no heat up there.
Senator ELLENDER. How do you provide for that?
Mr. BURKE. Well, we go downstairs. This lady where we rent, she has us come downstairs, you know.
Senator ELLENDER. Is it a home occupied by someone else in which you live?
Mr. BURKE. Yes, sir.
Senator ELLENDER. What conveniences have you with the room?
Mr. BURKE. Well, the bathroom we can use.
Senator AIKEN. But you get by on $36 a week as long as both of you work?
Mr. BURKE. Yes, sir, but my wife is not able to work all the time, sir; her nerves are bad.
Senator AIKEN. Suppose you earned $30 a week yourself, would your wife have to work?
Mr. BURKE. No, sir.
Senator AIKEN. Would you find a way to get by?
Mr. BURKE. Yes, sir; I could manage to get by on that.
Senator AIKEN. But you could not get by on what you earn alone, say, $20?
Mr. BURKE. Yes, sir; that is right.
Senator TUNNELL. Now, then, you were starting in to tell us what you did with the rest. As I figure it, there is $23.20 a week if you both work, that is still left. Now, how much does it take for the other 28 meals?
Mr. BURKE. Where do you get 28 meals from, sir?
Senator TUNNELL. That is what I am trying to find out from you.
Mr. BURKE. I did not say 28 meals—I don't believe I did.
Senator TUNNELL. Well, there are 7 days. Don't you count three meals a day?
Mr. BURKE. No, sir; I said one meal a day, which is just supper.
Senator TUNNELL. You mean you don't eat but one meal a day?
Mr. BURKE. Well, that is, in this place where we are staying.
Senator TUNNELL. I am just trying to get the facts. If you do eat more than one meal a day, say so.
Mr. BURKE. Yes, sir; we have three meals a day, but I am saying in this place where we rent we have one meal and the other two we eat out.
Senator TUNNELL. You mean you pay 40 cents for that meal except for one day and then you pay 50 cents?
Mr. BURKE. Yes, sir; that is on Sunday.
Senator TUNNELL. Your wife has to pay just as much, doesn't she?
Mr. BURKE. Yes, sir.
Senator TUNNELL. Well, that is $5.80 a week for that one meal each. Now, as I figure it there must be 28 more meals? What does your lunch cost?
Mr. BURKE. I don't know.
Senator TUNNELL. Why is it you don't know? Does your wife buy it?
Mr. BURKE. I don't pay no attention to food. When I want food I go out and buy it. The price don't bother me.
Senator TUNNELL. The price doesn't bother you?
Mr. BURKE. No.

78595—45——8

Senator TUNNELL. I don't know why it doesn't. It would bother me. Who is the cashier in your family?

Mr. BURKE. Well, we both are, sir, my wife and I.

Senator TUNNELL. But you say you don't pay any attention to it.

Mr. BURKE. Well, once in a while I go to the store, and then she goes once in a while. I mean everything is divided equally between us.

Senator AIKEN. Have you saved any money since you married?

Mr. BURKE. No.

Senator AIKEN. Have you got any war bonds?

Mr. BURKE. No, sir; I can't buy War bonds on $20 a week, sir.

Senator AIKEN. Have you run into debt since January?

Mr. BURKE. Well, we are paying on some furniture, sir.

Senator AIKEN. Paying on what?

Mr. BURKE. Paying on furniture. We are ready to go to housekeeping.

Senator AIKEN. But you haven't any place to put the furniture yet?

Mr. BURKE. We haven't finished paying for it, sir. You can't do it on that.

Senator GUFFEY. Mr. Burke, what does the lunch cost you when you go to the grocery store?

Do you spend 15, 20, or 25 cents on the average?

Mr. BURKE. Our whole supply for the week may run up to $2 or more.

Senator GUFFEY. That is about 12 lunches for $2?

Mr. BURKE. Yes, sir.

Senator GUFFEY. Your wife buys her own lunch, according to this. That is a joint arrangement?

Mr. BURKE. Yes, sir.

Senator TUNNELL. I have never found any woman who could not eat.

Mr. BURKE. My wife eats, sir. She never did suffer for lack of food.

Senator TUNNELL. How is that?

Mr. BURKE. My wife eats, the same as I do.

Senator TUNNELL. That is for one meal and a room, it amounts to $12.80, one meal for each of you.

Mr. BURKE. Yes, sir.

Senator AIKEN. What would a flat cost in Lebanon, provided you had three rooms, including a kitchen?

Mr. BURKE. I would say around $35 to $52. That is if they are empty, you know, and you have to furnish them yourself.

Senator AIKEN. That is what it would cost you if you had a place to live where you would like to live?

Mr. BURKE. Yes, sir.

Senator AIKEN. Is that unfurnished?

Mr. BURKE. Yes, sir.

Senator AIKEN. You would have to furnish it?

Mr. BURKE. Yes, sir.

Senator TUNNELL. Does anybody else have any questions?

Senator GUFFEY. What does your plant make? Does it make clothes, suits, or women's garments?

Mr. BURKE. Mackinaws.

Senator GUFFEY. Mackinaws?

Mr. BURKE. Yes, sir.

Senator GUFFEY. You spread this cloth out to get the wrinkles out so the machine will cut them all the same size?

Mr. Burke. Yes. Or if there is any defect in the cloth, like holes or spots in there, we see that they are cut out.

Senator TUNNELL. All right. Thank you. I hope the next witness will have his figures a little better.

Mrs. PETERSON. May I interrupt just a minute?

I wonder if he can tell about the main point he wanted to make? I don't think he has quite had a chance.

Mr. BURKE. No.

Mrs. PETERSON. Would you mind just summarizing it?

May he just summarize what he told us in a couple of sentences?

Senator TUNNELL. You tell us your story, if you have one. I don't seem to be able to find it.

Mr. BURKE. Well, sir, I spent 5 years and 3 months in the Army and when I came back the best job I could get in my town paid only 50 cents. I was overseas 22 months, in which time I was in action.

Senator TUNNELL. Well, you were not married then, so the cost of living did not have anything to do with it, did it?

Mr. BURKE. No, sir; that is right. But over there we got news from the papers, which were 2 months old or more, that the people back here were riding around in horses and buggies. When I got back to the States I saw more cars on the streets, but when I went to get a job, the only job I could get was at 50 cents an hour, that is the highest wage there was. Well, we went over there to fight, and I think the Government and the people of the United States did a very fine job in supplying us with the ammunition and stuff over there to win the war and win the peace. I think everybody should stick together and work together now, too. We boys don't expect much when we come back. We just want a good paying job and a good place to live, but you can't do it on 50 cents an hour.

Senator TUNNELL. How much do you think it would take for you?

You say you don't pay much attention. Maybe you don't know. Do you know?

Mr. BURKE. No, sir; I never bothered to figure it out.

Senator TUNNELL. Never bothered to figure it out?

Mr. BURKE. No.

Senator TUNNELL. Is that all you want to say?

Mr. BURKE. Yes.

Senator ELLENDER. What is the most you ever received per hour?

Mr. BURKE. 50 cents, sir.

Senator ELLENDER. Is that the same rate that you had before you went to war or less?

Mr. BURKE. Well, I got less, because I went in the service in 1939 as a volunteer; I enlisted of my own accord, thinking I would be helping my country out by enlisting.

Senator ELLENDER. Were you employed at the same place before the war as where you are now employed?

Mr. BURKE. No, sir; I was not.

Senator ELLENDER. You were getting less than 50 cents before you went to war?

Mr. BURKE. Yes, sir.

Senator ELLENDER. What was it?

Mr. BURKE. Well, I don't know, sir; I can't remember very well now.

Senator ELLENDER. That is all.

Senator TUNNELL. All right. Thank you.

Mr. ERVIN. The next witness is Mrs. Frances Garcia, of New York City, who holds a highly skilled position in the Western Union. Her husband is still in the Army in Germany. He was also a volunteer. He has been in the Army 5½ years. She is a mother of a child not quite 2 years old, and she will tell you her experiences and what her desires are on this measure.

Senator ELLENDER. Mr. Chairman, at this point, could we find out who the gentleman is who is introducing these witnesses, and what is his background?

Senator TUNNELL. What is your name?

Mr. ERVIN. I am Charles W. Ervin, public relations counsel for the Textile Workers Union of America, the Amalgamated Clothing Workers and for other organizations affiliated with the CIO.

Senator ELLENDER. Thank you.

TESTIMONY OF MRS. FRANCES GARCIA, AMERICAN COMMUNICATIONS ASSOCIATION, NEW YORK, N. Y.

Senator TUNNELL. I did not catch your name.

Mrs. GARCIA. My name is Frances Garcia. I am 24 years old and I have been married 3½ years; and I have a child, a baby girl of 21 months. I work for Western Union, and I am considered highly skilled in my field. I am in one of the key positions of Western Union. Without me and others like me there would not be a Western Union.

Senator TUNNELL. What do you do?

Mrs. GARCIA. I am an automatic operator. I send over 100 messages an hour under conditions which are not too good, for one reason. They have lots of noise, tension, mental strain, because you have to send messages and concentrate all the time, and there is no air-conditioning. Well, it just isn't good for someone that is working in a place where you need some kind of decent air. You see they pay so little that they can't get much help, and naturally we have to work harder.

Senator LAFOLLETTE. How long have you been doing this work?

Mrs. GARCIA. I have been working there 3½ years, and I have been getting 60 cents an hour, but only for 2½ years, that is, during the wartime when there were sky-high prices, but we are still getting 60 cents an hour.

Now, I have a baby girl that I would like to bring up to the best of my ability. With the help of the allotment I get, which is $80 a month, I have to contribute that to my mother who is helping me take care of my baby. She doesn't get much, if anything, from my dad; so, I am really supporting my mother, my child and myself on $21 a week take-home pay, and the $80 allotment that I give her completely for room and board and for the services she renders for my child. She can't work, and that is the reason I feel she should get the $80 a month, and sometimes more, in fact, if I can afford it. Sometimes I work a little overtime and bring home a little more, but I do not work overtime all the time because I have to come home and help with the clothes, wash clothes, my baby's clothes, my own, and so on, and so forth. So, I can't put much overtime in, but when I can I do, which is very rarely.

The reason I say I take home $21 a week is because so many people have bought bonds and tried to help the United States, so I felt ashamed that I could not buy a bond, so I tried and I bought a $4 a week bond, but to my regret, once in a while I find expenses are too high, I have to live, so I have to cash in a bond. I don't like to do that. I do want to save for the future.

My husband, when he comes home, I want a home and I want to be able to stay home and take care of my baby in my own way. I hate to see her being taken care of by other people. When my husband comes home I certainly would not like to see him work for 50 cents an hour, and I have to work also and help him along, and then not be able to take care of my baby in the proper manner to get the mother's care that she needs. I'm tired of not taking care of my baby.

Senator TUNNELL. Do you get an allotment from your husband?

Mrs. GARCIA. That is what I say. I give that allotment to my mother for the care of the baby. It is very hard for me, because I have to be presentable when I work; I have to have a nice appearance. I can't go sloppily dressed to the office, so naturally it costs me money for tailor bills and clothes, of which I get very little because I have to clothe the baby as well, and things are very expensive. For instance, I could buy a dress for $2 in prewar times, and it is $4 now. It is just double for everything I get for me and for my little girl. It is hard, because I have to eat out.

Now, you say, well, maybe I could live on $80 a month and stay home. No; it is impossible. It is not possible in a big city where you have to pay more money. I know of a woman who is staying home on her $80 allotment and she does not buy any clothes, she does not buy any shoes, she stays at home, and all she does is take care of her baby in one little room, and it is very, very hard for her to live. Naturally, if I work and can be able to make a little more money, I do so because it helps us to live a little more decently.

Senator TUNNELL. Do you rent a house?

Mrs. GARCIA. I live with my mother and my father. I give my mother the $80 to take care of me, and my baby while I work. But she doesn't do it all the time. By that I mean when I come home in the evening it is my duty to take care of my baby and myself, and it is hard, because after I work and come home I have to wash her clothes, give her a bath, give her supper and put her to bed, which is the regular routine. Well, it is not easy, sir, and 60 cents is really very little, and especially during wartime when they were paying such high prices for telegraph operators, and here we had to work for 60 cents an hour.

I am not the only girl there. There are many girls in Western Union working for 60 cents an hour who deserve much more, because we do a lot of work and it is vital to Western Union. We should get more than 60 cents. Even 65 cents an hour is too little to live on in the city where I am from, because the prices are too high.

Senator LA FOLLETTE. What does your family pay for rent?

Mrs. GARCIA. I pay $80 a month. That includes rent, room and board, and the care of my baby, but there are other expenses. If I bring home $21, $10 you consider for lunch money, carfare and incidentals at work, and not any recreation, which I am sorry to

say—I am a young girl; I am entitled to a movie occasionally and a dance, but I can't do that now. You can figure $10 approximately for going to work, which includes clothes, tailor bills, and so on. Then there are all the expenses for the baby, which are $3 a week for her clothes and care, and then I get her cod-liver oil and that costs about 69 cents for a small bottle, and it doesn't last very long.

Then, you have to figure out of the $21, sometimes she needs furniture. When I had the baby I had to get a crib and a dresser, and so on. I did not have the cash at the time, so I borrowed from the bank $200 to buy the crib and her necessary things when she was born. That is what I am paying off now, $3.75 a week, to the bank.

Senator AIKEN. For how long?

Mrs. GARCIA. For a whole year. In November I will be through.

Senator AIKEN. For a year?

Mrs. GARCIA. Yes, sir; for a whole year I have been paying $3.75 a week back to the bank. That is the First National Bank of America.

Senator AIKEN. You borrowed $200?

Mrs. GARCIA. Yes, sir. Sir, are there any questions? I want to tell you my story, but I figure maybe if you can ask me some questions I can tell you fully what might be doubtful in your minds, as to what I spend. Maybe you want to ask me if I save any money. Well, sir, I try to, but I could not save any money either.

Senator TUNNELL. You say you bought some bonds?

Mrs. GARCIA. That is right. I only hoped I could save those bonds, but I can't; I have to cash them in. Sometimes my husband even sends me extra money, and that goes right away for clothes for the baby. You would be surprised how much bigger she gets every month, and I have to buy her shoes; every 2 months I have to buy her new pairs of shoes. Well—shall I tell you—well, her feet grow, and then she wets her shoes all the time and they get bad, and every 2 months I have to get a new pair, and that costs money; that costs about $4 to get her a good shoe, a half-way decent pair of shoes. I could get a cheaper shoe made out of paper, which would last about a month.

Senator AIKEN. What did your husband do before he went into the service?

Mrs. GARCIA. He was a butcher; he worked for the United Dressed Beef Co.

Senator AIKEN. Is he going back there to work when he comes out of the service?

Mrs. GARCIA. That is a question. I don't know. At the present time I don't know if he will get the same job that he had. He does not want to be a butcher, because he is an electrician really; that is his trade, an electrician, and he would like to go to school nights and be able to take the advantage offered by the GI bill of rights and study so he can have a better job. Also we want more babies; we just don't want to stop with one child; we want a couple of children. Why, I really want to be a mother. Maybe some day I will go back to work, but in the meantime I want to stay home and take care of my own children in my own way, not with any interference from anybody else.

Senator AIKEN. How much do you think he will have to earn in order to permit you to stay home with the children?

Mrs. GARCIA. I think he should get at least 78 cents an hour, which would amount to about $40 a week. Then, he could go to school nights. He would not have to work 50 and 60 hours a week to bring home a decent wage, so he can't go to school nights and he can't better himself, which we both want so very much. I could go to work and help him, but that would not be giving the baby the care that she needs.

Like this man who spoke to you before me, he and his wife have both got to work to make a livelihood. They want children, too. How can they make it on $30 a week between them, or $36 or even $40 a week? They can't have children, and if they do the child can't have the care she needs for when she grows up.

They talk about juvenile delinquency. That is what brings it on. If the two parents have to work in the family the little children run around loose, they are taken care of by inexperienced people that do not know the first thing about how to bring up children. It is hard. A married couple cannot work and have children and be able to live decently like you are supposed to in the United States of America. And that is true all over the country.

I am not smart, sir. I don't claim to be a college graduate. I am a high-school graduate, but I know I have lived for 5 years through a war and it has been hard for me and women like me who have waited for their husbands, sweethearts and sons to come home, and it has been hard for everyone.

It is only fair, it is real decent that someone like yourselves should consider a bill like this. Sixty-five cents is really small; it should not be even debated. I don't know why it is, because it is hard to live on it—I don't care where you live—anywhere in the United States. If you want a family and children to be brought up decently and properly, the only way you can do it is by giving a decent wage.

Senator TUNNELL. If your husband were home and was getting a 65-cent minimum and you were not working, you would not be as well off as you are now, would you?

Mrs. GARCIA. That is right, sir; but when you consider 65 cents, maybe he could get a raise later on and get more. The 65 cents, as I say, is too little really, but he can get more money—if they pay 65 cents, he could probably get 75 cents and probably work his way up to get 85 cents so we can live decently and plan on a home and food and have more children—live like a man and woman should. I think this country is wonderful. I love my country; I am proud of it, and I would never do anything to mar it in any way, and if I can bring up my children decently, that is all I want.

Senator TUNNELL. All right; thank you.

Mr. ERVIN. The next witness is Winifred Burr, who has a highly skilled occupation in New York City in the American Safety Razor Co. She is the sole support of her mother, 92 years of age, and she will tell her own story.

TESTIMONY OF MRS. WINIFRED BURR, UNITED ELECTRICAL WORKERS, BROOKLYN, N. Y.

Senator TUNNELL. Give your name and residence.

Mrs. BURR. Winifred Burr, 783 Bedford Avenue, Brooklyn, N. Y.

Senator TUNNELL. Go ahead and please speak so we can hear you. Tell your story as to your method of living.

Mrs. BURR. Well, I pay $38 a month. I get 58 cents an hour as my take-home pay. I also try to buy bonds and keep them as long as possible. I had to sell insurance policies in order to live. Now, I am working 45 hours a week. When my bond is taken out, my taxes and social-security money, I bring home exactly $21.67 a week. That is a week. That is hard. My mother needs medical care, she needs medicine; she has a heart condition, and I have just been borrowing here and there to live.

Senator TUNNELL. A little slower, and a little louder, please.

Mrs. BURR. I have been borrowing everywhere to try to keep up. People have said to me during the war, "Why don't you go out and make big money in the war plants?" My answer was that it wasn't so easy at my age. I have gathered a lot of seniority in the plant I am in, and I don't think I should give up that job, because when the lay-offs came along I was able to hold on to my job because of my seniority, and I feel, at my age, I could not get a position any place else.

I have put up with those conditions figuring probably after the war the boys would come home and the conditions would change and get better, and we would get better living wages. I see there has been nothing done about it.

It is a very hard job. My job is a very hard job. Some sort of bookkeeping goes along with it. We make razor blades; we also make shaving brushes. In my department they make shaving brushes. In that department they have about 16 or 17 and maybe some days we have 21 different numbers of these brushes, and on these brushes we have to mark down every reject and what was the matter with them. With that job goes along a bookkeeping system. When it leaves our hands it goes to the packers and goes out to be shipped, and we are responsible for everything that goes out of that building, so it is a responsible job.

The wages I get are 58 cents an hour. I think that is too small for anybody to take home today, with living conditions as they are.

As to the food and clothing, I don't get much of that. I do the best I can, because my mother needs a lot of medical attention. She has heart attacks every once in a while and we have to have a doctor, medicine, and so forth.

Senator TUNNELL. Are you married?

Mrs. BURR. I am a widow.

Senator TUNNELL. No children?

Mrs. BURR. I have one daughter married.

Senator TUNNELL. Do you rent a home?

Mrs. BURR. Yes, sir.

Senator TUNNELL. What rent do you pay?

Mrs. BURR. $38 a month.

Senator TUNNELL. How many rooms in your home?

Mrs. BURR. I have five rooms.

Senator TUNNELL. That is an apartment, is it, or a house?

Mrs. BURR. That is right, a flat.

Senator TUNNELL. Is it on the first floor?

Mrs. BURR. No, sir; it is on the top floor.

Senator TUNNELL. How high is that?

Mrs. BURR. That is two flights up.

Senator GUFFEY. A walk-up apartment?

Mrs. BURR. Walk-up is right.

Senator TUNNELL. You say you have borrowed about as far as you can borrow?

Mrs. BURR. That is right. Then, I sell an insurance policy to pay it back. It is robbing Peter to pay Paul all the time.

Senator TUNNELL. Do you ever get him paid up?

Mrs. BURR. I try to do the best I can. I know the next time, if I don't get him paid I can't go back and get more.

Senator TUNNELL. You find with 58 cents an hour you are not able to pay for your living expenses?

Mrs. BURR. That is right.

Senator TUNNELL. You are living as economically as you can?

Mrs. BURR. That is right.

Senator TUNNELL. Are there any questions?

Senator ELLENDER. How long have you been obtaining this 58 cents?

Mrs. BURR. The 58 cents we have only gotten now since 1944.

Senator ELLENDER. What did you get before that?

Mrs. BURR. 50 cents an hour.

Senator ELLENDER. Did I understand you to say you are working 45 hours a week?

Mrs. BURR. That is right.

Senator ELLENDER. At 58 cents, that would make $26.10, and your take-home pay is what?

Mrs. BURR. $21.67.

Senator ELLENDER. What do they retain the difference for?

Mrs. BURR. Well, I have a bond taken out every week.

Senator ELLENDER. That goes toward paying for a bond?

Mrs. BURR. That goes for paying for a bond and my social security and taxes.

Senator ELLENDER. What size bond does that take care of?

Mrs. BURR. That $3.50 a week bond.

Senator ELLENDER. $3.50 a week?

Mrs. BURR. That is right.

Senator ELLENDER. That would be $14 a month.

Mrs. BURR. That is right.

Senator ELLENDER. Thank you.

Senator GUFFEY. How many hours a day do you work?

Mrs. BURR. I work 9 hours a day.

Senator GUFFEY. How many days?

Mrs. BURR. 5 days a week.

Senator GUFFEY. 45 hours?

Mrs. BURR. That is right.

Senator GUFFEY. If you got 75 cents an hour for those long hours, would that give you a sufficient income?

Mrs. BURR. With those hours?

Senator GUFFEY. 9 hours a day at 75 cents an hour.

Mrs. BURR. That is right.

Senator GUFFEY. 8 hours a day for 5 days is 40 hours a week, and at 75 cents an hour, that would be $30 a week.

Mrs. BURR. That is right. It would not be much help with conditions the way they are and the rent I pay, and the gas and electricity.

Senator GUFFEY. It would help some?

Mrs. BURR. It would help some.

Senator ELLENDER. Don't you get time and a half for the extra hour you work?

Mrs. BURR. Yes.

Senator ELLENDER. In other words, you get 87 cents for that extra hour..

Mrs. BURR. That is right.

Senator TUNNELL. If there are no further questions, thank you, Mrs. Burr.

Mr. ERVIN. The next withness is a mother of eight children. She has worked in the same factory for about 13 years, a canning factory in Traverse City, Mich., Mrs. Bellows. She will tell her own story.

TESTIMONY OF MRS. GLADYS BELLOWS, FOOD, TOBACCO, AGRICULTURAL AND ALLIED WORKERS UNION OF AMERICA, TRAVERSE CITY, MICH.

Senator TUNNELL. Give your name and address to the stenographer.

Mrs. BELLOWS. My name is Gladys Bellows. I am from Traverse City, Mich. I work at the Cherry Growers, Inc., cannery. I have been there for 13 years.

When I started working nights, which I had to do because we just could not make ends meet with our eight children, I got 20 cents an hour, and gradually they brought the wages up until we got 30 cents and overtime. We asked for a raise, and they said, "Well, if we give you a raise we have to discontinue operations. We can't pay it." But somehow they managed to muddle through.

We got 40 cents an hour when the 40-cent minimum went through, and when the union came in and organized, we got 50 cents an hour. Now, we work any number of hours that they ask us to. Three years ago, on peaches, we worked 91 hours, and some of the girls became exhausted, hysterical, and although I was used to working and had been pretty steady at it, they had to take me home. I had to stay home 4 hours because I was worn out, because after I got home I had washing, ironing, baking, scrubbing, and everything to do myself. My girls went to school. They did what they could, but that is not much, because school children have to have their rest, they have got their homework to do.

Senator AIKEN. Who owns Cherry Growers, Inc?

Mrs. BELLOWS. It is a farmers' cooperative, so you know as much as I do about who owns it, because they do not tell us the different members, they are afraid we might get to them sometime.

Senator TUNNELL. Do you can all the year round?

Mrs. BELLOWS. Up to last year, it was only a seasonal operation. Cherries were their main pack. Then they took on the peach pack, and last year we had a corn pack. They put that through a frozen process, quick-freeze. Then a year ago they put in a dehydrating plant, and since that time we have worked almost the year round.

From 9 to 14 weeks off was about what the older girls would get. I have accumulated quite a great deal of seniority, and if there was any work I was able to get it, but due to the fact that they were allowed 28 weeks exemption on their work, we did not get time and a half. They were allowed to work us as many hours as the law would permit without any overtime. They always said they could not pay overtime and operate, but this last year for everything over 40 hours we got time and a half, we worked 8 hours a day 6 days a week, and the plant is still flourishing paying time and a half, with more people than they ever employed before, and in fact they are building a nice new building right now.

Senator AIKEN. What part of the plant is it that you are talking about now?

Mrs. BELLOWS. Well, they haven't told us the borders; it is just an addition to the rest of the building. I suppose it will be some special processing.

Senator AIKEN. What did you say they are paying?

Mrs. BELLOWS. We get 50 cents an hour.

Senator AIKEN. 50 cents an hour?

Mrs. BELLOWS. Yes.

Senator AIKEN. And time and a half overtime?

Mrs. BELLOWS. Yes, now we do, but only if they don't use the exemption periods, because while the dehydrating plant is running and we do work more time there is no guaranty that the dehydrating plant will work that long, and then our work will not last 28 weeks, for which they have an exemption.

SENATOR AIKEN. What are they dehydrating?

Mrs. BELLOWS. Potatoes. We work under conditions which you cannot call ideal. We are in water all day long, and after we have worked there for a while, it is very common for the girls to have arthritis and neuritis.

Senator AIKEN. How many days a week, and how many weeks do you work?

Mrs. BELLOWS. Well, as I said, this last year I think we have had perhaps 12 weeks. It might be a little more; it might be a little less than that, I don't remember just exactly, because I came in a hurry and I did not bring any finished story with me.

I know how much it costs to raise a family. No one has to theorize for me, I know from experience. We have a son that has been discharged from the Army and he will never be well again.

Senator TUNNELL. You do not mean that literally? You do not know how much it does cost, do you?

Mrs. BELLOWS. I do know how much it costs to raise a family.

Senator TUNNELL. How much?

Mrs. BELLOWS. More than we have.

Senator TUNNELL. It takes more than you have?

Mrs. BELLOWS. Yes.

Senator TUNNELL. Why do you say that?

Mrs. BELLOWS. Well, I will tell you. My husband works at the same plant that I do.

Senator TUNNELL. What does he get?

Mrs. BELLOWS. He gets now—Well, that is another story. He did get 71 cents an hour. They gave him a 5-cent raise. Last Friday he got his first check with the raise, and Saturday they were informed

that their hours have been cut, and now they won't make as much as they did without the raise. They still have to do the same amount of work. It is a speed-up. I don't know what is going to happen. I left before anything had been found out about it.

Senator TUNNELL. How old is your oldest child?

Mrs. BELLOWS. Our oldest child is a girl. She is 26.

Senator TUNNELL. Does she work or is she married?

Mrs. BELLOWS. She is married. Our three girls are married. We have five boys at home. Our next oldest son is crippled; he has been a cripple since he was a baby.

Things were not so bad about 14 years ago, we got so deeply in debt that just as soon as the little one was old enough to leave at night I went to work nights. I worked nights for a long, long time, and came home and did all my own work.

Senator TUNNELL. How old is the youngest boy?

Mrs. BELLOWS. The youngest boy will be 14 in November.

Senator TUNNELL. Are any of the boys working?

Mrs. BELLOWS. Yes; they work. The oldest boy, the one I told you was a returned veteran, he has a job, and he contributes to our budget, but at this time we are paying bills that we ran up from the time when things were so hard and we could not get the bills paid up no matter what we did, but we are just proud enough and determined enough that we want to pay them. We are going to pay them; we are going to pay up every debt. But this last year it has been awfully hard, because the home we live in and have lived in for 25 years we cannot have any longer, the people have to have it themselves.

We went to look for a house to buy, but from $5,000 to $7,000 in the city was more than we could afford to pay, and they were not worth it, so we started to look around, and we found a place in the country. We had to buy the land. Well, that is all right. We were well known; we have lived there all our lives, and we bought the land. Our credit is good, so we went to the lumber company and we got materials to build the house. We got priority because of personal hardship, we had to move and we had no place to go. My husband, besides working 8 or 9 hours a day, is building that house himself from the cellar or from the foundation up. He goes out every night after he gets home and works on that house. He is a good carpenter, and he is a cement finisher; he has worked at all those things.

Senator TUNNELL. What did you have to pay for the land?

Mrs. BELLOWS. We paid $800 for 10 acres. Five of it is clear and the other five woods.

Senator TUNNELL. Did you have to pay anything down on it?

Mrs. BELLOWS. My father and mother loaned us the $100 and our oldest son gave us the other $50. I had some income tax coming back, so we gave that to them to straighten out.

Senator TUNNELL. Did you say you had some income tax coming back?

Mrs. BELLOWS. Yes.

Senator TUNNELL. From where?

Mrs. BELLOWS. Well, I will tell you, sir. My husband claimed all exemptions. We did not know just how it was going to work. When we are working our 48 hours they take $5.50 every week from my check. He doesn't always earn, in fact he very seldom earns as much as he would be allowed with all the exemptions. I knew we were paying more than we should, but that is a darned good way to save $5.50 a week. It goes awfully fast if you have it in your pocket. So we got it back. That is what we depended on for the down payment.

Now, the lumber company let us have all we needed, and they let us pay $10 a week until we get it paid up. We did not have a contract or did not sign a note until we had the down payment made.

Senator TUNNELL. You say they trusted you for the lumber and let you pay $10 a week?

Mrs. BELLOWS. Yes, and now we have signed a note. Two weeks ago we made enough for the down payment, and we signed a note. That has to be paid in a year. We figured our payments out on the land and on the lumber, and we have to pay $64 a month on our lumber and $15 on our land.

Senator TUNNELL. You are getting ahead a little now, aren't you?

Mrs. BELLOWS. We will have a home when we are finished, sir, if we keep on working, but I am almost 45 and I haven't been very well this last year, because you can't work all around the clock and stay well.

Senator TUNNELL. I don't mean you are not entitled to a home; I think you are, and I am glad to hear you say you could get one.

Mrs. BELLOWS. I think we are entitled to it, sir. That son of ours will never get married because he figures he will never be well enough to.

Senator GUFFEY. What is the name of this so-called cooperative?

Mrs. BELLOWS. Cherry Growers, Inc.

Senator GUFFEY. Do you really think the farmers own it or some people in the neighborhood?

Mrs. BELLOWS. I know some farmers own it, because I have some friends that belong to it, but they are such good friends that I do not ask them questions. I don't want to spoil a friendship that has gone back to the time when I was tiny.

Senator ELLENDER. Did your son have difficulty in getting a job since he came from the war?

Mrs. BELLOWS. No. First he went in as a helper in a friend's gas station. Everybody liked him. He had the job until the station closed up. Now, he is working for the city. I think unless something goes very badly wrong, he will continue to work.

Senator ELLENDER. What does he get a week?

Mrs. BELLOWS. I am sorry, I cannot tell you what his wages are. I can tell you a few more things about how much it costs us to live.

Senator TUNNELL. All right.

Mrs. BELLOWS. $25 goes to my grocery store every week for our groceries and milk, and maybe part of it for meat. We pay a small rent at this time, $20 a month, but besides we keep the repairs up on the place; we agreed to do that, and we have done so until now, when we started to build. But even so, my children have had to go without things for so long. My little 14-year boy is facing the prospect of having to have all his teeth pulled because we did not have the money to give him the milk to furnish the calcium that his little body needed when he was a baby. We paid $17 for two of his front teeth 6 months ago, and they crumbled right to pieces because they were not good teeth, there was nothing to furnish him good teeth; he was not getting what he needed.

I figure a 65-cent minimum rate if paid to the women—not for myself but for all of them, because most all cannery workers are women,

who have families and who have gone in to help their husbands—65 cents isn't too much, it is too little. After all, as I heard here yesterday, this is America. Everybody looks to this country for its progress, and we have got to keep reaching ahead all the time. It is only by reaching ahead all the time that we get anywhere. When we stop we are going to roll back down hill.

Senator ELLENDER. You stated you spent $25 each week for groceries.

Mrs. BELLOWS. Yes, sir.

Senator ELLENDER. Can you recall what your grocery bill was before the war? How much more is it now?

Mrs. BELLOWS. How much more was it before the war?

Senator ELLENDER. How much more is it now than before the war?

Mrs. BELLOWS. Well, I really can't say an awful lot about that, because in our family if one of us goes downtown and sees something that they think they would like on the table, we buy it. We don't keep track of that. I do know clothing has gone out of sight, because I can't buy a house dress for anywhere near the money I used to be able to. I used to be able to go to the stores and shop, to Penney's, Montgomery Ward's, and buy a really nice house dress that I could go out on the street in for a dollar. I went down 2 months ago and tried to find a house dress that was nice enough to wear. I wear slacks and coveralls to work in, because you get so dirty there you just can't afford to get a nice dress.

I am one of the older workers and if there is something that needs doing I do it. I have even taken a man's place, closing machines, something like that.

I tried to buy a dress for $4.98, and the dress wasn't a bit better than the dress I could have bought for $1.98 before the war. That is one thing we still have to do; we have to wear clothes. We can go without eating for a couple of days, but we can't go without clothes.

Senator TUNNELL. Speaking of the grocery bill before the war, you have a growing family, you still have a boy 14?

Mrs. BELLOWS. Yes.

Senator TUNNELL. Before the war he was about 10.

Mrs. BELLOWS. Yes.

Senator TUNNELL. I suppose the others were working?

Mrs. BELLOWS. Yes. Our youngest boy will be 14 in November. The next one was 15 last June. They both go to junior high. I am telling you, this year their books cost money.

Senator TUNNELL. Their books?

Mrs. BELLOWS. Yes, we have to pay for their books there, you know, all the books, all the materials, everything has to be paid out of our own money. They do not have any books furnished them.

Senator TUNNELL. In Michigan?

Mrs. BELLOWS. Yes, sir.

Senator GUFFEY. Does that apply to all the schools in Michigan?

Mrs. BELLOWS. Up to the 8th grade they furnish the books, but after junior high you have to buy all the books, everything—nothing is furnished.

Senator ELLENDER. What size town do you live in?

Mrs. BELLOWS. I imagine it is around 16,000.

Senator ELLENDER. How much more do you think it would cost you to maintain yourself and family if you lived in Detroit?

Mrs. BELLOWS. I can't tell you, sir; I never lived in Detroit.

Senator ELLENDER. That is all.

Senator TUNNELL. What larger city is near where you live?

Mrs. BELLOWS. The closest one to us would be Grand Rapids. That is about 140 miles away. We do not have very many industries in our town. That is really considered a resort district up in Michigan. You can't blame them, it is such a beautiful place. That is a plug for my home place.

Senator TUNNELL. Any further questions? If not, thank you, Mrs. Bellows.

(Following is a letter from John J. Riggle, executive secretary, National Council of Farmer Cooperatives, received subsequent to Mrs. Bellows' testimony:)

NATIONAL COUNCIL OF FARMER COOPERATIVES,
Washington 6, D. C., October 1, 1945.

Hon. GEORGE D. AIKEN,
United States Senate, Washington, D. C.

DEAR SENATOR AIKEN: We have a brief statement from Mr. A. J. Rogers, general manager of Cherry Growers, Inc., located at Traverse City, Mich., relative to the hours worked by Mrs. Gladys Bellows. You will recall that Mrs. Bellows testified September 27 before the subcommittee of the Senate Education and Labor Committee, which is conducting hearings on S. 1349.

Cherry Growers, Inc., is a fruit-growers cooperative association, whose normal operations consist of packing canned and frozen apples, cherries, and peaches. Processing of these perishable products are highly seasonal occupations, requiring occasional long hours of work in the face of inability to spread supplies of perishable ripening fruit and continuing labor shortages, according to Mr. Rogers.

Mr. Rogers further states that Mrs. Gladys Bellow's husband has a good job in the plant of Cherry Growers, Inc., and four of the eight children are dependent on the parents.

Mr. Rogers further states that in a 4-year period, Mrs. Bellows had 1 week each year in excess of 60 working hours as follows:

	Hours
Sept. 3, 1941	87
Sept. 5, 1942	70
July 29, 1943	62½
Aug. 5, 1944	62

Wages, indicated by Mrs. Bellows, to range from 40 to 55 cents per hour for her work, are, according to Mr. Rogers, equal to wages paid by competitive canneries. And, as you know, shortage of labor and war industry wages have established competitive wage rates in any given area for both industry and farming operations.

Sincerely yours,

JOHN J. RIGGLE,
National Council of Farmer Cooperatives.

Mr. ERVIN. The next witness, Mr. Fesser, is a sailor. He has sailed from the Port of Baltimore for 18 years. During this war he sailed in the Atlantic, Pacific, Mediterranean, Indian Ocean, and the Far East, delivering to our allies and to our own troops supplies.

TESTIMONY OF ARNOLD N. FESSER, NATIONAL MARITIME UNION, BALTIMORE, MD.

Senator TUNNELL. Give your name and address, Mr. Fesser.

Mr. FESSER. My name is Arnold N. Fesser.

Senator TUNNELL. How long have you been home?

Mr. FESSER. Since September 5.

Senator TUNNELL. September 5 of this year?

Mr. FESSER. Of this year.

Senator TUNNELL. Are you a native of Baltimore?

Mr. FESSER. No, I was born in Tampa, Fla., but I have been living in Baltimore 18 years or a little over.

Senator TUNNELL. What did you do before the war?

Mr. FESSER. Merchant seaman. I have been doing it since I was a kid.

Senator TUNNELL. Where did you go during the war?

Mr. FESSER. I went to England: I went to Africa——

Senator TUNNELL. What part of Africa?

Mr. FESSER. North Africa. I was in Italy. I was over in the Persian Gulf; I was over in Australia.

Senator TUNNELL. What did you go to the Persian Gulf for?

Mr. FESSER. I went to the Persian Gulf to deliver goods to the United States Army.

Senator TUNNELL. What did you deliver there?

Mr. FESSER. That is a military secret.

Senator TUNNELL. Do you think it is still a military secret after the war?

Mr. FESSER. Well, if I say something about it I have to face the Coast Guard and not to take chances I won't say anything.

Senator TUNNELL. Did any of the ships sink on which you were placed?

Mr. FESSER. I am one of the lucky ones that got through.

Senator TUNNELL. Were you on the same ship all the time?

Mr. FESSER. On different ships every time I would make a voyage, and at the end of the voyage I was paid off. I get 30 days ashore, and in that 30 days I am off, I am home with my family.

Senator TUNNELL. What did you get a month?

Mr. FESSER. We get paid at the rate of $3.66 a day.

Senator TUNNELL. Together with board and lodging?

Mr. FESSER. Yes.

Senator TUNNELL. What are you doing now?

Mr. FESSER. I am on a vacation until the 6th of next month.

Senator TUNNELL. A vacation?

Mr. FESSER. Sure. I am entitled to my 30 days ashore after I was out in Okinawa.

Senator TUNNELL. What are you going to do on the 6th?

Mr. FESSER. Ship out again.

Senator TUNNELL. What do you think about your wages? Aren't they all right?

Mr. FESSER. Well, for me being on the ship, I am all right, but what about my family? I have got a wife and three kids. While I am out I work 8 hours a day 7 days a week. Out of that comes the allotment for my family. I have got to pay the taxes and I have got to work a lot of overtime to make that up.

Senator TUNNELL. How much is your family allowance?

Mr. FESSER. I leave my family $80 a month. Out of that comes rent.

Senator TUNNELL. That is not in addition to your salary, is it?

Mr. FESSER. No.

Senator TUNNELL. Does that come out of the $3.60 a day?

Mr. FESSER. Yes.

Senator TUNNELL. How much do you draw a month, then?

Mr. FESSER. $110 a month. Those are the wages of firemen and oilers.

Senator TUNNELL. After paying the $80, that is?

Mr. FESSER. No. If you want the story of the merchant seamen, we have got good, decent wages, as they are supposed to be, during this wartime; but before the war—and after the war they are coming back to the same thing—I worked for $45 a month, and I worked for $35 a month, and that wasn't so long ago. Out of that I had to take care of my family.

Senator TUNNELL. But you don't have to work for that now, do you?

Mr. FESSER. At the present time, no; but the bonus is coming out and I will be back to the same basic wages that I had before. Now, you tell me how to take care of three kids. I am living all right on the ship, because I get fed; but my family in Baltimore, that is what I have got to worry about, how they are taken care of while I am on ship and they are living on shore.

Senator TUNNELL. You get something like $100, and you keep something for yourself. You have to buy your clothes, don't you?

Mr. FESSER. I have to buy my clothes.

Senator TUNNELL. You send your family what you can out of that, don't you?

Mr. FESSER. That is right.

Senator TUNNELL. Your children are all small, you say?

Mr. FESSER. I have got a girl 18 years old.

Senator TUNNELL. Does she work?

Mr. FESSER. No, she does not work.

Senator TUNNELL. Does she go to school?

Mr. FESSER. She goes to school. I have got a boy 4 years old and I have got a baby 4 months old, a baby girl.

Senator TUNNELL. Does your wife work?

Mr. FESSER. No, she doesn't work.

Senator TUNNELL. Do you pay rent?

Mr. FESSER. I pay rent.

Senator TUNNELL. How much?

Mr. FESSER. $25 a month, and I am lucky at that, because my mother-in-law owns the house.

Senator TUNNELL. Sometimes mothers-in-law are pretty good collectors, aren't they?

Mr. FESSER. Oh, she is a good collector.

Senator TUNNELL. Do you mean your family are not keeping up with their expenses?

Mr. FESSER. They can't.

Senator TUNNELL. What are they doing?

Mr. FESSER. What are they doing?

Senator TUNNELL. Yes. Are they going behind?

Mr. FESSER. Sure, they are going behind.

Senator TUNNELL. Whom do you owe?

Mr. FESSER. At present, we don't owe anyone, because I have seen to that. But I am interested in the wages that I earn to take care of my family. If I can't take care of my family properly, like I want it to be taken care when I come out of a job like now, then I have to worry about going behind. Out of each year I work 8 months, and

the rest of the time I am out in the street, but I have got to take care of my family right on. I don't get unemployment compensation, and if I can't take care of my family properly when bad times come after this war, something has got to be done about it. You don't want me to hold you up to take care of my family because I don't want my children to go hungry. I had enough of going hungry during the depression. My oldest kid would tell me, "Daddy, why don't you get work? I am hungry. You have been walking around all morning, and I don't see no fire; I am hungry." I don't want that to happen no more.

I could have been ashore here in Baltimore making some of the money that the shipyard workers made, but I am a seaman; my place was to carry the goods anywhere in the world where the American soldiers were, and that is what I have done. Right now I can't get out of the merchant marine to look for another job because there are boys still overseas; that is the reason I have got to keep going, until everybody is back home.

Senator TUNNELL. You say you don't get anything now?

Mr. FESSER. No; I don't get anything now.

Senator TUNNELL. You don't get any wages now?

Mr. FESSER. No, sir. Once I get off the ship I don't collect anything until I ship out again in the next 30 days.

Senator TUNNELL. All right. Now——

Senator GUFFEY. In other words, you get paid 8 months out of the year. Is that approximately it?

Mr. FESSER. Yes, when I work.

Senator GUFFEY. That is what I mean. You don't work 12 months. You sign up for a trip, for a voyage?

Mr. FESSER. Yes.

Senator GUFFEY. When you come back you have to sign up for another trip?

Mr. FESSER. I have to sign up for another trip.

Senator TUNNELL. You only get $800 a year at that rate. You say you work 8 months, and you get about $100 a month, or $101 a month.

Mr. FESSER. $110.

Senator TUNNELL. That is $880 a year if you work 8 months.

Mr. FESSER. It has been $110 since the war. Before the war the wages were not that.

Senator TUNNELL. You say you are an oiler?

Mr. FESSER. An oiler, a fireman, and water tender.

Senator TUNNELL. I thought the oilers got more than that.

Mr. FESSLER. Oilers always get $10 or $12 more than the fireman, that is, they used to, but right now the oiler and fireman get the same wages, $110.

Senator TUNNELL. You are paid the regular $110 rate?

Mr. FESSER. Yes.

Senator TUNNELL. And the engineer gets more than the oiler?

Mr. FESSER. Quite naturally. Why should he not? If I was an officer, I would look for higher pay, too.

Senator ELLENDER. You don't seem to be complaining about the present rate you are receiving. Am I correct in that assumption?

Mr. FESSER. What is that?

Senator ELLENDER. I say you do not seem to be complaining about the present rate of pay you are receiving. Am I right in that assumption?

Mr. FESSER. Sure, I have no complaint to make on the rate of pay I get now.

Senator ELLENDER. I understood you to say you get along very well; you don't owe anything, and you are taking care of your family at $110 per month and that you don't want to go back to the $45 a month that prevailed before the war.

Mr. FESSER. Why should I suffer the torture of putting myself in debt through borrowing money when I try to do the best I can?

Senator ELLENDER. I am not asking you to do that.

How much more do you think you should get after the war than you got during the war?

Mr. FESSER. I think I am entitled to—not only me but me and the rest of the fellows that do the same kind of work, we are entitled to at least 75 cents an hour.

Senator ELLENDER. You are paid, you said, $3.60 for 8 hours' work.

Mr. FESSER. $3.66.

Senator ELLENDER. And you get your board aside from that?

Mr. FESSER. I get my board out of that.

Senator ELLENDER. And you say it ought to be at the rate of 75 cents an hour?

Mr. FESSER. That is right.

Senator TUNNELL. What company do you work for?

Mr. FESSER. Well, I have worked for the Bull Line, the Mystic Line, American-South Africa, International Freight Corp., American Foreign Line, Luckenbach, American State Marine; quite a few other companies, I can't remember their names now.

Senator TUNNELL. All right.

Senator ELLENDER. You belong to a union?

Mr. FESSER. I belong to the National Maritime Union.

Senator ELLENDER. Are they satisfied with the pay they are now receiving?

Mr. FESSER. Well, I can't answer that as a whole; I can't answer for somebody else. I am answering for myself.

Senator ELLENDER. Do you know whether or not an effort was made by your union to get more money?

Mr. FESSER. What is that?

Senator ELLENDER. Do you know whether or not your union attempted to get more money than you are now receiving?

Mr. FESSER. Sure, they are making the effort every day.

Senator ELLENDER. And with no success?

Mr. FESSER. So far they got a raise to $45; that begins on October 1, but all the bonus has been cut out.

Senator ELLENDER. When you say "bonus," you mean in addition to the $110 that you are receiving per month?

Mr. FESSER. Yes.

Senator ELLENDER. What does that amount to, do you know?

Mr. FESSER. That amounts to the same thing, $110.

Senator ELLENDER. The bonus is included in the $110?

Mr. FESSER. Yes.

Senator ELLENDER. Now, when you say $110 per month, do you mean only for the 8 months that you work?

Mr. FESSER. Yes.

Senator ELLENDER. Which would make $880 per year that you receive as a worker?

Mr. FESSER. Yes.

Senator ELLENDER. Plus your board.

Mr. FESSER. In some ports you went in you got the same pay, you didn't get no bonus, but just in certain places that you got in.

Senator ELLENDER. That is all.

Senator TUNNELL. All right. Thank you.

Mr. ERVIN. The next witness, members of the committee, is a textile worker from Virginia, Miss Shirley Hall. She will tell you about conditions in the textile industry there and why they want this measure passed.

I call the attention of the Senators to the fact that nobody has asked any questions about the income tax. All the witnesses pay income taxes that come from their wages.

TESTIMONY OF SHIRLEY HALL, TEXTILE WORKERS UNION OF AMERICA, LYNCHBURG, VA.

Senator TUNNELL. Will you give your name to the reporter?

Miss HALL. My name is Shirley Hall. I live at 2363 Carroll Avenue, Lynchburg, Va., and I work in the Consolidated Textile Co.

I am a drill weaver, and that is the hardest job in the weaving room, I should say in the whole mill practically. For the time I have been running the drill I have made more than I made before, which isn't enough. I might sometimes average 63 cents an hour, but if I were my daddy and had several children to support, to take care of, I could not get by. I can't get by, anyway. While it would not be enough to live on, it is high for the mill and high for the area in which I live.

Our wages have been pushed up since the union came in. It has been a constant fight trying to get them up. But I believe minimum wages should be set by law for all people, so that people could have a chance to have a decent wage and a decent life.

I am a pieceworker. All the weavers are pieceworkers. When you are young, when you are just 22, you can get around and make a rate, but every year you work you get a little more stooped, a little more tired, and you can't run around as fast, although your service record gets longer.

Senator TUNNELL. How do you know you are going to earn less all the time?

Miss HALL. By watching others. My daddy has worked in the mill 30 years, and I make more than he does because I get around faster.

Senator TUNNELL. That is what I am getting at. You know that from watching others?

Miss HALL. I know that from the experience of my family and people who work in the mill with me. I am not a better worker than he is; he is far more skilled, it is just that I can move around better, I can see better. It is a constant strain on your eyes to weave. It is hard work. It is not only the mental strain; it is physical labor. You are straining all day long trying to keep the looms running.

Since the union came in, since we got the raise last year in August we talked my mother into quitting work. After all, we have three small children at home. My daddy and I felt it would be better if she stayed home and took care of the children.

Now, I understand our mill is to go back on a 40-hour week next Monday, so that means my mother will, in all probability, have to go back to work, and my little brother and my little sister will have to run around on the streets. I don't like to think about that.

When the war started, when it broke out, my two brothers and I made a bargain. One of my brothers was 20 and the other was not quite 17, but we made a bargain that they would go into the Army and I would stay home and take care of the family. I felt that I should, that if they wanted to fight, well, it was their responsibility, they were young, healthy, strong boys. So I have stayed home and tried to take care of the family, tried to help, and they have been in the Army. My brother is now getting a medical discharge, his nerves are all shot, and my little brother is in the Navy, I don't know where he is, although I have an idea that he is around Tokyo some place. They took out their allotments when they got in. They don't claim a dependency allotment, but one of the brothers sent $25 home and the other brother, when he was on the ship, sent $50. My daddy and I talked it over, and we decided when the war would be over they would probably come home and would want to get married, and we saved the money for them, and so we have been able to bank it every month, but it has been hard to do, and now we are facing the choice of spending my brothers' money that they have sent home all the time that they were in danger or putting my mother back in the mill, because you can't take care of four children, yourself and wife on $26 or $39 a week—it just can't be done.

In Virginia we have to pay for all the schoolbooks from grade school up. You hear talk of the Sunny South, but when it is cold it is just as cold there as any place else, and the rain is just as wet.

I don't want to speak as much for myself and my family as I do for the other families I know of. Our conditions are bad; I know they are, but they are not as bad as in some other families. We live in a cotton-mill village, company-owned and controlled. There is a family that lives on a hill, and I think the father makes 60 cents an hour. He has seven children, the oldest 15, and he is trying his best to keep her in school, and they have a baby about 13 months old. The second girl has rheumatic fever and heart trouble, and they think she will be an invalid the rest of her life. They can't get the proper care for her. They have to go around and take her to charity doctors, they would not take her in a hospital. When the mill gets back on 40 hours, what is going to happen to these people? I am worried about what is going to happen to me and my family, but what about the other families in Lynchburg that will be even worse off than we are?

We live in a company house. It is not a very good house. We don't have a bathtub. I have a 12-year-old brother, and until last April he had never seen a bathtub. We get just as dirty as other people; we need to wash.

Senator TUNNELL. Have you bought any Liberty bonds?

Miss HALL. My daddy has $1 a week deducted from his salary and I have $3 deducted from my salary for bonds.

Senator TUNNELL. Are you able to keep them?

Miss HALL. I have one that is not old enough to cash in. If anybody had to cash his bond in, I feel I don't have as many family responsibilities as my daddy and I would cash mine and let him keep his, feeling he would need it more later on than I would.

My grandpa and grandma don't have a place to live; they are very old, so we have to try to send them money to buy them medicine. They need clothes, too.

I think the time ought to come when the cotton mill people will have a chance to say what their children are going to be. If the kids want to work in the cotton mill, let them—that is their choice. But I have known children who wanted to do other things, they wanted to go to school, to college, maybe to be a doctor or lawyer, but they never had a chance. I had to go to work in the mill before I finished my last year of high school, right before my baby sister was born—I did not have a choice, but I would not want my sister to do that, I want her to have a chance to be what she wants to be.

They take income tax out of us, from $3.60 a week up, according to how we make.

I don't see how they expect us to live in any decency, expect us to grow up to be good American citizens, or to do anything, on account of the salaries we are making. I don't think my brothers, when they come back, will want to go to work for 50 cents an hour. I think they are entitled to more than that. I don't believe that my little sister would ever want to go to work for 50 cents an hour, and that is really what I am shooting at. What is going to happen to the other people who are coming on?

Senator SMITH. You are speaking of Lynchburg?

Miss HALL. Yes.

Senator SMITH. How many mills are there?

Miss HALL. Just one, in Lynchburg.

Senator SMITH. Do you know whether the rate of pay is about the same there as in other mills in the same kind of business?

Miss HALL. I should say in cotton mills the rate of pay would be the same where they have a union, and it would be much lower if they do not have a union. The minimum rate would be 40 cents if they did not have a union.

Senator SMITH. Where you are working you get better pay than they get in other mills?

Miss HALL. I think I am getting about the average. I would not say it is any less.

Senator SMITH. How is the business of the mill now?

Would you say they are going to shut down because they haven't got business enough?

Miss HALL. No, sir; they are going to put on a third shift and cut our hours from 48 to 40 hours a week and we will have a cut in pay for everybody.

Senator SMITH. They want to put on three shifts?

Miss HALL. Yes; if they get the help.

Senator SMITH. You think they are doing as much business as before?

Miss HALL. Yes; they are. They are expanding. They have new equipment ordered, and as soon as they can get it they will expand.

Senator JOHNSTON. I believe you stated you are a weaver?

Miss HALL. Yes.

Senator JOHNSTON. I know something about that, because I was a weaver for 8 years. What kind of weaving do you do?

Miss HALL. I make drill, three-harness stuff.

Senator JOHNSTON. A Draper loom?

Miss HALL. It is a Draper, model E.

Senator JOHNSTON. How many looms do you run?

Miss HALL. I run 36.

Senator JOHNSTON. Do you have a battery?

Miss HALL. Yes, sir.

Senator JOHNSTON. How many is the most in the mill?

Miss HALL. The number of looms would vary according to the construction of the cloth and whether or not you had a feeder. The most is 66.

Senator JOHNSTON. The most is 66?

Miss HALL. Yes.

Senator JOHNSTON. Even on the same grade of loom, you will find a difference in the number they are running.

Miss HALL. What do you mean by grade?

Senator JOHNSTON. I mean the same type of cloth, making the same type of thing, running the same yarn, the same warp, you find some weavers running a great deal more than others.

Miss HALL. I am afraid I can't answer that.

Senator JOHNSTON. Say you are running 64–68 or 64–72, you find one weaver will probably run 32 and some other weaver will be running 50 or 60 looms.

Miss HALL. Not if it is the same construction.

Senator JOHNSTON. You find that in my State.

Miss HALL. All I know is the one in Virginia.

Senator JOHNSTON. I worked for 50 cents a day. It is a disgrace, I know, because I worked for that, and for 65 and 75. I know your trouble. I worked in the spinning room and weave shop. You have different types of work in the mill, isn't that true?

Miss HALL. Yes.

Senator JOHNSTON. Did you ever work as a spinner?

Miss HALL. No, sir.

Senator JOHNSTON. I worked on that for some three years. In a spinning room a spinner will run four sides, isn't that true, maybe for the first 6 months or year?

Miss HALL. When she is learning, and then she will gradually take more.

Senator JOHNSTON. Up until they run maybe 12 sides.

Miss HALL. Some of our spinners run 16 sides.

Senator JOHNSTON. Some run 16 sides?

Miss HALL. Yes.

Senator JOHNSTON. That is true in the cotton mill industry. What do you draw per week?

Miss HALL. I am a piece-rate worker. There is a difference in my salary each week. If I feel good and can run around pretty fast, I might get $32.

Senator JOHNSTON. What is the price for the battery?

Miss HALL. The battery is 55 cents an hour. I think that is about $24 a week.

Senator JOHNSTON. What type of work does your father do?

Miss HALL. My father is a weaver.

Senator JOHNSTON. How many looms does he run?

Miss HALL. 66, but he doesn't make as much as I do, because it is different construction.

Senator JOHNSTON. A different type loom?

Miss HALL. Yes. He can't get around as fast as I do.

Senator JOHNSTON. I see. Do you know what they pay in the carding room?

Miss HALL. I know that the minimum pay is 55 cents. I know the fixers make 58 cents, and I think the drawing tenders would make about 58 cents, I am not sure.

Senator JOHNSTON. When you are speaking of children working in the mill, what is the age in Virginia?

Miss HALL. 16.

Senator JOHNSTON. I would like people to know I worked when I was 11 years old in the cotton mill.

Miss HALL. My daddy did, too, but it is telling on him now.

Senator JOHNSTON. I want to tell you I made them raise the limit there when I was Governor, and when I was a member of the House.

Miss HALL. I did not know you had been Governor.

Senator JOHNSTON. Yes; I was Governor two different times in South Carolina.

Miss HALL. I did not know who you were.

Senator JOHNSTON. I am trying to get some facts out here.

Miss HALL. I would like to give them to you.

Senator JOHNSTON. That is what we want. Do you know what the average is in spinning now?

Miss HALL. I should say it would be about 61 cents. I should say more than half the people in the mill make the minimum rate, the rate for common labor, and they are running skilled jobs.

When the minimum pay was shoved up they had to pay more. They went from 37½ to 40 then 45 and 47½; they had to pay the people that much. They did not raise the skilled-labor rate.

Senator JOHNSTON. That is right, they did not raise your skilled labor at all when the minimum came up.

Miss HALL. That is right.

Senator JOHNSTON. I think you will find it practically true throughout the United States to a large extent. What air-conditioning do you have in the mill?

Miss HALL. We do not have any air-conditioning; it is just plain hot, that is all. You go in to work 6 minutes to 7.

We have worked 9 hours and 36 minutes without a lunch period all during the war.

Senator JOHNSTON. No air conditioning?

Miss HALL. We haven't any there. In half an hour, all of our clothes are wet.

Senator JOHNSTON. It is necessary to keep the right humidity.

Miss HALL. The most times they put hot water on you.

Senator JOHNSTON. What house rent do you have to pay?

Miss HALL. We live in a company house. We pay $1.15 a week. They deduct that from your salary.

Senator JOHNSTON. Do you know whether or not some mills have rent as high as yours?

Miss HALL. Some of the mills, I understand, sold the houses to the help. In North Carolina that is true in several places, I believe.

Senator JOHNSTON. In my State they did the same thing. I don't know whether it has proved out successful or not.

Miss HALL. I figure we have bought our house about six or seven times. After all, we have lived there about 14 years, and it is not a very good house.

Senator JOHNSTON. I believe that is all.

Senator TUNNELL. I remember there was something about there being a tendency to increase the number of looms that a person attended to. Has that been noticeable in your mill?

Miss HALL. There have not been any stretch-outs yet, but they have gone around asking the people how many looms they thought they could run.

Senator TUNNELL. I remember one witness in particular testifying that the number of looms was increased until the defects were more noticeable and more cloth would be condemned.

Miss HALL. Yes, sir.

Senator TUNNELL. They could get more for the condemned cloth than they could for the ceiling priced cloth.

Miss HALL. There has not been too much stretch-out among the weavers, because they would not stand for it. We had a lot of absenteeism, and I imagine everybody has. They would come up to the battery floors and say: "Could you fill your job and half of another job?" Some of the good battery people said, "Look how much money I am going to make," and they agreed to do it.

Senator JOHNSTON. Do you think it would be a good thing to have some law whereby, before they could increase the load, that is, the stretch-out, in the cotton mills more than they have on a certain date—pick out a date in the past, 1939, 1940 or 1942—they would say "You cannot increase it above that load in the future unless you get the permission of your State labor commission?" Do you think that would be any good or not?

Miss HALL. I don't know. We have work-load clauses in our contracts. I should think that is good if we can get it to work. I should think offhand that would be a good law.

Senator JOHNSTON. I have no further questions.

Senator TUNNELL. I want to commend you for one thing, that is the saving of your two brothers' money in the bank.

That is all for today. We will meet again tomorrow morning at 10 o'clock.

(Whereupon, at 11:50 a. m., an adjournment was taken until 10 a. m., Friday, September 28, 1945.)

AMENDMENT OF THE FAIR LABOR STANDARDS ACT

FRIDAY, SEPTEMBER 28, 1945

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON EDUCATION AND LABOR,
Washington, D. C.

The subcommittee met, pursuant to adjournment, at 10 a. m., in room 357, Senate Office Building, Senator James M. Tunnell presiding.

Present: Senators Tunnell, Ellender, Guffey, and Aiken.

Also present: Charles Kramer, consultant to the committee.

Senator TUNNELL. The hearing will please come to order.

We have a statement here from the Secretary of Agriculture, Clinton P. Anderson, which I will ask to have put in the record at this point.

(The statement referred to is as follows:)

STATEMENT BY SECRETARY OF AGRICULTURE CLINTON P. ANDERSON ON S–1349, A BILL TO PROVIDE FOR THE AMENDMENT OF THE FAIR LABOR STANDARDS ACT OF 1938, AND FOR OTHER PURPOSES, BEFORE THE SUBCOMMITTEE OF SENATE COMMITTEE ON EDUCATION AND LABOR, SEPTEMBER 28, 1945.

Although this proposed legislation does not directly affect farmers or agricultural laborers, I am happy to make a statement about it before this committee. I believe it will have important indirect effects on agriculture if it becomes law. Farmers are interested in all types of legislation which may lead to increased purchasing power among their customers. This proposed amendment to the Fair Labor Standards Act of 1938 will no doubt have an influence in expanding the demand for food and fiber. It is, therefore, of concern to all of us who are wrestling with the problems of agriculture.

American agriculture came out of this war geared to produce 30 to 35 percent more than it was producing in the years immediately preceding Pearl Harbor. This increased production came about at a time when the farm population, and hence the farm labor supply, was decreasing. In addition, the available supplies of farm machinery were far below the amounts that farmers wanted to buy. Of course, we have been blessed with generally favorable weather during the last few years. But the real credit goes to the American farmer for furnishing our civilian consumers with a better diet than they had before the war and, at the same time, supplying our allies large and urgently needed quantities of food. The American farmer's share in winning this war through expanding food production is striking testimony to his managerial and productive ability. He worked long hours, planned his operations carefully, managed well, and gave to us and to our allies—in short, to the cause of freedom—a phenomenal supply of food, which is one of the most important munitions of war.

This outstanding production on the part of American farmers indicates in no uncertain terms that we have had a veritable production revolution in agriculture. This wartime production revolution is not reversible. We cannot go back to prewar days. Postwar production on the prewar pattern is as outmoded as the model T Ford. Wartime production levels in agriculture will tend to persist regardless of economic conditions. Total farm production is responsive to increased prices or income on the upward side, but, once expanded, it is quite unresponsive to low prices or depressed conditions on the downward side.

Moreover, there is every reason to believe that improved farm technology will increase at a rapid rate in the years ahead. More and better fertilizers will

be used; improved varieties of plants and livestock will be grown on more and more farms; better feeding and breeding practices will result in greater production of livestock, dairy and poultry products, per pound of feed consumed. All of these things, and many others like them, will tend to increase the production per acre. At the same time that this type of technology is advancing, we may expect that more and more farmers will turn to the use of tractors and other power machinery; that more milking machines, self-feeders, and automatic watering devices will be installed; that more four-row cultivators will be in use; and that many types of machines will be used to cut down the heavy labor requirements at harvesttime in the cotton, hay, and vegetable fields, as well as in the fruit orchards. These developments will tend to reduce the man-hours of labor required in farming. With one type of technological advance reducing acreage requirements and another reducing labor requirements, it is easy to understand that the total output of all farm products will be extremely difficult to hold down in future years. Moreover, production control in agriculture is not compatible with a needed framework of policies in both industry and agriculture which encourages expanding employment and production throughout the economy.

I am convinced, therefore, that a large part of the solution to the farm problem ahead must be sought in the direction of expanding the total market for agricultural products. We may also need special programs to help workers who no longer can find adequate opportunity in agriculture to find nonfarm employment.

This proposed legislation appears to be one step forward in the task of expanding the market for farm products. That is the primary reason why, as Secretary of Agriculture, I am interested in it. That explains why I support its general purposes.

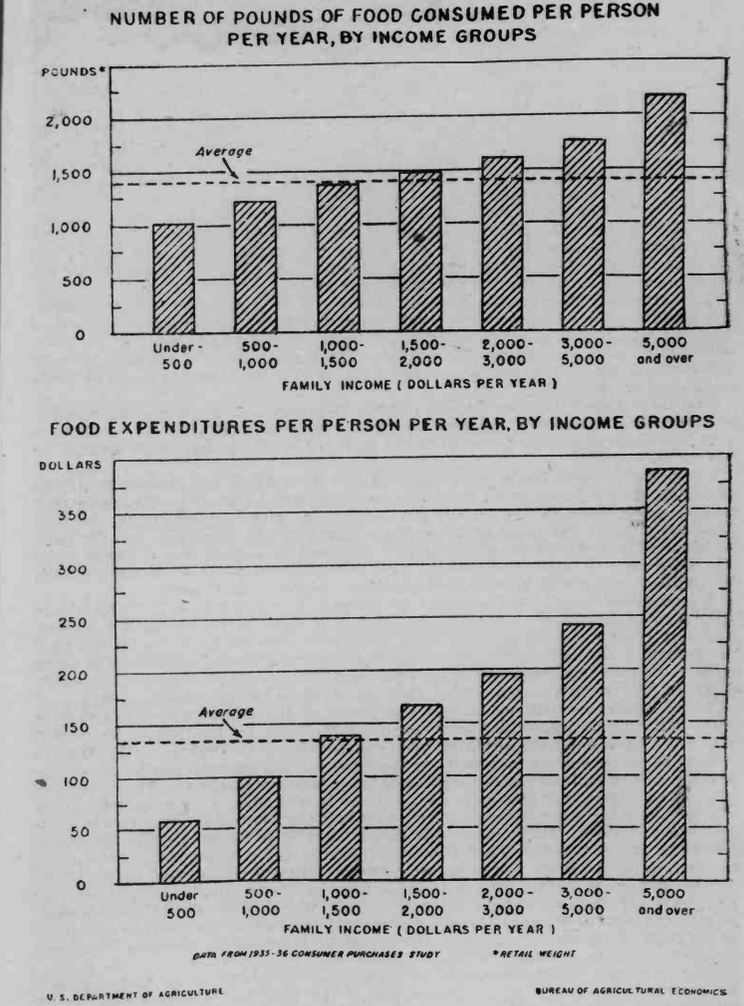
One of the greatest contributions which we can make in this country to expanding the market for agricultural products is to maintain full employment, and, at the same time, develop our international relations in such a way as to encourage foreign trade. Under a full employment situation, the problems of agriculture will not all be solved. They will, however, be manageable. Even with full employment and an active foreign trade, many steps will be necessary in the fields of agricultural, labor, and business policies, if we are to have a sound and prosperous agriculture. President Truman was certainly correct when he said in his recent message to Congress: "The existence of substandard wage levels sharply curtails the national purchasing power and narrows the market for the products of our farms and factories."

We know from our wartime experience that the demand for farm products rises rapidly with an increase in the incomes of city people. The families of the wage earners in this country are the biggest single group of customers that the farmer has. Better incomes for them will mean better markets for farm products. Along that line I want to call your attention to a chart which I have here.

The top part of this chart shows the way in which the pounds of food consumed per person increases as income increases. The bottom part of the chart indicates how annual expenditures for food rises with increasing family income. It is perfectly obvious that raising the income of a family increases the actual pounds of food which it consumes. Moreover, the expenditures which it makes for food rise considerably more rapidly than do the quantities consumed. The increase in pounds consumed, as well as in expenditures, arises from the fact that higher-income families purchase the more expensive and nutritious foods, which are also the more bulky foods.

Families with annual incomes below $500 ordinarily consume in a year only a little more than 1,000 pounds of food per person. The type of food which they buy is relatively cheap. However, families with incomes of $5,000 and more per year buy about a ton of food per person. Moreover, the type of food which they purchase is fully twice as expensive per pound as that purchased by the lowest-income groups. High-income families eat much more fruits, meats, dairy products, and vegetables than do low-income families. The latter depend heavily on bread, potatoes, beans, and similar relatively inexpensive foods. If, therefore, we can have a general rise in family incomes, we can be assured of expanding markets for food products—particularly for the foods that supply the minerals and vitamins essential to good diet.

This chart does nothing more than to illustrate graphically what we have all seen with our own eyes during the past 2 or 3 years. When people are at



work at good wages, they spend more money for practically everything. Food is no exception to this general rule, and especially the high-priced, nutritionally needed foods. As I have just indicated, agricultural production in the years ahead is potentially so great that farmers will need every possible increase in market outlets if they are to move their products into consumption at reasonable prices. The proposed amendments to the Fair Labor Standards Act will, I believe, aid materially in widening the farmer's market for the things he has to sell.

These amendments propose four important changes to the present law. First, they would increase the minimum wage of those unskilled workers covered by the act from the present legal minimum of 40 cents per hour to 65 cents, in the first year after the effective date of the amendments. During the second year the minimum would go to 70 cents per hour, and then to 75 cents in the third and subsequent years. Second, they propose to include two new groups of workers, namely, seamen and workers engaged in the processing, storing, and handling of agricultural and fishery products. Third, they provide for the establishment of reasonable wage differentials throughout an industry for all jobs above the minimum level act for unskilled workers. Fourth, they strengthen the present law in the way of preventing the use of oppressive child labor in nonagricultural enterprises. Agricultural employees are specifically exempt, as well as several other classes of workers.

The proposed amendments are not as far reaching as many people believe. For instance, the increase in the legal minimum wage from 40 cents to 65 cents an hour will probably not directly affect more than 4 to 4½ million workers, which is a small percentage of the total. The maintenance of reasonable wage differentials above the minimum will, of course, raise the earnings of some additional workers.

The inclusion of seamen and employees engaged in the processing, storing, and handling of agricultural and fishery products does not involve more than 1 to 2 million workers. Some of these workers have already been covered by the present act.

I do not propose to try to tell this committee what all of the various ramifying effects of this legislation will be if it becomes law. I shall gladly leave that task to my friends in the Department of Labor, who are experts in the field Studies by the Department of Agriculture staff indicate, however, that for each increase of $1,000,000,000 in the annual earnings of low-income workers there will be a corresponding increase in food expenditures of at least $200,000,000. In addition, there will be increased purchases of cotton and tobacco.

A modest increase in the earnings of low-paid workers will be a highly desirable type of insurance against a substantial decline in the demand for farm products resulting from the decreased purchases of farm products on the part of the armed forces plus the decline in lend-lease shipments, while, at the same time, reconversion unemployment is a problem.

There are those who will argue that an increase in the minimum wages of nonfarm employees will mean that the prices of the things which the farmer buys will automatically increase. To me this argument has yet to be proved sound. I have not seen anything very convincing on the subject. Economists are not at all agreed that an increase in wages paid by manufacturers will necessarily result in an increase in the price of manufactured products. Higher wages may bring about, for instance, an increase in efficiency of production either through a rise in the productivity of individual workers or through better management practices. Right along this line I want to point out that in the years following the end of the First World War there was a tremendous rise in the production per worker. For instance, between 1919 and 1923 annual productivity per worker in manufacturing industries rose by about one-third, or 8 percent per year. If the experiences after the First World War should be repeated within the next few years—in other words, if production per worker increases rapidly—it is obviously true that there can be substantial increases in wages without any rise in prices.

Whatever may be the real truth with respect to the influence of higher wages on prices, it is evident that the passage of the Fair Labor Standards Act of 1938 did not bring about any apparent increase in the prices of commodities purchased by farmers. That act was passed near the end of June 1938 and became effective about October 1st of that year. The quarterly index of prices paid by farmers for items used in family living stood at 122 in June 1938. (The average of 1910–14 equals 100.) By September of that year it was down to 121; in December it had declined to 120; and in both March and June of 1939, it was 119. It

was not until September 1939 that the index reached the level of 122, at which it stood in June 1938. Moreover, it declined slightly after June 1939, and a full year later, in the middle of 1940, the index was still below the level of mid 1938. The same general movements were apparent in the index of production items—farm machinery, fertilizer, building materials, seed, etc.—as in the family living items. There is no need to give the detailed figures. They tell the same general story as those I have just mentioned.

No one would argue, of course, that raising the minimum wage will not create problems for certain industries and firms which have unusually low wage scales. The wage increases which the passage of these amendments would bring about would be of greatest significance in the textile, tobacco, fruit, and vegetable-canning, and southern lumber industries. However, the enactment of the proposed amendments would not seriously interfere with the general reconversion program. Moreover, the long-time advantages of increased market outlets for these and other industries will more than offset the temporary disruptions which may occur in a few lines of production.

In summary, it appears evident that legislation of this character will increase the demand for farm products and that the production situation in agriculture is such that farmers need every assurance of the broadest possible market outlets. Moreover, there is little past evidence to indicate that prices paid by farmers will be increased by this proposed legislation. Therefore I conclude that amendments of this general nature should be enacted into law.

Senator TUNNELL. Mr. Remele.

All right, Mr. Remele; give your name, address, and present position.

TESTIMONY OF A. C. REMELE, NORTHWEST COUNTRY ELEVATOR ASSOCIATION, MINNEAPOLIS, MINN.

Mr. REMELE. My name is A. C. Remele, 713 Chambler of Commerce, Minneapolis. The Northwest Country Elevator Association is a voluntary organization, the member of which are engaged in the operation of country elevators in the States of Minnesota, North Dakota, South Dakota, and Montana. The F. H. Peavey & Co., of which I am general counsel, is a member of this association and operates at the present time about 225 country elevators.

The total number of elevators operated by members of the association is approximately 1,000. In addition to the elevators included in the membership of the association, there are in the four States named approximately 3,000 elevators operated by independent owners and cooperatives.

Nature of facilities: Country elevators are facilities located in the grain-growing areas of the States above named, as well as other areas in the United States, and are constructed for receiving, storing, and shipping of grain raised in the surrounding territory and hauled in by farmers in wagons or trucks. They constitute the primary markets for grain and seeds and are located in nearly all towns, villages, and sometimes at mere railroad sidings in the grain-growing area. In many instances, they take the place of storage facilities at the farm, as a great percentage of farmers haul their grain directly from the threshing machine to these storage facilities and have no facilities for storing their grain other than these country elevators.

They are, for the most part, equipped with large platform dump scales, so that trucks and wagons can be weighed and dumped into a receiving pit from which the grain is elevated by power machinery to various bins in the elevator. As grain accumulates in the elevator, it is again transferred by machinery to cars for shipment to terminal grain markets.

Employees: In a large percentage of the elevators in this area there is but 1 employee, known as the manager. For example, out of 136 elevators reporting in Minnesota, 100 had but 1 employee; out of 155 reporting in Montana, 117 had 1 employee; and in North Dakota, out of 559 reporting, 299 had 1 employee.

The manager is in complete charge of the elevator, and his duties consist of weighing and taking into the elevator the grain hauled in from the farm and diverting it through mechanical devices to bins in the elevator, either buying the grain at the time of the receipt or issuing storage receipts therefor and subsequently shipping the same to terminal markets. He must have a specialized knowledge of all kinds of grain, including skill in the matter of determining grade and quality, usually fixes his own hours, on which there is no check, and his status is entirely different from the status of employees working in industrial plants or factories. He does very little physical work, since the grain is all handled by machinery, and his chief value lies in his ability to get business and to properly grade and price the grain offered for sale.

Quite a large percentage of the elevators in the northwest area have what is known as a second man, who assists the elevator manager with his duties and is usually in line for a position as manager when he has become sufficiently competent to be advanced to such position. Where there are more than two employees it is usually because of the fact that the elevator is engaged in the handling of coal, twine, flour, and feed which are being sold at retail to farmers.

Managers and second men are almost without exception paid on a monthly basis, are usually old employees; and the average monthly salary for managers is approximately $190, while second men receive a monthly salary averaging $140.80.

Hours: The elevators in the four Northwestern States in which we are primarily interested are all operated under State licenses as public utilities and are supervised by regulatory bodies known as railroad and warehouse commission, public service commission, and so forth. They are required by law to receive grain tendered for storage and cannot be closed except with the consent of the regulatory body.

The grain producers in this area have been accustomed during the threshing season to haul their grain to the elevator directly from the threshing machine; and since these machines work long hours, elevator employees have, during the time of heavy movement, kept their elevators open sometimes considerably in excess of 12 hours per day. It is a matter of extreme importance to the producers to take advantage of every available hour of good weather to harvest the grain and haul the same to the elevators, so as to take it out of the hazards of weather and other factors that may result in damage to the crop. The hours at these elevators have, therefore, been adjusted to meet these requirements. For a large part of the year the hours are much shorter; and while the elevators usually are kept open during business hours, there are many weeks during the year when the manager has very little to do and many days when he does not take in a single load of grain but keeps his plant under observation so that if some grain is offered he can take it in. There is no one present at his station to check his hours, and he uses his own judgment as to what time he ought to put in at his elevator. This is quite unlike the situation prevailing in factories and plants in other lines.

Hours of employment are not a factor in these small towns and villages, and the employees in the stores, garages, and other little business usually found are not much concerned with the hours of work.

Origin of the grain: The grain received at these elevators is hauled from farms varying considerably in the matter of their distance from the elevator, depending upon the number of stations that are to be found in any given area. In more thickly populated sections of Minnesota, the distance may not exceed 15 to 20 miles, whereas in some sections of North Dakota, South Dakota, and Montana the nearest elevator to some of the grain farms would be as much as 50 to 100 miles.

We are appearing here primarily in opposition to the proposed amendments of the Fair Labor Standards Act insofar as they eliminate the exemption provided by section 13 (a) (10), which provides:

> The provisions of sections 6 and 7 shall not apply with respect to (10) any individual employed within the area of production (as defined by the Administrator), engaged in handling, packing, storing, ginning, compressing, pasteurizing, drying, preparing in their raw or natural state, or canning of agricultural or horticultural commodities for market, or in making cheese or butter or other dairy products.

Senator ELLENDER. Exactly, how would that affect your business?

Mr. REMELE. If we are denied the exemption, we would have to keep hours in these country plants. A country elevator, of course, is located out in every little town and village throughout Minnesota and North Dakota and all the grain-growing area. The employees in these plants have to adjust their hours to the hours that are observed by the farmers in the locality. The farmers, of course, during the threshing season especially, work long hours; they have got to get the grain in before rain or some other thing deteriorates the crop; and we are the storage facility for many of these farmers. Most of the farmers do not have sufficient storage capacity on the farm to take care of it, and they haul the grain right from the thresher into the elevator.

Senator ELLENDER. How much longer would an employee have to work unless the exemption that you are contending for is in the bill?

Mr. REMELE. The employee in these elevators works overtime perhaps to the extent, in the busy season, of as much as 60 or 70 hours, and it would be a terrific burden on us as the employers to pay them overtime for the hours over 8 per day.

Senator ELLENDER. For how long a period does that last?

Mr. REMELE. Of course, we don't know exactly what hours they observe, because they keep their own hours.

Senator ELLENDER. I mean for how long a period of time; 2, 3 weeks or 2 months?

Mr. REMELE. Well, in these last years they have been busy 3, 4 months of the year, especially busy, but they work 50 or 60 hours most of the year. I mean they put that much time in at the elevator. They do not work hard all the time; they do not do anything a lot of the time.

Senator ELLENDER. Do they get overtime for such work as they do?

Mr. REMELE. No; we pay them all on a monthly salary basis. The average pay is about $190.

Senator ELLENDER. Have you any objection to the minimum rate of pay fixed in the bill?

Mr. REMELE. Not if we get this exemption. Of course, we would not be interested in the rate if we got this exemption.

Senator ELLENDER. What is the pay at the present time?

Mr. REMELE. The pay averages in our area about $190 for the manager and about $145 to $150 for what they call the second man. He is an assistant.

Senator ELLENDER. What does that mean on a per hour basis?

Mr. REMELE. Well, we haven't reduced it to hours, but the average week would probably run between 50 and 60 hours.

Senator ELLENDER. That would be around 55 cents an hour.

Mr. REMELE. For the second man; yes. The managers, of course, get more.

Senator ELLENDER. If you got this exemption, you would have no objection to the considerably increased rate of pay that is provided for in the bill?

Mr. REMELE. If we get the exemption we of course would not be affected by the proposed increase in the hourly rate.

Senator TUNNELL. If you are not under the law, you do not care?

Mr. REMELE. That is right. There is one factor I want to call your attention to in the little time I have, and that is that these elevators are public utilities; they are licensed by State authority, and the charges that they can make for their services are fixed by law, such as the storage charge, the handling charge. If our overhead is increased by bringing us under the law, whereas before we have been exempt, why, we want to know where to make up this extra overhead involved in paying the extra wages.

Senator AIKEN. Do you store this grain for so much per bushel?

Mr. REMELE. Yes.

Senator AIKEN. And you have to keep these long hours, so if a farmer comes in after supper there is someone there to take care of his grain?

Mr. REMELE. Yes; someone must be there to take care of his grain. He may come in from 15 to 20 miles.

Senator AIKEN. I suppose some days, probably when the harvest is at its height, when you have people waiting to unload and there is pretty steady work during the height of the season, the time of the men is fully employed.

Mr. REMELE. Oh, yes.

Senator AIKEN. And then as the harvest season tapers off the grain comes in slower and there are longer periods between the trips.

Mr. REMELE. That is right. In these little towns the man would be at the elevator but on some days he might not have a load all day.

Senator AIKEN. Who owns these elevators?

Mr. REMELE. Speaking of elevators generally, they are owned by individuals or by what they call line companies which have a chain of elevators throughout the country, or by cooperatives. A good many cooperative elevators are owned by the farmers themselves.

Senator AIKEN. Does the same law that applies to these elevators apply to the big elevators, we will say, in Duluth and Minneapolis?

Mr. REMELE. No.

Senator AIKEN. They come under the law?

Mr. REMELE. They come under the law and always have; yes.

Senator AIKEN. It is just this primary storage?

Mr. REMELE. That is all; yes.

Senator AIKEN. That you ask to have exempted?

Mr. REMELE. Yes.

Senator ELLENDER. Now, a little while ago you said you wanted to be exempted and not have the law applied to you. You further said that you are now paying $145 a month for the second man. Am I right in that?

Mr. REMELE. That is right.

Senator ELLENDER. That second man works about 50 hours a week?

Mr. REMELE. Yes; that would be a fair statement, I think.

Senator ELLENDER. Now, should the maximum amount of pay, that is, the 75 cents, be reached within 3 years, at 50 hours a week it would mean, as I figure it, $37.50 a week, and that times 4 weeks would make it $140 per month; and you are paying about $145.

Mr. REMELE. That would be $150, I think—$37.50 time 4.

Senator ELLENDER. You are correct.

Mr. REMELE. We are also interested in the effect it is going to have on the manager. There are a lot of these elevators, probably one-half of them, that only have one man. If we lose the exemption, he has got to have his increase.

Senator ELLENDER. Suppose, instead of operating your elevators on a basis of 50 hours a week you operated them on a basis of 40 hours a week, as I figure it you would be better off; that is, it would cost you less or not more than you are now paying.

Mr. REMELE. We cannot do that, though, because we have got to keep the elevator open to conform with the custom and habits of the farmers.

Senator ELLENDER. Why cannot you keep it open by employing two men instead of one man?

Mr. REMELE. We cannot do that, because the manager is the fellow that gets the business, that takes in the grain, inspect it, pays for it and stores it, and he is responsible for what he takes in at the end of the year. You cannot substitute another fellow in there and still make the manager responsible for the grain that he takes in.

Senator GUFFEY. What is the average capacity of these elevators?

Mr. REMELE. About 30,000 bushels would be the average.

Senator AIKEN. As I understand it, the small elevators have just one man who receives about $190 per month. That is about $45 per week.

Mr. REMELE. Yes.

Senator AIKEN. He is getting paid now 75 cents an hour for 60 hours straight time.

Mr. REMELE. Yes.

Senator AIKEN. If your exemption were denied it would mean you would have to pay an increase for 20 additional hours a week; is that right?

Mr. REMELE. Yes.

Senator AIKEN. That would be $7.50 a week increase. The increase would be more, however, at the elevators where you have to keep two men.

Mr. REMELE. Yes; and in elevators where there is one man and he is open, as he might be, 72 to 80 hours.

Senator AIKEN. The increase in wages would not affect you as much as the exemption of the overtime provision.

Mr. REMELE. We pay him on a straight salary basis. If you establish the 40 hours and paid him overtime over 40 hours, it would increase the pay of the manager very materially. The point is, while the average might be around 50 or 60 hours during the time they are threshing, during the rush season, maybe 2 or 3 months, which starts in some of these areas in July and runs on through November, the hours might be 70 to 80 some days. The employees are not at all dissatisfied; they like their job and nobody kicks at the long hours at these times.

Senator AIKEN. Do these men have year-round work?

Mr. REMELE. Oh, yes.

Senator AIKEN. They have to stay in the elevators in the winter, too?

Mr. REMELE. Oh, yes.

Senator AIKEN. Then, I suppose they have shorter hours when the grain has gone out.

Mr. REMELE. They do not have any physical work to speak of.

Senator AIKEN. I mean they probably get in 5 or 6 hours during the wintertime.

Mr. REMELE. Some days they would not do anything at all; the elevator would be open, but they probably would go home and if a load drove up they would go to the elevator and attend to it.

Senator ELLENDER. They get the $145 monthly whether they work the 50 hours or don't work at all?

Mr. REMELE. Yes.

Senator ELLENDER. That is on a yearly basis?

Mr. REMELE. That is right.

Senator AIKEN. It is probable that they get more than what this bill calls for if they are on an annual wage.

Mr. REMELE. Oh, yes. We try to keep them on, and have kept them on, during the whole year, whether they are busy or not. In fact, these elevators have got to stay open by law.

Senator AIKEN. Can you hire labor in the northwest and central part of the country for less than 65 cents an hour now, if it was reduced to an hourly rate?

Mr. REMELE. Oh, you can here and there, but generally speaking the farm labor is a little higher than that.

Senator AIKEN. You might get a man who has physical defects.

Mr. REMELE. Yes. These men do not do much physical work.

Senator AIKEN. How much, if any, has the cost of labor increased in the last 4 years?

Mr. REMELE. The elevator employees?

Senator AIKEN. Yes.

Mr. REMELE. Well, I think there has been perhaps an increase of an average of $20 a month or $25 perhaps.

Senator GUFFEY. If the farmer stores wheat for 30 days; what is the charge?

Mr. REMELE. We give him 15 days free storage, and then we charge him one-thirtieth of a cent a day per bushel.

Senator GUFFEY. One-third of a cent?

Mr. REMELE. One-thirtieth.

None of the reasons or labor conditions that prompted the passage of the act originally are present in the case of these isolated establishments and it is, we think, beyond dispute that it never was the intention of Congress in passing the act of 1938 to include activities of this character as being within the provisions of the Fair Labor Standards Act. It was clearly intended that the Administrator should by proper definition exclude them from the wage-and-hour provisions of the act, and immediately after the effective date of the act the Administrator defined Area of Production; the requirements of the first definition being that the establishment obtain its products from farms in the immediate locality and the number of employees in an establishment not to exceed seven.

Effective April 20, 1939, there was a new definition made applicable to perishable fruits and vegetables in which towns of 2,500 were excluded from the exemption and the distance from which a plant could draw its products was limited to 10 miles. Then effective June 17, 1939, there was promulgated a generally applicable definition requiring that the products come from farms in the general vicinity of the establishment and the number of employees engaged in the establishment was not to exceed seven.

This definition was in effect and exempted fully 85 percent of the grain elevators in the United States until the United States Supreme Court decision in the case of *Addison* v. *Holly Hill Fruit Products Inc.*, decided June 5, 1944, holding that the act of 1938 gave the Administrator no power by definition of area of production to differentiate between plants on a basis of number of employees engaged in the plant. The Court directed the Administrator to promulgate a new definition to be in accord with the opinion of the Court and to govern retroactively from the effective date of the act. Last February extensive hearings were held by the Administrator on the matter of a new definition which has as yet not been announced.

Undoubtedly one reason for the delay in the promulgation of a new definition is the difficulty involved in writing a definition applicable reasonably to the hundreds of agricultural products involved.

We feel certain that if only grain were involved there would be no hesitation on the part of the Administrator in writing a definition by the terms of which grain elevators generally would be exempt.

As area of production was defined from time to time by the Administrator, he issued statements explanatory of these definitions and it is clear from his explanatory statements and regulations that he had in mind exempting small plants where the number of employees did not exceed from 7 to 10.

The administrator now finds himself in a position whereby the decision of the Court in the Addison case he dare not use the number of employees in the plant as a factor in his definition and it is therefore very difficult to carry out what the Administrator and the Supreme Court have construed the intent of Congress to have been in the original act; namely, to give exemption to plants involving only a small number of employees and including under the provisions of the act the larger plants with large numbers of employees.

Among the reasons which we believe require that the country grain elevators remain exempt from the provisions of the act and why we oppose the elimination of the exemption are the following:

(1) The legislative history of the act indicates clearly that at the time it was passed it was not the intention of Congress to include the nonexempt establishments engaged in operations closely related to and in close proximity to agricultural operations where the products in

question are produced. As the bill was passed by the Senate it provided that the term "person employed in agriculture" as used in this act insofar as it shall refer to fresh fruits and vegetables, shall include persons employed within the area of production engaged in preparing or storing such fresh fruits and vegetables in their raw or natural state.

Volume 81, Congressional Record, 7876, 7949, 7957: This provision varied somewhat by extending its coverage to all "agricultural commodities"—Congressional Record, 1783–1784—remained as part of the definition of "Employee employed in agriculture" until shortly before the bill was finally adopted by the House, at which time the so-called Biermann amendment included within the definition of employees engaged in agriculture:

> individuals employed within the area of production, engaged in the handling, packing, storing, ginning, compressing, pasteurizing, drying, or canning of farm products and in making cheese and butter.

Volume 83, Congressional Record, 7401, 7407: At the conference on the disagreeing votes of the two Houses, the "area of production" provision was given the form in which it was finally enacted, and there the parenthetical phrase "as defined by the Administrator" was inserted after "area of production"—volume 82, Congressional Record, 9249. So throughout the time the bill was considered the country elevator operations would have been exempt either by the definition of agriculture as used in the act or by the final provision leaving the definition to the Administrator.

Representative Biermann was asked whether his amendment—

> would apply to a packing house located in Iowa and Illinois in the area of production, which employs two or three hundred men.

This was his complete answer:

> Speaking frankly, I think that is something that would have to be worked out. There are some packing houses in the State of Iowa that this amendment would apply to, perhaps; but may I say that all over this country it has been recognized that there should be a labor differential between the large city and the little town.

In other words, between the large and small plant.

As the legislative history shows, there was fairly general agreement that some part of the work specified in section 13 (a) (10) should be exempt, whether or not it was done on the farm. Among the latter were views that the exemption should be made because the farmer bore the cost of the work—confer volume 81, Congressional Record, 7656, 7877, 7880; or because many farmers in fact performed it on their farms and as part of their operations—volume 81, Congressional Record, 7657–7659; or because others who had to resort to independent contractors to have it done would be discriminated against unless the work were exempt—volume 81, Congressional Record, 7656, 7658–7660, 7876. Some legislators were concerned to have the exemption apply whether the work were done in large or small plants; others to limit it to small ones only; and still others to secure it completely for particular crops. Numerous amendments were tendered, but for the most part defeated. It was not until the conference committee's report was framed that the problem was solved by referring it to definition by the Administrator.

The Senate's first suggestion of "area of production" came from Senator Copeland—volume 81, Congressional Record, 7656—although

Senator Schwellenbach became the chief proponent of the concept in the Senate. Senator Black, sponsor of the bill, was concerned with the scope of "area" and sought a more accurate term for limiting its effect so as not to exempt workers in large plants—confer volume 81, Congressional Record, 7656–7660, 7876–7878—and others expressed opinions that large operators should not be exempted.

Parenthetically, I might say that the above references to the legislative history of the act are all taken from the notes in the decision of the Supreme Court, *Addison* v. *Holly Hill Fruit Products*.

The same considerations that prompted the Congress to create the exemption provided in section 13 (a) to (10) are just as much present and just as persuasive as at the time when the act was originally passed, and no sound reason why this exemption should now be discarded suggests itself. If it be argued that the difficulties involved in formulating a definition applicable to all agricultural products involved might be a reason for the elimination of the exemption, then we suggest that the purpose of Congress and the apparent intent to limit the exemption to the smaller plants could quite easily be accomplished by a slight change in the language of section 13 (a) to (10) and making this section to read as follows:

> The provisions of sections 6 and 7 shall not apply with respect to (10) any individual engaged in handling, packing, storing, ginning, compressing, pasteurizing, drying, preparing in their raw or natural state, or canning of agricultural or horticultural commodities for market or in making cheese or butter or other dairy products, where the number of persons regularly employed in one plant or establishment does not exceed ten.

(2) As it has already been suggested, it is impossible for the average country elevator, of which there are some 14,000 in the United States, to operate on a basis of a fixed hours per day or week schedule. These grain elevators in many instances are the only storage facilities available to farmers operating in the vicinity. When the harvest season is on, it is not only desirable but imperative that every available hour of good weather be utilized to accomplish the threshing of the crop and getting the product into safe storage. Anyone familiar with agricultural conditions in the grain-growing sections of the country must realize that a protracted wet spell or hail storm may seriously damage crops where still standing or in shocks or windrows ready for the thresher. Only last year there were thousands of acres in Minnesota and North Dakota that were caught in a wet spell and the grain sprouted in the windrows and shocks in the fields and was never threshed. Farmers, therefore, operate their threshing machines during long hours and country elevators must be kept open to receive the grain as it is offered for storage. These elevators are for the most part located in the small towns and other businesses in these towns are accustomed to keeping long hours. This means, therefore, that at times these elevators are open in the busy season from 12 to 14 hours, and to place them under the provisions of the act would require at the increased hourly rates proposed in the present bill payment of overtime in amounts that would be ruinous to elevator operators.

The managers of these elevators are all bonded and are responsible for the amount, kind, and grade of grain they report as having been received in the elevator. This makes it impossible to substitute another shift during a part of a long day, even if the added expense were warranted. The manager of the average elevator would not

accept the responsibility involved if he were not present to supervise the taking in and weighing and grading of the grain as it is offered. He is required to make a cut-off and report at the end of the year, and he could, of course, not be held responsible for the outturn of his elevator if someone else were permitted to function in his job for a part of the time.

(3) Nearly all country elevators are operated as public utilities and are licensed and supervised by State regulatory bodies. As for example, in Minnesota we have the railroad and warehouse commission, in North Dakota, the public service commission, and so forth. In addition to this, the charges for storage and handling of grain through the elevator are fixed by a statute and cannot be increased except by the enactment of new laws by State legislatures. Unless country elevators are permitted the exemption, they would be compelled in many instances to operate at a loss until they can persuade a State legislature to permit them to increase their charges or unless they could pass the loss back to the producer in a smaller price for his products.

(4) A great many country elevators are operated from a central office or by a manager, in case of a cooperative, hired by a board of directors. The employer is not at the plant except for occasional visits and cannot keep the time of employees as can be done in factory or other plant operations. In the event, therefore, that a record of hours was required to be kept, the employer would be absolutely at the mercy of the employees in the matter of hours. This would throw an unusual, and unwarranted, and unfair hardship on the employer and he might be required to pay for many hours spent away from the plant entirely, when employees might be visiting downtown, working in the home garden, off hunting, or other matters that might keep the employees away from the elevator in slack times.

Then, too, wherever the act applies, the Administrator is required to and does employ investigators and field men to check on the matter of hours and payment of overtime and the supervision of these scattered and isolated plants, each with an average of not more than two employees would throw an undue and unnecessary and expensive burden on the Administrator. It must be noted, too, that the local manager cannot qualify for an exemption as an executive or administrative employee as these terms have been defined by the Administrator and there would be no disinterested party available to keep records of time and overtime.

We, therefore, respectfully urge that the exemption heretofore afforded to our industry may be retained hoping that the Administrator can formulate a definition that will meet the specifications suggested in the decision of Supreme Court in the Addison case.

We also respectfully urge careful consideration to our suggestion that section 13 (a) (10) be amended so as to make it unnecessary for the Administrator to write a definition. All of the services enumerated in section 13 (a) (10) have to do with agricultural products at or near their source and with the limitation as to the number of employees, we believe that the original intention of Congress in the passage of the Fair Labor Standards Act will be fully served. This would deny the exemption to large plants and retain it for the smaller operations with a very limited number of employees. We

submit that retaining the exemption in its present form, or as suggested herein, would not, to the slightest degree, be inconsistent with the declared policy of Congress as set forth in either the act of 1938 or in the proposed bill amending the same.

Senator TUNNELL. Are there any further questions?

If not, thank you.

Mr. Davis.

TESTIMONY OF WILLIAM H. DAVIS, FORMER DIRECTOR, OFFICE OF ECONOMIC STABILIZATION

Senator TUNNELL. Mr. Davis, will you give your name, address, and your present position?

Mr. DAVIS. My name is William H. Davis. I am a private citizen, practicing law in New York City.

Senator TUNNELL. All right, Mr. Davis, you may make your statement.

Mr. DAVIS. Your invitation to appear before this committee was first extended to me as Director of the Office of Economic Stabilization. When that office was consolidated with the Office of War Mobilization and Reconversion and I left the Government service, your committee again invited me to appear, as a private citizen. I am very glad to do so.

Your committee has under consideration proposals to amend the Fair Labor Standards Act of 1938. I think the committee may wisely approach the subject from the point of view expressed by President Truman in his message to Congress of September 6, 1945. The President said that the 40-cent minimum wage of the law as it now stands—

was inadequate when established. It has now become obsolete.

"Was inadequate when established": I need not recall to this committee that the act of 1938 was preceded by a very careful study in the Congress, and was very fully debated. It provided a minimum wage of 25 cents an hour for the first year following the effective date of the act—October 23, 1938, to October 3, 1939—not less than 30 cents an hour for the next 6 years, and not less than 40 cents an hour after October 23, 1945, the expiration of 7 years from the effective date of the act.

These minimum wage rates, progressing over a period of 7 years from 25 cents an hour to 40 cents an hour, produced minimum weekly wages, at 40 hours a week, progressing from $10 a week in 1938 to $16 a week in 1945. Minimum wages were not fixed at those levels on any finding by Congress that such wages were sufficient to maintain the minimum standard of living necessary for health, efficiency and general well-being of workers. On the contrary, the committee reports declared that such wages were insufficient to eliminate the substandard conditions which the Congress found to be a burden on interstate commerce, a source of unfair methods of competition, an inducement to labor disputes, and an interference with orderly and fair marketing of goods in commerce. The minimum rates fixed in that act were regarded as only a beginning and as the most that could then be required without causing unemployment. That should be emphasized. That was the conclusion of the Congress at that time, after,

I think, one of the most careful and thorough-going studies and debates that I can remember.

The Congress recognized that it should not proceed too abruptly to a minimum wage level high enough to afford a standard of living necessary for health, efficiency, and general well-being of workers. The studies that had been made indicated that so abrupt a change in minimum wage levels might so affect costs and prices as to substantially curtail employment. Congress had to be contented at that time with a minimum wage level admittedly too low to eliminate substandard conditions of living.

With the view of reaching, as rapidly as it was economically feasible without substantially curtailing employment, the 40-cent minimum-wage level of the act of 1935, the Congress provided in the act for the tripartite industry committees to be appointed by the Administrator and empowered to recommend to the Administrator an earlier increase of the minimum wage in any industry or industry subdivision up to but not above 40 cents. If my information is correct, those industry committees have functioned very well, indeed. Their recommendations have almost always been unanimous. They have afforded an almost ideal means of making a specific study of the effect of a statutory increase in minimum wages—not above 40 cents an hour—in any particular industry.

If my information is correct, gentlemen of the committee, those industry committees have functioned very well, indeed, and I think my information is correct. Their recommendations have almost always been unanimous, tripartite—industry, labor, and the public. They have afforded an almost ideal means of making a specific study of the probable effect of a statutory increase in minimum wages.

It seems to me that the experience gained and the information collected by those industry committees should be of great value to this committee. I should suppose that the Wage and Hour Division of the Department of Labor and the Bureau of Labor Statistics could now present to this committee or to its counsel a real mine of information about the practical effect of the act of 1938. I should think that this committee could now be informed fully as to whether the minimum-wage provisions of that act did in fact have a good effect to remove labor conditions detrimental to the general welfare without substantially curtailing employment or earning power. I also think that such information, derived from actual experience, would be very helpful toward enabling this committee to estimate the effects of further steps toward a higher level of minimum wages, having regard to the continued purpose to eliminate detrimental substandard wages at such a rate as to avoid substantial curtailment of employment or earning power.

"Has now become obsolete": I quite agree with President Truman's statement in his message to Congress that the 40-cent minimum wage has now become obsolete. When we take into account the rise in the cost of living of wage earners who subsist on these very low levels of income, the 40 cents which the Congress intended to provide by 1945, under the act of 1938, is reduced to less than 30 cents. At the price levels of today it would take at least 55 cents an hour to equal the 40 cents Congress intended to give in the 1938 act. Even the inadequate provision of the act of 1938 now means 55 cents, not 40 cents.

Senator ELLENDER. Would you mind an interruption, Mr. Davis?

Mr. DAVIS. Senator, if you will let me finish——

Senator ELLENDER. All right.

Mr. DAVIS. In other words, the minimum wage rate now needs to be increased to at least 55 cents an hour to achieve even the limited degree of improvement intended by the Congress in the 1938 act. The existing minimum wage of 40 cents an hour now falls far short of the real minimum wage level Congress intended that the country should reach by 1945. The 40-cent minimum wage does not now achieve its intended purpose. It has become obsolete.

In the Wage Report made by the four members of the National War Labor Board to President Roosevelt on February 12, 1945, in pages 24 and 25, there is a careful discussion of substandard wages. The first sentence of that discussion is:

> It must be recognized that the situation of the lower income wage and salary workers, upon whom the increase in the cost of living has fallen with disproportionate severity, has remained unsatisfactory under the wartime economy.

I continue to be of the same opinion we expressed at that time, and I am confident that my conferees, Dr. George W. Taylor, Mr. Lloyd K. Garrison, and Dr. Frank P. Graham, still entertain the same views. I should like to insert into the record of this committee, if I may, what was said in that Wage Report on this subject, as follows:

> SUBSTANDARDS
>
> It must be recognized that the situation of the lower-income wage and salary workers, upon whom the increase in the cost of living has fallen with disproportionate severity, has remained unsatisfactory under the wartime economy. This situation deserves the most careful consideration as we pass from war to peace. As the President said to Congress on January 6 of this year in his message on the State of the Union: "Americans do not regard jobs that pay substandard wages as productive jobs."
>
> The War Labor Board's capacity to deal with the situation is very limited. The Board can act in only two ways, by approving or disapproving voluntary wage adjustments, and by deciding wage disputes under the War Labor Disputes Act. The Board cannot issue general orders requiring employers not before the Board to increase their wages. In dispute cases involving substandard wages the Board while not restrained by any specific wage stabilization rules, has had to consider competitive conditions and the extent to which substandards can be corrected without creating a loss of employment. All carefully developed budgetary studies show the need for minimum hourly rates much higher than those which could be ordered without shutting down establishments and throwing people out of work. This inherent limitation, which Congress took into account in the Fair Labor Standards Act in 1938, must be given even more attention in deciding individual dispute cases than in enacting legislation, since in dispute cases the order will normally affect only one employer or a small group of employers in an entire industry, and the competitive difficulties will accordingly be accentuated.
>
> The Board's capacity to correct substandards is still further narrowed by the fact that there are multitudes of people at the very low-income level who are not under the Board's jurisdiction at all.
>
> "The school teachers, the clergymen, the State, county, and city officials, the policemen, the firemen * * * the dependent mother of the soldier boy with her scant $37 a month, the widow living off the proceeds of her husband's insurance policy, and the old-age pensioner * * *. These unorganized millions must not become the forgotten men and women of our war economy (from the President's message accompanying his veto of the Commodity Credit Corporation bill of July 2, 1943)."
>
> LEGISLATIVE POSSIBILITIES
>
> For the most part the economic status of the "unorganized millions" referred to in the President's message above can be improved only by legislative action, chiefly on the part of local governments. There are other millions of low-paid

industrial wage earners whose cases, while falling under the War Labor Board's jurisdiction, never reach the Board and whose prospects for economic advancement are not favorable. Their status could most rapidly and effectively be improved by increasing the minimum-wage requirements of the Fair Labor Standards Act. Quite apart from the considerations of equity which are here involved, we suggest that legislative action of the sort here mentioned could produce a very large effect on the aggregate of incomes if it should be concluded at any time that national economic policy calls for increasing the level of consumer incomes.

The Fair Labor Standards Act deals only with minimum wages at the substandard level. The War Labor Board has found that increases in the minimum require further wage adjustments for closely interrelated job classifications above the minimum. It is not uncommon to find portions of industries in which all the workers are crowded together within a narrow range of rates just above the minimum. In these cases there may be few if any workers at the statutory minimum, and yet the substandard problem is a very real one. It must be remembered that when Congress, in the Fair Labor Standards Act, prescribed a minimum rate of 25 cents an hour for the first year, to be raised at the beginning of the second year to not less than 30 cents and after 7 years from the date of the act to not less than 40 cents, Congress did not find that these minimum rates were sufficient to afford a decent standard of living. On the contrary, the minimum rates were regarded as only a beginning and as the most that could be required without causing unemployment.

In the light of our experience, and of the changes in the economy since 1938, we raise the question whether it would not be appropriate to consider a statutory requirement that, in each industry, minimum rates for a limited number of key occupations above the minimum starting rate should be set, with a view to more effectively correcting substandards of living and, so far as possible, eliminating competitive advantages derived from the payment of inadequate differentials above the minimum starting rate. Peg points of this sort above the starting rate would not have to be identical for all areas or for all branches of a given industry, and they could be established through industry committees and collective bargaining in the same way as has been provided for in the act with respect to starting rates.

These peg points would constitute a framework within which all intermediate rates would have to be set in accordance with proper job descriptions and evaluations, in balance with each other and with the peg points. We have already pointed out how this process of reevaluation will impart more stability to wage structures and act as a deterrent against reductions in straight-time hourly earnings in the reconversion period. A statutory requirement that peg points be established would therefore support the congressional purpose, declared in the Stabilization Act of October 2, 1942, to avoid the deflation of wages.

We think that industry and labor might well consider whether this purpose, whose achievement is so necessary to the continued stability of the economy, might not be still further advanced by a statutory enactment under which the industry committee procedure laid down in the present act would be extended to cover the establishments of minimum starting rates and of minimum peg points above them not only in the industries with the lowest wages, but in all industries. The establishment of these minima throughout industry generally, and the consequent revision of ill-defined and unbalanced wage structures, would provide a very substantial degree of protection against deflation of straight-time hourly earnings in the reconversion period. These ends can, of course, best be accomplished by collective bargaining, and legislation of the sort here envisaged should be regarded chiefly as an aid to that process.

We draw attention to these legislative possibilities only because our own experience in the field of wage stabilization and disputes has indicated the causes of certain weaknesses in the national wage structure whose correction is desirable in the interests both of stabilization and of peaceful labor relations.

That is all I have to say, Senator.

Senator TUNNELL. You state 40 cents was inadequate, that 55 cents now would be about the equivalent to 40 cents then. That is another way of saying that 55 cents would now be inadequate,

Mr. DAVIS. Yes, Senator Tunnell, it would be inadequate in exactly the same sense that the 40 cents was inadequate then.

Now, mind, you, I do not think you can pull things out of a hat in this economic world. I think the progress we have been making should proceed. I think it has been one of the most stabilizing factors in our economy since the minimum wage bill of 1938. Although the action of the War Labor Board was limited, we could not issue general orders, but the practical effect of it has been to bring the minimum wages in industry in the country pretty well up to 55 cents, but not entirely so.

I think the head of the BLS gave some testimony here on that subject in detail. But there has been a great progress towards the 55 cents. In other words, if I may put it that way, the War Labor Board came in and rescued the purpose of Congress in the act of 1938 by bringing the minimum wage up pretty close to a level equivalent to 40 cents.

Now, it seems to me the question before the country and Congress is, can we now proceed with that laudable purpose? And if so, At what rate? The country is still confronted with the question, At what rate? I mean that is a practical, factual question. How fast can you raise this thing without upsetting the economy, throwing people out of employment? There is a great deal of talk, gentlemen, by the economists—I don't always understand it—about the creation of unemployables. I have seen page after page using that word. As nearly as I can make out what they are saying is exactly what the Congress said in the act of 1938, and that is you should do this thing at such a rate as not to create unemployment. Now, that is a practical, factual job. We have a saying in the War Labor Board that—"Gentlemen cannot really disagree about a fact; they can only be ignorant about it."

The thing to do, if they disagree now, is to find out what the fact is, and then they cannot disagree about it any more.

Senator TUNNELL. Would an adequate wage rate have caused unemployment?

Mr. DAVIS. God only knows, Senator. The Wage and Hour Division people and their committees could give you a lot of information on that. I think anyone who followed it would say that they are very much surprised at the effects. What happened was that they started off on the 25 cents, they got to the 30 cents without any trouble, and then prices began to go up in 1941 and the 30 cents became 25 cents and 40 cents became 30 cents. So, we were in a period of great production before the War Labor Board came along and authorized it to go up to 55 cents, because labor was short and you could not buy people's services at 30 or 40 cents. But my point is, gentlemen, that from the point of view of, let us say, the farmer, the achievement of as much progress as possible in this direction is the most stabilizing thing that can be done as we go forward in this reconversion period. Those people are the people who spend most of their money on the thing the farmer produces. They do not buy diamond pins, nor automobiles even, they buy food, clothing and shelter, and if you can lift that consuming power—and I do not accept all that is said on the subject of maintaining consuming power in America—if you can lift that consuming power, it is the best stabilizer you have for the farmer, and if a farmer has got a good market the country is prosperous.

Senator ELLENDER. But, on the other hand, Mr. Davis, by increasing the cost of producing the products that the farmer needs, don't you in turn increase his cost so that the price of agricultural products must also be upped?

Mr. DAVIS. You certainly do, Senator. I said before another committee of this Senate that the trouble with price stabilization is that everybody is in favor of price stabilization, because in our industrialized economy he buys a greater variety of things than he sells; he wants a little private price regulation, so he can put up his price, but he wants other prices held, because everybody's price is somebody else's cost.

Senator ELLENDER. Yes.

Mr. DAVIS. Now, however, I think your proposition, Senator Ellender, is one in which there exists no room for controversy in this great country of ours in the present situation, and I will tell you why. I am not an economist, but it seems to me perfectly clear that where you have capable workers—and I think our workers have demonstrated in the last 5 years that they are capable workers—where you have efficient and resourceful management and they have demonstrated that they are, and you have an almost inexhaustible market for their products, and certainy that exists, you have the making of economic prosperity. You have the possibility of going ahead at this high level. The procedure to do that has only two essential steps: One of them is production, production, and production, and the other is a fair distribution of the proceeds of production among the wage earners, the managers, and the stockholders. There is no room for emotion in that at all, because the good Lord fixed it so in the field of economics that unless you make a fair, that is, an economical division of those proceeds, the whole thing breaks down. There is no room for a hog in it, because any hog will starve himself and the others, too, to death.

Now, I do not think, as I said, there is any room for the American people to get excited about that; I do not think there is any need for the present controversy. I think the rights and aspirations of the employer and employee in America today are not in any sense irreconcilable; they are perfectly reconcilable. We can go on to this high level. I say that the young people of America will never forget it if the older people stand around quarreling and stand in the way of their progress to the almost unlimited opportunities that lie ahead of them right now.

Senator ELLENDER. Now, Mr. Davis, as I understand, you agree that if we are to raise the level of the industrial worker it would also be necessary to raise the level of those who produce the food and the wearing apparel or the raw material, for making the wearing apparel of those workers—you concede that.

Mr. DAVIS. Yes.

Senator ELLENDER. If that be true and we keep that going—that is, if we increase one group we cannot do it to the detriment of others, and, therefore, we must likewise raise the levels of such groups—are we not going to reach a point where no matter if we do raise the wages that in itself does not in any manner raise the standard of living?

Mr. DAVIS. I think I follow you, Senator Ellender, and I will try to answer it. If I do not you can ask me something further. Of course,

if your wage increase adds to the cost an amount which requires a price increase in order to give the stockholder and manager his fair share, why, the wage increase will result in a price increase, and to the extent to which it does, you are taking out of the workingman's pocket through the week the money that you put into it Saturday night. So that the policy that was adopted by the Government in the President's Executive Order 9599—a policy, incidentally, that was approved by industry and management on the War Labor Board, who are pretty representative and do not hesitate to express themselves or to disagree, I can assure you of that—the policy was that they would permit now a freedom of action in collective bargaining on wages within the limits of the existing price structure. That was what labor asked for. Mr. Murray and Mr. Green had expressed themselves in those very terms the same day, although in different words. That was the policy: Let us go ahead and increase wages within the limits of the existing price structure.

Now, Senator, that is where the controversy begins.

Senator ELLENDER. And at that point, is it not that situation which prompted you, when you were with the Government, to agree to fix the 55-cent minimum that you spoke of a while ago?

Mr. DAVIS. You mean the War Labor Board?

Seantor ELLENDER. Yes.

Mr. DAVIS. No, it was not.

Senator ELLENDER. Then why wasn't the minimum made more?

Mr. DAVIS. I will tell you why. The minimum wage adjustments which finally got up to 55 cents, which first went to 45, then 50, and then 55, were always made without regard to prices. Senator Brown first, when he was the head of the OPA, and Mr. Bowles afterward, they both announced that they would allow a price increase in order to pay the substandard wage level fixed by the War Labor Board. They both took the position that we are not going to force a manufacturer to manufacture at a price which is not a decent and fair price. So it was always recognized if the minimum wage required a price increase, it was all right to go ahead and increase the price.

So it was not the effect on prices that limited us to 55 cents. That is your question, I think. What it was, was this—exactly the same thing that limited the Congress to 40 cents in 1938—we were feeling our way to see how quickly we could put that up to a decent level without unemployment.

Now, of course, we were operating in a period of great unemployment. Take the southern textile actions of the War Labor Board. I do not think the southern textile people today generally object to paying 55 cents.

Senator ELLENDER. Did you not take this position, though, in reaching the 55-cent figure, that by further upping the minimum wage you might have to raise the price of textile products?

Mr. DAVIS. We were prepared to raise the price of textiles if that was necessary. The reason we stopped at 55 cents—labor at that time was asking for 60 cents, and we stopped at 55 cents because we put a different evaluation upon the very thing that caused the labor union to stop then at 60 cents. Nobody pretended that 60 cents was enough to give a man a decent living. There was no formula, or no budget that anybody ever got up that came out as low as that. Now, that

particular union has, I think, some of the best statisticians in America, Sol Barkin and that crowd, and they had very convincing evidence that 75 cents would be required to give a minimum standard of living, but they realized then that that would be too fast.

Senator ELLENDER. But they also realized this, I presume, as you have just indicated, that if it were necessary to raise the wages higher than 55 cents, making them 60 cents or 75 cents as they were demanding, it would then have been necessary to raise the ceiling prices of various commodities that were used by these wage earners.

Mr. DAVIS. It was recognized by OPA—that is a little different question, Senator. It was recognized by OPA that the substantial increase to that 55-cent minimum level would require a price adjustment, which they subsequently made. Now, that was a combination of the Bankhead amendment plus the added pay roll cost.

Senator ELLENDER. Now, Mr. Davis, I don't ask you to go into this question unless you want to, but the newspapers attributed a statement to you, which I think you afterward denied. The statement attributed to you was to the effect that the raising of wages would not mean an increase in cost of production. I think you set a figure according to the press, of a rise in wages of as much as 50 percent. As I understand your testimony this morning, you do concede this, that by raising wages, the continuous raising of wages, you are also bound to increase the cost of production.

Mr. DAVIS. Well, I did not quite say that, Senator. I will be very glad to answer this question in some detail, and I think you and I can have a meeting of minds about it. As a matter of fact, I do not think we differ about it.

Senator ELLENDER. What I have been contending before this committee is this, that I cannot see, try as much as I can, how it is possible for us to increase and keep on increasing wages without at the same time increasing the cost of goods to the consuming public.

Mr. DAVIS. Senator, you know one of the greatest imaginative writers in the world, Edgar Allen Poe, who was also a great philospher, remarked that the truth is something which stands on its own feet and is fortunately not affected by anybody's capacity to see it. Now, you say you cannot see it, and I am not saying to you that I can see it, and I did not say in that statement that I can see it, I said I hoped for it.

Now, I want to add a word, Senator Ellender, as to what happened at that conference. I have the transcript, which has been published, if you want to see it.

Senator ELLENDER. I have always had implicit faith in you, Mr. Davis.

Mr. DAVIS. I do not want it to go out that I deny anything I said at that conference. I have made no retraction. If I had, I would be standing like Galileo and saying, "but the world is round."

I say now that this country will go forward to a level of industrial production of $160,000,000,000 to $200,000,000,000 at present prices; that in doing that we will increase our standard of living 50 percent, and that that, as a mere matter of arithmetic, means that all incomes, including wages but also including everybody's income, farmers' and everybody's, will be increased 40 or 50 percent. That is not my figure—I would rather say 30, but that was Fred Vinson's figure in relation to prices.

To come right to the point of answering your question, the way it is done, Senator, is by an increase in the skill of the workmen, an increase in the resourcefulness and skill of management, an increase in the productivity of investment. I am a patent lawyer. I have been working, since the turn of the century, devoting my whole life to work on technological improvements that have resulted in such an increase.

In 1939, as it happens, the standard of living figures—that means the BLS index, and you know what that means——

Senator ELLENDER. At least I think I do.

Mr. DAVIS. Well, it has a technical meaning, in a way, and I am sure you know about it.

Now, their figures on the price of living were almost exactly what they were in 1944. The straight-time average earnings of wage earners in American manufacturing—and that is the true measure of the price of labor—were a little more than double. So, in that period this country of ours doubled its standard of living measured in that way, and I think they are going to do it again.

Senator ELLENDER. I believe, as you have stated, that it is feasible, but the point I have made is that we must start from the bottom and take care of all groups. We cannot single out any group unless we do violence to others. In other words, you cannot elevate the standards of living of a particular group without also taking with that group the groups that you are going to penalize. In short, care must be taken that all groups are provided for, be they the farmers, the small businessmen, white-collar employees, or what not. My contention has been if we attack the problem from another aspect, that is, by reducing our cost of production, we can attain as high a standard of living just as well, and in so doing we can then put ourselves in a better position to compete for foreign trade, and by doing that we can provide more jobs for our people. Now, what is wrong with that?

Mr. DAVIS. Senator Ellender, you are quite right in saying you could achieve this result, which I say is the destiny of America—you can achieve it, as you say, by reducing prices or by increasing wages, or by mixing both, and usually it is done by a mixture of both. I just do not think, Senator, we are going to increase the buying power of a dollar represented in goods when we owe 300 billion of them. I do not know any more about it than the man on the street, but it is my guess that there will be no general reduction in the general level of prices. In other words, I do not think we will have a dollar of increase in value when we owe 300 billion of them.

Senator AIKEN. Mr. Davis.

Mr. DAVIS. Yes, Senator Aiken.

Senator AIKEN. If we had to offset Senator Ellender's theory that an increase in wages would be equivalent to an increase in price of consumer goods, we might also assume there has been no improvement in production, in transportation, processing, and distribution. If there have been no improvements in those factors, then I agree it is true that an increase in wages would be accompanied by approximately an equal increase in cost. However, that is not true. We have made tremendous strides in improving production, transportation, processing, and marketing methods, and that being the case, an increase in wages simply means it is going to furnish work for a lot

more people to produce the goods that they can buy with the increased wages.

I personally believe if we permit the purchasing power of our Nation to fall that it is going to be the farmer and not the industrial worker that is going to be hit the hardest, and it is the dairy farmer, whom I am best acquainted with, that is going to be hit first, because the first thing they are going to cut in their diet is milk.

Mr. DAVIS. There has been a report put before this committee by the Bureau of Agricultural Economics, which must have been published in June or July in which that very point is made, Senator Aiken, in which they are a little apprehensive about that, and in which they say that the only salvation for the American farmer is a high level of industrial wages.

Now, Senator Ellender, if I may follow a little further on my answer, there was an editorial published in one of the leading metropolitan journals when this subject was under discussion and the editor made the remark that really paraphrased the first assumption in what you said. He said wages are the principal item in cost, which, of course, they are, and therefore, he said, whenever you increase wages you must make a corresponding increase in prices. Well, 2 or 3 days later, the Standard Oil Co. of New Jersey came out and announced that they were going to increase their wages 15 percent and they did not want a price increase. I suggested that somebody put those two statements of economic philosophy side by side in parallel columns and ask Mr. Gallup to take a vote of the American people and ask them, "Which of these philosophies do you think is correct?" I say that they would get just about a 100-percent vote for the Standard Oil Co.'s philosophy, not because the American people know the economics of the situation but because they are shrewd enough to see that the Standard Oil Co. is paying for its economic philosophy and the editor is getting paid for his, and they are smart enough to guess who is right.

Senator ELLENDER. Now, Mr. Davis, at that point I have an instance in my own State that came to my attention yesterday. We have a sugar factory in Louisiana that produces raw sugar and its capacity is 2,900 tons of raw sugarcane in 24 hours. We have another factory that has a capacity of 1,000 tons of raw sugarcane per 24 hours. Now, in terms of cost of production, the factory that processes 2,900 tons of raw sugarcane per 24 hours employs only 10 men more than the factory that processes 1,000 tons per 24 hours. Now, if you base the production cost of those two factories in terms of the cost of labor, cannot you see that the factory that processes at the rate of 2,900 tons per 24 hours with only 10 people more than the factory that processes 1,000 tons per 24 hours, that the factory that has that smaller production is at a great disadvantage to the factory which has the larger production? And might that not also be said of the Standard Oil that you have mentioned? It might cost so much to crack oil in a certain size factory of so many barrels capacity, but if that factory is increased three or four or five times, you might be able to operate it with but 10 percent more employees, and therefore the unit cost of production is reduced, not because you have more efficient labor, but because you have a larger plant and can turn out more goods with less labor. The same might apply to other endeavors, even farming.

Mr. DAVIS. Senator, the first part of your statement is really a reflection about a competitive society in which lies the real explanation of the reason you can increase wages without increasing prices, because competition comes in. People get hurt in competition sometimes, but the thing goes on. I do not think we want to abolish it.

Now, the other part of it, about the Standard Oil Co., on account of its bigness, being able to pay this wage; I do not think so, Senator. I happen to have spent a good part of my life representing other oil companies than the Standard Oil Co. in the field of patents and so forth, and they think, at least, that they can produce gasoline cheaper than the Standard Oil Co. I don't know.

Senator AIKEN. Mr. Davis, the answer to Senator Ellender's problem is to make sure that we have full employment, because when everybody is busy then small industry and small farmers both get by and sometimes profit. When there is not enough work, enough business to go around, big business gets it or the big farmer gets it.

Mr. DAVIS. A friend of mine wrote to me and enclosed a clipping from a letter that a friend of his had written to him about me. I know quite well why he cut this remark out of the letter. I am sure he would not want me to see the entire letter, but he said, "Does this idiot think that there are 60,000,000 jobs in America?" I said, "I don't know, but why does this fellow get excited about it? There is nothing to quarrel about."

The best statistics I have—and they have been checked and rechecked by the best people in Washington—are that in the fall of this year there will be available in America 61,000,000 and some-odd willing and capable workers looking for jobs. I do not regard that as a calamity; I think it is an asset; I think it is our greatest asset. To waste it, I say, to so conduct the economy that you are wasting 10 to 15 percent of that asset is simply ridiculous. It will not be done. The people will not permit it again for any considerable period of time.

Senator AIKEN. I think the situation was best expressed by a farmer in my State to whom I was talking. He said: "I notice when I cannot get enough help I always make money; when I get all the help I want I cannot break even."

Mr. DAVIS. That is right. Wages are always highest when business is good, of course; and production is at the bottom of it all.

I would like to close. You have been awfully nice to me, but I would like to close with this, Mr. Chairman——

Senator TUNNELL. We don't want you to close.

Mr. DAVIS. All right. I want to get this in there. I say there is nothing for the American people to fight about. They have got, lying ahead of them, the opportunity to make the greatest contribution to progress that you have ever seen in the world. Their duty, their assumed obligation to the rest of the world, is to go ahead and use these assets. They ought not to quarrel about it, because there is plenty of pie for everybody if you go ahead and produce.

Senator TUNNELL. When you say that the raising of wages must necessarily raise prices of everything in proportion, aren't you assuming that everything is properly adjusted between every class of producer and worker, and so on? Now, my recollection is that in the war period profits increased about 5 or 6 times, while, at the same time, a large class of people were getting inadequate wages; in other

words, there are a number of persons who are not earning enough to live on, and yet there are others who are paying perhaps a 95-percent income tax. There is not the perfect adjustment which enables us to say that a rise in price of one commodity will raise the price of everything.

Mr. DAVIS. I think I agree with all of that, Senator Tunnell. I perhaps would put it this way: Now, there is never any direct relationship, but if prices need to be increased to fairly cover the added cost of bringing substandard wages up to a decent standard, I am in favor of taking the increase in price, for the very reason you have in mind, and spread it over the community where it belongs. The social economist, not so long ago, believing in the law of supply and demand, and not understanding it perhaps, was content to regulate the supply of labor by starving the laborers that were not necessary at the then existing level of industrial production. We have come a full cycle from that theory of economics, if you call it economics. I think it is no more than Christian ethics, but we have come to it, the economists have come to it, that that is not the way you would regulate the economy, that what you would do is make an endeavor to utilize to the full your available resources. No country in the world has anything like the resources we have, and there is no reason why we should not use them, and among those resources is the labor of 61,000,000 people in industry.

Now, I am an elderly gentleman—at least I am elderly, and I would prefer to take a rest. I do not want $160,000,000,000 worth of gadgets, but the young people of America do, and the boys that are coming back from the fronts do, and they are not coming back with any idea of asking for charity, in my judgment. They know their way around; they know the possibilities. I am no prophet, but I think they are just going to insist on them, and I think they will get them.

Senator ELLENDER. Mr. Davis, do you think that the Wage and Hour Act of 1938 was given a fair trial, in view of the fact that the war came in 1939?

You indicated a while ago that although Congress did not believe that the 40-cents-per-hour minimum was enough, yet you say that Congress spread this increase from 25 cents to 40 cents over the period of 7 years because of the fear that was in the mind of Congress that by increasing it too fast we might disrupt industry and cause unemployment. Now, in the light of that, will you please answer the question I just asked?

Mr. DAVIS. I believe it is perfectly obvious, Senator, that it got a less thoroughgoing test than it would have gotten if the value of the dollar had remained stationary. After all, this is a big world, and, as Senator Tunnell pointed out, there is no such thing as even distribution. We know it did not do anybody any harm, it did not do the producers any harm. They will agree with us, I think.

Senator ELLENDER. The reason for that was the impact of the war.

Mr. DAVIS. Not altogether, Senator.

Senator ELLENDER. Well, I think you will concede this: The war in Europe started in 1939, and although the minimum wage under the Wage and Hour Act was raised from 30 to 37½ cents after the first of the year, as I recall it, the fact remains that the cotton mills throughout the country had abundant orders from across the seas in preparation for the war, and of course that took out a lot of the shock.

I asked the Secretary of Labor, Mr. Schwellenbach, a few days ago, whether he thought that a rise of 62½ percent from the legal rate fixed by law for the first year was a fair upping of the legal rate, in the light of the President's message to Congress, that he favored a reasonable rise, and he said, "Yes."

What is your view on that?

Mr. DAVIS. Well, I would say "yes," too.

Senator ELLENDER. You would say what?

Mr. DAVIS. I would say "yes," too, for this reason: The 55 cents is now the equivalent of 40 cents, and it has pretty generally been attained. I think Secretary Schwellenbach pointed that out.

Senator ELLENDER. Yes; he did.

Mr. DAVIS. So you start with the situation where we know pretty well that the 55-cent minimum is equitable, it is in accordance with the purpose of Congress, and it would not cause any disturbance. Now, the question is, would 65 cents——

Senator ELLENDER. Now, wait a minute. At that point, though, the reason for that was, as I conceive it, we had full employment because of the war—many industries vied with each other for labor. Our Government bought 50 percent of what industry produced, and it could look ahead. On the other hand, according to your own statement, from 1939 to 1944, a period of 5 years, we raised minimum wages from 40 cents to only 55 cents, or 37½ percent. That is what we did, wasn't it?

Mr. DAVIS. Yes; but not quite in that period. It was from June 1942 to 1944.

Senator ELLENDER. But from 1939 to date, with full employment, you raised it 37½ percent, assuming I am right, and I think I am.

Mr. DAVIS. I do not know about that, Senator. I don't know what you have reference to.

Senator ELLENDER. I remember, because I attended a committee meeting in New York.

Mr. DAVIS. Talking about textiles?

Senator ELLENDER. Yes. I think on that committee, although the South produced about 80 percent of textile products, they had about two representatives out of about 30 to 50.

Mr. DAVIS. They ought to have brought it up before Congress, Senator.

Senator TUNNELL. They did not get behind much, did they?

Senator ELLENDER. No, they did not, because of the European orders, as I pointed out a while ago.

The point I want to stress with Mr. Davis is this, if you will be kind enough to answer: The facts remain, however, Mr. Davis, that irrespective of what period the increase occurred—my recollection is it was from about 1939——

Mr. DAVIS. Very likely.

Senator ELLENDER (continuing). To date or 1944, that we raised minimum wages 37½ percent. In other words, from 1939 to 1944, the War Labor Board saw fit to raise minimum wages only to 55 cents, or 37½ percent from what they were in 1939.

The bill under discussion seeks to do this, as I understand it: It seeks to raise wages from the standard that Mr. Schwellenbach states is the standard now, that is, 55 cents, to 65 cents the first year, to 70 cents the second year and to 75 cents the third year, all in a period of

3 years. With no indication as to what the future holds out, some are proposing to raise the present 55 cents in the space of 3 years to a rate that will be over 36 percent. Do you think that is a fair increase of the minimum wage? Will industry be able to absorb it in such a short period?

Mr. DAVIS. May I first give you my refreshed recollection about the textile wages?

Senator ELLENDER. Yes. State it as you understand it, sir.

Mr. DAVIS. As I recall it, the War Labor Board, the Mediation Board, gave a 7½-cent increase in textiles in the South in 1941, and the prevailing wage was around 30 cents, although there were a good many below that. Then, it was later raised again by the War Labor Board, and, finally, the third time, to 55 cents. I think that is it.

Now, to answer your question, which is a quantitative one, Senator, that is the jump from 55 cents, which is really the prevailing wage now, to 65 cents at once and then 5 cents a year the next 2 years will be too rapid?

Now, I think that is a very pertinent question. If I knew the answer I certainly would help this committee in any way I could, but I doubt whether there are experts who know the answer. The people who can make the best guess about that are people like Mr. Hinrichs, of BLS, who has the statistics, and Mr. Walling, of the Wage and Hour Division, and his people, and the people who sat on those committees whom you remember. They have really studied it. Now, I think that is where this committee should get the detailed information, because you gentlemen are going to have a very important decision, as I see it, and that is whether 65 cents is the right amount to start with and whether it should go up 5 cents a year, or how much of that you should leave to the judgment of the individual committees. I think those committees work splendidly, and I think you could afford to leave some discretion there to the individual committees.

Senator ELLENDER. Mr. Hinrichs was on the stand, and I asked him a few questions, not exactly in the language that I asked you but along the same line. He took the position, as I recall it, that higher wages would accomplish much good in raising the standard of living, but he is not sufficiently qualified to tell us what effect such a course is going to have on the groups below that may be disturbed by that.

Mr. DAVIS. There is no group below these people.

Senator ELLENDER. I mean, as I pointed out, the one-horse farmer, the small manufacturer who has from 5 to 15 employees, who cannot afford to install these labor-saving devices, or cannot make goods in large quantities, and whose per unit cost is greater, as you know.

Mr. DAVIS. I see.

Senator ELLENDER. I could testify as to the most marvelous living conditions that will exist as to those of our laboring men who are given a minimum of $2,000 per year—that is fine, but if you forget about the disturbance and the dislocation you are going to cause to the group below that produces for those people that you are trying to help, you may find yourself with a plan that will not accomplish your purpose. In other words, as I pointed out a while ago, unless we also help those who produce the raw materials, the people in the group you are trying to help will not get the clothing and food that they need, even though they have the money. That, to me, is one of the disturbing factors.

Mr. DAVIS. I do not think it need be, Senator. There is no need in America to forget anybody.

Senator ELLENDER. That is right. But are we not forgetting many groups when we protect a particular group?

Mr. DAVIS. You can take all the people into account, and you do not have to have any real quarrel about it. Men are selfish. Each one thinks he ought to get a little more, but with a little patience and tolerance we can work it out.

Senator ELLENDER. I am confident of that, but we always come back to the same place where we were before. If you raise the wages of a certain group and you also permit the rise of the production costs of the lower group which means higher living costs you find yourself in the same boat. Your dollars buy less and conditions are not improved.

Mr. DAVIS. Secretary Schwellenbach said, in answer to that question: "Industry always finds a way." I would put it a little differently. I would say "America has found a way in the past." Right now, just as soon as we get into production and in a position to make rapid progress, we will be in that path.

Now, I can understand how a manufacturer, especially the small one that you speak of, is apprehensive today—even the big one—but they have got to go ahead. I think the trouble is, Senator, that everybody thinks they know the answer and each one is likely to be selfish. What we need in this country is courage to go ahead and the humility to realize that no one of us knows the answer; we have got to experiment and learn from experience.

Senator ELLENDER. I agree with you thoroughly, Mr. Davis, but here is what we are doing at the moment. We are taking care of a special group by law without in any manner attempting to take care of the groups that are going to be disturbed. We are doing violence to some who may have no other recourse than to close their businesses. That is the point I am trying to make.

Mr. DAVIS. You always have to do that.

Senator ELLENDER. What is that?

Mr. DAVIS. It is only God who could pass a law that would fix everything in one law. You have got to take it one at a time.

Senator ELLENDER. All of that may be true, but we certainly got along splendidly without going too far out of the way to help certain groups. I, for one, am willing to help, but I am not willing to help by law to the extent that I think it will destroy some of the members of other groups. Now, if we could write out a bill here that would take care of all groups that will be disturbed by virtue of this proposed law I would not be quarreling, I would not say a word, but we are not doing that.

Mr. DAVIS. Senator, you say we have gone ahead splendidly, and you also bring up these matters of balance, which are very real, but we are talking about the substandard group in industry. Now, there are substandard groups in agriculture that ought to be talked about, but not in this bill. I say our splendor is tarnished as long as we have willing workers, capable people who cannot make out of an honest day's work enough wages to live on. There is no necessity for it. This is a splendid country, but until you wipe that stain off the shield I say its splendor is tarnished, and unnecessarily tarnished.

Senator ELLENDER. I agree with you thoroughly, Mr. Davis; I am

not taking issue with you on that point. I have been in politics now for over 30 years. I was in the Louisiana Legislature for 12 years and served 8 of those when Huey Long was in power in Louisiana. You heard of him.

Mr. DAVIS. Yes.

Senator ELLENDER. I worked with him and helped him to the extent of my ability. I would say, there is no State in the Union that has made greater progress toward helping the so-called common man than Louisiana has done. I have been an advocate for the so-called common man all my life, and I want to continue to be. As I have indicated on two or three occasions before this committee, before we take steps in a direction that might cause unemployment rather than continued employment, we ought to give the subject the most thorough consideration. That is one of the most crucial phases of the problem. Many small businesses, such as in lumber production, small businesses that employ from 5 to 20 persons, where hand work prevails, I can see much damage to them. Such business may be absorbed by large business. Small farmers will be compelled to pay more for labor and will not be able to compete with large farmers who are able to buy labor-saving machinery.

If Congress, back in 1938, saw fit to give a leeway of 7 years in which to raise a minimum wage of 25 cents to as high as 40 cents and here you are attempting to do it in 3 years with a much greater percentage rise, I just cannot see it. Especially in view of the fact that with the war over and a number of strikes facing us now all over the country, and no doubt with full employment not in the cards, as I can see at the moment. I fear it will result in more disruption of business than some are willing to admit.

Senator TUNNELL. I will just remind the Senator that 3 years is a long enough time to starve.

Senator ELLENDER. Nobody will ever starve in this country.

Senator TUNNELL. I will just call your attention to the 1931 crisis.

Senator ELLENDER. Everybody was in a mighty poor state then but nobody starved. Cotton was 4 cents a pound, wheat 30 cents per bushel, and other farm products similarly low.

Senator GUFFEY. Our country had no vision. We are planning now for the future. Until you plan something for the future, you are going to have trouble.

Senator ELLENDER. I agree with that, Senator, but when we start planning for one group let us not do so to the destruction of other groups.

Senator TUNNELL. Do you think there should be a great number of exemptions now?

For instance, this morning I had some communication from a concern in Michigan that claims that they should have exceptions for boys on part time, and boys that they are training for expert work, and that any rigid law fixing a minimum would strike them wrongly.

Mr. DAVIS. I am glad you asked me that, Senator, because the answer is "Yes." Any wage contract needs to have carefully drawn exceptions for workers who are not capable of full-time work or a full output of work. For instance, the order of the War Labor Board, if you get it and read it, on this 55-cent minimum in the textile

industry, makes a provision for an exception of trainees, I think. I do not know just what is excepted, but there are always certain groups that are excepted. Now, the danger there is that under the pressure of selfish interest the employers would like to put everybody in the excepted class. The exceptions should be carefully drawn. They are drawn by the Department of Labor and ought to be under the administration of some of the labor laws. The minimum wage law and this law itself make such exceptions. There is a well-developed definition of such exceptions which this committee could use, as long as you watch out and see that somebody does not slip something over in the definition, so that they make an exception of full-time workers.

Senator TUNNELL. Could you give us that order?

Mr. DAVIS. Yes, sir; I will be very glad to. Shall I put it in the record?

Senator TUNNELL. I wish you would.

Mr. DAVIS. I will be very glad to.

(See exhibits A and B, pp. 164, 165.)

Senator ELLENDER. Mr. Davis, one more question that I just thought about. As I understand it, the pending bill changes the present law considerably in respect to exceptions and exemptions. Are you in a position to state to us whether or not you think that the present law ought to be in any manner changed in respect to the exceptions and exemptions that exist in it?

Mr. DAVIS. No, I am not, Senator. I do not know that I am particularly qualified, but if the committee would like to have me to look into that and write that out, I would be glad to do it.

Senator ELLENDER. Mr. Davis, you have had a lot of experience with that, and I am sure the committee would appreciate your preparing a memorandum if you have time and give us your views in that respect.

Mr. DAVIS. Are you going to pay my fees, Senator?

Senator ELLENDER. I think that would be feasible.

Mr. DAVIS. Well, of course, I do not mean that. I will be very glad to do it. I will suggest, if I may, Mr. Chairman, I will get a copy of this War Labor Board order and then I will accompany it by a memorandum referring to the provisions in the proposed act, an old act, and give you my opinion on it, for what it is worth.

Senator ELLENDER. And give us your views as to the feasibility of such changes from the old act as compared to those provided for in the bill under consideration.

Mr. DAVIS. Yes.

Senator TUNNELL. I think that will be fine.

Mr. DAVIS. I am very much obliged to you, Senators.

Senator GUFFEY. We used to have the child-labor problem in the blast furnace industry. We have raised the age limit to 16 years, and that is when they started to make money.

Mr. DAVIS. Senator, the first job I ever had was in the steel business, of which my father was a member. I worked as a sweeper in a steel plant. The regular scheduled hours were 12 hours a day, except Sunday, and 18 hours on Sunday, to swing the shift. My father was a kindly sort of person. When I said, "People ought not to work like this," because I was only a kid, and when I got home I just dropped into bed, and he said, "What are you going to do? You can't run

the steel industry on less than 12 hours a day." I said, "Why can't you run it on 8 hours." He nearly dropped dead. He said, "How can you run the steel industry on 8 hours a day?" I bring that up as a personal story, because that is a fine illustration. The people who said that you could not possibly afford to operate the steel industry on an 8-hour shift, three shifts a day, instead of a 12-hour shift, two shifts a day, were perfectly sincere, and their statisticians and their economists had all the figures and they really believed you could not do it, but finally the considerations of common decency led them to do it, and, goodness knows, they have done very well. None of them would go back to the 12-hour day if they could.

Senator GUFFEY. You recall in the blast-furnace industry it was 12 hours a day 7 days a week. A philanthropic man in the steel organization gave a friend of mine the job to investigate it for 9 months, and when he got through he made a report the result of which was they adopted the 8-hour day 6 days a week and they made money in the blast-furnace industry.

Senator TUNNELL. All right, thank you, Mr. Davis.

(The material submitted by Mr. Davis follows:)

PENNIE, DAVIS, MARVIN AND EDMONDS

COUNSELLORS AT LAW

New York 17, N. Y.

WASHINGTON, D. C., *October 2, 1945.*

Mr. CHARLES KRAMER,
Committee on Education and Labor,
U. S. Senate, Washington, D. C.

DEAR MR. KRAMER: When I appeared before the subcommittee considering S. 1349 on Friday, September 28, I testified that the orders of the National War Labor Board in the textile cases in February 1945 excepted learners, and handicapped persons from the minimum wage rate of $0.55 per hour. I was asked to supply copies of those orders. I transmit a number of mimeographed copies herewith. The provision as to learners and handicapped persons is in paragraph 1 of each order.

I was also asked by the subcommittee to comment upon the provisions of S. 1349 as to persons excluded from the provisions of sections 6 and 7.

The extent of these exceptions is not a matter to which I have given any particular study. I do not think my testimony on the subject would be as helpful to the committee as the testimony of Mr. Walling, for instance, or anyone who has had direct experience with the operation of the Fair Labor Standards Act of 1938 as it applied to such exceptions.

As I understand it, the principal amendments to section 13 of the old act, proposed in S. 1349, have to do with employees engaged in the handling and packing of fish and in the handling and packing of agricultural products. The lines that should be sought for in these fields are lines which separate occupations which are truly fishing operations or agricultural operations from occupations which are really industrial operations. It seems to me that it is fairly easy to draw this line of separation in fishing.

The drawing of the line in the field of agriculture will get the committee, I am afraid, into the middle of the long-standing dispute as to where agricultural labor ends and industrial labor begins. That situation is now completely confused. The confusion has been lifted almost to the level of the fantastic by the Lea amendment to the War Labor Board appropriation bill. I do not think Congress can expect to legislate wisely in this field by riders to appropriation bills. It is my judgment that the question should be frankly faced and a legislative definition of agricultural labor adopted which will be appropriate for all legislation by which agricultural labor is affected.

Sincerely yours,

WILLIAM H. DAVIS.

EXHIBIT B

NATIONAL WAR LABOR BOARD

DIVISION OF PUBLIC INFORMATION

PRESS RELEASE

For release in morning papers
of Wednesday, February 21, 1945

B–1963
Textile

(Cleared and released through the facilities of the Office of War Information)

The National War Labor Board today completed its decision in the disputes involving 23 southern cotton textile companies, 25 New England cotton and rayon companies, and 6 New York and Pennsylvania rayon companies. The Textile Workers Union of America, CIO, is bargaining representative for the more than 50,000 employees covered by the 3 decisions. Industry members dissented to the order.

"The Board in these three textile orders is not only raising these substandard-of-living wage rates for the sake of the workers involved but is striving to increase production in a critical war industry," Chairman William H. Davis stated. "Its products are desperately needed by the armed services and civilians in quantities larger than the industry is able to produce because of manpower shortages.

"All carefully developed budgetary studies show the need for a minimum hourly rate higher than we have ordered in this case, but the Board must use its best judgment as to the extent to which substandards of living in dispute cases can be corrected without creating unstable employment conditions. The Board's orders in those cases take area and industry conditions into consideration. The orders are so reasonable that they could not be disruptive to employment relations or upsetting to competitive relationships.

"The 'guideposts' fixed by the Board in this order for use by the parties in negotiating a properly alined wage structure are based directly upon wages now being paid for various occupations in the 3 regions involved in those cases. They are, therefore, not uniform for all regions. In fixing these 'guidepost' rates the Board thoroughly analyzed the wage rate structure for each major job classification in the 54 companies involved in the 3 cases. The 'guidepost' rates for each area were established in relation to the wage rates actually paid by the companies in each area which had already developed a properly balanced wage rate structure. In this way the Board made certain that it was not departing from its long-established policy of not eliminating established geographical differetials."

The Board ordered that negotiations on rate schedules in each plant should commence immediately, and it placed in effect all provisions of the three orders which do not involve compensation to employees.

Provisions of the orders which affect compensation to employees, however, were stayed by the Board "pending further order of this Board, which will be issued as soon as the questions of procedure regarding price relief (or production costs in cases involving procurement agencies) now under discussion between the Economic Stabilization Director and the Board have been resolved."

Each of the three textile orders contains major provisions:

MINIMUM RATE

A minimum rate of 55 cents an hour was ordered in a "move toward the correction of substandard living" under the Board's statutory duty in all dispute cases to "provide for terms and conditions to govern relations between the parties which shall be fair and equitable to employer and employee under all the circumstances of the case."

The union had requested that the minimum rate be raised from 50 to 60 cents.

The Board heretofore generally has applied 50 cents an hour as the substandard minimum to the extent that employers are authorized to raise wages to 50 cents an hour without applying to the Board for approval.

The Board found that the cotton textile industry pays the lowest wages of any basic manufacturing industry in America, the average hourly earnings being 64.6 cents which is the lowest of the 134 manufacturing industrial groups shown in a survey by the Bureau of Labor Statistics for September 1944. The three industrial groups with average hourly earnings below cotton textiles were all

nondurable goods industries: Cottonseed oil, 63.3 cents; work shirts, 55.2 cents; and handkerchiefs, 62.8 cents.

The Board pointed out that cotton textiles is an industry where efficient operation is essential for the effective prosecution of the war and that the low wages now paid in the industry prevent the industry from meeting its wartime production schedules.

FIVE-CENT INCREASE IN HIGHER RATES

Having raised the minimum rate to 55 cents, the Board found it necessary to increase all rates above the present 50-cent figure by 5 cents an hour in order "to keep the minimum differentials between immediately interrelated job classifications necessary for the maintenance of productive efficiency." It found that the wage rate structure is compressed close to the 50-cent minimum, due to gradual increases in minimum rates over a period of years and failure in the past to keep the proper differentials between jobs above the minimum.

The Board's orders in the southern and New England cases stated that "further narrowing of wage differentials between job classifications above the minimum is incompatible with the maintenance of productive efficiency in the manufacture of cotton textile goods so vital to the prosecution of the war and to the civilian economy." In most of the southern companies, the order added, the present narrow differentials are "an important factor in causing the present critical shortages of war and civilian textiles."

WAGE RATE RECLASSIFICATIONS

Each company and the union were directed "to establish through collective bargaining a more balanced and properly alined wage rate structure in which the rates for semiskilled and skilled employees provide a reasonable differential above the minimum rate."

Different sets of "guideposts" are fixed for the three cases. The lowest guide rate in the southern and New York-Pennsylvania cases is 55 cents an hour for common labor, while the lowest in the New England case is 57 cents for scrubbers and sweepers (a few employees in the New England mills receive a rate below the scrubber-sweeper category and thus are affected by the minimum rate). The top "guidepost" (for loom fixers) is $1.02 in the New England and New York Pennsylvania cases, while it is 90 cents in the southern case.

"Guidepost" rates for certain key occupations were set forth in the orders in order to insure a proper alinement of the wage schedules in the negotiations between the parties. These key-rate guides were not identical in all three cases because they are based on the area rates.

Special panels will be established for the textile cases to review the wage classification schedules negotiated by the parties and to draft schedules for those unable to agree. The panels will review the schedules to make certain they do not violate instructions of the Board. The adjustments made under the reclassification cannot be general across-the-board increases but must be bona fide adjustments to eliminate inequities in the internal structure of the plant, the order specifies.

As respects the reclassification adjustments, the order explained, "little or no increase will be needed in some plants where wage rates are now in a sound relationship." In others, where most rates are now close to the minimum, greater adjustments will be required, but in the southern and New York-Pennsylvania cases these are not to exceed an over-all average increase of 5 cents an hour, computed for the total number of employees of the company. In the New England case, rates set forth in agreements between the union and the Fall River Textile Manufacturers Association are to be used as a guide in negotiating rates between the "guide posts" provided in the order.

The parties were directed to negotiate the establishment of a daily guaranteed minimum for job classifications operated on a piece or incentive basis.

RETROACTIVE PAYMENT

The Board ordered a retroactive payment equal to 5 cents per hour dating from October 1, 1944, unless otherwise agreed by the parties.

OTHER PROVISIONS

In the southern case, a premium of 5 cents an hour was ordered for work on the third shift, effective as of the date of the Board's order. The union had requested a 7-cent differential in the southern case, but this was not an issue in the other cases.

For 11 southern companies in which vacations was an issue, the Board ordered 1 week's vacation with pay for employees with 1 year of service unless a more liberal plan was contained in an expired contract in the company involved. The vacation allowance is to be computed as 2 percent of the individual employees' total earnings during the previous year, and the employees are to receive vacation pay in lieu of vacation time off if the company "requires their services in the interest of war production."

The Board's orders are attached.

NATIONAL WAR LABOR BOARD

In the Matter of 23 Southern Cotton Textile Companies and The Textile Workers' Union of America, CIO. (Cases Nos. 111–5110–D, 111–6308–D, 111–5822–D, 111–2527–D). February 20, 1945.

DIRECTIVE ORDER

By virtue of and pursuant to the powers vested in it by Executive Order 9017 of January 12, 1942, the Executive orders, directives, and regulations issued under the act of October 2, 1942, and the War Labor Disputes Act of June 25, 1943, the National War Labor Board hereby decides the dispute between the parties and orders that the following terms and conditions of employment shall govern the relations between the parties:

(1) The National War Labor Board may authorize wage increases "clearly necessary to correct substandards of living." The Board has the responsibility in all dispute cases to "provide for terms and conditions to govern relations between the parties which shall be fair and equitable to employer and employee under all the circumstances of the case." In view of those considerations, the Board has determined to move toward the correction of substandards of living in these cases by specifying a minimum wage rate of 55 cents per hour for all employees, except learners and handicapped persons.

(2) In connection with wage adjustments to eliminate substandards of living, adjustments in immediately interrelated job classifications may be ordered to the extent required to keep the minimum differentials between immediately interrelated job classifications necessary for the maintenance of productive efficiency. Such adjustments above the minimum are normally tapered. The Board finds in the present cases that further narrowing of wage differentials between job classifications above the minimum is incompatible with the maintenance of productive efficiency in the manufacture of cotton textile goods so vital to the prosecution of the war and to the civilian economy. Until such time as more balanced wage rate differentials are established, as set forth in section 3 below, it is necessary to maintain at least the existing differentials above the new minimum of 55 cents. A wage increase of 5 cents per hour is provided, therefore, to all employees involved in these cases who are classified in occupations for which the heretofore prevailing rate is more than 50 cents per hour.

(3) The Board finds that in the wage rate structures of most of these companies the differentials now provided between unskilled, semiskilled, and skilled occupations are too narrow for the maintenance of efficient production and are an important factor in causing the present critical shortages of war and civilian textiles.

The Board directs the company and the union to establish through collective bargaining a more balanced and properly alined wage rate structure in which the rates for semiskilled and skilled employees provide a reasonable differential above the minimum rate. The following procedures are established for the bargaining of the parties.

(*a*) As guideposts, the following wage rates shall be established for the designated key occupations:

	Cents per hour
Common labor	55
Card tender, picker tender, spooler tender	61.5
Doffer, spinning	68.0
Weaver, plain, automatic	75.0
Loom fixer	90.0

If, in a particular case, one of the above job classifications is wholly or partly compensated on incentive or piece rates, the applicable guidepost specified above shall be deemed to refer to average straight-time hourly earnings, and the

piecework or incentive rates shall be fixed by collective bargaining to yield average straight-time hourly earnings not less than the rates as indicated above.

(*b*) In cases where the job content of the above-designated key occupations in a particular plant constitutes an abnormal variation from generally prevailing standards of job content in the industry, the parties shall establish wage rates for those occupations which take into account such abnormal variation.

(*c*) The wage rates for job classifications not listed above shall be bargained by the parties in proper relation to the wage rates for the designated key occupations.

(*d*) The reduction of an out-of-line wage rate shall not be effective to reduce the wages of present incumbents.

(*e*) For job classifications operated on a piece or incentive basis, the parties shall bargain the establishment of a daily guaranteed minimum.

(*f*) The extent of wage adjustments required to establish a balanced and properly alined wage-rate structure will vary between the companies. On the basis of the record in these cases, little or no increase will be needed in some plants where wage rates are now in a sound relationship. There are other plants, however, where most wage rates are now close to the minimum. In order to limit the extent of change required of such companies, it is specified that the maximum increase for any one company under section 3 of this order shall not exceed an amount equivalent to an average of 5 cents per hour for all its employees covered by this directive order.

(*g*) The wage-rate adjustments provided for in section 3 cannot be general across-the-board wage increases, and any such general increases will be disapproved.

(*h*) The Board expects the parties to begin their negotiations on the adjustments to be made under section (3) promptly, to negotiate in good faith with a view to carrying out the intent of section (3), and to bring the negotiations to a reasonably expeditious conclusion. The panel to be appointed by the Board will stand ready to assist the parties in carrying out their respective obligations set forth above. If either party believes that the other is interposing unwarranted delay, it may bring the matter to the attention of the Board and ask for appropriate redress.

(4) Agreements reached between the parties for a balanced and properly aligned wage rate structure in conformance with section 3 above shall be transmitted for approval to a special panel to be established by the National War Labor Board in consultation with the appropriate regional boards. If agreement is not reached by the parties, the matters in dispute shall be referred to the special panel for determination. Any appeal of the parties from the rulings or decisions of this special panel shall be made to the National War Labor Board.

(5) Section 3 of this order shall not apply to the seamless hosiery departments of the Durham Hosiery Co., nor to the bag mill, the full-fashioned hosiery mill, and the printing plant of the Golden Belt Manufacturing Co.

(6) (*a*) The company shall provide 1 week's vacation with pay to each employee who has been in the employ of the company for 1 year. Vacation pay for each employee shall be equal to 2 percent of his total earnings during the previous year. Provided, however, that if the previous contract provides vacation pay or eligibility requirements more favorable than the foregoing provisions, the previous contract provision in such respect shall prevail.

(*b*) The schedule of vacation weeks shall be specified by the company after due consideration of the desires of the employees, as expressed through the union.

(*c*) The vacation period shall be provided to eligible employees except as the company requires their services in the interest of war production. In such event the employees shall receive the designated vacation pay in addition to the regular pay for the period worked. The company shall consult with the union on the need of working during the vacation period; and if the company shall conclude that time off cannot be provided, it shall notify the union to that effect.

(*d*) This section of the order (sec. 6) shall apply only to the following companies: Anson Manufacturing Co., Alabama Mills, Chadwick-Hoskins, Dallas Manufacturing Co., Entwistle, P. H. Hanes Co., Jewell Cotton Mills, Lincoln Mills, Mary Leila Cotton Mills, Wade Manufacturing Co., and Highland Cotton. These are the companies in which the issue of vacation was in dispute.

(7) A premium of 5 cents per hour shall be paid for all hours worked on the third shift.

(8) (*a*) The effective date of the vacation provisions (sec. 6) shall be the date of the expiration of the previous contract or, in the event of no prior contract, the date of certification of the dispute to the National War Labor Board.

(*b*) In the light of all the special circumstances of these cases, the Board has determined that 5 cents per hour shall be retroactive to October 1, 1944, unless otherwise agreed by the parties.

(*c*) Except as provided in (*a*) and (*b*) above, the effective date of this order shall be the date of this order.

EFFECTUATION OF THE ORDER

All of the foregoing terms and conditions applicable to the particular case shall be incorporated in a signed agreement reciting the intention of the parties to have their relations governed thereby, as ordered by the National War Labor Board.

All provisions affecting the compensation of employees are stayed pending the further order of this Board, which will be issued as soon as the questions of procedure regarding price relief (or production costs in cases involving procurement agencies) now under discussion between the Economic Stabilization Director and the Board have been resolved. In the meanwhile, the board directs that with respect to such provisions, the parties commence such negotiations as are contemplated in this order with a view to expediting the final disposition of the issues involved when the procedural questions referred to above have been clarified.

All other provisions of this order shall become effective on the issuance of this order in accordance with its terms.

Representing the public: William H. Davis, George W. Taylor, Frank P. Graham, Lloyd K. Garrison; representing labor: Van A. Bittner, Robert J. Watt, James A. Brownlow, Neil Brant; representing industry (dissenting): Walter T. Margetts, Horace B. Horton, Clarence O. Skinner, Vincent P. Ahearn.

NATIONAL WAR LABOR BOARD

In the Matter of 25 New England Cotton and Rayon Companies and the Textile Workers' Union of America, CIO (Cases Nos. 111–7739–D, 111–4841D, 111–6534–D, 111–4593–D, 111–6301–D). February 20, 1945

DIRECTIVE ORDER

By virtue of, and pursuant to, the powers vested in it by Executive Order 9017 of January 12, 1943, the Executive orders, directives, and regulations issued under the act of October 2, 1942, and the War Labor Disputes Act of June 25, 1943, the National War Labor Board hereby decides the dispute between the parties and orders that the following terms and conditions of employment shall govern the relations between the parties:

(1) The National War Labor Board may authorize wage increases "clearly necessary to correct substandards of living." The Board has the responsibility in all dispute cases to "provide for terms and conditions to govern relations between the parties which shall be fair and equitable to employer and employee under all the circumstances of the case." In view of these considerations, the Board has determined to move toward the correction of substandards of living in these cases by specifying a minimum wage rate of 55 cents per hour for all employees, except learners and handicapped persons.

(2) In connection with wage adjustments to eliminate substandards of living, adjustments in immediately interrelated job classifications may be ordered to the extent required to keep the minimum differentials between immediately interrelated job classifications necessary for the maintenance of productive efficiency. Such adjustments abovethe minimum are normally tapered. The Board finds in the present cases that further narrowing of wage differentials between job classifications above the minimum is incompatible with the maintenance of productive efficiency in the mannufacture of cotton-textile goods so vital to the prosecution of the war and to the civilian economy. Until such time as more balanced wage rate differentials are established, as set forth in section 3 below,

it is necessary to maintain at least the existing differentials above the new minimum of 55 cents. A wage increase of 5 cents per hour is provided, therefore, to all employees involved in these cases who are classified in occupations for which the heretofore prevailing rate is more than 50 cents per hour.

(3) The Board directs the company and the union to establish, through collective bargaining, a more balanced and properly alined wage rate structure in which the rates for semiskilled and skilled employees provide a reasonable differential above the minimum rate. The following guideposts and procedures are established for the bargaining of the parties:

(*a*) The following base rates for both hourly rates and piece rates shall be established for the designated key occupations:

	Cents
Sweepers and scrubbers	57
Card tender, picker tender, spooler tender	64
Doffer, spinning	72

(*b*) For jobs paid on a piece-rate or incentive basis, piece rates shall be so set as to yield normal piece-rate earnings equal to those which would result from an application of the "60–40" rule now in effect in Fall River.

(*c*) The rates for other job classifications not listed above shall be bargained by the parties in proper relation to the wage rates for the designated key occupations. For this purpose the structure of rates set forth in agreements between the union and the Fall River Textile Manufacturers' Association shall be used as a guide. This does not, however, preclude minor modification of this structure by collective bargaining.

(*d*) The reduction of an out-of-line wage rate shall not be effective to reduce the wages of present incumbents.

(*e*) The wage rate adjustments provided for in section 3 cannot be general across-the-board wage increases, and any such general increase will be disapproved.

(4) Agreements reached between the parties for a balanced and properly alined wage rate structure in conformance with section 3 above shall be transmitted for approval to a special panel to be established by the National War Labor Board in consultation with the appropriate regional board. If agreement is not reached by the parties, the matters in dispute shall be referred to the special panel for determination. Any appeal of the parties from the rulings or decisions of this special panel shall be made to the National War Labor Board.

(5) In the light of all the special circumstances of these cases, the board has determined that 5 cents per hour shall be retroactive to October 1, 1944, unless otherwise agreed by the parties. Except as so provided, the effective date of all wage adjustments herein provided for shall be the date of this order.

EFFECTUATION OF THE ORDER

All of the foregoing terms and conditions applicable to the particular case shall be incorporated in a signed agreement reciting the intention of the parties to have their relations governed thereby, as ordered by the National War Labor Board.

All provisions affecting the compensation of employees are stayed pending the further order of this Board, which will be issued as soon as the questions of procedure regarding price relief (or production costs in cases involving procurement agencies) now under discussion between the Economic Stabilization Director and the Board have been resolved. In the meanwhile, the Board directs that with respect to such provisions, the parties commence such negotiations as are contemplated in this order with a view to expediting the final disposition of the issues involved when the procedural questions referred to above have been clarified.

All other provisions of this order shall become effective on the issuance of this order in accordance with its terms.

Representing labor: Van A. Bittner, Robert J. Watt, James A. Brownlow, Neil Brant; representing the public: William H. Davis, George W. Taylor, Frank P. Graham, Lloyd K Garrison; representing industry (dissenting): Walter T. Margetts, Horace B. Horton, Clarence O. Skinner, Vincent P. Ahearn.

NATIONAL WAR LABOR BOARD

In the Matter of six New York and Pennsylvania Rayon Companies and The Textile Workers' Union of America, CIO (Cases Nos. 111–7107–D, 111–7159–D, 111–8105–D). February 20, 1945.

DIRECTIVE ORDER

By virtue of and pursuant to the powers vested in it by Executive Order 9017 of January 12, 1942, the Executive orders, directives, and regulations issued under the act of October 2, 1942, and the War Labor Disputes Act of June 25, 1943, the National War Labor Board hereby decides the dispute between the parties and orders that the following terms and conditions of employment shall govern the relations between the parties:

(1) The National War Labor Board may authorize wage increases "clearly necessary to correct substandards of living." The Board has the responsibility in all dispute cases to "provide for terms and conditions to govern relations between the parties which shall be fair and equitable to employer and employee under all the circumstances of the case." In view of these considerations, the Board has determined to move toward the correction of substandards of living in these cases by specifying a minimum wage rate of 55 cents per hour for all employees, except learners and handicapped persons.

(2) In connection with wage adjustments to eliminate substandards of living, adjustments in immediately interrelated job classifications may be ordered to the extent required to keep the minimum differentials between immediately interrelated job classifications necessary for the maintenance of productive efficiency. Such adjustments above the minimum are normally tapered. The Board finds in the present cases that further narrowing of wage differentials between job classifications above the minimum is incompatible with the maintenance of productive efficiency. Until such time as more balanced wage rate differentials are established, as set forth in section 3 below, it is necessary to maintain at least the existing differentials above the new minimum of 55 cents. A wage increase of 5 cents per hour is provided, therefore, to all employees involved in these cases who are classified in occupations for which the heretofore prevailing rate is more than 50 cents per hour.

(3) The Board finds that in the wage-rate structures of certain of these companies the minimum differentials now provided between unskilled, semiskilled, and skilled occupations are too narrow for the maintenance of efficient production.

The Board directs the company and the union to establish through collective bargaining a more balanced and properly aligned wage-rate structure in which the rates for semiskilled and skilled employees provide a reasonable differential above the minimum rate. The following procedures are established for the bargaining of the parties.

(*a*) As guideposts, the following wage rates shall be established for the designated key occupations:

	Cents per hour
Common labor	55.0
Winders, spinners, doublers, coners	61.5
Loom fixers	102.0

If in a particular case, one of the above job classifications is wholly or partly compensated on incentive or piece rates, the applicable guidepost above specified shall be deemed to refer to average straight time hourly earnings, and the piece work or incentive rates shall be fixed by collective bargaining to yield average straight time hourly earnings not less than the rates as indicated above.

(*b*) In cases where the job content of the above-designated key occupations in a particular plant constitutes an abnormal variation from generally prevailing standards of job content in the industry, the parties shall establish wage rates for these occupations which take into account such abnormal variation.

(*c*) The wage rates for job classifications not listed above shall be bargained by the parties in proper relation to the wage rates for the designated key occupations.

(*d*) The reduction of an out-of-line wage rate shall not be effective to reduce the wages of present incumbents.

78595—45——12

(*e*) For job classifications operated on a piece or incentive basis, the parties shall bargain the establishment of a daily guaranteed minimum.

(*f*) The extent of wage adjustments require to establish a balanced and properly aligned wage-rate structure will vary between the companies. On the basis of the record in these cases, little or no increase will be needed in most plants where wage rates are now in a sound relationship. There are a few plants, however, where most wage rates are now close to the minimum. In order to limit the extent of change required of such companies, it is specified that the maximum increase for any such company under section 3 of this order shall not exceed an amount equivalent to an average of 5 cents per hour for all its employees covered by this directive order.

(*g*) The wage-rate adjustments provided for in section 3 cannot be across-the-board wage increases, and any such general increases will be disapproved.

(4) Agreements reached between the parties for a balanced and properly aligned wage-rate structure in conformance with section 3 above shall be transmitted for approval to a special panel to be established by the National War Labor Board in consultation with the appropriate regional boards. If agreement is not reached by the parties, the matters in dispute shall be referred to the special panel for determination. Any appeal of the parties from the rulings or decisions of this special panel shall be made to the National War Labor Board.

(5) In the light of all the special circumstances of these cases and the equities of the companies and the employees, the Board has determined that 5 cents per hour shall be retroactive to October 1, 1944, unless otherwise agreed by the parties. Except as so provided, the effective date of all wage adjustments herein provided for shall be the date of this order.

EFFECTUATION OF THE ORDER

All of the foregoing terms and conditions applicable to the particular case shall be incorporated in a signed agreement reciting the intention of the parties to have their relations governed thereby, as ordered by the National War Labor Board.

All provisions affecting the compensation of employees are stayed pending the further order of this Board, which will be issued as soon as the questions of procedure regarding price relief (or production costs in cases involving procurement agencies) now under discussion between the Economic Stabilization Director and the Board have been resolved. In the meanwhile, the Board directs that with respect to such provisions, the parties commence such negotiations as are contemplated in this order with a view to expediting the final disposition of the issues involved when the procedural questions referred to above have been clarified.

All other provisions of this order shall become effective on the issuance of this order in accordance with its terms.

NATIONAL WAR LABOR BOARD

DIVISION OF PUBLIC INFORMATION

PRESS RELEASE

For release in afternoon papers
Of Friday, February 23, 1945

B-1936a
Textiles

(Cleared and released through the facilities of the Office of War Information)

The industry members of the National War Labor Board today issued the following statement on the Board's recent decision in the case between the 23 southern cotton textile companies and the Textile Workers' Union of America, CIO:

STATEMENT OF INDUSTRY MEMBERS

We believe it necessary to call attention to the fact that in the textile cases, and in the packing-house case as well, industry members voted in the negative not only on disposition of specific issues, but also on the paragraphs found under "Effectuation of the order."

We opposed this action of the majority of the Board because we believe that the orders should carry the restraining language of Executive Order 9328 whenever this Board deals with the so-called "fringe issues." Until that Executive order has been changed by the appropriate authorities, this Board should continue to operate in accordance with its explicit provisions.

We have, here, a group of 23 southern textile companies. The appropriate Government agencies, though asked to do so, refused to certify them, as a group, as so essential to the prosecution of the war that they could be given by us a "rare and unusual" status. Some of the individual companies, we were told, warranted that classification, but the whole group did not.

A majority of the board has ordered a 55-cent minimum wage, in the teeth of the fact that the Board has long had a policy defining a substandard wage in terms of a 50-cent minimum. The 55-cent minimum is 37½ percent higher than the highest minimum under the Fair Labor Standards Act. In order to increase the minium to 55 cents, the Board, under the circumstances of the rate structure here involved, give a 5-cent and more across-the-board, general, increase to all employees. The result will be increases in these 23 mills since January 1941, totaling far more than double the amount permitted by the Little Steel Formula—indeed, the increases will be near 50 or 60 percent.

But that is not all the Board has done. It has imposed the new 55-cent minimum, and across-the-board increases, on a small segment of the textile industry—even of the southern textile industry. In the South alone this case affects but 23 out of 854 plants—less than 3 percent. It affects but about 17,500 employees out of 360,000—less than 5 percent. The Board imposed on these companies a burden which may well make it very difficult for them to operate in competition with the vast majority of the rest of the southern industry. And if it be said that the condition will soon ameliorate itself because the rest of the industry in the South will necessarily fall in line, the Board is imposing on that industry an added wage bill—estimated at about $71,600,000 per year—which may have serious reprecussions on the entire southern economy.

The considerations, both of policy and of practical consequence, are in our opinion overwhelmingly against the action taken by the majority. The gravity of the case compels this statement of our dissent.

NATIONAL WAR LABOR BOARD

DIVISION OF PUBLIC INFORMATION

PRESS RELEASE

For release in Sunday papers
Of March 18, 1945

B-1963B
Textile

(Cleared and released through the facilities of the Office of War Information)

"It simply doesn't make sense to continue to hamper the production of urgently needed supplies of cotton textiles by continued payment of the existing substandard minimum wages and by continued use of grossly unbalanced wage-rate structures," Chairman George W. Taylor, of the National War Labor Board, said in a written opinion issued today on the Board's orders of February 20 in the textile cases. "The correction of such obvious defects in the industry's wage structure will help win the war and provide a more equitable basis for operations in the peace which is to follow."

By unanimous action, the Board at the same time lifted the stay previously imposed on the compensation provisions of the February 20 orders, which directed wage adjustments based chiefly on correcting substandards of living as a settlement of disputes involving 23 southern cotton textile companies, 25 New England cotton and rayon companies and six New York and Pennsylvania rayon companies. The textile Workers Union of America, CIO, is bargaining agent for the more than 50,000 employees covered by the orders.

The Board's order lifting the stay provided, however, that—pursuant to the directive of March 8 of the Director of Economic Stabilization—all compensation provisions of the textile decisions of February 20, exclusive of the correction of

wage-rate structures, are to become effective upon a determination by the Office of Price Administration that no change in price ceilings is necessary or, if price relief is necessary, upon approval of the Director of Economic Stabilization.

As to the correction of wage-rate structures, for which the Board provided guide posts to be used in negotiating the structures, the Board directed the parties to proceed with the collective bargaining and to report their results to the Board for approval. They will be assisted in this function by a textile panel.

The compensation provisions of the February 20 orders had been stayed pending completion of discussions with the Director of Economic Stabilization on the question of procedure regarding price relief or, in cases involving Government procurement agencies, production costs.

The Board's original orders provided for (1) a 55-cent hourly minimum rate as a move toward the correction of substandards of living (2) a 5-cent hourly increase in all rates above 50 cents an hour to maintain the minimum differentials between immediately interrelated job classifications necessary for the maintenance of productive efficiency; (3) a premium of 5 cents an hour for third-shift work in the southern cases, and (4) 1 week vacation with pay for those employees who have 1 year of service with the 11 southern companies where vacations were an issue. Five cents an hour is to be paid to all employees retroactive to October 1, 1944, unless the parties agree otherwise.

Industry members said they concurred in the supplementary directive orders issued today because they only concerned procedure, and that their dissent to the original decision on the merits still stands. They said they may issue a statement supplementing the one they issued at the time of the decision.

Labor members of the Board in another opinion accompanying today's orders, said that "no sound reason has been stated for refusing to grant the union's demand for a 60-cent-an-hour minimum wage. We supported the decision only because of the necessity for obtaining a majority vote of the Board."

Chairman Taylor asserted in his opinion, written in behalf of the Board majority, that "vitally important cotton textile manufacturing pays the lowest wages of any basic industry in the country" and that "its minimum wage of 50 cents per hour provides a definitely substandard living particularly under present circumstances."

"If any wage structure is subject to adjustment on grounds of fairness and equity, this is it," he said. "Nor can one say that this country, performing such gigantic industrial tasks, cannot support more equitable wages in cotton textiles, particularly since equitable wages are a prerequisite to securing more goods needed to fight the war. The country cannot afford to leave the cotton textile wage scales where they now are."

On the relationship of cotton-textile wages to cotton-textile production, he said:

"There is ample industrial experience to show that substandard wages and badly out-of-balance wage-rate structures are a deterrent to efficient production in peacetime. Today, and in this industry, they are an unnecessary hindrance to the war-production program. Reports of other Government agencies, intimately concerned with production and procurement, make it very clear that the output of the cotton textile industry has been falling far short of the amounts needed for war purposes and for essential civilian uses."

Various manpower devices have been tried in cotton textiles, including the use of soldiers in the mills, Chairman Taylor said, but they have been "insufficient to turn the tide of continually declining output.

"Undoubtedly, the manpower difficulties cannot be eradicated by wage adjustments. There is neither rhyme nor reason, however, to make the crucial manpower and production problems virtually impossible of solution by continuing a 50-cent minimum wage and by limping along under grossly unbalanced wage-rate structures."

The opinion stated that the Board's order will form a pattern for the entire industry. "On the basis of past experience," it said, "the Board's decision can be expected almost immediately to become effective throughout most of the northern industry; the decision in the southern cases will probably be extended throughout most of the southern area over a period of a year or more."

Board determinations in the cases will have an important bearing on the general problem of correcting substandards of living, the opinion asserted, emphasizing that the cases highlighted the need for adjusting seriously unbalanced wage rate structures in order to provide reasonable wage differentials for occupations involving different skills and responsibilities.

"The manner of providing wage adjustments to correct substandards of living is clearly spelled out in the May 12, 1943, Directive of the Director of Economic Stabilization," the opinion said. "After an adjustment is made in the minimum wage for the least skilled occupation, correlative adjustments incident to and inseparable from the substandard minimum adjustment in interrelated job classifications may be made to the minimum extent necessary to maintain reasonable differentials between jobs of varying skill and responsibility. Ordinarily such correlative changes in job rates are tapered, i. e., the wage incerases diminish in amount as the jobs increase in skill and responsbility. Because the average wage for all employees in cotton textile mills is now generally so close to the minimum, a change in the minimum wage cannot be accompanied by tapered adjustments if a workable wage rate structure is to be developed."

The wage rate differentials between unskilled, semiskilled, and skilled occupations in some mills are so narrow they call for greater increases to the skilled and semiskilled employees than to those employed at the minimum rate, the opinion said, continuing: "Such a realignment of wage-rate relationships is a phase of correcting intraplant inequities under the stabilization program. It is covered by section 2 of Executive Order 9328 which recognizes the responsibility of the Ntaional War Labor Board to order reclassifications under the circumstances found in this case."

Chairman Taylor pointed out that if 50 cents an hour is an unduly low wage for common labor, than 53 cents for spinners and 65 to 70 cents for highly skilled loom fixers are extremely low for such work although they are the wages paid in some mills.

"It simply doesn't make sense," he said, "to continue to hamper the production of urgently needed supplies of cotton textiles by continued payment of the existing substandard minimum wages and by continued use of grossly unbalanced wage-rate structures. The correction of such obvious defects in the industry's wage structure will help win the war and provide a more equitable basis for operations in the peace which is to follow."

The wage awards of the Board will result in an average wage of approximately 65.5 cents an hour for all employees in the southern plants directly affected, according to the opinion. In the northern cases the average will be about 72.5 cents per hour. However, it said, a wage differential in favor of the southern area has long been a characteristic of the industry. Board policy has been not to eliminate such established area differentials.

The opinion reviewed wage movements in the cotton textile industry, and pointed out that its problems have been long in the making and are deep seated.

The opinion also discussed the duty and responsibility of the Board to approve or to order wage increases to correct substandards of living.

In connection with its order to the parties to negotiate a better balanced wage-rate structure, the Board specified a number of occupational guide post rates to be used in collective bargaining. These are set at levels with insure reasonable differentials for semiskilled and skilled work.

"There is general agreement among all interested parties that the existing differentials for semiskilled and for skilled occupations in most of these mills are to narrow," the opinion asserted. "There is likewise a consensus among the interested parties that a differential between least-skilled and most-skilled occupations of at least 35 cents is required to produce a properly balanced wage structure. Most southern employers in the present cases believe, however, that the spread should be from 50 cents to 85 cents per hour rather than from 55 to 90 cents as proposed by the Board."

After discussing the North-South wage differential, the opinion stated: "A careful analysis of condition in the two major areas in terms of wages paid, fabrics produced, skills required and work loads leads to the conclusion that there is presently no problem which can properly be dealt with in terms of a North-South differential as such."

The opinion of the labor members, in addition to commenting on the minimum wage, discussed the shift premium and the effective date of the order.

It contended that the Board's "refusal to grant the union's demand for a premium of 7 cents an hour flies squarely in the face of its own well-established policy. Even in industries where there had been no practice of paying shift premiums the Board has ordered third-shift premiums greater than 5 cents an hour."

In discussing the retroactivity issue, the labor members said:

"The effective date of the order follows no discernible pattern, or rather it is a confusion of all the patterns the Board has used for determining the effec-

tive date of its orders. The general policy, applied in nearly all disputes, is that the effective date of the order shall be the expiration date of the previous contract, or in the event of no prior contract, the date of the cerification of the dispute to the Board. This policy is applied only to the vacation provision of the present order. The 5-cent general increase, however, is made retroactive only to October 1, 1944. The reclassification wage adjustments and the shift premium are to be effective only from the date of the directive order. The justification given for this arbitrary arrangement is that it is necessary 'In order further to ease the burden upon the minority of the mills affected directly by the order * * *.' This tender solicitude for an industry whose war profits are 10 times greater than their peacetime profits is an attitude that will, of course, be deeply appreciated by 55-cent-an-hour workers."

The Board's directive orders and the opinions are attached.

NATIONAL WAR LABOR BOARD

In the matter of 23 Southern Cotton Textile Companies and the Textile Workers' Union of America, CIO (Case Nos. 111-5110-D, 111-6308-D, 111-5822-D, 111-2527-D). March 13, 1945.

SUPPLEMENTARY DIRECTIVE ORDER

The second from the last paragraph in the Directive Order of February 20, 1945, in the above-named cases is hereby rescinded and the following substituted in its place:

Pursuant to Executive Orders Nos. 9250 and 9328, as supplemented by the Directive of May 12, 1943, and the Directive of March 8, 1945:

I. The terms and conditions ordered in sections 1, 2, 6, 7, and 8 shall become effective only upon determination by the Office of Price Administration that these adjustments will not require any change in price ceilings, or, if no such determination is made, then upon approval by the Director of Economic Stabilization. The parties will be notified promptly of the action of the Office of Price Administration or the Director of Economic Stabilization.

II. The parties are directed to proceed with collective bargaining on the matters covered by section 3 in accordance with the guideposts established by that section and to report directly to the Board the results of their collective bargaining, which shall be subject to the approval of the Board. Until the further order of the Board, the textile panel shall be limited to the functions described in section 3 (h).

Representing the public: George W. Taylor, Lloyd K. Garrison, Frank P. Graham, Lewis M. Gill; representing industry: Vincent P. Ahearn, Clarence O. Skinner, James A. Tanham, Fred Climer; representing labor: Van A. Bittner, Carl J. Shipley, Robert J. Watt, James A. Brownlow.

NATIONAL WAR LABOR BOARD

In the matter of 25 New England Cotton and Rayon Companies (Case Nos. 111-7739-D, 111-4841-D, 111-6554-D, 111-4593-D, 111-6301-D) and 6 New York and Pennsylvania Rayon Companes, and the Textile Workers' Union of America, CIO (Case Nos. 111-7107-D, 111-7159-D, 111-8105-D). March 13, 1945.

SUPPLEMENTARY DIRECTIVE ORDER

The second from the last paragraph in the Directive Order of February 20, 1945, in the above-named cases is hereby rescinded and the following substituted in its place:

Pursuant to Executive Orders Nos. 9250 and 9328, as supplemented by the Directive of May 12, 1943, and the Directive of March 8, 1945:

I. The terms and conditions ordered in sections 1, 2, and 5 shall become effective only upon determination by the Office of Price Administration that these adjustments will not require any change in price ceilings, or, if no such determination is made, then upon approval by the Director of Economic

Stabilization. The parties will be notified promptly of the action of the Office of Price Administration or the Director of Economic Stabilization.

II. The parties are directed to proceed with collective bargaining on the matters covered by section 3 in accordance with the guideposts established by that section and to report directly to the Board the results of their collective bargaining, which shall be subject to the approval of the Board. Until the further order of the Board, the functions of the textile panel shall be limited to assisting the parties in carrying out their respective obligations under section 3.

Representing the public: George W. Taylor, Lloyd K. Garrison, Frank P. Graham, Lewis M. Gill; representing industry: Vincent P. Ahearn, Clarence O. Skinner, James A. Tanham, Fred Climer; representing labor: Van A. Bittner, Carl J. Shipley, Robert J. Watt, James A. Brownlow.

NATIONAL WAR LABOR BOARD

In the Matter of 23 Southern Cotton Textile Companies and the Textile Workers' Union of America, CIO (Case Nos. 111-5110-D, 111-6308-D, 111-5822-D, 111-2527-D), 25 New England Cotton and Rayon Companies and the Textile Workers' Union of America, CIO (Case Nos. 111-7739-D, 111-4841-D, 111-6534-D, 111-4593-D, 111-6301-D), 6 New York and Pennsylvania Rayon Companies and the Textile Workers' Union of America, CIO (Case Nos. 111-7107-D, 111-7159-D, 111-8105-D). March 9, 1945.

The Directive Orders of the National War Labor Board in the above cases, dated February 20, 1945, were approved by the following members of the Board: William H. Davis, chairman, George W. Taylor, vice chairman, Frank P. Graham, Lloyd K. Garrison, Van A. Bittner, Robert J. Watt, James A. Brownlow, and Neil Brant. The following members of the Board dissented: Walter T. Margetts, Horace B. Horton, Clarence O. Skinner, and Vincent P. Ahearn. Dr. George W. Taylor was designated to write the following opinion for the majority of the Board.

OPINION

GENERAL SUMMARY OF CASE

These cotton textile cases involve disputes between the Textile Workers' Union of America, CIO, and 23 southern cotton textile companies, 25 New England cotton textile concerns, and 6 rayon companies in the New York-Pennsylvania area. They have been considered as three separate but closely related cases because of a similarity of issues and because their determination will form a pattern for the entire industry. On the basis of past experience, the Board decision can be expected almost immediately to become effective throughout most of the northern industry; the decision in the southern cases will probably be extended throughout most of the southern area over a period of a year or more.

The Board determinations in the cotton textile cases have an important bearing upon the general problem of correcting substandards of living. These cases also highlight the need for adjusting seriously unbalanced wage rate structures in order to provide reasonable wage differentials for occupations involving different skills and responsibilities.

The manner of providing wage adjustments to correct substandards of living is clearly spelled out in the May 12, 1943, Directive of the Director of Economic Stabilization. After an adjustment is made in the minimum wage for the least skilled occupation, correlative adjustments incident to and inseparable from the substandard minimum adjustment in interrelated job classifications may be made to the minimum extent necessary to maintain reasonable differentials between jobs of varying skill and responsibility. Ordinarily such correlative changes in job rates are tapered, i. e., the wage increases diminish in amount as the jobs increase in skill and responsibility. Because the average wage for all employees in cotton textile mills is now generally so close to the minimum, a change in the minimum wage cannot be accompanied by tapered adjustments if a workable wage rate structure is to be developed.

To correct substandards of living the Board has ordered a minimum wage of $0.55 per hour in these cases. To preserve the wage differentials between occupations presently existing in each mill the Board has ordered an increase of $0.05 per hour in all other occupational rates. The foregoing adjustments are incident to the substandard phase of the cases. Differentials between wage rates for unskilled, semiskilled, and skilled occupations are so narrow in some mills, however, as to call for further adjustments of the wages paid to skilled and semi-skilled employees. Such a realignment of wage-rate relationships is a phase of correcting intraplant inequities under the stabilization program. It is covered by Section 2 of Executive Order 9328 which recognizes the responsibility of the National War Labor Board to order reclassifications under the circumstances found in this case.

The wage problems of the cotton textile industry as shown in these cases are, therefore, quite complex. Not only is there a low minimum wage for unskilled workers, but many of the jobs involving considerably more skill are paid wages but little greater than that paid to sweepers. The Board majority has determined that $0.50 per hour is an unduly low wage for common labor under the facts of these cases. It has also determined that wages, such as are paid in some mills, of $0.53 for spinners and of $0.65 to $0.70 for highly skilled loom fixers, are extremely low for such work.

The manufacture of cotton textiles is a vital war industry. This industry is falling short of meeting the minimum military and civilian demands for its product, to a large extent because of a serious loss of manpower. It simply doesn't make sense to continue to hamper the production of urgently needed supplies of cotton textiles by continued payment of the existing substandard minimum wages and by continued use of grossly unbalanced wage rate structures. The correction of such obvious defects in the industry's wage structure will help win the war and provide a more equitable basis for operations in the peace which is to follow.

The $0.55 minimum wage and the wage differentials for other occupations, directed by the National War Labor Board for this vital war industry, will result in an average of approximately $0.655 per hour for all employees in the southern plants directly affected. A significantly higher average wage of about $0.725 per hour will result from application of the Board's order in the northern producing area. A wage differential in favor of the southern area, however, has long been a characteristic of this industry. The National War Labor Board policy has been not to eliminate such established area differentials.

WAGE MOVEMENTS IN THE COTTON TEXTILE INDUSTRY

The previously noted wage problems come into bold relief now when the cotton textile industry is called upon to carry very heavy wartime responsibilities. Such problems, however, have long been in the making and are deep-seated. This is evident from the following review of the way in which the industry's wage structure has developed.

In recent years the cotton-textile industry has made great progress in raising its minimum wages more nearly to the level paid by other great basic American industries. The need for a higher wage policy has long been recognized by many of the leaders of the industry. Attainment of the objective, however, has been hindered by formidable obstacles inherent in the organizational structure of the industry.

It is significant that governmental action has played a large part in the raising of cotton textile wages. The governmental program of past years, particularly under the Fair Labor Standards Act, has been concentrated largely upon changes in the minimum wage for the least skilled occupations. Adjustments of wages above the minimum, with each change in the minimum wage, have been variously made in different plants. This underlies the present problem of unbalanced wage-rate schedules.

Prior to 1938, minimum wages of less than 25 cents an hour were not uncommon in the cotton textile industry. In October 1938, the Fair Labor Standards Act required the payment of a minimum wage of not less than 25 cents per hour. As a result of later action under the Fair Labor Standards Act, a 32½-cent minimum was made effective in October 1939. This was raised to 37½ cents in July 1941, and to 40 cents in April 1942. Each adjustment of the minimum rate was made without any particular change being required in other occupational rates at which the great majority of textile workers are employed.

In August 1942, the National War Labor Board, in cases involving 59 cotton-textile companies in both the northern and southern industry, established a

47½-cent minimum wage and also ordered an across-the-board increase of 7½ cents per hour in order to maintain all existing occupational differentials. These were the differentials which had previously been variously established in the different mills.

Shortly thereafter, other cotton textile plants, not directly affected by the 1942 order of the Board, voluntarily granted wage adjustments which averaged somewhat less than 7½ cents per hour. Still more recently, under General Order No. 30, most of the industry has been operating under a 50-cent minimum.

In some plants, each increase in the minimum wage as outlined above was accompanied by across-the-board increases of a similar amount. This maintained the occupational-wage differentials in cents per hour but narrowed the percentage differentials. Differentials in cents per hour that might have been regarded as appropriate at an average wage level of say 30 cents might be quite inappropriate at 50 cents. In other plants, tapered increases were made in wages above the minimum whenever a change was made in the minimum wage. When this policy was applied a number of times, wage differentials between jobs were narrowed almost to a vanishing point. A few companies made no significant adjustments at all in rates above the minimum on some occasions when the minimum rate was increased. These various practices brought about wide differences between the wage-rate structures of the different cotton-textile mills.

Mills which made no increases except in minimum wages and mills which rigorously tapered wage adjustments each time there were increases in the minimum wage now have wage-rate structures which are seriously unbalanced. The rates for semiskilled and skilled occupations are frequently inadequate. Even where across-the-board increases have been made in the past, the wage differentials in cents per hour between occupations are quite narrow at the higher level of wages now prevailing. Although these problems are most aggravated in the southern cases, they are also present in a number of the northern cases.

Inequities within the wage-rate structures of different companies have become more aggravated during the war. As previously noted, in August 1942 the National War Labor Board issued directive orders in cases involving 59 cotton textile companies providing for an increase of 7.5 cents an hour to be applied across the board in order to maintain existing occupational differentials. A substantial minority of textile companies in the southern industry, not directly affected by the 1942 order of the Board, subsequently instituted wage adjustments averaging somewhat less than 7.5 cents per hour but distributed throughout the wage structure so as to increase the minimum wage but slightly while substantially increasing the semiskilled and skilled job classifications. Such adjustments were designed to cope with the very problem which is before the Board in these cases. They were designed to balance wage-rate structure. The lower minimum rates of many of these companies were subsequently increased, however, when they made "across-the-board" increases in 1944 equal to the increase necessary to install a $0.50 minimum wage. Many of these companies now have a reasonably balanced wage-rate structure based upon a $0.50-per-hour minimum wage.

The southern companies involved in the present textile cases pay a minimum wage generally in line with that paid by a large majority of other southern textile companies. For job classifications in the skilled and semiskilled occupations, however, their wage rates are below what may be termed "best practice" in the southern area. Their wage scales are, therefore, out of balance to a greater extent than many other mills in the same area. The panel report reveals that for most occupations the average of wage rates for the southern mills in these cases was about 5 cents below the weighted average for the mills in the South which made voluntary increases in the spring and summer of 1944.

LEVEL OF COTTON TEXTILE WAGES

As noted above, the wage-rate structure of the cotton textile industry needs adjustment in order to correct substandards of living and also in order to provide reasonable wage differentials for semiskilled and skilled occupations. The low minimum wage and the lack of adequate occupational wage differentials combined result in an average wage for all cotton textile employees which is relatively low in comparison with other industries. In a very real sense, the correction of substandards of living in these cases requires an over-all adjustment of wages rather than merely a change in the minimum wage.

Of the 134 manufacturing industrial groups included in Bureau of Labor statistics data for September 1944, the average hourly earnings of 64.6 cents paid

by the very large industry designated as "cotton manufacturers except smallwares" was the lowest except for 3 relatively very small industry groups, namely, cottonseed oil 63.3 cents, work shirts 55.2 cents, and handkerchiefs 62.8 cents. It may be pointed out, moreover, that as a group the southern cotton-textile mills involved in these cases pay average straight-time hourly wages of only 57.4 cents per hour or about 10 percent below the average for cotton manufacturing as a whole.

The three industrial groups with average hourly earnings below cotton textiles were all nondurable-goods industries. No durable-goods group was as low as cotton textiles. The lowest durable-goods group was "wood preserving," which paid average hourly earnings about 15 cents higher than cotton textiles. Of 22 nonmanufacturing industrial groups, only 2 were lower than textiles: "Retail trade, general merchandise" at 60.9 cents and "power laundries" at 63.7 cents. Both of these averages, however, are higher than the average hourly wage paid by the southern cotton-textile industry.

The simple fact is that the vitally important cotton-textile manufacturing pays the lowest wages of any basic industry in the country. Its minimum wage of $0.50 per hour provides a definitely substandard living, particularly under present circumstances. If any wage structure is subject to adjustment on grounds of fairness and equity, this is it. Nor can one say that this country, performing such gigantic industrial tasks, cannot support more equitable wages in cotton textiles, particularly since equitable wages are a prerequisite to securing more goods needed to fight the war. The country cannot afford to leave the cotton-textile wage scales where they now are.

THE CORRECTION OF SUBSTANDARDS OF LIVING

Analysis of the wages problem of the cotton-textile industry led a majority of the Board, industry members dissenting, to the conclusion that the mills involved in these cases should increase their minimum wage to $0.55 per hour as a feasible forward step in the correction of substandards of living. This action represents a significant development of the substandard wage policy of the National War Labor Board. It is appropriate at this point, therefore, briefly to review the duty and responsibility of the Board to approve or to order wage increases to correct substandards of living.

Provision has always been made in the wage stabilization program for wage adjustments to correct substandards of living. In his April 27, 1942, message to the Congress, which set forth a program for wartime economic stabilization, the President stated:

"The existing machinery for labor disputes will, of course, continue to give due consideration to inequities and the elimination of substandards of living."

Under the Economic Stabilization Act of October 2, 1942, the National War Labor Board was specifically authorized by Executive Order 9250 of October 3, 1942, to approve or to order wage adjustments necessary to correct substandards of living.

All carefully developed budgetary studies show the need for a higher minimum hourly rate than can ordinarily be ordered by the Board without creating employment instability. In dispute cases over substandard rates, the War Labor Board problem is to determine the extent to which standards of living can be improved without creating a loss of employment and unstable employment conditions. After 3 years of experience with such cases, the Board still has no inflexible rule for the correction of substandards of living to apply in dispute cases. The particular circumstances of each case must be given separate consideration. Let it be understood that the War Labor Board can order wage adjustments only in dispute cases which are certified to the Board. It has no power to order any wage for general application. This is an important consideration in cases such as the present ones in which a determination is made for a minority of the total plants in the cotton-textile industry.

Although the National War Labor Board has utilized a case-by-case approach in the settlement of disputes over substandard wages, a number of steps have been taken to grant general authorizations for the voluntary adjustment of such wages by employers.

On February 18, 1943, the Board provided in General Order No. 30 that wage rates could be raised by employers up to 40 cents per hour without Board approval provided that such increases did not furnish a basis to increase price ceilings. On July 26, 1943, the Director of Economic Stabilization authorized adjustments up to 40 cents per hour without the necessity of approval by the Office of Economic Stabilization in the event that price relief was necessary.

On March 11, 1943, the Board established a "shortened procedure" under which detailed wage analyses would not be required in voluntary cases providing wage adjustments not in excess of 50 cents an hour. This was followed on November 11, 1944, by an amendment to General Order No. 30, which gave employers the right to make increases up to 50 cents an hour without prior approval of the Board. Increases above 40 cents per hour which involved price ceilings, however, were still subject to the approval of the Board. Then on February 28, 1945, the Board extended the "shortened procedure" method to voluntary applications by employers to increase wages up to $0.55 per hour.

Most of the cases handled by the National War Labor Board are voluntary submissions by employers for approval of wage adjustments which they want to make. The voluntary substandard cases are processed under the expediting policies previously discussed. Many voluntary submissions, however, have been for minimum wages considerably below $0.50 per hour. They are approved by the Board, of course, since there is no power to require increases where there is no labor dispute over the wages paid. Inasmuch as most Board cases are voluntary submissions, the wage levels for the low-paid occupations are generally established by the voluntary cases and sometimes considerably below $0.50 per hour.

In dispute cases, the Board establishes substandard wages in individual cases only after consideration of the local wage levels established in many instances by voluntary acting of the employers. This procedure is designed to avoid, as far as possible, the creation of wage instabilities in a labor market. A dispute case may arise in 1 establishment out of, say, 20 in an area where minimum wage rates of $0.30 per hour are paid by all the establishments. Wages are not in dispute and not before the Board except in the one case. Under such circumstances it would normally not be possible to require a $0.50 minimum in the one establishment without a likelihood that it would be forced out of business by the competition of the other establishments.

The National War Labor Board unquestionably has the power and the duty to increase wages when clearly necessary to correct substandards of living. It cannot fulfill its duty, however, by restricting its decisions in dispute cases strictly to the limit determined by employers. The elimination of substandards cannot be dependent entirely upon employer violation. The National War Labor Board has a duty to exercise its judgment in establishing a minimum wage above generally prevailing levels to correct substandards of living when that is feasible to the employer and equitable to the employees.

In the cotton textile industry, for example, a minimum wage of $.50 per hour has already been generally established by employers through their own action or by voluntary submissions. In these cases, the Board determined to increase that minimum wage generally established by employers in the industry as a necessary and a feasible step for the correction of substandards of living. The Board majority believes that a $.55 minimum wage can now be established even though it will initially be effective only as respects a minority of the plants in the industry. This determination is based upon a conviction that at least a $.55 minimum wage can now be effectuated in the industry without creating employment instability. As a matter of fact, at least a $.55 minimum wage is now a prerequisite to the avoidance of employment instability resulting from serious manpower losses.

The Economic Stabilization Director's policy directive of May 12, 1943, provided, in connection with the approval of wage adjustments necessary to eliminate substandards of living, that adjustments in immediately inter-related job classifications could be approved "to the extent required to keep the minimum differentials . . . necessary for the maintenance of production efficiency." The Regulations of the Director of Economic Stabilization issued on August 28, 1943, used somewhat different language, stating that "such adjustments are to be tapered off rigorously in application to higher job classifications so as to apply only in those classifications and only to the extent necessary for productive efficiency in the inter-related job classifications."

The regulation of August 28, 1943, providing for tapered adjustments has been followed with some difficulty even where a wage structure as a whole was in balance prior to an adjustment in the minimum to correct substandards of living. A tapered adjustment in such cases would disturb established wage differentials. There is no doubt that tapering is not feasible at all where the average wages for all occupations are as close to the minimum wage as in cotton textiles. The governing stabilizating principle is that adjustments above the minimum must be of such a nature as to maintain productive efficiency. This is a

matter of judgment to be arrived at after a consideration of the facts of a particular case.

In a number of cases, such as the Postal Telegraph case, the Board found that the differentials between job classifications above the minimum were so narrow that productive efficiency would be impaired by further narrowing of the differentials. In such cases the Board has authorized or ordered an across-the-board increase equal to the increase in the minimum rate. A similar judgment has been made by the Board majority in the present case.

In the Postal Telegraph-Cable Co. case (May 31, 1943) we said: "It does not follow that in ruling on a wage scale where only a portion of the rates may be characterized as substandard, the Board is rigidly precluded from making any adjustments in the higher rates. On the contrary implicit in the Board's authority to make substandard adjustments is the right, even the duty, of making those correlative adjustments necessary to preserve throughout the wage scale a workable balance and to maintain between job classifications the minimum differentials necessary to preserve operating efficiency. To conclude otherwise would be to place the Board on the horns of an insoluble dilemma; it would be faced with the impossible choice either of refusing to grant any substandard increase or of granting such an increase in the face of the knowledge that by so doing it was unbalancing the entire wage schedule and its occupational relationships. It was never intended that the Board should be confronted with such a "Hobson's choice!"

In increasing the minimum wage to $0.55 per hour in these cotton textile cases, the Board has concluded, therefore, that each other occupational rate should immediately be increased by $0.05 per hour. This is the minimum adjustment required to maintain wage differentials, incident to the correction of substandards of living. Under the directive of the Board, each occupational rate will be increased by $0.05 per hour, except where a greater increase is necessary to reach the $0.55 minimum wage, and each employee will receive a retroactive adjustment of $0.05 per hour to the date specified.

JOB EVALUATION OR RECLASSIFICATION ASPECTS OF THESE CASES

Even after the adjustments necessary to correct substandards of living have been made, the wage structures of a number of the mills involved in these cases include wage differentials insufficient adequately to compensate semiskilled and skilled employees for their contribution to the production of cotton textiles. In order to meet this problem and for the purpose of working out a balanced wage-rate structure, the Board has specified a number of occupational guide post rates to be used in the collective bargaining contemplated by the directive of the Board. The guideposts are set at levels which insure differentials for semiskilled and skilled work.

The present average spread in the 23 southern companies between scrubbers and sweepers at the bottom of the wage structure and loomfixers at the top is but 27.5 cents per hour. This spread is as little as 5 cents in some concerns but as much as 44 cents in others. There is general agreement among all interested parties that the existing differentials for semiskilled and for skilled occupations in most of these mills are too narrow. There is likewise a consensus among the interested parties that a differential between least skilled and most skilled occupations of at least 35 cents is rquired to produce a properly balanced wage structure. Most Southern employers in the present cases believe, however, that the spread should be from $0.50 to $0.85 per hour rather than from $0.55 to $0.90 as proposed by the Board.

The inadequacy of the present wage rate structure of certain of these companies may be further illustrated by a particular case. In one of the mills, among the 23 companies in the Southern case, the sweeper and scrubber rate is 50 cents an hour. Picker Tenders are also paid 50 cents an hour, while slubber tenders on incentive wages earn the same average wage of 50 cents an hour. Spinners, cloth-room inspectors, and baling pressmen are paid between 51.5 and 52 cents an hour. Spinning doffers earn 55.5 cents on the average while weavers on incentive earn no more than 61 cents per hour. The loomfixer (a skilled mechanic) earns 65.5 cents as compared to a rate of 90 cents an hour applicable to class B machinists in the areas where most textile mills are located.

Other plants have similar compressed wage structures. This may be discerned by the relation between minimum wages and plant averages. Thus one plant with a plant minimum of $0.50 has a plant average of $0.5438; another with a plant minimum of $0.50 has a plant average of $0.5296. Such wage

structures provide little or no incentive for advancement and the differentials between the entrance rate of 50 cents and the rate for machine tending classifications are out of all proportion to the content of job and the skill required.

The Board has concluded that a 35-cent spread in wage rates between least skilled and most skilled occupations should now be established as a minimum differential necessary to assure reasonably balanced wage structures. Within the limits of the lower and upper anchor points, the Board has also determined the greater position of wage rates for three other jobs (machine tenders, spinning doffers, and weavers) in the wage structure. With the establishment of such peg points, and the designation of facilitating guide posts and procedures, the task of completing a properly alined and balanced wage structure has been assigned to collective bargaining.

If the parties interpolate rates for other occupations between the guide rates it is estimated that the reclassification part of the case would increase wages paid in the 23 southern companies by approximately 3 cents per hour as an average for all employees involved in these cases. The average increase in some mills will be as low as 0.3 cents and in others the maximum allowance of 5 cents prescribed by the Board will have to be utilized. The average wage increase represented by the reclassification as apart from the adjustment to correct substandards of living, will be less than 5 percent of average hourly earnings. Since the labor cost in textiles averages about 25 percent of the total manufacturing costs, it may be concluded that the reclassification wage adjustments will increase production costs by only abuot 1¼ percent on the average. The Board majority believes, however, that the reclassification program will, over a period of time, actually reduce costs of production by providing a wage policy which will be in the interests of production efficiency.

The reclassification program ordered by the Board is of significance as a cost factor only to those mills where the wage differentials for semiskilled and skilled work are unduly low in comparison with widely accepted good practice in each textile producing area. It is recognized, however, that the burden imposed upon those mills with average wages which are extremely low in comparison with the general area average should be limited so as not to require a too drastic change at one step. The Board has directed, therefore, that the reclassification cost, apart from the correction of substandards of living, should not exceed an average of $0.05 per hour for any one company. For some companies, therefore, the exact guide-rates set forth in the Board's directive order will not be applicable. Lower guide rates for the key occupations will have to be worked out. It may also be mentioned that lower rates than the Board's guide rates will be also used if the job content in any plant is abnormally below the standard generally prevailing in the industry, although higher guide rates may be used where the job content is substantially above standard.

In order further to ease the burden upon the mills directly affected by the Board order, a minority of the mills in the industry, it has been directed that reclassification wage adjustments are to become effective only as of the date of the directive order. It has also been determined that the increase of $0.05 per hour to all employees is to be made retroactive only to October 1, 1944. The date of expiration of previous contracts, which ordinarily provides the base date for retroactive adjustments, was in most of these cases in December 1943.

The problem of working out proper wage-rate differentials is particularly acute in the southern cases. The existing differential in the northern companies between the lowest paid common labor and the highest paid occupation of loomfixer averages about 45 cents per hour. One of the few job evaluation plans in this industry indicates that a 47 cents differential represents a reasonable differential in the light of the relative job content of the occupations at the bottom and the top of the wage structure.

As provided in the order, the Board does not intend to have the wage scales submitted piece-meal to the special panels but rather intends that for each plant the parties submit an over-all wage schedule.

THE NORTH-SOUTH DIFFERENTIAL

Many unwarranted generalities have been made about the "North-South differentials" in cotton textiles and of the alleged effect of the Board's order on this differential. Differences between the average wages paid by plants in the two producing areas are not particularly significant in appraising area differentials.

The average hourly wage for all the employees of an integrated weaving mill will normally be higher than a throwing plant or a spinning mill which leave a smaller percentage of skilled employees. A plant manufacturing specialty products which require a higher skilled labor force may, in general, be expected to pay higher average wages than a plant producing relatively coarse, standardized products.

Cotton textile mills in the northern producing area pay higher wages than those in the South. They do not, however, manufacture the same kind of fabrics. Higher wages and smaller job loads prevail in the manufacture of fine goods in the North, for example, as compared with the production of say print cloth in the South. The resulting difference in average hourly earnings or in unit labor costs cannot, of course, be considered as a North-South differential on comparable work.

With a wage-scale and job loads geared primarily to the production of fine goods, northern cotton textile mills are not generally in a position to manufacture coarser fabrics on a competitive basis. They cannot, properly claim, however, that the southern mills should therefore be required to increase to northern levels the wages they pay for the manufacture of coarser fabrics. The possibility of expanded production of fine goods in the South at lower labor rates there prevailing has apparently given concern to northern mills. It would appear that such problems might well be considered as such a basis rather than in terms of meaningless generalities about the North-South differential. A careful analysis of conditions in the two major areas in terms of wages paid, fabrics produced, skills required and work loads leads to the conclusion that there is presently no problem which can properly be dealt with in terms of a North-South differential as such.

The Board was concerned in the cases, therefore, not with area wage differentials but with intraplant relationships between specific job classification rates. The Board majority found that some mills, in both North and South, do not pay an adequate differential over the minimum rate adequately to compensate semiskilled and skilled labor. This happens to be characteristic of more southern mills than northern mills. Certain of the southern mills in these cases, however, were found to have reasonably balanced wage-rate structures.

In order to approach the reclassification problem in a fair and equitable manner, the Board analyzed the job rates for each major classification in each of the 54 companies in these cases. On the basis of prevailing relationships, key grade rates were established separately for each producing area. In this way, the Board has made certain that it has continued its long-established policy of not eliminating established geographical differentials.

The guide posts for key occupations have been set by the Board for use in bargaining by the parties for the purpose of establishing reasonably balanced internal plant wage structures where such structures do not exist. A comparison of these guideposts for key occupations indicates that the Board has not disturbed established area differentials.

(a) The first guide rate established is a 55-cent point for common labor in the southern companies and a 57-cent point for scrubbers and sweepers in the northern companies. This maintains the present relationship between these classifications in the two producing areas since the present rates are $0.50 and $0.52 per hour. A uniform 55-cent minimum rate has been set for both areas since there have been no area differences in the minimum wage over the past several years. Only a very few employees in northern mills receive a rate below that paid to scrubbers and sweepers. Battery hands in the North have been receiving $0.5203, which is actually less than the rate paid for such work in many southern mills. The present guide-rate of $0.57 in the North is confined to scrubbers and sweepers; the battery hands in northern mills are to be provided with a higher rate through collective bargaining under the conclusion of a majority of the Board that the battery hand rate now paid in the North represents an intraplant inequity.

(b) A rate of 61.5 cents is established as a guide rate for certain machine tending job classifications (card tender, picker tender, and spooler winder) in the southern companies. A base rate of 64.0 cents is set for these operations in the northern companies; earnings will average in excess of that figure in northern plants where incentive earnings are paid.

(c) A rate of 68.0 cents is established for spinning doffers in the southern companies as compared to 72.0 cents for the same classification in the northern companies.

(d) For plain automatic weavers, piece rates are to be so set in the southern companies so as to yield average straight-time hourly earnings of 75.0 cents for the group of these weavers in a mill as a whole. No comparable guide rate is established for weavers in the northern companies. The piece-rate system in northern plants applied to plain automatic weavers yields straight-time hourly earnings significantly greater according to the data in the record.

(e) A guide post of 90 cents is established for loomfixers in the southern companies as compared to 102.0 for the northern companies.

The extent of the differentials by job classification is underestimated by the above comparisons in three important respects. In the first place, the 5-cent limitation in section 3 of the directive order for the southern case will mean that at least eight of the southern companies involved in the case will apply lower guide rates than those specified as standard. In order to establish a balanced internal wage structure and remain within this 5-cent limitation, wage rates will have to be established in certain companies by the adoption of guide rates from 1 to 4 cents an hour below those specified in the Board's order for at least some of the job classifications.

In the second place, the directive order in the case of the southern companies provides that, in any plant, abnormal variations from generally prevailing standards of job content in the industry shall result in approximately different rates. In the event that the job content of an occupation in one of the southern companies is abnormally below that prevailing in the industry, a lower rate is appropriate under the order of the Board. A higher rate may, of course, be agreed to by the parties if that is justified by job content considerations. No similar provision is set forth in the case of the northern companies.

In the third place, the directive order in the case of the northern companies provides that job classifications paid on a piece rate or incentive basis that shall be subject to the "sixty-forty" rule now in effect in Fall River. This rule provides a continuing guarantee of piece work or incentive earnings. Practically, this rule means that straight-time average hourly earnings of workers on a piece-work or incentive basis in northern mills will exceed the applicable guide-post rates, while in the South the piece rates or incentive rates will be set so as to yield earnings equal to the applicable guide-post rates.

In summary, it is estimated that the average wage increase to all the New England mills directly affected by the Board's proposed order will be approximately $0.06 per hour; wages paid by the southern mills in the case will be increased by approximately $0.08 per hour as an average of all employees. These average figures, however, obscure the real nature of the wage adjustments. Most of the northern mills and a number of the southern mills will be required to pay but little more than the $0.05 general increase incident to the correction of substandards of living since their wage structures are now in a reasonably balanced relationship. These mills will not be affected by the reclassification adjustment. The largest increases under the Board's order will be required of those mills whose wage structures do not now provide an adequate differential over the minimum rate for semiskilled and for skilled occupations. The average wages of such mills may be increased by a total of $0.10 per hour: $0.05 to correct substandards and an additional $0.05 for the reclassification adjustment.

The reclassification adjustment directed by the Board affects more southern mills and to a greater extent, as compared to northern mills, for the simple reason that many more wage structures in the south are out of line with the balance maintained by fellow manufacturers in the same area.

EFFECT OF BOARD ORDER ON TEXTILE WAGE LEVELS

The wage adjustments to correct substandards of living and those necessary for reclassification of out-of-line rates for semiskilled and skilled employees will, on the basis of the figures submitted in the cases, increase the average straight time hourly wage of all employees in the 23 southern cotton mills from $0.57½ per hour to approximately $0.65½ per hour. The present straight-time average hourly earnings in the northern mills included in these cases will be increased from $0.66½ to $0.72½ per hour under the proposed directive orders. As noted previously, these figures cannot be considered as a "North-South differential." The work loads in the South are generally greater than in the North, but in the North the finer fabrics are made, involving a greater number of skilled employees.

THE RELATIONSHIPS OF TEXTILE WAGES TO TEXTILE PRODUCTION

The Board majority is of the opinion that the wage increases involved in these cases are amply justified under considerations of fairness and equity. The

adjustments to correct substandards of living, i. e., a $0.55 minimum wage and a $0.05 increase across the board, are but one phase of the case. The development of balanced wage rates structures through a program of reclassification is not only called for by the equity of the employees affected but are necessary for the effective prosecution of the war.

The wage problems of the present cases would be serious enough in peacetime. There is ample industrial experience to show that substandard wages and badly outof-balance wage rate structures are a deterrent to the efficient production in peacetime. Today and in this industry, they are an unnecessary hindrance to the war production program. Reports of other Government agencies, intimately concerned with production and procurement, make it very clear that the output of the cotton textile industry has been falling far short of the amounts needed for war purposes and for essential civilian uses. Ten of the southern mills involved in these cases manufacture duck, the shortage of which is so critical that price ceilings were entirely removed recently in an effort to encourage expansion of production. It would appear that even such drastic action on the price front does not get to the core of the problem which is the severe losses of manpower in this industry. In the judgment of the Board majority, these crippling manpower losses arise principally because of low wages paid to semiskilled and skilled employees.

Manpower losses have interfered with the necessary production of cotton textiles other than duck. Shortages of twills and gabardine, or denims for navy dungarees, and of bagging materials are so great that the military services are receiving allocations equal to only three-quarters of their requirements. Shortages of civilian fabrics are also serious.

Underlying the current inability of the industry to meet the full needs of war production is the steady and substantial loss of manpower from the industry. Between December 1942 and July 1944 there was a net loss of 76,000 workers from the cotton textile industry. The progressive deterioration of the industry's manpower situation is further reflected in the reduction in third shift operations. Currently, only 25 percent of the looms used on the first shift are also running on the third shift. This compares with a 50 percent operation on the third shift in 1942.

Various efforts have been made to meet the manpower problem in cotton textiles. Controls have been instituted by the War Production Board to confine the facilities of the industry to certain uses; to assign responsibility to various mills for filling rated orders; to limit the size and weight of certain textile pproducts and to limit the types of construction and measurement, etc. Likewise, various manpower devices have been tried, such as the use of a priority referral program and the use of soldiers in cotton textile mills (receiving Army pay in addition to the regular wages paid for the work performed). Comprehensive as these measures are, they have been insufficient to turn the tide of continually declining output.

Undoubtedly, the manpower difficulties cannot be eradicated by wage adjustments. There is neither rhyme nor reason, however, to make the crucial manpower and production problems virtually impossible of solution by continuing a $0.50 minimum wage and by limping along under grossly unbalanced wage-rate structures. Skilled employees have to be paid reasonable differentials for their contribution to the production of cotton textiles of the needs of the war for textiles are to be met.

GEORGE W. TAYLOR, *Chairman.*

NATIONAL WAR LABOR BOARD

In the Matter of 23 Southern Cotton Textile Companies and Textile Workers Union of America, CIO (Case Nos. 111-5110-D, 111-6308-D, 111-5822-D, 111-2527-D), 25 New England Cotton and Rayon Companies and Textile Workers Union of America, CIO (Case Nos. 111-7739-D, 111-4841-D, 111-6554-D, 111-4593-D, 111-6301-D, 6 New York and Pennsylvania Rayon Companies and Textile Workers Union of America, CIO (Case Nos. 111-7107-D, 111-7150-D, 111-8105-D). March 9, 1945

OPINION OF LABOR MEMBERS

Our comments on the decision in this case are confined to three issues: (1) the minimum wage, (2) the shift premium, and (3) the effective date of the order.

SUBSTANDARDS

The order establishing the minimum rate at 55 cents per hour illustrates once again the unwillingness of the Board to match its actual decisions with its good intentions. The majority opinion recognizes that "The National War Labor Board unquestionably has the power and the duty to increase wages when clearly necessary to correct substandards of living." In their recent report to the President the Public Members stated: that the situation of the lower income wage and salary workers, upon whom the increase in the cost of living has fallen with disproportionate severity, has remained unsatisfactory under the wartime economy." Yet this apparent recognition and understanding has never been translated into any effort to determine what constitutes a decent minimum standard of living. It would seem almost too elementary to assert that substandards cannot be corrected without first establishing some sort of standard that has some rational connection with reality. But evidently the sheer simplicity of this proposition is a fatal weakness, for it has never been accepted by the Board.

Until very recently the farthest advance made by the Board, pursuant to its authority to correct substandards, was to permit voluntary wage adjustments not in excess of 50 cents an hour, without Board approval. Since February 28, 1945, voluntary adjustments may be made up to 55 cents per hour, subject only to a routine examination and practically automatic approval. These limits have absolutely no relation to any standard of living. They are arbitrary administrative regulations which the Board has never even attempted to rationalize.

We believe that the very least that the Board must do, as a first step toward discharging its duty, is to determine what wage rate is necessary in order to maintain a decent minimum standard of living. It should then permit voluntary adjustments up to that rate without question.

The Board has conceded this much in voluntary cases, that adjustments may be made to the limits now established, without regard to local wage levels. In dispute cases, however, it has heretofore established the policy that decisions must be based on considerations of local wage levels. The justification for this distinction, according to the majority opinion, is that we must "avoid, as far as possible, the creation of wage instabilities in a labor market." It seems obvious to us that such "instabilities" may be caused to an equal extent by voluntary adjustments. Since the argument is not made in the latter cases it should not be made in the former. Furthermore, even the most zealous stabiliber cannot justify any concern for "instabilities" in such low rates.

We must, of course, express our approval of the slight step forward achieved by this decision. The majority opinion properly declares that " the National War Labor Board has a duty to exercise its judgement in establishing a minimum wage above generally prevailing levels to correct substandards of living. * * *" This much is a cautious but definite advance over previously stated policy. But the statement adds "* * * when that is feasible to the employer and equitable to the employees." We can conceive of no situation when a wage increase bringing employees closer to a minimum standard of living should be inequitable to employees. Feasibility to the employer means ability to pay, which has no necessary relation to prevailing levels of wages.

Even this cautious approach was not followed through in the present case. The Board orders a minimum of 55 cents an hour on the basis of its conviction that this wage "can now be effectuated in the industry without creating employment instability." That is a studied understatement. There is substantial evidence that the employers are well able to pay a minimum wage of least 60 cents an hour. There is no creditable evidence that such a rate would cause "instability." So far as equity to the employees is concerned, the union produced a mass of uncontradicted evidence that at least 72 cents an hour was necessary to maintain a barely decent minimum standard of living. The majority opinion points out, also, that the textile manufacturing industry is far and away the

lowest paying basic industry in the country. In short, no sound reason has been stated for refusing to grant the union's demand for a 60-cent an hour minimum wage. We supported the decision only because of the necessity for obtaining a majority vote of the Board.

SHIFT PREMIUM

The Board has ordered the companies in this case to pay a third shift premium of 5 cents an hour. The Board's refusal to grant the union's demand for a premium of 7 cents an hour flies squarely in the face of its own well established policy. Even in industries where there had been no practice of paying shift premiums the Board has ordered third shift premiums greater than 5 cents an hour. Most recently, in the steel case (*Carnegie-Illinois Steel Corporation, et al.*, decided Nov. 25, 1944 (19–WLR–568)) the third shift premium was instituted at 6 cents an hour. In the nonferrous metal cases (*Vanadium Corporation of America, et al.*, decided Aug. 11, 1945 (18–WLR–215)) a new third shift premium was established at 8 cents an hour. There has been little question, for many months now, that the Board would order or approve 10 cents an hour for third shifts in noncontinuous operations. Textile manufacture is a noncontinuous operation. This practice of the Board is too well known to require citation of precedents. Nevertheless, despite these considerations, the third shift premium was set at 5 cents in this case without an effort even to assign a plausible reason for this divergence. Apparently the fact that the wages of these workers are now substandard makes the burden of working the late shift less onerous for them than for better paid workers. To him that hath little shall be given less!

RETROACTIVITY

The effective date of the order follows no discernible pattern, or rather it is a confusion of all the patterns the Board has used for determining the effective date of its orders. The general policy, applied in nearly all disputes, is that the effective date of the order shall be the expiration date of the previous contract, or in the event of no prior contract, the date of the certification of the dispute to the Board. This policy is applied only to the vacation provision of the present order. The 5-cent general increase, however, is made retroactive only to October 1, 1944. The reclassification wage adjustments and the shift premium are to be effective only from the date of the directive order. The justification given for this arbitrary arrangement is that it is necessary "In order further to ease the burden upon the minority of the mills affected directly by the order * * *." This tender solicitude for an industry whose war profits are 10 times greater than their peacetime profits is an attitude that will, of course, be deeply appreciated by 55-cent an hour workers. The justice of the claim of these workers for wage adjustments did not arise on October 1, 1944. The arguments which justify an increase as of that date would justify one for a year earlier, when the prior contracts were expiring, and at the very least back to the certification dates of these disputes.

The bargain-counter nature of the action in this case is all the more inexcusable by reason of the fact that this case was actually decided during the first week in January 1945. Had differences of opinion not arisen with the Director of Economic Stabilization over unrelated aspects of policy, this order would have been issued more than 2 months earlier. It is precisely accidents of this nature which necessitate the establishment, and consistent observance, of a stable policy on retroactivity.

Certainly there is nothing in the nature of the wage issues in this case which required special treatment. In the steel case cited above, the Board decided very similar issues, and made its order effective as of the expiration dates of the prior contracts. There are no considerations of policy, practice, or expediency which justify different action in this case.

NATIONAL WAR LABOR BOARD
DIVISION OF PUBLIC INFORMATION
PRESS RELEASE

INDUSTRY DISSENTING OPINION

For release in morning papers of Wednesday, March 28, 1945

B–1963–C
Textiles

(Cleared and released through the facilities of the Office of War Information)

Industry members of the National War Labor Board today issued a dissenting opinion to the Board's decision in the textile cases in which they stated that neither the past record of the industry nor the over-all manpower situation justify the inference that increases ordered by the Board will have a favorable effect on employment in the textile industry.

The opinion quoted and reaffirmed the industry members' statement of February 23 (B–1963A) which said "the considerations, both of policy and of practical consequence, are in our opinion overwhelmingly against the action taken by the majority."

The Board orders of February 20 and March 31 were issued in settling disputes between 23 southern cotton textile companies, 25 New England cotton and rayon companies and 6 New York and Pennsylvania rayon companies and the Textile Workers Union of America, CIO, bargaining agent for the more than 50,000 employees involved.

Chairman George W. Taylor issued an opinion for the Board majority on March 18 (Release B–1963B) in which he said that "it simply doesn't make sense to continue to hamper the production of urgently needed supplies of cotton textiles by continued payment of the existing substandard minimum wages and by continued use of grossly unbalanced wage rate structures."

The Board's orders provided for a 55-cent hourly minimum rate as a move toward the correction of substandards of living; a 5-cent hourly increase in all rates above 50 cents an hour to maintain the minimum differentials between immediately interrelated job classifications, and directed the parties to negotiate well-balanced wage-rate structures using the guidepost rates provided for certain key-jobs by the Board. All employees were to receive 5 cents an hour retroactively as of October 1, 1944.

Pursuant to the directive of March 8 of the Economic Stabilization Director, all compensation provisions, exclusive of the correction of wage-rate structures, are to become effective upon determination of the Office of Price Administration that no change in price ceilings is necessary, or, if price relief is necessary, upon approval of the Director of Economic Stabilization. As to the correction of wage-rate structures, the Board directed the parties to proceed with the collective bargaining and to report their results to the Board for approval.

The opinion of the industry members contended that the 55-cent minimum wage for unskilled workers cannot aid the textile industry in obtaining manpower when it applies "as it now does by later Board action, to all other industries as well." The "later Board action" referred to is the Board's resolution of February 26 in which, by unanimous vote, it authorized its regional boards to "determine what rate or rates up to 55 cents an hour constitute substandard or salary rates in their regions for the purpose of permitting consideration of the proposed adjustments up to the specified minima." Previously a 50-cent figure was used.

"A careful comparison of the differences between the 'peg points' established by the orders, and the differentials shown by the Bureau of Labor Statistics, indicates even more clearly that present differentials (between the North and the South) have, in fact, been materially narrowed," the opinion said.

It contended that the majority opinion statement that "the new wage structure embodies a so-called best practice, based on one of the few job analyses in the industry" is unfounded.

"We have no reason to believe," the opinion said, "that the textile industry is so completely homogeneous that we can say that one wage structure will fit it

all, and that the historic wage structure means nothing. * * * The ordering by the majority of a whole new wage structure * * * seems * * * perilously close to the outer limits of the Board's autthority."

The opinion concluded by contending that "there can be no justification for giving a retractive wage increase to October 1, 1944, when Board policy prohibited such an increase on that date."

The dissenting opinion of the industry members is attached.

NATIONAL WAR LABOR BOARD

In the Matter of 23 Southern Cotton Textile Companies and The Textile Workers' Union of America, CIO (Case Nos. 111–5110–D, 111–6308–D, 111–5822–D, 111–2527–D). March 20, 1945

DISSENTING OPINION OF THE INDUSTRY MEMBERS

On February 23, 1945, the industry members issued a statement on the wage increases ordered by a majority of the Board in these cases. We stated:

"We have, here, a group of 23 southern tetxile companies. The apppropriate government agencies, though asked to do so, refused to certify them, as a group, as so essential to the prosecution of the war that they could be given by us a 'rare and unusual' status. Some of the individual companies, we were told, warranted that classification, but the whole group did not.

"A majority of the Board has ordered a 55-cent minimum wage, in the teeth of the fact that the Board has long had a policy defining a substandard wage in terms of a 50-cent minimum. The 55-cent minimum is 37½ percent higher than the highest minimum under the Fair Labor Standards Act. In order to increase the minimum here involved, give a 5-cent and more across-the-board, general, increase to all employees. The result will be increases in these 23 mills since January 1941 totaling far more than double the amount permitted by the Little Steel Formula—indeed, the increases will be near 50 or 60 percent.

"But that is not all the Board has done. It has imposed the new 55-cent minimum, and across-the-board increases, on a small segment of the textile industry—even of the southern textile industry. In the South alone, this case affects but 23 out of 854 plants—less than 3 percent. It affects but about 17,500 employees out of 360,000—less than 5 percent. The Board imposed on these companies a burden which may well make it very difficult for them to operate in competition with the vast majority of the rest of the southern industry. And if it be said that the condition will soon ameliorate itself because the rest of the industry in the South will necessarily fall in line, the Board is imposing on that industry an added wage bill—estimated at about $71,600,000 per year—which may have serious reprecussions on the entire southern economy.

"The considerations, both of policy and of practical consequence, are in our opinion overwhelmingly against the action taken by the majority. The gravity of the case compels this statement of our dissent."

We see no reason, now, to change that statement. We do believe, however, that it is appropriate to incorporate it in this dissenting opinion, and, in view of the majority opinion, to add one or two additional comments.

1. The majority opinion suggests that the action of the Board in increasing the wage rates in these textile cases may have a favorable effect on employment in the industry. Neither the past record of the industry nor the over-all manpower situation justifies that inference. Wage increases since 1941 have not been followed by any increases in the number of employees, nor by any improvement in the absentee rate. Moreover, a 55-cent minimum wage for unskilled workers certainly cannot aid the textile industry when it applies, as it now does by later Board action, to all other industries as well.

The present manpower needs of the textile industry are, in fact, common to all industry, including those with much higher wage scales, such as shipyards and rubber tires. Employment in the textile industry has, it is true, been reduced from the peak of 1942. In the textile industry, the reasons are independent of wage rates. Mushrooming war industries needed workers, and established peacetime industries have been the source of workers for the new or expanded war plants. Recruiting campaigns for shipyards, airplane plants, machine shops, ordnance works and the like are even now being carried on in the mill villages of the South under the auspices of the War Manpower Commission. Textiles are in priority group "6" of the War Manpower Commission, while war plants are in groups "1," "2," or "3." Selective service itself has taken approximately 25 percent of the workers in the industry.

2. The majority opinion characterizes as "unwarranted generalities" the argument of the companies that the decision tends to eliminate long-established textile wage differentials between the North and the South. The majority does not, and could not, deny that the Board has consistently disavowed any intention of eliminating this differential, and, indeed, has agreed that it was no part of the Board's functions to do so. Yet the majority opinion itself admits that the average increase in the New England mills affected by the Board's order will be approximately 6 cents per hour, and that the average increase in the southern mills will be approximately 8 cents per hour. On their own statement, the differential is decreased by 2 cents per hour. Actually, we believe that the differential will be decreased by substantially more than 2 cents per hour. In addition, a careful comparison of the difference between the "peg points" established by the orders, and the differentials shown by the Bureau of Labor Statistics, indicates even more clearly that present differentials have in fact, been materially narrowed.

3. The majority opinion states that the new structure embodies so-called "best practice," based on one of the few job analyses in the industry. We have no reason to believe that the textile industry is so completely homogeneous that we can say that one wage structure will fit it all, and that the historic wage structure means nothing. Until scientific job analyses have been made for each mill, "best pratcice" is not necessarily what one mill does, but what sound and tested experience has shown to be best in a given factual, practical situation. Differentials between mills are, to a degree, like differentials between areas. They are the results of long development. The ordering by the majority of a whole new wage structure which ignores all of this seems to us not only unwise, but also perilously close to the outer limits of the Board's authority.

4. A final word is warranted with respect to the retroactive date for the 5-cent increase—October 1, 1944. That is, admittedly, a compromise date. But the fact that it is a compromise highlights the inequity of the retroactive award. In this case, aside from the fact that in most instances there was no real collective bargaining on wages prior to certification, resolutions of most of the original boards, including those in the South, announced in February 1944 that no wage increases would be permitted unless geared to the then authorized 50-cent minimum rate. The mills here involved were, in other words, prohibited from that date from doing what the majority of the Board now orders them to do. There can be no justification for giving a retroactive wage increase to October 1, 1944, when Board policy prohibited such an increase on that date.

NATIONAL WAR LABOR BOARD

DIVISION OF PUBLIC INFORMATION

PRESS RELEASE

For release in morning papers
Of Friday, April 6, 1945

B–1963D
Textile

(Cleared and released through the facilities of the Office of War Information)

Any of the 54 textile companies involved in the February 20 decisions of the National War Labor Board which have not requested price relief are to put the wage adjustments ordered by the Board into effect immediately under a resolution the Board adopted today.

The Board's orders provided for (1) a 55-cent hourly minimum rate as a move toward the correction of substandards of living (2) a 5-cent hourly increase in all rates above 50 cents an hour to maintain the minimum differentials between immediately interrelated job classifications necessary for the maintenance of productive efficiency; (3) a premium of 5 cents an hour for third-shift work in the southern cases, and (4) 1 week vacation with pay for those employees who have 1 year of service with the 11 southern companies where vacations was an issue. Five cents an hour is to be paid to all employees retroactive to October 1, 1944, unless the parties agree otherwise.

In supplementary directive orders of March 13, the Board directed that these adjustments should become effective only on determination by the Office of Price Administration that they would not require any change in price ceilings, or upon approval by the Director of Economic Stabilization. This stay still applies to those cases where the companies have asked price relief.

The Board also directed all the companies and the Textile Workers Union, CIO, bargaining representative for the 50,000 employees involved, to negotiate corrected wage-rate structures using certain key rates as guide posts. The results of this collective bargaining are to be submitted to the Board for approval before the new wage structures are put into effect.

Involved are 23 southern cotton textile companies, 25 New England cotton and rayon companies, and 6 New York and Pennsylvania rayon companies.

The Board's resolution is attached.

NATIONAL WAR LABOR BOARD

In Matter of 23 Southern Cotton Textile Companies and The Textile Workers' Union of America, CIO (Case Nos. 111-5110-D, 111-6308-D, 111-5822-D, 111-2527-D), 25 New England Cotton and Rayon Companies and The Textile Workers' Union of America, CIO (Case Nos. 111-7739-D, 111-4841-D, 111-6534-D, 111-4593-D, 111-6301-D), 6 New York and Pennsylvania Rayon Companies and The Textile Workers' Union of America, CIO (Case Nos. 111-7107-D, 111-7159-D, 111-8105-D). April 5, 1945.

RESOLUTION

Whereas the supplementary directive orders in the textile cases issued on March 13, 1945, provided that certain adjustments shall become effective only upon determination by the Office of Price Administration that these adjustments will not require any change in price ceilings, or, if no such determination is made, then upon approval by the Director of Economic Stabilization, and

Whereas certain companies involved in the textile cases have not requested price relief; It is hereby

Resolved, That the provisions of said directive orders which were stayed because of the possibility that price relief might be required shall become effective immediately as to those companies which did not request price relief.

NATIONAL WAR LABOR BOARD

DIVISION OF PUBLIC INFORMATION

PRESS RELEASE

For release in morning papers
On Monday, April 16, 1945

B-1963-E
Textile Commissions

(Cleared and released through the facilities of the Office of War Information)

The National War Labor Board announced today it had created two textile commissions in order to effectuate the provisions of its directive orders of February 20 in the cases of 23 southern cotton textile companies, 25 New England cotton and rayon companies, and 6 New York and Pennsylvania rayon companies.

One commission will have headquarters in Atlanta, Ga., and the other in Boston, Mass.

The southern commission will have jurisdiction to approve agreements and to decide disputes with respect to the 23 southern companies covered by the directive order and such other companies as the Board may designate.

The northern commission will have the same jurisdiction over the 25 New England companies, the 6 New York and Pennsylvania rayon companies, and such other companies as the Board may designate.

Both commissions are subject to the provisions of the Board's directive orders of February 20 and the principles and limitations contained in them. These orders directed the parties "to establish through collective bargaining a more balanced and properly aligned wage rate structure in which the rates for semi-skilled and skilled employees provide a reasonable differential above the minimum rate."

Guidepost rates for certain key occupations were set forth in the orders in order to insure a proper alignment of the wage schedule in the negotiations. These key rate guides were not identical in all three cases because they are based on area rates.

The orders provided that any agreement reached during these negotiations were to be submitted to a special panel for approval. Also any matters in dispute at the end of the negotiations were to be submitted to the panel for determination.

Each commission will consist of three members—one each representing the public, industry, and labor—with the public member as chairman.

David L. Cole, former chairman of the New Jersey State Board of Mediation, was made chairman of the northern commission, and Richard Lester, professor of economics at Duke University, Durham, N. C., was named chairman of the southern commission.

Mr. Cole is a public member of the second regional WLB at New York City and was chairman of the NWLB's "basic steel" panel. He is a member of a Paterson, N. J., law firm and during 1941-42 was president of the fair rent commission in Paterson. He is a graduate of Harvard University and Harvard Law School. He was associate counsel of the Silk Textile Code Authority of the NRA.

Mr. Lester has been a special mediation representative and public panel member of the fourth regional WLB at Atlanta. During 1941-42 he was associate chief and later chief of the Industry Branch Consultant Service of the Labor Division of the War Production Board and the War Manpower Commission. He holds M. A. and Ph. D. degrees from Princeton University.

Labor and industry members will be named later.

The decisions of each commission are to be subject to stay and review by the National Board in the same manner as decisions of the regional boards, except that the Board will "in any case consider the merits of a petition for review from any ruling or order of either commission which is claimed to conflict with one or more of the 'guideposts' or other limitations and principles set forth in the applicable directive order of February 20 * * *."

The Board instructed its regional boards that if there is any case involving the textile industry before them in which the regional board finds that the internal wage structure should be corrected in the same manner as the textile decisions and concludes that the case should be placed under the jurisdiction of either of the textile commissions, it should so certify to the National Board, which, if it approves, will extend the jurisdiction of the appropriate commission to cover that case.

The commissions will not have jurisdiction over any matters unrelated to those portions of the Directive Orders dealing with the rationalization of the wage structures on an over-all basis. This means the regional boards will continue to handle incidental intraplant wage rate inequity cases as well as all other textile wage and dispute cases.

The Board's order establishing the commissions is attached.

NATIONAL WAR LABOR BOARD

Washington, D. C.

DIRECTIVE ORDER ESTABLISHING TEXTILE COMMISSIONS

By virtue of and pursuant to the powers vested in it by Executive Order 9017 of January 12, 1942, the Executive orders and regulations issued under the act of Congress of October 2, 1942, and the War Labor Disputes Act of June 25, 1945, and in order to effectuate the provisions of the directive orders of February 20, 1945, in the cases of 23 southern cotton textile companies, 111-5110-D, etc., 25 New England cotton and rayon companies, 111-7739-D, etc., and 6 New York and Pennsylvania rayon companies, 111-7107-D, etc., the National War Labor Board hereby directs:

I. There are hereby created two textile commissions, one with headquarters at Atlanta, Ga., and the other with headquarters at Boston, Mass., with jurisdiction as follows:

A. *The commission at Atlanta, Ga.*—With respect to the 23 southern cotton textile companies covered by the Directive Order of February 20, 1945, and such other companies as the Board may from time to time designate, this commission

shall have jurisdiction to approve agreements and to decide disputes submitted to it, subject to the provisions of said directive order and the limitations and principles contained therein.

B. *The commission at Boston, Mass.*—With respect to the 25 New England cotton and rayon companies and the 6 New York and Pennsylvania rayon companies covered by the Directive Order of February 20, 1945, and such other companies as the Board may from time designate, this commission shall have jurisdiction to approve agreements and decide disputes submitted to it, subject to the provisions of said Directive Orders and the principles and limitations contained therein.

II. Each commission shall consist of three members to be appointed by the Board, one of whom shall represent labor, one industry and one the public. The public member shall act as chairman. The Board may at any time appoint alternates or substitutes for the members of each commission. The labor and industry members of each commission, whether alternate or substitute, shall serve on a per-diem basis and shall be appointed by the Board from nominees submitted by the labor and industry members of the Board, respectively. The presence of all three members of each commission shall be necessary to constitute a quorum and a majority vote shall determine the decision of the commisison.

III. The rulings of each commission on wage or salary adjustments and its directive orders in dispute cases shall have the same effect, and be subject to stay and review by the National War Labor Board to the same extent, as rulings and orders of the Regional War Labor Boards, as set forth in parts IV to VI of the Board's Rules of Procedure, as amended, except that, in addition to the review therein provided for, the Board shall in any case consider the merits of a petition for review from any ruling or order of either commission which is claimed to conflict with one or more of the "guideposts" or other limitations and principles set forth in the applicable Directive Orders of February 20, 1945, referred to above.

IV. Each commission shall transmit regularly to the Board copies of its decisions and rulings and such additional data and reports as the Board may from time to time require.

NATIONAL WAR LABOR BOARD

DIVISION OF PUBLIC INFORMATION

PRESS RELEASE

For immediate release
Thursday, April 19, 1945

B-1963F
Textiles

(Cleared and issued through the facilities of the Office of War Information)

The National War Labor Board today released the following letter from the Director of Economic Stabilization approving the recent textile decisions:

OFFICE OF ECONOMIC STABILIZATION,
Washington, D. C., April 17, 1945.

Re: 23 Southern Cotton Textile Companies, 25 New England Cotton and Rayon Companies, 6 New York and Pennsylvania Rayon Companies, and the Textile Workers Union of America, CIO (Cases Nos. 111-5110-D, 111-6308-D, 111-5822-D, 11-2527-D, 111-7739-D, 111-4841-D, 111-6534-D, 111-4593-D, 111-6301-D, 111-7107-D, 111-7159-D, 111-8105-D).

Hon. GEORGE W. TAYLOR,
Chairman, National War Labor Board,
Department of Labor Building, Washington 25, D. C.

DEAR DR. TAYLOR: I have received a report from the Office of Price Administration with reference to the price consequences of the textile wage increases granted under the War Labor Board's Directive Orders of February 20, 1945, as supplemented by its Orders of March 13, 1945, in the above cases. Neither this Office nor the Office of Price Administration have taken into consideration the wage adjustments that may possibly result from the provision of the Board's February 20th orders which direct the parties to negotiate "a more balanced and properly aligned wage rate structure" as more specifically indicated in those

orders. If the Office of Price Administration subsequently reports that the adjustments ultimately approved or ordered by the Board in that connection will require price relief, this Office will make a final determination thereon.

The Office of Price Administration reports that the authorization of wage increases for the 54 companies involved in the wage proceedings would not in itself require an industry-wide increase in the maximum price of any of the major items which such firms produce, although some of the participating companies may become entitled to individual price adjustments. Insofar as the principles approved in the wage decisions may be applied to companies not participating in the proceedings there might likewise be cases in which the company would become entitled to an individual adjustment, but the Office of Price Administration finds that it is unlikely that individual adjustments, even if the wage increase becomes industry-wide, would materially affect the level of industry prices. Whether an extension of the wage increase generally throughout the industry would at some future time require price increases for major textile items cannot be positively determined at the present time, but the Office of Price Administration concludes that any such future price increases would be of small percentage amounts even if it could be assumed that the wage increases would result in equivalent increases in labor costs, without offset for increased productivity, and that wage increases in the amount authorized will immediately become general for all firms in the industry. It is recognized that these assumptions are in some measure contrary to fact or probability, that the War Labor Board found that the proposed wage increases would increase labor productivity, and that any improvement in labor supply would make possible increased production which would materially affect labor costs. Furthermore, the Office of Price Administration calls attention to certain offsetting factors which might so change the situation in the future that no over-all price adjustment would become necessary in any event.

A majority of the War Labor Board found the wage adjustments granted in these cases to be "clearly necessary to correct substandards of living," in accordance with Executive Order 9328, paragraph 2. Under these circumstances, I have not hesitated to approve such wage adjustments.

For the foregoing reasons, and pursuant to the provisions of title II, paragraph 2, of Executive Order 9250, the wage increases granted by the War Labor Board's Directive Orders of February 20, 1945, as supplemented by its directive Orders of March 13, 1945, in these cases are approved and may be put into effect.

I take advantage of this opportunity to call the attention of everybody concerned—management, labor organizations, and the workers themselves—to the fact that an immediate and substantial increase in the total production of textiles is of supreme importance to the stabilization program. The acute need for greater production of textile goods is of almost unique significance in its critical relation to the fight to hold the cost of living down. I believe that the decisions of the War Labor Board have laid a broad foundation for sound employee relationships and for productive employment conditions in the industry. I urge everyone to now take full advantage of this favorable situation and by concerted action to plan for and achieve higher and higher levels of textile productions.

I hope that you can convey to the interested parties the views expressed in the foregoing paragraph when you notify them that the wage adjustments may now be put into effect.

Sincerely yours,

WILLIAM H. DAVIS, *Director.*

Senator TUNNELL. Is there anyone else who would like to be heard?

Mr. POTOFSKY. Mr. Chairman, I am the general secretary-treasurer of the Amalgamated Clothing Workers of America. Miss Gladys Dickason, the director of research, Amalgamated Clothing Workers of America, has arranged the program of witnesses.

Senator TUNNELL. All right, Miss Dickason.

Miss DICKASON. I wish to present, members of the committee, Mrs. Lucille Durham, of Fayetteville, Tenn.

TESTIMONY OF MRS. LUCILLE DURHAM, AMALGAMATED CLOTHING WORKERS OF AMERICA, FAYETTEVILLE, TENN.

Senator TUNNELL. All right, Mrs. Durham. What is your work?

Mrs. DURHAM. I worked in the Blue Ridge Shirt Manufacturing Co. until I was laid off on a phone call this summer.

Senator TUNNELL. What do you do?

Mrs. DURHAM. Setting pockets on shirts.

Senator TUNNELL. How long have you worked there?

Mrs. DURHAM. I began working in the factories in 1930.

Senator TUNNELL. At what wages did you begin working in 1930?

Mrs. DURHAM. I started in at $2.50 a week.

Senator TUNNELL. Do you mean $2.50 for a 6-day week?

Mrs. DURHAM. No, sir; five.

Senator TUNNELL. Have your wages been increased?

Mrs. DURHAM. Well, I worked about 3 months at $2.50, then the plant shut up. I did not go back to work there. I got married and in 1937 I started to work in L. N. Gross & Co. in Fayetteville. That is a dress factory.

Senator ELLENDER. Do you know why the plant shut down?

Mrs. DURHAM. I think they went bankrupt. I won't say that for sure, because I don't remember.

Senator TUNNELL. Probably it was the high wages.

Mrs. DURHAM. I have been told that several lost money in it. I started working for the dress factory in 1937.

Senator TUNNELL. How many hours a day? What did you get there?

Mrs. DURHAM. Eight. I worked for 6 weeks on a 5-day week for a dollar a day. They raised me a quarter and I worked 6 weeks longer for $1.25. Then they raised me to $1.75. I worked 6 weeks for $1.75, and then they raised me to $2, and Mr. Gross came down from Cleveland and said if we did not go on piecework he was going to close the plant. We went on piecework and I could make more on piecework than the $2 a day. Then, when they found out that the hands could make more working like that, they began to cut down on the piecework rates. They moved from one thing to another so that we made just $2 each day we worked. I worked there along until the first of 1940 and then the plant shut down, or, anyway, it closed down for the lack of work, and I was off a few months, and then I went back.

Senator ELLENDER. Why did it close down?

Mrs. DURHAM. Lack of work, they said; they could not get the material.

Senator ELLENDER. Oh.

Mrs. DURHAM. Then, I went back and worked 2 months and then I was off again, on account of lack of material. Then, I went to the Blue Ridge shirt factory and went to work. I started in there at 25 cents an hour.

Senator TUNNELL. Twenty-five cents an hour?

Mrs. DURHAM. That is right.

Senator TUNNELL. When was that?

Mrs. DURHAM. In 1941. I worked, I think it was 6 weeks before I got 32 cents—I think it was; I think they raised it from 25 to 32, but

I won't say for sure. Then, I worked until the night shift was laid off, and I went back to the L. N. Gross & Co., and worked awhile there. In 1942, if I am not mistaken, we got 40 cents an hour, and I worked there until we got short of work and I was laid off, and I went back to the shirt plant to work, because I have three children to support.

Senator TUNNELL. How many?

Mrs. DURHAM. Three. I went back to work at 40 cents an hour, and I worked for 40 cents an hour, which is all I ever got.

Senator TUNNELL. Are you and your husband living together?

Mrs. DURHAM. My husband is dead.

Senator TUNNELL. And you have three children to support?

Mrs. DURHAM. Yes.

Senator TUNNELL. You get 40 cents an hour; how many hours a week do you work?

Mrs. DURHAM. Forty.

Senator TUNNELL. That is $16. Do you have your own home, or do you rent?

Mrs. DURHAM. I rent two small rooms in what has been a barn and made into a dwelling house now.

Senator TUNNELL. Did they change it?

Mrs. DURHAM. I think they just floored it, that is all.

Senator TUNNELL. You have two small rooms in a barn?

Mrs. DURHAM. Yes.

Senator TUNNELL. Are there other apartments in the rest of the building?

Mrs. DURHAM. Yes, sir; it is made into a six-room apartment house.

Senator TUNNELL. That is, six 2-room apartments?

Mrs. DURHAM. No; three families live there; two rooms each.

Senator TUNNELL. What rent do you pay?

Mrs. DURHAM. $1.50 per week.

Senator TUNNELL. That leaves you about $14.50 after you pay your rent?

Mrs. DURHAM. Well, when they get through taking out on my check, I only have $15.64 left.

Senator TUNNELL. Then you pay $1.50 out of $15.64?

Mrs. DURHAM. Yes, sir.

Senator TUNNELL. That leaves $14.14.

Mrs. DURHAM. I haven't got figures on it. I can't tell you how much is left.

Senator TUNNELL. Well, can you support yourself and three children on that?

Mrs. DURHAM. No, sir, I certainly can't.

Miss DICKASON. May I ask the witness some questions?

Senator TUNNELL. Go ahead.

Miss DICKASON. In the first place, will you tell the members of the committee how far you went in school?

Mrs. DURHAM. I got to the sixth grade. I had got started in it. My mother died. She left four babies. She left one 4 weeks old, one 6 years, and she left one 2 years, and I was the oldest, and I had to stay home and take care of them.

Miss DICKASON. How old were you then?

Mrs. DURHAM. Eleven.

Miss DICKASON. How old were you when you started working in the factory?

Mrs. DURHAM. I was near 14, but I told them I was 16, to get the work.

Senator TUNNELL. You say you do not get enough to live on. Now, how much do you think you would need to live decently?

Mrs. DURHAM. Well, several things.

Senator TUNNELL. All right, tell us.

Mrs. DURHAM. If you cooked beans and potatoes, and things like that, every day, would you call that living?

Senator TUNNELL. I am trying to find out what the condition is. I am not saying that it is right.

Mrs. DURHAM. I cannot have any clothes for my children. We had to cut down on the food we got.

Miss DICKASON. Where do you get your children's clothes?

Mrs. DURHAM. My brother and my daddy give me all their clothes and I make them over.

Miss DICKASON. Do you make the suits for them yourself?

Mrs. DURHAM. Yes, ma'am.

Miss DICKASON. Where did you get the dress you have got on?

Mrs. DURHAM. I made it.

Miss DICKASON. How much did that dress cost you?

Mrs. DURHAM. $3.

Miss DICKASON. So, you make your boys' clothes out of the old clothes that your father and your brother give you?

Mrs. DURHAM. Yes, ma'am.

Mrs. DICKASON. How old are your boys?

Mrs. DURHAM. I have one that will be 14 in December, and one will be 12 Sunday, and I have one 10 the 29th of November.

Miss DICKASON. Are all three of your boys in school?

Mrs. DURHAM. No; my oldest boy works for the Pure Milk Co. in Fayetteville at 75 cents a day. He has been out of school 2 years.

Miss DICKASON. Why did you take him out of school?

Mrs. DURHAM. Because I could not afford it.

Miss DICKASON. When did your husband die?

Mrs. DURHAM. The 8th of January this year. He was unable to work 3 years.

Miss DICKASON. Your husband was sick and you had to take your boy out of school and he went to work and was making 75 cents a day?

Mrs. DURHAM. Yes, ma'am.

Miss DICKASON. How much a week does he make?

Mrs. DURHAM. $5.

Miss DICKASON. What does he do with his money?

Mrs. DURHAM. He takes it and keeps himself in clothes, shoes, and things he has to have, and helps me with the other two children.

Miss DICKASON. You let him keep his money, but he buys clothes for himself, shoes, and things for the other children?

Mrs. DURHAM. No; I don't let him keep his money always. If we need coal or food I take it from him.

Miss DICKASON. Do your other boys do anything to help you out?

Mrs. DURHAM. I have one that has taken a paper route a week ago. He gets $1.50 a week.

Miss DICKASON. Did either of the boys work during the summer?

Mrs. DURHAM. I had one to pick apples in the summer to buy his school clothes.

Miss DICKASON. Your boy that gets $1.50 for the paper route, what does he do with that $1.50?

Mrs. DURHAM. Well, I let him buy shoestrings, toothbrushes, toothpaste, or whatever he needs, and let him have show fare, which is 12 cents, on Saturday.

Miss DICKASON. You said you do not like to eat potatoes and beans all the time. Do you ever buy any oranges?

Mrs. DURHAM. No, ma'am. There are very few that I ever get.

Miss DICKASON. When do you get those?

Mrs. DURHAM. Mostly Christmas.

Senator TUNNELL. How about milk?

Mrs. DURHAM. I do try to get 2 quarts of milk a day for my children.

Senator TUNNELL. What does that cost you?

Mrs. DURHAM. Buttermilk, 9 cents; and sweet milk, 15 cents.

Senator TUNNELL. 15 cents a quart?

Mrs. DURHAM. Yes.

Senator TUNNELL. You get one of each?

Mrs. DURHAM. Yes, sir.

Miss DICKASON. How much does your food cost you a week for what you do buy?

Mrs. DURHAM. My grocery bill runs around $12 a week.

Miss DICKASON. Your rent is $1.50?

Mrs. DURHAM. Yes, ma'am.

Miss DICKASON. Do you carry any insurance?

Mrs. DURHAM. Yes, ma'am.

Miss DICKASON. Tell us about that, will you?

Mrs. DURHAM. I carry burial insurance.

Miss DICKASON. How much does that cost you?

Mrs. DURHAM. It costs me 25 cents every 3 months, for the four of us.

Miss DICKASON. When your husband died this spring, he being sick for a while, you received this insurance because you had been carrying it for him?

Mrs. DURHAM. Yes, ma'am.

Miss DICKASON. While you were working and taking care of your husband, were you out of debt, or how did you make out?

Mrs. DURHAM. Well, the insurance I carried on him took care of putting him away, part of the doctor bills and medicine, but I am still in debt for part of it.

Senator TUNNELL. Did not you say you had burial insurance?

Mrs. DURHAM. Yes, sir, just $100.

Senator TUNNELL. Did you have it on your husband?

Mrs. DURHAM. Yes, sir.

Senator TUNNELL. That is 25 cents for every 3 months.

Mrs. DURHAM. Yes, sir.

Senator TUNNELL. You are not out of debt now, then?

Mrs. DURHAM. No, sir, and I don't expect to be at 40 cents an hour.

Miss DICKASON. You said you worked on the night shift. What hours did you work?

Mrs. DURHAM. I worked from 3 to 11.

Miss DICKASON. You worked from 3 to 11 at night?

Mrs. DURHAM. Yes, ma'am.

Miss DICKASON. What time did you get home and get to bed?

Mrs. DURHAM. Well, I lived out in the country, and I got home around 2 o'clock if we had no trouble. I would walk home.

Miss DICKASON. You got home at 2 o'clock in the morning?

Mrs. DURHAM. Yes.

Miss DICKASON. Did you have somebody taking care of the children, or did you take care of them?

Mrs. DURHAM. I was taking care of them and leaving them with my husband's aunt while I worked. I did all my house work, washing and ironing, keeping them in school.

Miss DICKASON. So, you don't send any laundry out?

Mrs. DURHAM. No.

Miss DICKASON. Even though you work a full day in the factory, you do your own washing?

Mrs. DURHAM. That is right.

Miss DICKASON. What kind of stove do you have?

Mrs. DURHAM. It is just a small oil stove, three burners.

Miss DICKASON. That is, a kerosene stove?

Mrs. DURHAM. Yes.

Miss DICKASON. Where do you get the water you use?

Mrs. DURHAM. Outside of the house; out of the hydrant.

Miss DICKASON. To wash your clothes, to scrub the floors, and for the boys taking baths, how do you get hot water?

Mrs. DURHAM. I heat it on the stove and give them a bath in the big, round washtub.

Miss DICKASON. You carry it in from the outside and heat it on the stove?

Mrs. DURHAM. That is right.

Miss DICKASON. Have you had any sickness in your family? Have you had to go to the doctor any during the last year or two?

Mrs. DURHAM. Well, my husband had been sick for over 3 years.

Miss DICKASON. And he went to the doctor?

Mrs. DURHAM. Yes, and I had medicine to take care of, and my children, they got sick and I had to take them to the doctor. I am out quite a bit for doctor bills and medicine.

Miss DICKASON. You said a while ago that the boy that worked and earned $5 a week bought shoes for the other boys. When I used to live down in Oklahoma we all went barefoot. Tell me how it happens that you buy shoes for your boy.

Mrs. DURHAM. Well, I started one of my children barefooted, and he stuck a piece of glass in his foot. I thought it was all out, and then in January the next year the glass worked out the top of his foot. I had to carry him to the doctor and have it pulled out. I figured my doctor bill was costing me more than a pair of shoes to go to school in.

Senator TUNNELL. My father said that to me. He said it didn't pay.

Miss DICKASON. How many times did you take this boy to the doctor when he had this piece of glass in his foot that came out at the top a year later?

Mrs. DURHAM. I just carried him to the doctor one time, and he gave me medicine when it came out.

Miss DICKASON. Then, the boy's foot was sore and you took care of him yourself after that?

Mrs. DURHAM. Yes; that is right.

Miss DICKASON. Did one of your boys carry papers, either one of your little boys, younger boys—carry papers any time before?

Mrs. DURHAM. Yes, ma'am. I had two that were very small, 3 years ago, that started on the paper route, the Tennessean and Banner, they carried them every morning before they went to school and in the afternoon when they came back, one would carry on one side of the street and the other would carry on the other side.

Miss DICKASON. Why did not they keep on carrying the papers, then?

Mrs. DURHAM. Well, they got $4 for the two routes, $4 a week.

Miss DICHASON. That was $2 apiece?

Mrs. DURHAM. $2 apiece a week.

One of them got sick, almost had pneumonia, and I had to put out a big doctor bill, and I said their paper route wasn't paying them enough to keep them in shoes and to pay the doctor bill.

Miss DICKASON. What do you read? Do you get a chance to read anything?

Mrs. DURHAM. I see the Banner, the Tennessean, the Household Times, and a few magazines.

Miss DICKASON. Do you buy those magazines?

Mrs. DURHAM. No; my friends pass them around to me.

Senator TUNNELL. You can read, can't you? You went through the fifth grade?

Mrs. DURHAM. Yes, sir.

Senator TUNNELL. You have probably improved some in reading since.

Mrs. DURHAM. Well, I don't have so very much time, but every time I get a chance I generally pick me up something to look at.

Senator TUNNELL. Is that all?

Miss DICKASON. Just one final question.

Your boy that is 14, is he going to go back to school this fall?

Mrs. DURHAM. I am not able to keep him in school. He has got to stay out and work to help me. He will start back if I get enough to keep him in school. I will be glad for him to start back, but like it is I can't.

Senator TUNNELL. What grade is he in?

Mrs. DURHAM. He is in the sixth. He has been out 2 years.

Miss DICKASON. I think that is all. Do you have anything else you would like to say to the Senators, to the committee?

Mrs. DURHAM. Yes. I kept my smallest child out of school 2 years because the health doctor said he was weak-eyed, and I was unable to buy him glasses, and they didn't let him start to school until he was 7. I started all three at 5, because I was working. The schools weren't crowded and they said they would let him go. My baby went about 3 months and they stopped him on account of being weak-eyed, and they kept him out over 2 years and then he went back.

Senator TUNNELL. Does he have glasses now?

Mrs. DURHAM. No, sir; I haven't been able to get them. Every once in a while he stays out of school on account of his eyes being weak.

Miss DICKASON. Is there anying else you would like to say?

Mrs. DURHAM. I carried him to the doctor and asked him to fix him up. He told me if I had $15 to pay down and $5 a week he would. I, myself, have lost 15 pounds since I was laid off this summer on a phone call. I was laid off because I joined the union to try to get better conditions. I had to borrow money then until finally the company gave me a separation slip so that I could get unemployment compensation.

Miss DICKASON. Will you tell us your age, please?

Mrs. DURHAM. Thirty-one.

Senator TUNNELL. All right, thank you.

Do you have any other witnesses?

Miss DICKASON. Mrs. Dorothy Fizz of Pottstown, Pa.

TESTIMONY OF MRS. DOROTHY FIZZ, AMALGAMATED CLOTHING WORKERS OF AMERICA, POTTSTOWN, PA.

Mrs. FIZZ. My name is Mrs. Dorothy Fizz, Pottstown, Pa.

Senator TUNNELL. What is your work?

Mrs. FIZZ. I work in a shirt factory.

Senator TUNNELL. How long have you worked there?

Mrs. FIZZ. Nine years.

Senator TUNNELL. How much did you start to work at?

Mrs. FIZZ. When I started to work I was making $16 per week.

Senator TUNNELL. What are you making now?

Mrs. FIZZ. Now, I am making $26 a week.

Senator TUNNELL. How may hours do you work?

Mrs. FIZZ. Forty hours a week.

Senator TUNNELL. Then, you are getting 65 cents an hour?

Mrs. FIZZ. I am.

Senator TUNNELL. Do you have a family of your own?

Mrs. FIZZ. Yes; I do. My husband and I have one boy at home and I also have one in the service overseas. My husband has been sick a year in August; he is not able to work.

Senator TUNNELL. He is not able to work?

Mrs. FIZZ. No.

Senator TUNNELL. Do you own your own home?

Mrs. FIZZ. No; we rent it.

Senator TUNNELL. What rent do you pay?

Mrs. FIZZ. $22 a month.

Senator TUNNELL. What was your husband's work?

Mrs. FIZZ. He was a truck driver.

Senator TUNNELL. How long has he been out of work?

Mrs. FIZZ. A year on August 2.

Senator TUNNELL. August 2?

Mrs. FIZZ. Yes; it was 1 year.

Senator TUNNELL. Is your husband likely to recover?

Mrs. FIZZ. Well, he is getting better, but there is no chance for him to be able to go back to work. He still reports to the hospital every Saturday for treatment, and that must be paid or they don't give him the treatments.

Senator TUNNELL. If this bill were passed, it would not help you?

Mrs. FIZZ. No; but I would feel secure that my wage would not be lowered on me, because I can hardly get along. I have no way of knowing how I can get any coal in the winter to heat in my kitchen. I don't heat my bedrooms at any time.

Senator TUNNELL. Do you use your kitchen for a living room?

Mrs. FIZZ. Yes; in the wintertime.

Senator TUNNELL. Your husband stays in your home?

Mrs. FIZZ. Yes. He was in the hospital for 4 months, and I had to cash in on the war bonds I had been able to get before he was taken sick, but I had to cash that in, to pay his hospital bill, and for his medical care.

Senator TUNNELL. Have you any war bonds now?

Mrs. FIZZ. No; I have none whatsoever now, I had to cash them in.

Senator TUNNELL. Have you any other income?

Mrs. FIZZ. No.

Senator TUNNELL. What size home do you have?

Mrs. FIZZ. A 5-room house.

Senator TUNNELL. Furnished?

Mrs. FIZZ. Yes.

Senator TUNNELL. Your own furniture?

Mrs. FIZZ. Yes.

Senator TUNNELL. How many years have you been married?

Mrs. FIZZ. 22 years.

Senator TUNNELL. What was your husband getting before his health failed?

Mrs. FIZZ. He was getting $35 a week.

Senator TUNNELL. Did you work at that time?

Mrs. FIZZ. I wasn't working until I started to work 9 years ago, I had to go to work because we had a lot of bills, grocery bills, doctor bills. I have three children altogether. We had so many expenses and bills that I had to go to work to help pay them off. I now have a doctor bill of $35 standing, and I do not know how I am going to pay it.

Miss DICKASON. You have a son who has returned from overseas, haven't you?

Mrs. FIZZ. Yes; I have a son that was discharged 2 years in August. He has malarial fever, shell shock, and he had his spine injured.

Miss DICKASON. Where was he overseas?

Mrs. FIZZ. He served on Guadalcanal with the marines, and in both the Red Sea and the Coral Sea.

Miss DICKASON. Can he work regularly now?

Mrs. FIZZ. No; he cannot.

Miss DICKASON. Is he married?

Mrs. FIZZ. Yes; he is married and has a small baby.

Miss DICKASON. Do they ever bring the baby over to your house to eat?

Mrs. FIZZ. Yes; because they don't have anything half the time themselves. They live with her mother who is a widow and unable to work, and she has a small child, so they go between the two to get something to eat.

Senator ELLENDER. Does he get any allotment from the Government?

Mrs. FIZZ. He gets $23 a month. You know how far that goes for three people. He works when he can.

Miss DICKASON. You said the reason you were here, since you were making 65 cents an hour, is because you think if this bill were passed your wages would not be reduced, but that you cannot get along on what you are getting now. Is there any reason that makes you think that your wages might go down any lower if the bill were not passed? Do you remember any time when there was any wage reduction in your plant?

Mrs. FIZZ. Yes; we did have a wage reduction.

Miss DICKASON. Do you remember when that was?

Mrs. FIZZ. Yes. Early in 1938 before the minimum wage law.

Miss DICKASON. So that is why you are here, because you remember the wage reduction when there was not a minimum wage law?

Mrs. FIZZ. That is right.

Miss DICKASON. Is there anything else?

Mrs. FIZZ. No; that is all I have.

Senator TUNNELL. All right; thank you.

We will convene again Tuesday morning at 10 o'clock.

(Whereupon, at 12:05 p. m., a recess was taken until 10 a. m., Tuesday, October 2, 1945.)

AMENDMENT OF FAIR LABOR STANDARDS ACT

TUESDAY, OCTOBER 2, 1945

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON EDUCATION AND LABOR,
Washington, D. C.

The subcommittee met, pursuant to adjournment, at 10 a. m., in room 357, Senate Office Building, Senator James M. Tunnell presiding.

Present: Senators Tunnell, Aiken, Ellender, La Follette, and Smith.

Also present: Charles Kramer, consultant to the committee.

Senator TUNNELL. The committee will be in order.

Mr. Hines, are you now ready to proceed?

Mr. HINES. Yes, sir.

TESTIMONY OF LEWIS G. HINES, LEGISLATIVE REPRESENTATIVE OF THE AMERICAN FEDERATION OF LABOR

Senator TUNNELL. All right, Mr. Hines, you may give your name and position.

Mr. HINES. My name is Lewis G. Hines. I am legislative representative of the American Federation of Labor.

I might say, Mr. Chairman, that I am here representing President Green today due to the fact that he was unable to get here. He appeared before the committee on two previous occasions.

Senator TUNNELL. There was something of a misunderstanding about that and I might state a hearing had been fixed for some people who had been present 2 or 3 days before. I want it understood there was just a misunderstanding.

Mr. HINES. I hope that is the case because while Mr. Green did not mention the fact, some of our people felt he was being slighted and had been set aside by the committee in preference to some other people.

Senator TUNNELL. It was not even known to the committee that he was supposed to testify. I will say that to you Mr. Hines. I received a statement that he was to testify after there was a public announcement that he was to testify. There was no attempt to slight him and we all regret the misunderstanding.

Mr. HINES. I am here today to present the views of the American Federation of Labor. My statement is as follows:

For 65 years the American Federation of Labor has maintained the right of a worker to a fair wage as compensation for work done, in order that he and his family might have decent and healthful standards—the foundation of national welfare.

We have constantly stood for justice and prosperity for workers as an integral element in national prosperity. It has taken a long time

to convince those in authority that national welfare and progress result from integrating efforts to raise standards of living for all groups of citizens. No one group in our economy can enjoy sustained prosperity unless other groups are proportionately prosperous. Integrated prosperity is the key to full employment toward which we hope to move. We must raise standards for the lower-paid workers as well as those who set new goals.

The normal index to wage-earning prosperity is the hourly wage rate. Wage rates should increase with increased productivity and ability of management to pay. Due to wartime policies which the administration adopted to control inflation, hourly wage rates have been frozen during the war. The result was that collective bargaining itself was frozen—the workers' agency for industrial justice. Overtime and other expedients to increase weekly earnings were introduced to compensate for declining purchasing power of dollars. Workers who sharply increased their productivity were denied earned increases in wage rates. The Executive order following the VJ-day permits collective bargaining to overcome as much of this differential as is possible within current prices. We cannot fully regain collective bargaining until we overcome production scarcities.

The United States is sorely in need of a national wage policy in keeping with the economic power which this Nation wields. Whatever policy prevails here will influence wage policies in all other countries. The American Federation of Labor intends to maintain its traditional high-wage policy. We produce goods and services in amounts that permit high wages to be paid and we seek opportunities to increase our contributions to efficient production.

The American Federation of Labor holds that our traditional high-wage policy is the keystone to balance in an economy attempting to maintain maximum production with maximum employment. High wages will make available to the masses of the people higher material standards of living and comfort.

Some workers and some managements in the United States have enjoyed the highest national standards of living in the world. Our next step is to set new minimum standards and thus raise the whole economy to higher levels. A nation that leads the world in research and in technical application of scientific progress should also lead in making the benefits of technical progress available to its citizens for better living.

Our main dependence for making our high-wage policy effective for all workers is collective bargaining. Collective bargaining is accepted public policy. We have given the same status to Federal legislation fixing minimum standards which facilitate collective bargaining. Now that practically all industrial groups realize moral responsibility for providing opportunity for work for all who are willing and seeking jobs, we must realine our policies and procedure to further the objectives of full employment. The first step in that direction is reexamination of basic wage rates and minimum standards.

Why should we ask for a 65 cents minimum wage now? Because it is one of the most fundamental parts of our national effort for full employment based on full production. As Government officials and leaders of private industry have repeatedly pointed out, our national

prosperity in the years ahead can only be based on a high standard of living. Industry cannot find a market for the goods it will produce at full capacity operation unless workers can buy. Wage and salaried workers buy 75 percent of all goods and services sold to consumers of the United States, and our mines and factories, farms, and transport systems, stores and service industries depend more on the buying power of wage earners than on that of any other group.

To raise the lowest paid workers up to create the necessary market for American industry: Workers receiving 65 cents an hour or $26 for a 40-hour week spend all the income they receive for the products of American farms and industries. At this living level workers need their entire income for living expenses. They cannot afford to save any significant part of their income—therefore any increase in their wages is "live money"—money spent at once for food from farms, clothing and house furnishings from stores and factories. At this level practically 100 percent of the wage increase is spent, while at higher income levels a portion is saved and does not go immediately for the purchase of goods and services.

A second important reason why we must set this 65-cent minimum now is that it represents a basic floor for living standards below which we dare not permit our American economy to fall. This 65-cent minimum is necessary today to accomplish the purpose set forth by Congress when the Fair Labor Standards Act was passed in October 1938. At today's prices a man cannot possibly support a typical family of four at even a minimum of subsistence on 65 cents. And when Congress passed the act in 1938 its purpose was to provide the minimum of subsistence so that every American might at least have the bare essentials of food, clothing, and shelter. But a minimum subsistence budget for a family of four requires a wage of 87 cents an hour for a 40-hour week at today's prices, according to the Labor Department's maintenance budget. That is, the 65-cent minimum is 22 cents below even the Labor Department's bare-subsistence budget; it provides only three-quarters of an estimate of minimum living.

What kind of a living then will the 65 cents provide? On such a wage, a worker's family of four can buy only three-fourths of the food necessary for a minimum adequate diet as calculated by the United States Department of Agriculture. This means that the father of the family, a man at active work, can have only a very small serving of meat, fish, or poultry for one meal on 6 of the 7 days in the week. He cannot buy even his full meat ration under present quotas of ration tickets; he has at least one meatless day during the week. The family cannot buy enough green vegetables and citrus fruits to give them the necessary vitamins. They cannot buy enough protective foods to maintain bodily health.

What of the house they may call a home? It may cost them only $20 a month in rent. And a house rented at so low a figure in these days will probably either be in need of repair or will provide only the most crowded quarters.

What of clothes? The father of the family can afford one overcoat in 5 years. His street suit must last 3 years—and he has only one. He can buy only three cotton shirts a year. For his wife, he can afford a heavy coat once in 4 or 5 years. And she must make out on three dresses a year, including house dresses, street dresses, and all clothing

for church or other occasions. With such meager clothing she cannot take her rightful place in the life of her community. The worker's growing boy must make out on one cotton suit per year, and one pair of slacks with two blouses. His wool suit must last 4 years. When this must supply his need for school and for play, for winter and for summer, can it be called a minimum of decency for a growing boy? The above figures are from the United States Department of Labor.

This is all that a wage of 65 cents provides. Is it too much to ask in a country with the greatest productive capacity in the world? And if we fail to provide this 65-cent minimum, wages may be driven down so that hundreds of thousands of families will have much less than this to live on.

American industry is able to produce at least a 65-cent living standard for every American, and a far higher standard for the vast majority of American workers. The thing we want to accomplish with this bill is to see that American workers actually receive the bare minimum.

During the war we have made great progress in raising the minimum wage. Starting with 40 cents, the minimum was lifted to 50 cents through the War Labor Board action, then to 55 cents. Meanwhile industry itself raised its minimums so that today the vast majority of our factory workers are already receiving far more than 65 cents an hour. Labor Department figures for the summer of 1945 show that 80 percent of all factory workers are today getting 65 cents or more per hour. Those who still receive 65 cents or less form a very small percentage indeed in most plants, so that it will not create a great burden for the plants to raise their minimum wage.

Another vital reason why we need this minimum now is to hold the standards we have gained during the war. It has been our national policy, both for war and for reconversion, to prevent wage reductions. Now we find that some chiseling employers are using the reconversion period to attempt to force wages down, whether by actual wage reductions or by reclassifications. To establish this minimum is to stop the chiselers and to lay the foundation for the high wage, high production, and high employment economy which alone can preserve our American way of life in the years ahead.

Why have American industries paid the highest wages in the world for the last century? Why will American industries be able to meet this 65-cent minimum in the months and years ahead? It is because American workers have the highest productivity of any workers in the world. Our productivity per hour of factory work in this country before the war was three times that of Britain and Russia, more than 140 percent above the efficient plants of Hitler's Germany, and four times the productivity of Japanese factory workers. During the war we have immensely increased productivity, and today we exceed other countries by an even higher figure.

Throughout the last half century the amazing increase in American workers' productivity has steadily flooded the market with more and more products and services for consumers at lower and lower prices. And steadily rising wages have created a market to buy those products. Take, for instance, the experience of the industry making electric refrigerators. In 1928 the early refrigerators sold for $400 each. In 1942, just before production was stopped, a better refrigerator sold for $150 or less, and the wages of refrigerator workers advanced steadily in that 14-year period. The price of an auto tire has been cut by 75 percent through increased productiviity, but today's tires give 40 times the service of the tires used a quarter century ago. And hourly wage rates of tiremakers have more than doubled in the last 13 years.

These are only two examples of a process that goes on steadily year by year, throughout American industry. Productivity increases, wages rise, prices fall, and the quality of the product improves. A few figures for industry in general will give you a historical picture of this dynamic force of increasing productivity.

From 1923 to 1940, in American manufacturing industries as a whole production per man-hour rose 83 percent. Wholesale prices of the products produced by the factory workers actually declined by 18 percent, while "real" hourly wages of the workers rose 49 percent. And employers continued to make satisfactory profits.

This is a striking example of increasing wages while prices declined. This rising productivity is the genius of our American competitive system. But the system cannot function and will not function unless wages rise enough to create a market for the ever-increasing stream of consumer goods produced. The depression of the 1930's showed only too well what happens when workers' buying power fails to keep pace with their power to produce.

We look forward to immense increases in productivity in the years just ahead. Experts estimate that in the next 3 years production per man-hour will increase 30 percent in American factories. Replacement of worn-out machinery, installation of new techniques and new machines developed during the war, will enable the average factory worker to produce nearly one-third more than he does today—and this amazing gain will take place in the short period of 3 years.

With such advances in prospect, a minimum so low as 65 cents an hour will soon be out of date. There is no question that manufacturers who have the ability typical of our American industrialists can pay this wage.

If we permit workers to receive minimum wages of less than 65 cents an hour, who will buy the products which are going to pour from our factories as production and productivity increase? How will workers be able to buy enough radios, furniture, refrigerators, and other household equipment, automobiles, and other products to keep the wheels of industry in motion?

We must plan now for our postwar market. Fixing a floor of 65 cents under wages will set the stage for maintenance and improvement of wages so that workers' buying power will rise to create a demand for industry's goods. To increase wages now throughout industry, up to industry's ability to pay, is a first requirement in our efforts for full production and full employment. Labor Department figures show that at today's wage levels workers' buying power will fall short by some 9 billion of the amount necessary to sustain full employment.

If we fail to fill this gap, if we do not make up this shortage, then we risk a business depression as soon as workers' savings and employers' reserves are exhausted. Workers must have decent wages or they cannot afford to spend their savings or to become adequate buyers of industry's products in the future.

An important added protection to workers is contained in section 12 of S. 1349 pertaining to child labor. The American Federation of Labor has consistently been opposed to the exploitation of children.

The Supreme Court decision in regard to the Western Union case distinguished between commerce and the production of goods for commerce. After that decision there was a considerable increase in the employment of children by that company. We urge that children be given this additional protection against exploitation by coverage of industries engaged in commerce as well as those producing goods for commerce.

We recommend the following changes in S. 1349:

1. Eliminate all provisions in the proposed bill designed to establish by a wage order of the Government specific rates of pay for is to eliminate substandard labor conditions. Its wage provisions are designed to establish a minimum wage standard. It was the job classifications above the minimum.

The basis of the Fair Labor Standards Act, in intent and in law, express purpose of Congress in enacting the Fair Labor Standards Act of 1938 to establish a floor under wages. It is the proper prerogative of the Federal Government to make certain that the channels and instrumentalities of interstate commerce are closed to unfair competition, unfair because the competitive advantage is the advantage of the substandard wage. Congress said, in effect, that those who compete with goods made at substandard pay, engage in "an unfair and unconscionable method of competition in commerce," that they gain and profit by trading in the undermined health and stunted lives of workers whose pay is driven below the level necessary to maintain decent and healthful living. To safeguard "the maintenance of minimum standards of living necessary for health, efficiency, and general well-being of workers" is and should continue to be the controlling purpose of the minimum wage regulation.

Detailed Government regulation of wages above the minimum is foreign to that purpose. It constitutes an invasion by the Government of the domain of free and voluntary collective bargaining between labor and management. It injects the Government into the areas of detailed determination of wage standards above and beyond the minimum.

Minimum wage regulation is essential to prevent the development of a downward spiral of wages under pressure of unfair wage competition. Enforcement of such a minimum wage is vital not only to the maintenance of the standard of living, but also the protection of the entire economy of the Nation against the ravages of unchecked deflation of all wages, with the drain upon the buying power of the mass of the wage earners. Detailed regulation of wages above the minimum is not a part of the protective exercise of the Federal powers to safeguard the standards of minimum welfare of the workers and the integrity of the whole economy against unfair competition.

We ask that all provisions relating to the establishment of wage differentials above the minmum be stricken from the bill as indicated specifically in appendix A.

At the same time, it is important to stress that the increase in the minimum rates of pay, either directly by statute or by wage order, is bound to create a downward pressure upon wages above the minimum. Experience of minimum wage regulation in the past has demonstrated the tendency of the minimum becoming the maximum. A safeguard against the reduction of wages and the reduction in the

relative standard between the minimum wages and the wages above the minimum is imperative to prevent a dislocation in the entire wage structure. We therefore recommend that the following safeguard be embodied in the bill to make certain that the relative standard between the minimum wage and the wages above the minimum be fully enforced in the administration of the law:

> No employer shall reduce the relative standard of compensation between the minimum wage and any wage or salary rate above the minimum because of the application of any minimum wage requirement of this act.

2. Minimum wage differentials for products or other subdivisions within an industry should be eliminated.

The entire administrative experience of the Wage and Hour Division to date has demonstrated that the provision of section 8 (c), requiring industry committees to set up subdivisions within one industry in order to establish different minimum wages for each subdivision of the same industry, is without warrant and should be eliminated.

This provision has served as a basis for setting up minimum wage differentials for different products in the same industry. When the initial industry committees were convened, they spent much time in determining minimum rates for one product of the industry differing by as little as 1 cent or even a half a cent from the rate set for another product in the same industry. When industry committees for these same industries were later reconvened, such classifications establishing wage differentials for different products were gradually eliminated. In one industry after another the wage classifications were eventually consolidated. A universally minimum rate of 40 cents was finally reached by all industry committees.

Past experience has proved the procedure of setting up industry classifications or subdivisions to be without any positive justification and administratively wasteful. It also has shown that many industry classifications brought about minimum wage differentials wholly artificial in character, provided solely because of the requirement of the act and for no substantive reason. We, therefore, recommend that section 8 (c) be amended to eliminate all reference to subdivisions and classifications for the purpose of minimum wage determination within one industry.

3. The basis on which minimum wages are determined by industry committees and the Administrator should be clarified.

Section 8 (c) of the act now contains an indirect requirement that living costs, production costs, and wages established for similar work by collective labor agreements, as well as other factors, be taken into account in the minimum wage determination. We ask that this requirement be made clear and direct.

It is important to spell clearly in the statute the affirmative duty of the industry committees to rely on these basic factors in the minimum wage determination: (1) the cost of living; (2) competitive conditions as affected by production and transportation costs; (3) the wages established for work of like or comparable character by collective labor agreements negotiated between the employers and the employees by representatives of their own choosing; and (4) the wages paid in work of like or comparable character by employers who voluntarily maintain minimum wage standards in the industry. All safeguards now contained in the act to make certain that no minimum wage rate is fixed

solely on a regional basis and that no wage differentials are permitted on the basis of age or sex must be retained in the statute.

4. Exemption of learners, apprentices, and messengers from the minimum wage should be eliminated.

Section 14 of the act requires exemption from the minimum rate of learners, apprentices, and messengers, as well as handicapped workers, under a system of special exemption certificates. We ask that the exemption of learners, apprentices, and messengers from the benefits of the minimum rate be eliminated as inconsistent with the basic purpose of the minimum wage policy of the act.

The minimum wage prescribed by the act must mean what it says: It should be an absolute minimum permitted in employment covered by the act. By definition, this minimum applies to the wages paid to the unskilled workers. Workers who have acquired skill and experience in performing work more exacting than unskilled labor are entitled to pay higher than the minimum.

This means that hiring rate or entrance rate should not begin at a standard lower than the minimum standard if the express purpose of the act is to be carried out. Learners engaged in productive work are entitled to compensation not lower than the minimum rate. In the case of apprentices, while it is an established practice to fix compensation during the period of apprenticeship at a rate lower than the skill classification to which a worker is being apprenticed, such compensation is related directly to the standard of pay established for that particular skill and not the minimum pay in the plant or establishment. The apprentice, as well as any other employee, must maintain his livelihood during the period of apprenticeship, and is entitled to compensation at a rate determined by collective bargaining and not lower than the established minimum. This minimum standard of compensation must be made equally applicable to learners, apprentices, and messengers as well as to all other unskilled workers.

Now, Mr. Chairman, we have certain suggestions here contained in the appendix referred to before, and these are amendments proposed by the American Federation of Labor to Senate bill 1349 to amend the Fair Labor Standards Act of 1938.

Senator La Follette. Mr. Chairman, may I say for the record that I have been very distressed during the meetings of this subcommittee because another subcommittee of the Education and Labor Committee has been meeting at the same time. I am very much interested in this legislation, and I hopeful we are going to conclude our work on this very important bill within a day or two.

Senator Ellender. I am also on that committe, and I agree with you, Senator.

Senator Tunnell. You may proceed, Mr. Hines

Mr. Hines. The American Federation of Labor recommends that S. 1349 be amended in the following respects:

I. New amendments: 1. Amend section 14 of the act as follows:

(1) The employment of learners, of apprentices, and of messengers employed exclusively in delivering letters and messages, under special certificates issued pursuant to regulations of the Administrator, at such wages lower than the minimum wage applicable under section 6 and subject to such limitations as to time, number, proportion, and length of service as the Administrator shall prescribe, and——

Senator Ellender. Would you mind telling us what the effect of that statement would be?

Mr. Hines. To do just what I suggested in my statement, which would take them out of the category of exempt groups and place them under minimum wage.

Senator Aiken. That means you would have a minimum wage based upon ability of the poorest worker to work?

Mr. Hines. The minimum wage prescribed by law.

Senator Ellender. But you could not base it, as Senator Aiken suggested, on the capacity of the poorest worker to produce.

As I understand, the act does not make any distinction between an efficient or an inefficient worker. They are all treated alike as far as the minimum wage is concerned.

Mr. Hines. The act merely establishes minimum rates just the same as a union contract establishes minimum rates in that contract, and the employer is privileged to pay anything he wants above the minimum rate to reward efficiency of the worker.

Senator Ellender. No matter how inefficient a man is, or if he is a cripple and cannot do a full day's work, he must receive the minimum wage fixed under this bill or else be unemployed?

Mr. Hines. That is the purpose.

Senator Ellender. What effect will that have on unemployment, in your opinion?

Mr. Hines. I don't know just what you mean by that, Senator.

Senator Ellender. Don't you know that the manufacturer will seek the employees who can give him the highest rate of production in a day's work; that is, the production of each employee will have to equal a certain minimum amount, or else he will not be employed?

Mr. Hines. That always has been, and I presume that always will be, and under the present minimum wage rates established we don't find it has increased unemployment to any measurable degree. What it will do is to set a floor below which the employer can't go.

Senator Aiken. Then in supporting this bill you maintain that the poorest worker should receive 75 cents an hour?

Mr. Hines. I don't like to use the term "poorest worker."

Senator Aiken. I don't, either, and I have been trying to think of another word. He may be a good worker but physically unable to do the work.

Mr. Hines. You will find among any group of workers some that are more inefficient than others.

Senator Aiken. I will say "least proficient."

Mr. Hines. That may be a proper term. But you will find that if a worker falls below a certain standard that the employer has set himself, that worker is eliminated from the picture. He is not employed.

Senator Aiken. If the apprentice should be eliminated from the picture, wouldn't it result in his having to pay for his education rather than being paid while learning?

Mr. Hines. We propose that the apprentice be protected by the minimum wage, but we also propose that the apprentice does not necessarily have to be paid the minimum wage; that he should be paid higher, perhaps, in proportion to what the journeyman receives in that industry.

Senator Aiken. I can see the basis for your argument.

Mr. Hines. The wage rate of an apprentice is more or less determined in accordance with what the mechanic receives, and in many

cases it would be higher than the minimum wage rates prescribed by law.

Senator AIKEN. I can see the advantage of your argument. Some employers would take advantage of the opportunity to pay apprentices less than the minimum wage——

Mr. HINES. May I digress a moment?

It has been my experience where collective bargaining did not prevail, and before we had this protective legislation, that in some big industrial plants in this country the personnel man or employment manager would go out on the street during the depression days and ask, "How many people here are willing to go to work for 15 cents an hour," and after he got his quota of 15-cent workers he would raise it to 18 cents, and then to 20 cents.

They were not concerned about the efficiency of the work, but it was the wage rate for unskilled work.

I am personally aware of many instances of that sort and we don't want to go back to it again and will not go back to it after we have set the basic minimum wage.

That plant owner who resorted to those tactics in those days today must pay a minimum wage so he does not go out and try to bargain with the starving worker on the sidewalk to come in at starvation wages.

If the cost of living has increased—and we know it has since 55 cents was established—the minimum wage ought to go to 65 cents.

Senator AIKEN. The establishment of a minimum wage did lessen that practice of securing labor for 15 cents an hour?

Mr. HINES. Definitely.

Senator AIKEN. And you claim if the amount was raised it would lessen it still more?

Mr. HINES. I think so. I think it would lessen the tendency to try to beat down wages.

Senator, you and I have something to be concerned about more important than what the worker gets. That is, whether or not our national economy is going into a tailspin. If the increased purchasing power does not help keep our economy stable, God help all of us.

Senator AIKEN. We are concerned with that, and we are also concerned with the ability of the beginner to learn a trade. That is one reason I am one of the sponsors of the vocational training bill—I thing it is No. 619.

But I don't want to get in a position where young men and women are deprived of a chance to learn.

Mr. HINES. I don't think there is any chance of that. From 1939 to 1942 I was secretary of labor and industry in Pennsylvania. We established an apprenticeship council set up in connection with the Federal Government. That is not vocational training. That is the real substantial apprenticeship training system.

We started with one employee and I think today they have perhaps 30 or 35 employees in the State of Pennsylvania. The State and Federal Government work together in perfect harmony, I might say, which is unlike many other instances.

They interested the employer in the problem of apprentices with the result that we have set up apprenticeship training systems in practically all of the basic trades, building trades, metal trades, and today we are solving that problem and today that is one of the greatest

assets we have in developing new mechanics, the cooperation between the unions, employers, and State and Federal Governments through the apprenticeship training council.

It would be well worth your while to look at that set-up.

Senator AIKEN. I won't have to look at it because we set them up in Vermont when I was Governor.

Mr. HINES. I don't think this has any bearing upon the apprenticeship system at all, none whatsoever.

Senator AIKEN. I want to get your ideas and I want to make sure when this bill is reported out that it does not permit injustices or deprive anybody of a chance to earn a living if it is possible for him to do it.

Mr. HINES. You are always going to find an employer who will tell you, "I can take a less efficient worker and use him if you will permit me to pay him lesser wages."

That is one of the things we are going to be confronted with with the handicapped veteran. Already employers have agreed to put these disabled veterans to work, but at a lower wage than customarily paid workers in that particular group, regardless of how much he produces or anything else.

For many years the employers exploited women until we forced the employer, in many instances, to give equal pay for equal work, and then that practice stopped.

Senator ELLENDER. Mr. Hines, your proposed amendment does not fix a minimum wage, as I understand it. You are simply providing that an apprentice shall receive the minimum wage fixed in the bill before us?

Mr. HINES. That is right.

Senator ELLENDER. Why is the amendment necessary since all employees must receive 65 cents on up to 75 cents after the second year?

Mr. HINES. Because the original act, as I understand it, eliminates apprentices from the application of the act, and we don't want apprentices eliminated.

It is my understanding that the original act provides this does not apply to apprentices. We want to lift them out of that category and not exempt them from the provisions of the act.

Senator ELLENDER. There is a differential made under the existing law between apprentices and workers——

Mr. HINES. Between apprentices, messenger boys, and other types of workers as I referred to in the last paragraph of my statement here.

Senator AIKEN. All through your testimony, Mr. Hines, you refer to a 65-cent minimum. Am I right in assuming that you think that should be raised during the next 2 years until it reaches 75 cents?

Mr. HINES. That is right. Now, if I may be permitted I would like to suggest further: Amend section 6 (a) of the act, page 3, lines 11 through 24 of the bill, as follows:

In line 24 change the period at the end of the section to a colon, and insert the following new language on the next line:

Provided, That no employer, with respect to any of his employees, shall reduce the relative standard of compensation between the minimum wage and any wage or salary rate above the minimum because of the application of any minimum wage requirement of this act.

Changes in amendments proposed by S. 1349: 1. Proposed new section 2 (b) of the act, page 2, lines 11–19 of the bill:

In line 13 delete "(1)." In lines 16–19, following the words "earning power", change semicolon to a period and delete:

and (2) to provide for the maintenance of reasonable wage differentials between interrelated job classifications in such industries.

In other words, get away from the idea of setting a basic rate for the industry and then have subdivisions within the industry.

Senator ELLENDER. Aren't you trampling over the rights of the unions there? What about collective bargaining?

Mr. HINES. Not in the least. The unions all have the right to negotiate.

Senator ELLENDER. As I understand, the purpose of the bill is principally to take care of unskilled labor, the product of the sweatshop, and the man who because of his employment, cannot join a union and he is not in a position to bargain collectively.

Mr. HINES. As I understand you have had witnesses before this committee here who were not unskilled and who were receiving the minimum wage now prescribed by law.

One of the Senators referred to the fact that in New Orleans there were clothing factories paying the absolutely minimum wage. Clothing workers and workers in textiles are certainly not unskilled.

I don't know what you are going to term unskilled. Even in our least skilled categories in the American Federation of Labor, we do find some skill.

Senator ELLENDER. What effect will fixing a minimum on certain skills have on your ability to bargain for union wages in the future? Will you use the minimum as a basis or what will happen?

Mr. HINES. I think it has been proven during the past several years that the law has been in effect, that it in no way interfered with or affected our ability to establish rates for workers coming under union contracts.

Senator ELLENDER. That may have been true at the time the act was passed in 1938. Many in Congress thought the 40-cent maximum was pretty low, but now some are making it so that in the third year the minimum hourly wage will be 75 cents, which is pretty close to what employers are now paying to union labor in a vast number of industries.

Mr. HINES. It depends upon what kind of union labor you are referring to.

We have rates that are considerably higher than 75 cents, and when we have a higher basic rate prescribed by law I think it will have a tendency to enable us to raise our more skilled workers to a higher level.

Senator ELLENDER. That is what I am coming to. So that by the establishment of a 75-cent hourly minimum in the third year, that will have a tendency to take all labor from the 75-cent point level and raise it in the same proportion that you are now seeking to up the wage earner now receiving minimums far below that fixed in the bill.

Mr. HINES. There won't be anything wrong with that, Senator.

Senator ELLENDER. That is what is going to happen. In addition, the bill goes a step farther and permits the classification of jobs and the adjustment of hourly rates upward from that fixed in the bill.

Mr. HINES. You know what is happening today throughout the country. Our wages have been frozen, our standards of living encroached upon by taxes and our inability to increase our wages, while the cost of living has skyrocketed.

Senator ELLENDER. The cost of living has been maintained fairly steady by OPA; hasn't it?

Mr. HINES. It has been maintained to some extent but it has gone up out of all proportion to what the worker has been able to get in the way of increases, and today you have dissatisfaction and people asking for a 30-percent increase to bring them somewhere close to the increase in the cost of living.

I again refer back to the statement I made that if the 65-, 70-, and 75-cent rate will have a tendency to raise the wages of all workers, it will increase purchasing power and increase employment.

Senator ELLENDER. And with that it is bound to increase the cost of living.

Mr. HINES. I presume the cost of living will rise slightly in some instances, but not necessarily in proportion to the wage increases.

Senator ELLENDER. Don't you know that wage increases and high costs are relative? In other words, as wages rise, so do prices of commodities in almost the same proportion?

Mr. HINES. Not necessarily. It is not relative if a worker works in an industry where huge profits are made by the owners of the industry and the owners of industry can increase their salaries by 100 percent and still pay for the difference. Don't you think that has been the case in the past in many instances?

Senator ELLENDER. I wish to admit this: The trouble has not been altogether with labor asking for higher wages. I do believe that industry has in many instances made unconscionable profits and unless industry is willing to take cuts now and make it so that we can produce goods at a cheaper figure——

Mr. HINES. And turn some of the profits into higher wages in order that the workers can purchase the things that industry produces; yes.

Senator ELLENDER. No; I would prefer to see labor retain the gains it has made during the war on its basic hourly wages, and have industry to cut its profits so as to offset the overtime pay received by labor.

Awhile ago you said, if I recall—and if I am misquoting you I want you to say so—that very few employees would be affected by this 65-cent minimum rate.

As I understood your testimony, you said that practically all employees have already reached the 65-cent minimum. Is that right?

Mr. HINES. I didn't say that.

Senator ELLENDER. What did you say?

Mr. HINES. I am trying to point out that the establishment of a 65-cent minimum would not necessarily mean that everybody gets a raise.

Senator ELLENDER. That would indicate that most of them are already receiving the 65 cents.

Mr. HINES. I wouldn't say most of them.

Senator ELLENDER. Do you know how many of them are not receiving the 65 cents minimum?

Mr. HINES. I don't have the figures and I would not want to guess at it, but I think I am safe in saying that all workers would not benefit by this directly, but they probably would indirectly.

If I am receiving 65 cents an hour, which is 10 cents above the minimum wage established by the Government for that particular industry, and the industry is raised by 10 cents, I am going to call the committee together and ask for another dime an hour and I think I will probably get it.

Senator ELLENDER. Of course, that is what is going to happen on up the line. I predict that all classifications will seek for an increase equal to that provided in the pending bill.

At this point in the record I would like to insert a short table taken from the Bureau of Labor Statistics showing the percent of employees earning less than 65 cents.

These are figures taken from the Bureau of Labor Statistics, as I have just indicated, and they indicate the percent of employees in various industries earning less than 65 cents.

(The table is as follows:)

Percent earning less than 65 cents

All manufacturing	20	Stone, clay, and glass	27
		Electrical equipment	22
Tobacco	58	Printing and publishing	21
Lumber and timber	54	Chemicals, petroleum, and coal products	16
Textiles	47		
Apparel	38	Rubber	13
Furniture	37	Nonferrous metals	8
Leather	30	Iron and steel	7
Paper	30	Machinery	4
Food	28	Transportation equipment	(1)

[1] Less than half of 1 percent.

Mr. HINES. These percentages refer to those who are receiving minimum wages now?

Senator ELLENDER. Percent of employees of certain industries now receiving less than 65 cents per hour.

Mr. HINES. I was very much interested in your reference to tobacco workers.

Won't you agree with me that if the tobacco industry diverted some of the money used for advertising purposes to the wages of the workers the economy of the country would be much better off?

Senator ELLENDER. They might not sell as much tobacco if they did that. Aside from that the newspaper publishers and radio operators must live so as to give employment. Don't you believe in advertising?

Mr. HINES. Where you have four or five big brands and spread your advertising between them trying to convince the consumer to buy one brand instead of the other, I think some of the money should be diverted to the workers.

Senator ELLENDER. Don't you believe in competition?

Mr. HINES. I believe in competition but I believe they are overdoing it when 58 percent of the workers in the tobacco industry are receiving less than 65 cents an hour.

Yet there are millions of dollars poured forth between the several large manufacturers to try to induce people to smoke this or that brand, and not one single less pack of cigarettes would be smoked if that was cut down—perhaps the workers could smoke a little more if they had better wages.

Senator ELLENDER. Suppose they made only one brand. Is that what you want? Do you think we would get as much employment as we are now having in the tobacco industry if we should not have this competition you seem to be against?

Mr. HINES. Please don't put me on the record as against competition. What I said before, Senator, you and I should be concerned about more money going into the pay envelopes of the workers to increase the purchasing power in order to buy the things we want to produce.

We have increased our productivity during the war. For instance, in the airplane industry we increased our productivity over a period of 3 or 4 years by about 300 percent due to improved techniques, new machinery and increased efficiency on the part of the workers, and in another industry when we were urged to produce in order to help with the war, we did that and invented new ways of getting things out quickly.

We are going to be confronted with technological improvements during the years to come. If we don't have money to buy those things the worker will be laid off and those things will lay in the warehouse and we will go into an era of unemployment, which, God forbid.

Senator ELLENDER. We must maintain reasonably high profits in order to service our national debt. I concede that unless we maintain an economy that will produce us a lot of income taxes, we may not be able to pay off our big war debt.

But the fact I am trying to drive home to you, and what I maintained last week, is that continually raising wages, as you propose here, is bound to increase the cost of living in virtually the same proportion as the wages will rise and labor will not better its condition.

Mr. HINES. I disagree with that, Senator. I say that the profits are such that we can encroach upon the profits and we can raise wages.

Senator ELLENDER. Your position is that we can raise the wages as this bill now provides and still we are going to maintain the cost of living at the present level?

Mr. HINES. As far as possible.

Senator ELLENDER. I cannot agree with you. Cost of production is bound to rise and our present price structure will be shattered and we are bound to be thrown into a spiral of inflation that will destroy our economy. Do you think that a rise in costs is fair to the farmer?

Mr. HINES. The farmer will benefit in the same proportion that the worker benefits because the worker will have increased money to buy the farmer's products.

Senator ELLENDER. The only way by which the farmer can benefit is if he obtains a rise in the cost of the things he sells, so as to offset the additional cost for the things he has to buy. And also if he is compensated by higher prices because of the higher wages he will be compelled to pay on the farm.

Mr. HINES. I think Senator Aiken will be familiar with this situation. I have seen the apples on the trees rot; I have seen the potatoes in the fields rot because there was no market for those products because the worker did not have the money to buy them.

78595—45——15

The retail men could not buy them because——

Senator ELLENDER. This happened 3 or 4 months ago. Many growers had a lot of apples and could not sell them notwithstanding all the money now in circulation.

Today you have 42,000,000 bushels of Irish potatoes in excess of our requirements——

Mr. HINES. We never have an overproduction of anything. We have an underconsumption. Speaking of apples, what do you think of a situation of this kind, wherein the speculator buys apple orchard after apple orchard and if he needs them has them picked, and puts them in a storehouse and sells them in New York City for 5 or 10 cents apiece? And in order to keep the price up he will let them rot on the trees before he will glut the market.

People don't have the money to pay for them.

Senator ELLENDER. That is certainly not the case today in regard to potatoes. The Government is being asked to spend $60,000,000 just to protect the farmers who have an excess potato production. In other words, unless the Government steps in, potatoes will sell for less than the cost to produce them, and many farmers would lose heavily.

Mr. HINES. I think the important thing before you and me is that our people be clothed and fed and sheltered properly.

Senator ELLENDER. I agree with that 100 percent, but that cannot be accomplished by protecting one group to the detriment of other groups.

Mr. HINES. And perhaps more important is the necessity of keeping up the purchasing power in this country in order that we can buy back the things we produce.

If we don't, we are going into an economic tailspin, and God knows how we will get out of it. Maybe you fellows will have the answer to it this time. You didn't have it before.

Senator ELLENDER. God knows we didn't have it before and we will not have it in the future by the passage of such legislation as you are now proposing.

Such a bill as we are now considering will complicate matters to such a degree that I will not venture what the future holds. In attempting to protect a certain group of working people you will dislocate thousands of others.

Mr. HINES. I don't know how you arrive at that.

Senator ELLENDER. Well, I have a little farm down south and I sold a lot of potatoes at 71 cents a hundred not so long ago. All of my costs rose and the price was down. Do you think I could maintain myself as a farmer selling potatoes at that price?

Mr. HINES. The wife of the worker who is going to receive the minimum of 65 cents with the family consisting of the man, wife, and two children with an income of $26 a week, is going to market with her basket. She won't be able to buy everything she would like to buy that the farmer produces, because she does not have the money.

Increase her income 10 or 20 percent and she will buy that much more of what the farmer and other people produce.

Senator TUNNELL. Did I understand you to say we don't have overproduction?

Mr. HINES. We don't have overproduction; we have underconsumption.

The people in this country could consume anything if they had the money for it. We do have seasonal overproduction.

Senator TUNNELL. Mr. Hines——

Mr. HINES. Pardon me. You have overproduction of peaches, but give the worker the money to buy those peaches and the sugar and the canning equipment——

Senator TUNNELL. Mr. Hines, suppose all the land in the United States that can be put in peaches profitably now should be put in peaches, do you still maintain there would not be overproduction?

Mr. HINES. I think you can create an artificial overproduction.

Senator TUNNELL. I think that is real, not artificial.

Mr. HINES. Isn't it true that our production is based upon consumption? People don't produce things unless they hope to have them consumed.

Senator TUNNELL. As Senator Ellender says, there are times when there is simply an overproduction of potatoes, more than people can use.

Mr. HINES. That is seasonal overproduction.

Senator ELLENDER. Not so, sir. We consume 675,000,000 bushels of wheat a year. If we produce 1,000,000,000 bushels, what are we going to do with it? Generally speaking, we have produced much more than we consume each year and that is what has caused the price of wheat to remain low in prewar years.

The same situation has existed with cotton. We have in the cotton warehouses of our country today enough cotton to meet the demands of the people of the United States for a full year without producing a bale this year. Our farmers produced such an enormous crop in 1937, 19,000,000 bales as I recall, and it is still a drag on the market.

Mr. HINES. You will have European markets for wheat.

Cotton has always been a problem because there has always been an overabundance of cotton. The country where cotton is raised lends itself to that type of agriculture. I don't have the answer for that. I am not a farmer myself.

Senator ELLENDER. You realize it is the staple crop of the South?

Mr. HINES. Yes.

Senator ELLENDER. Thousands of farm families depend on it for a living and that is the way by which they have made a living in the past.

Instead of growing cotton they could venture in the dairy business or some other form of agriculture, but Minnesota and Wisconsin farmers might suffer.

Mr. HINES. If you have a surplus of cotton in the South it is not because of overproduction. It is because of underconsumption.

Ask any woman you meet if she can buy proper undergarments for her children and she will tell you she can't get them.

Senator ELLENDER. That may be true now, but that is because of the war. Most of the cotton textiles were producing for the Army and the Navy.

Mr. HINES. We have plenty of consumers for cotton at the moment and I say a surplus of cotton is due to lack of consumption.

Senator ELLENDER. I repeat, that is because of the war. But remember we are on our way to normalcy now.

As Mr. Davis pointed out last week while testifying, that the rise in the minimum wage from the legal limit of 40 cents over a period of 3 or 4 years during the war while we had full employment, was only 55 cents. Today what you are asking for in this bill is to raise

the legal minimum of 40 cents to 65 cents for the first year, 70 cents the second year and 75 cents the third year.

In justice to Mr. Davis, as well as to Secretary Schwellenbach, both pointed out that you are not raising the minimum from the legal level but from the 55-cent fixed level fixed in February of 1945, as I recall.

In any event, what puzzles me is how in the name of common sense can we raise the minimum wage from the fixed minimum of 55 cents, to 75 cents over a period of 3 years if, during 3 or 4 years of war with full employment, we were able to raise it only from 40 cents to 55 cents.

Mr. HINES. Only because you would not raise it. It has been raised by collective bargaining, particularly in certain sections of the country.

Senator ELLENDER. That is true provided it did not violate the Little Steel Formula.

Mr. HINES. May I ask you a question, Senator?

Senator ELLENDER. Well, I am not testifying, but I will be glad to answer the question if the chairman will permit me.

Mr. HINES. This is just in order to develop the question.

Senator ELLENDER. I want to say to you that I am trying in every way I know how, Mr. Hines, to elicit the facts and I don't want the questions I am asking to be taken as indicating what position I am taking on the bill.

Mr. HINES. That is right. We are proposing here that there be no regional differentials permitted under the law. Do you agree with the American Federation of Labor's policy in that regard?

Senator ELLENDER. Yes, but the American Federation of Labor didn't practice that in the past and it does not practice it now. It has never practiced it at any time.

Mr. HINES. We have.

Senator ELLENDER. You talk about it now, but you have never done it. A carpenter in my section gets about 90 cents an hour and in New York he gets a dollar and a half to one dollar and seventy-five cents. Here in Washington a bricklayer gets about $2 per hour and in the South about $1.25.

Mr. HINES. That may hold true in certain sections——

Senator ELLENDER. You are now preaching for something that you don't practice.

Mr. HINES. That does not only hold true between your town and New York, but that will hold true between a town in Senator Aiken's State and New York City, too.

Senator ELLENDER. What you are proposing right now is in effect saying to us, "We want the legal minimum fixed at 65 cents to 75 cents over a period of 3 years all over the country," but when we are bargaining it is on a different principle. Historically you make differences in New York and in Chicago and in Montana and in Memphis and in Atlanta, when bargaining collectively, but you desire to put all in a strait-jacket by law.

Mr. HINES. Do you know why we do that?

Senator ELLENDER. I don't know why you do it, but that has been your practice.

Mr. HINES. You would like to know, wouldn't you?

Senator ELLENDER. Yes; surely I would like to know.

Mr. HINES. It has been a fixed policy of the federation to follow such procedure. We raise wages in proportion to our ability to get the workers to join the union and when we can't get them to join the union in any particular section, the answer will be bad working conditions.

Senator ELLENDER. But when you do that, you don't do what you are now advocating in this bill. You don't provide for the same wage for a mechanic in New Orleans as you do in New York. You don't provide the same national wage for bricklayers, either, but here you want to slap it on by law, making the same wage apply all over the country.

Senator TUNNELL. I would like to say one thing in corroboration of what Mr. Hines is saying. I take it you don't push the wages up in all sections——

Mr. HINES. That is right.

Senator TUNNELL. But you are the ones who furnish labor and not wages, so you cannot be blamed if they won't go as high as you want.

Mr. HINES. Our ability to secure wages is contingent upon our ability to organize and use our organized strength.

Senator AIKEN. Do I understand Senator Ellender's contention is that for the same class of work wages should be the same in New Orleans as in New York?

Senator ELLENDER. I don't see why they should be any different. The A. F. of L. advocating it, don't do it themselves.

Senator AIKEN. Isn't it the purpose of the minimum wage-and-hour law to equalize wages all over the country, and isn't it one of the purposes of the law to protect the 52½ percent of eligible workers who don't belong to any labor union?

Mr. HINES. I will say New Orleans is a pretty nice place to live, and I think a worker has as much opportunity to spend his money there as in New York City, but if I asked for the New York scale in negotiating, I am afraid the first thing that would be fired at me is, "We don't need that here because of differences in working conditions."

There is a mistaken idea that a worker should live for less in one place than in another. But that isn't true, notwithstanding the fact that he won't need as heavy an overcoat in New Orleans as he will in Vermont.

And he won't need as much coal.

Senator SMITH. I want to ask Mr. Hines if this isn't true. I agree with your point. You raise the wages of workers and raise their standard of living by that process and increase their consumer power. I agree with you on that. As long as you keep prices stable the workers gain by it.

But isn't it true that that forces prices up?

I am a great believer that we must keep prices down in this country if we are going to spread the benefits of production to everybody.

I am interested in considering to what point we can raise wages without raising prices and then we will have to consider the extent to which that may close up certain industries because they can't meet the two squeezes on both sides and then, of course, you get unemployment.

Mr. HINES. Senator, I wish we had some very definite way that we could determine to what extent wages can be increased without increasing prices.

I think the fact that it can be done is proven by the action taken by the Federal Government when they permitted relaxation of the War Labor Board's rulings to permit wage increases as long as they did not increase prices.

Senator SMITH. Undoubtedly in some areas that is true, but if we take industry as a whole, wouldn't we find a tendency to raise prices unless we keep up controls? And I think controls are going to be difficult to maintain.

Mr. HINES. I don't think that is the case. And I don't think there is any point in my sitting here and pointing out the profits made by large corporations and having some large corporation representatives come back with an answer just to the contrary. But I think we can safely raise wages in this country without increasing prices to any great extent.

There may be some instances where that can't be done. There may be some instances where the margin of profit is very small. The clothing factories in New Orleans, referred to earlier in the hearing, compete with some of the industries in New York City. How they meet that competition, I don't know. They are perhaps able to stand that, but if that was carried to its logical conclusion we are going to find the wages tumbling all the way down the line and then those wages will be permitted to go lower and the other fellow will go lower and then what becomes of our national economy?

Senator SMITH. What becomes of the national economy if the prices go up so that people can't enjoy the benefit of low prices Nation-wide? I think what we should think about is what our people can get for an hour's work, not in terms of dollars but in terms of food, clothing, and shelter.

Senator TUNNELL. I would like to ask Mr. Hines if he agrees with Senator Smith's theory that prices should be kept down?

Mr. HINES. Yes; I do.

Senator SMITH. I don't want the record to show that it should be done by Government edict.

Mr. HINES. I think despite all the criticism the Office of Price Administration has done a mighty fine job.

Senator SMITH. They have had a headache. But that was a war condition and we don't want that in peacetime.

Mr. HINES. We want to get back to the free competitive system but during times like this there is a ceiling on certain foodstuffs, but you go on down to the fish market and ask the prices of some of the sea foods and they are ridiculous, all out of proportion to what they should be.

I know there is a certain amount of spoilage and I happen to know that the differential between what they receive from the ultimate consumer and what the fisherman is paid—we have them organized—is so vast it is astounding. But as soon as we all get back to normal they will get back to normal.

Senator SMITH. I think we have had a good deal of abuse by the middleman taking the profits while the consumer is charged too much.

Mr. HINES. And I submit that all these fellows who have been piling up huge profits and have not been able to hide them away where the man from the Treasury Department can't get at them—the higher they go the more that he pays Uncle Sam and he lessens the burden on the little fellow.

Senator ELLENDER. Mr. Hines, you say you hope this increase in wages will not increase the cost of production.

Mr. HINES. I don't say I hope. I say I know it won't in many instances.

Senator ELLENDER. I exhibited a table a moment ago showing that 54 percent of those engaged in the lumber and timber industry would be affected.

Now, I have before me a table that was worked out from the accounts of 199 mills throughout the South.

On a direct labor cost per thousand board feet, based on straight time earnings, beginning at 40 cents per hour, the labor cost is $15.52; at 45 cents it is $17.46——

Senator AIKEN. For what?

Senator ELLENDER. Per thousand board feet.

Senator AIKEN. For shingles or what?

Senator ELLENDER. Per thousand board feet of lumber. At 50 cents it is $19.40; at 55 cents it is $21.34; at 60 cents it is $23.28; at 65 cents, which you are now proposing for the first year, the increase would be $25,22, or $9.70 per thousand from the present legal minimum. For 70 cents it is $27.16, and at 75 cents it is $29.10, or an increase of $13.58 per thousand board feet from the legal minimum.

Or to give it percentage-wise, it would increase the labor costs should the legal minimum of 40 cents be raised to 75 cents, or 87½ percent per 1,000 board feet.

Mr. Chairman, I would like to have this entire table placed in the record at this point. May it be inserted at this point?

Senator TUNNELL. It may be done, without objection.

(The table appears on p. 226.)

Mr. HINES. May I suggest that if the workers' wages were increased to the proportions you mentioned they would probably be able to buy a couple more suits of clothes from the fellow who manufactures clothes in New Orleans.

Senator ELLENDER. But what are you going to do with the lumber industry, unless lumber prices are increased because of higher wages? Are you going to put them out of business so they can't manufacture lumber? If so, what are you going to do with the carpenters and bricklayers who depend on the lumber business to practice their trades?

Mr. HINES. Can you translate that into the number of hours it will take to build a house and the number of houses that can be built and the real-estate operator's profit on the house?

Senator ELLENDER. But you are increasing the labor cost of lumber 87½ percent, I believe as I pointed out, and the materials in a building amount to about 50 percent of its entire cost, doesn't it?

Senator AIKEN. What is included in that, from the cutting of the tree to the finished product?

Senator ELLENDER. That is right. This bill, if it becomes law, will affect those who cut the trees down. Those who haul the logs to the mill and on to those who handle the lumber until it becomes a finished product. You will have to pay them the minimum of 65 cents the first year and in 2 years it will be 75 cents per hour.

Senator AIKEN. How does that cost compare with the cost of cutting pulpwood?

Effect of increased minimum hourly wage rates on southern pine costs computations based on conditions applicable to year 1944

Item	Basis year 1944	Change from base year 1944 at increased minimum hourly rates, by intervals					
Minimum hourly wage [1]	40 cents	45 cents	50 cents	55 cents	60 cents	65 cents	70 cents	75 cents.
Do.[2]	52 cents	58.5 cents	65 cents	71.5 cents	78 cents	84.5 cents	91 cents	97.5 cents.
Direct labor cost per M based on straight-time earnings [3]	$15.52	$17.46	$19.40	$21.34	$23.28	$25.22	$27.16	$29.10.
Increase		$1.94	$3.88	$5.82	$7.76	$9.70	$11.64	$13.58.
Percent increase		12.5	25	37.5	50	62.5	75	87.5.
Direct labor cost per M based on total earnings reported by 84 group I mills, year 1944.[4]	$18.12	$20.72	$23.03	$25.33	$27.63	$29.93	$32.24	$34.54.
Increase		$2.30	$4.61	$6.91	$9.21	$11.51	$13.82	$16.12.
Percent increase		12.5	25	37.5	50	62.5	75	$7.5.
Total cost per M based on 199 mills reporting for year 1944 [5].	$45.17	$47.47	$49.78	$52.08	$54.38	$56.68	$58.99	$61.29.
Increase		$2.30	$4.61	$6.91	$9.21	$11.51	$13.82	$16.12.
Percent increase		5.1	10.2	15.3	20.4	25.5	30.6	35.7.

[1] Straight-time minimum rate per hour (wage-hour law).
[2] Average hourly wage resulting from application of minimum rate, based on proportions applicable to year 1944.
[3] Average labor cost per M board feet, straight-time earnings, based on percentage increase in hourly rate and on production and operating conditions applicable to year 1944 (1944 average computed from reports of U. S. Bureau of Labor Statistics on Employment and Wages, and from reports of U. S. Forest Service on Production.
[4] Average labor cost per M board feet, total direct wages paid, based on percentage increase in hourly rate and on production and operating conditions applicable to year 1944 (1944 average computed from cost reports of 84 mills giving wage details—3 in Inner Pine War Committee study).
[5] Average total cost per M board feet, resulting from increased labor cost noted in item 4 above. Adjusted for labor increase only (1944 total cost computed from reports of 199 mills—Southern Pine War Committee study).

Senator ELLENDER. Pulpwood is figured on a cost per cord basis. My recollection is $2.50 per cord on up to $4, I believe.

Senator AIKEN. That seems very low because I know in the North, in my State, it runs from $5 to $6.50 per cord. Now, much of the cutting is done with power saws and two men go into the woods and cut 12 to 14 cords in the same length of time they cut 4 cords previously. There is more efficient processing and cheaper merchandising which will, to a considerable extent, off-set increased costs of labor.

Mr. HINES. Those figures don't mean anything unless given in relation to the total cost of the house the thing goes into.

We have to know the commission of the real-estate man and the wages of the other groups and the profit to the man who sells the lumber.

The mere fact that they raise the wages of a group of workers who process lumber does not mean you are going to have an exorbitant increase in the cost of building.

Senator SMITH. Is it fair to ask if you raise the wages to that extent might you not shut the lumber mill down entirely?

Mr. HINES. I read an article the other day where the Aluminum Corporation of America controls practically all the aluminum and aluminum products in the world, and the article went on and intimated that if you set prices people won't stop using aluminum. Mills won't shut down. There will be a need and a demand for lumber. All that will happen is that these workers will get more in their pay envelopes, and I hope they buy a suit of clothes from the man in New Orleans.

Senator ELLENDER. But the point I am trying to make is that by increasing the wages you are bound to increase the cost of production as I just indicated a moment ago. You cannot escape that proposition.

What you have been saying in effect is that by increasing these wages as you are now proposing it will not materially increase the cost of production. I can't agree with you.

Mr. HINES. I can't concede or won't concede that there will be any general trend or that there will be an overwhelming increase in the cost of things produced. I don't think the 65 cents will have any appreciable effect at all.

Senator SMITH. You are speaking of the minimum wage?

Mr. HINES. That is right. I don't think it will have any appreciable effect at all.

Senator AIKEN. When you say there need be no great increase in the cost of what the consumer purchases, you refer to the over-all costs? You don't mean, of course, there won't be an increase in certain items, and it is only natural that those materials and goods which the consumer buys and which are produced, where the cost of lumber represents a large percentage of the cost, will be increased?

Mr. HINES. Where the profit has been held to a narrow margin.

Senator AIKEN. And in regard to the woodworking industry, I think that is one industry in the North that will have to raise its wages. I don't mean in the sawmill or in the woods, but in the factories wages will have to be raised because of the highly competitive nature of the industry which has forced prices down and everybody underbids everybody else until they can't pay high wages.

Mr. HINES. That is right.

Senator, I have a number of other amendments, and I don't like to encumber the record. May I submit them for your perusal later on?

Senator TUNNELL. Yes, sir. They may be inserted in record.

Mr. HINES (continuing). 2. Proposed amendment to section 3 of the act, page 3, lines 3 through 10: Delete lines 3 through 10—containing definitions of "job classifications" and "unskilled job classification."

3. Proposed amendment to section 6 of the act, page 3, line 11, through page 4, line 2, of the bill: On page 3, in lines 21 through 23, delete:

(not in excess of 75 cents an hour for unskilled job classifications).

4. Proposed amendment to section 8 (a) of the act, page 5, line 17, through page 6, line 5, of the bill: On page 5, in lines 20–21, delete:

for unskilled job classifications.

On page 5, in lines 22–24, delete:

and to provide for the maintenance of reasonable wage differentials between intermediate job classifications in such industry.

5. Proposed amendment to section 8 (c) of the act, page 6, line 20 through page 8, line 9 of the bill: Delete the entire subsection and insert in lieu thereof the following:

(c) In determining minimum wage rates for each industry, the industry committee and the Administrator shall consider among other relevant factors the following:

(1) The cost of living;
(2) Competitive conditions as affected by production and transportation costs;
(3) The wages established for work of like or comparable character by collective labor agreements negotiated between employers and employees by representatives of their own choosing; and
(4) The wages paid for work of like or comparable character by employers who voluntarily maintain minimum wage standards in the industry.

No minimum wage rate shall be fixed solely on a regional basis and no wage differentials shall be provided on the basis of age or sex.

6. Proposed amendment to section 8 (e) of the act, page 9, lines 3 through 10, of the bill: In lines 3 and 4, delete:

for unskilled job classifications.

In line 8, delete:

for unskilled job classifications.

7. Proposed amendment to section 8 (f) of the act, page 9, lines 11 through 22 of the bill: In lines 12 and 13, delete:

, or subdivision thereof and job classifications therein.

Gentlemen, I have enjoyed myself immensely. I am sorry President Green could not be here and have gotten the same pleasure out of this as I have.

I want to thank the committee for the courtesy extended to us.

Senator TUNNELL. Thank you for testifying, Mr. Hines.

Is Miss Lenroot here?

TESTIMONY OF KATHARINE F. LENROOT, CHIEF, CHILDREN'S BUREAU, UNITED STATES DEPARTMENT OF LABOR

Senator TUNNELL. Miss Lenroot, will you give your name and position to the stenographer?

Miss LENROOT. Katherine F. Lenroot, Chief, Children's Bureau, United States Department of Labor.

Mr. Chairman, I wish to speak briefly concerning the amendment to section 12 of the Fair Labor Standards Act included in the pending bill. The amendment would provide a new paragraph (b), making the present paragraph (b) become paragraph (c), the new paragraph to read as follows:

No employer engaged in commerce or in the production of goods for commerce shall employ any oppressive child labor in or about or in connection with any enterprise in which he is so engaged.

The existing act does not prohibit the employment of children as such, but prohibits the shipment of goods from establishments in which oppressive child labor, as defined in the act, is employed, and we believe it is essential and very important to strengthen this by providing, in addition to the prohibition of shipment of goods, a direct prohibition of employment of oppressive child labor.

Senator TUNNELL. Will you state what you think is included in oppressive child labor?

Miss LENROOT. As defined in section 3 of the present law, oppressive child labor means a condition of employment under which children under the age of 16 years are employed, with limited exceptions for children of 14 and 15 years of age, in occupations and under conditions determined by the Children's Bureau as not interfering with their health, schooling or wellbeing, and, in addition, coverage of minors between 16 and 18 years of age in hazardous occupations.

The proposed amendment would close a gap in coverage which was pointed up early this year by the Supreme Court in a case arising under section 12 (a) of the Fair Labor Standards Act. In this case, 323 U. S., 490, *Western Union Telegraph Company* v. *Katharine F. Lenroot*, the United States Supreme Court in January 1945 held, by a 5 to 4 decision, that the Western Union Co., while clearly engaged in interstate commerce does not produce goods or ship them in commerce within the meaning of the present child-labor provisions of the act, and that, therefore, children employed in telegraph messenger service for the company do not have the protection of its child-labor provisions.

The proposed amendment also would generally strengthen the child-labor provisions of the act and would result in giving to the children of the Nation protection which I believe was intended when the original act was passed in 1928.

In discussing the definition of "oppressive child labor," I should note that children employed in agriculture, when not legally required to attend school or as actors in motion pictures or theatrical productions, or working for their parents in occupations other than manufacturing or mining, are exempted.

Now, prior to the United States Supreme Court decision, the Bureau had proceeded on the assumption that the child labor provisions applied to establishments such as Western Union.

The undesirability of the employment of young children in public messenger work was recognized when in issuing an order as to conditions under which 14- and 15-year-old children could be employed under the act, it was provided that messenger service was not recognized as a suitable occupation for the employment of 14- and 15-year-old children.

There are many reasons why messenger work is not desirable for employment of children. It involves exposure to all sorts of weather extremes, physical strain, accident and health hazards and often long hours and late night employment.

Children under 16 years of age, because they are still in the period of growth, need special protection from over-strain and fatigue and they need time for sufficient sleep. In fact, inspections made under the Fair Labor Standards Act have shown messenger boys under 16 working late at night, carrying heavy schedules of school and work, and meeting with serious work accidents.

There is also other evidence of special accident hazards in telegraph-messenger work. According to annual reports for 1941 submitted to the Federal Communications Commission by the major telegraph, cable, and radiotelegraph companies, accidents to messengers—practically all of them telegraph messengers—caused 72 perecent of all the injuries occuring to their employees, although messengers formed only 36 percent of the employees as of December 31, 1941—a season of peak employment.

Mounted messengers on bicycles or motor scooters or other vehicles often in congested city areas are exposed to serious traffic hazards during most of their working time.

Foot messengers must work in winter, in cold weather, and face the danger of falls on icy or wet pavements.

The messenger must work under pressure of a time schedule for making deliveries.

Other types of Western Union employment are also hazardous. In a recent case brought to the attention of the Children's Bureau two 15-year-old boys working as groundmen with the Telegraph Co.'s construction crew were killed.

The proposed amendment does provide much needed protection for children who are not covered under the present wording of section 12 (a).

Senator SMITH. Do I understand that you are advocating doing away with messenger service entirely?

Miss LENROOT. For children under 16 years.

Senator SMITH. The hazards you are speaking of, any child incurs when he goes back and forth to school, doesn't he?

Miss LENROOT. That is true, Senator Smith, but those hazards are accentuated when working in downtown areas and working long hours.

Senator SMITH. I am familiar with many instances in which youngsters have been helped in getting their education by such work, and I am under the impression that the messenger service of Western Union has been pretty well protected.

Miss LENROOT. There are occupations in which children under 16 could be employed without extra hazard outside school hours under safe conditions, and their help in that way could be secured for the family's support.

Senator SMITH. Do you happen to know what percentage of Western Union messengers are under 16 years old?

Miss LENROOT. On March 31, 1943, before the case had been handed down by the Supreme Court, 11 percent of the messengers employed by Western Union were reported to be under 16 years, and the Western Union Telegraph Co. is probably the largest employer of children under 16 in the country. The fact that they work late at night, all hours and under all conditions, makes the employment more hazardous than the ordinary traffic going to and from school.

Senator TUNNELL. Don't you think bicycle riding is a little more hazardous than any method of transportation, anway?

Miss LENROOT. I think it is, Mr. Chairman.

Senator TUNNELL. Regardless of age?

Senator ELLENDER. I think it is more hazardous for older people than for younger ones.

Senator SMITH. Mr. Chairman, what I was trying to get clear in my own mind is that the witness is advocating elimination of messenger service under 16 years of age——

Miss LENROOT. I am advocating the direct prohibition of oppressive child labor under the Fair Labor Standards Act.

If this amendment were adopted it would be within the discretion of the Chief of the Children's Bureau, after careful consideration, to determine whether or not messenger service was an occupation which could be prohibited for 14- or 15-year-old children outside of school hours.

In the study we gave the question before, we were aware that messenger service was not covered by the act, and we came to the conclusion, after careful review of the evidence of accidents and testimony in hearings, that we should not authorize employment of children under 16 in messenger service.

If this amendment were adopted, however, it would still be within the discretion of an administrative agency to make such findings as the evidence indicated, and if evidence indicated the occupation was relatively safe, 14- and 15-year-old children might be permitted——

Senator SMITH. Do you happen to know what action the Western Union Co. has taken about this?

Miss LENROOT. I don't know what action the Western Union Co. has taken.

Reports to the Children's Bureau of certificates issued to children going to work show nearly 6,000 children of 14 and 15 going into telegraph messenger work in 1943.

Senator TUNNELL. Didn't you say 11 percent?

Miss LENROOT. Eleven percent, on March 31, 1943, were under 16.

In 1944, following the decisions of the district court and circuit court of appeals holding that the child labor provisions of the Fair Labor Standards Act applied to Western Union messengers, the number of certificates issued dropped to about 1,700, but since the Supreme Court decision incomplete reports for the first 6 months of 1945 show more than 2,000 children of 14 and 15 certificated for messenger work.

The recent war experience during a time of unprecedented labor shortage has demonstrated the practicability and desirability of the basic 16-year minimum age established by Congress in 1938 under the Fair Labor Standards Act.

There has been no serious attack upon this standard and the cooperation of the employers and the public has demonstrated wide public acceptance of the wisdom of the action of Congress in setting up this Nation-wide protection for the country's children, and now that we are no longer in a period of the war effort it seems we are entering upon a period in which we should provide the full protection which I believe Congress intended to provide when the provisions of the National Standard Labor Act were enacted into law.

Senator TUNNELL. Are there any questions of Miss Lenroot?

(No response.)

Senator TUNNELL. Thank you, Miss Lenroot.

I have been asked to announce that next week the opposition to the bill will have their innings.

We will now adjourn until Thursday of this week at the same time and place.

(Whereupon, at 11:50 a. m., an adjournment was taken until 10 a. m., Thursday, October 4, 1945.)

AMENDMENT OF FAIR LABOR STANDARDS ACT

THURSDAY, OCTOBER 4, 1945

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON EDUCATION AND LABOR,
Washington, D. C.

The subcommittee met, pursuant to recess, at 10 a. m., in room 357, Senate Office Building, Senator James M. Tunnell presiding.

Present: Senators Tunnell, Ellender, La Follette, Aiken, and Smith.

Also present: Charles Kramer, consultant to the committee.

Senator TUNNELL. The committee will be in order.

Mr. Walling, will you come forward, please? Will you give your name and connection, for the record?

Mr. WALLING. L. Metcalfe Walling, Administrator of the Fair Labor Standards Act and Public Contracts Act.

Senator TUNNELL. Are you accompanied by anyone?

Mr. WALLING. Yes, sir, I am accompanied by William R. McComb, Deputy Administrator, and Harry Weiss, Director of the Economics Branch, Wage and Hour Division. However, I do not anticipate that either of them will make any statement unless there are some technical matters you desire to inquire about.

Senator TUNNELL. Very well. Will you proceed?

TESTIMONY OF L. METCALFE WALLING, ADMINISTRATOR, FAIR LABOR STANDARDS ACT, AND PUBLIC CONTRACTS ACT, ACCOMPANIED BY WILLIAM R. McCOMB, DEPUTY ADMINISTRATOR, AND HARRY WEISS, DIRECTOR, ECONOMIC BRANCH, WAGE AND HOUR DIVISION

Mr. WALLING. Mr. Chairman, and members of the committee, the Secretary of Labor, in his testimony the other day, made the departmental position on the policy of this bill clear; and Mr. Hinrichs, of the Bureau of Labor Statistics, covered the economic aspects of the bill. So I shall generally confine myself to the administrative angles and problems which are raised, as I think I can be most helpful to the committee in that direction and avoid duplication of what has already been said.

I come here generally in support of S. 1349 as an extension of the benefit the American people have had from the Fair Labor Standards Act since 1938, although I have some changes that I would like to suggest in the amendments, and I will present these in detail later on. It is not a question simply of benefit to the wage earners, although those who would make the greatest gains under this proposal are those who need help most, those lowest paid and weakest in economic

bargaining power. I believe that the basic intention to raise the minimum wage and narrow exemption from both the minimum wage and overtime provisions is not only economically feasible at this time but it can assist in stabilizing our economy during reconversion and thereafter; it can provide insurance in the form least likely to lead to inflation against a chaotic drop in purchasing power. The floor under wages should be strengthened.

We all recall the calamity-howling that went up in 1937 and 1938 over the supposed ruination of business that would come with even a 25-cent or a 30-cent minimum wage, with 40 cents in prospect. I shall touch on this at greater length later, but these statements today do not need refutation. Merely to repeat them today is to let them refute themselves.

Senator TUNNELL. Right there, if you don't mind, do you show in your statement that there was no such calamity following the 1938 act?

Mr. WALLING. Yes; I am going to quote, a little bit later, from some of the comments which were made in that direction.

Senator TUNNELL. Very well.

The time to act is now. As President Truman said in his message to the Congress of September 6 [reading]:

> I believed that the goal of a 40-cent minimum was inadequate when established. It has now become obsolete.
>
> Increases in the cost of living since 1938 and changes in our national wage structure require an immediate and substantial upward revision of this minimum. Only in that way can the objectives of the Fair Labor Standards Act be realized, the national purchasing power protected, and an economy of full production and abundance preserved and maintained for the American people.
>
> The high prosperity which we seek in the postwar years will not be meaningful for all our people if any large proportion of our industrial wage earners receive wages as low as the minimum now sanctioned by the Fair Labor Standards Act.
>
> I therefore recommend that the Congress amend the Fair Labor Standards Act by substantially increasing the minimum wage specified therein to a level which will eliminate substandards of living and assure the maintenance of the health, efficiency, and general well-being of workers.

The President was equally cogent in urging limitation of the exemptions in the act, a number of which have lost such economic justification as they had. In this statement I shall first discuss these exemptions in detail, second, take up the question of minimum wage and child labor, and third, answer the request of the committee that I set forth suggestions for further amendment not touched on in the present bill.

First of all, the exemptions. This is with regard to the elimination of sections 13 (a) (10) and 7 (c), which are two of the important exemptions sections.

The bill proposes to eliminate from the Fair Labor Standards Act sections 13 (a) (10) and 7 (c). Section 13 (a) (10) provides exemption from the minimum wage and overtime provisions of the act for a large number of specified agricultural handling and processing operations when performed in the "area of production" as defined by the Administrator. Upward of a million-and-a-quarter workers are employed in performing operations that may qualify for the exemption if they meet the requirements.

Senator ELLENDER. Mr. Walling, could you at this point insert in the record, if your statement does not contain it, such a classification of the employees as would be affected by these two amendments?

Mr. WALLING. I think that I do cover that in what I say. If I don't, Senator Ellender, will you make it known, and I will be glad to amplify that.

Senator ELLENDER. Yes, sir.

Mr. WALLING. Under section 7 (c) a wide variety of agricultural processing operations employing some 265,000 additional workers may qualify for 14-week or year-round overtime exemption if the requirements under this section are met by the activity of the establishment and the occupation of the employee. Under one of the clauses of section 7 (c) a 14-week overtime exemption may apply if the establishment is in the area of production, and other tests required under section 7 (c) are met.

Senator TUNNELL. Would you explain that in a few words? It seems to me the language is rather complicated. You say that section 13 provides exemption from the minimum wage and overtime provisions of the act for a large number of specified agricultural handling and processing operations. Now, what will the new act do with reference to those agricultural employees?

Mr. WALLING. The new act would eliminate exemption for all employees except those in seasonal industries, as determined by the Administrator.

Senator TUNNELL. And they would still be under the seasonal——

Mr. WALLING (interposing). The seasonal employees as determined by the Administrator would be entitled to 14 weeks' overtime exemption——

Senator ELLENDER (interposing). Overtime exemption only?

Mr. WALLING. That is right.

Senator ELLENDER. But the minimum wage would apply?

Mr. WALLING. The minimum wage would apply to all employees in these occupations.

Senator ELLENDER. In that connection, Mr. Walling, I believe it might be well for you to be a little more specific as to exactly what employees that would exempt, or that that would affect, I should say. I wish you would also put in the record how, in the past, you have determined these areas of production as referred to in the act because, as I remember, there was quite a controversy as to the extent of the Administrator's authority under the law.

Mr. WALLING. Yes. On that point, the definition which was in effect when I became Administrator provided, among other things, that one test should be whether the establishment employed 10 or more employees, and it was that point which was involved in the litigation which ultimately went to the Supreme Court in the Holly Hill case, where the Supreme Court decided in a 5 to 4 decision that that numerical test of employees was not a proper interpretation of the term "area of production," and the Court directed the Administrator to redefine the term "area of production."

Now, as to the employees affected, would it be helpful to the committee if I put into the record some figures—which are only an estimate, because it is impossible to do more than that—of the number of employees in different occupations who would be affected? Is that what you would like, Senator Ellender?

Senator ELLENDER. What I had in mind was a sort of classification of the employees that would be affected.

78595—45——16

Mr. WALLING. Well, I think this is it.

Senator ELLENDER. For instance, let us say you have a lot of apple growers in Virginia, and some of them are quite large operators. Some of them have their own facilities on their farms to pack and prepare their own fruit for market. Would they in any wise be covered by this bill?

Mr. WALLING. The bill itself, as we said a minute ago, would subject all of these employees to the minimum wage obligations. The only exemption to which these agricultural processing and seasonal industries would be entitled would be an overtime exemption for 14 weeks, depending on whether they could qualify for classification as a seasonal industry.

Senator ELLENDER. Under the law as it now stands and, I believe, under the proposed changes, it is felt that agricultural labor should be exempted from wages and hours and everything else. Am I correct in that?

Mr. WALLING. Yes.

Senator ELLENDER. Well, now, would you not consider labor as agricultural labor that is engaged on a farm in preparing fruit for the market when the whole operation is conducted by the farmer himself on his own farm with his own facilities?

Mr. WALLING. Well, the act as it now stands specifically refers to first processing, which would cover, I think, many of the occupations which you refer to; and of course, agriculture itself, under the act, is specifically exempt.

Senator ELLENDER. As I understand it, under the present law if a fruit grower produces enough apples, let us say on his farm, and he can afford to have a packing plant on his farm, and should he employ as many as 25 people, to polish the fruit and pack it and have it ready for shipment, such employees would not under this new set-up be considered as farm labor. Is that correct, or not?

Mr. WALLING. I don't think that necessarily follows. I thought you were going to say that those employees, at present, of the farmer, would be exempt as agricultural employees, which is correct; but I don't understand that the proposed bill changes the definition of agriculture in any way. It merely deals with the subsequent operations to agriculture, that is, the processing of agricultural products.

Senator ELLENDER. Well, then, let me put it this way—I desire to put in in the affirmative now and be more specific—should a large fruit grower have a processing plant of his own, and should be prepare his fruit for market on his own farm, then neither the present law nor the act we are considering would in any wise affect him?

Mr. WALLING. I think that is correct.

Senator ELLENDER. Suppose, on the other hand, that a few farmers, small farmers, got together and agreed to purchase machinery for processing their own fruit in the same manner as the large grower does—would they be covered by the proposed act, or would they be exempt?

Mr. WALLING. I think they would be covered insofar as any produce is handled which is not raised on the particular farm. That is, the exemption goes to the farmer and his employees, but not to the handling of products by someone else, raised by someone else.

Senator ELLENDER. In other words, the same operation as performed by the farmer who picks and processes his own, can't be done by half a dozen farmers who choose to buy a procesing machine and prepare their fruit for market in the same way as the single farm operator does?

Mr. WALLING. Under the area of production, whatever that is ultimately defined to be, under the present act, if they could qualify under that they would, of course, be entitled to the exemption. But this bill, of course, does away with any area of production exemption, so that those operations, I think, would be clearly subject, under the proposal.

Senator AIKEN. You mean even though a group of farmers organized to process just their own fruit, we will say, to pack or process their own fruit? Wouldn't there be a distinction whether they were handling their own fruit exclusively in a nonprofit organization, or whether they organized and bought fruit from other growers and made a profit on it? Would there not be a distinction there?

Mr. WALLING. I don't understand the bill to provide any distinction based on whether it is nonprofit or profit.

Senator AIKEN. Do you understand that this bill would eliminate the exemption for a fruit grower who hired packers to sort and pack his applies in the fall of the year?

Mr. WALLING. On his own farm?

Senator AIKEN. Yes.

Mr. WALLING. No, I think not, if they are directly employed by him. But I understood your case to be one where several farmers pooled their efforts together and did packing on one farm, let's say, of produce raised on others.

Senator AIKEN. Under the law, doesn't the farm cooperative have the same status as an individual?

Mr. WALLING. No; not at the present time. There is no reference to cooperatives at all in the Fair Labor Standards Act. They have no special treatment; it is the individual farmer only.

Senator ELLENDER. But under this new amendment of yours they would be further affected, would they not?

Mr. WALLING. The cooperatives?

Senator ELLENDER. Yes.

Mr. WALLING. Yes, I think that some of them which now can qualify, probably, under a definition of "area of production," would, under the proposal, not be able to avail themselves of an exemption.

Senator ELLENDER. Can you be a little more specific now and tell us the difference, because I believe that is very important. All of us, I think, believe in the formation of cooperatives for the purpose of helping the farmers as much as possible. I would like for you to state to us, first, how the present law affects such cooperatives; and then what changes are made in the bill as now proposed, and what changes will be made from such amendments as you yourself may propose.

Mr. WALLING. As I understand it, neither under the act as at present worded, nor under this bill, would cooperatives be treated any differently merely because they are cooperatives. They will have to qualify or fail to qualify for the exemption under either the act or the bill, depending on whether they meet the standards that are applicable to everybody else. In other words, there are no special provisions or special exemptions applying to cooperatives, as such.

Senator AIKEN. Mr. Walling, it occurs to me that certain REA cooperatives, in some States at least, have been exempt from having to

get the consent of the State public service commission or being under the rules and regulations of the State public service commission because they were regarded as having the rights of the individual rather than a corporation.

Mr. WALLING. Yes.

Senator AIKEN. And I am wondering why that would apply to the REA and not to the same farmers, perhaps, pooling their apple crop in order to grade more uniformly and to handle their crop better. I can see how, if they bought apples from their neighbors and made a profit on them, that they would——

Senator TUNNELL (interposing). Wouldn't that depend somewhat on whether the cooperative was for the benefit of the whole, much the same as a corporation or a company, or whether it was a means of having the individual farmer's own fruit processed and taken back?

Senator AIKEN. The idea, Senator, is this: We will say that 25 farmers couldn't each afford a grading machine, but they could afford one collectively.

Senator TUNNELL. I am asking if it wouldnt' make a difference as to whether they were to get their products back-graded, or whether it was a business proposition in the name of a cooperative or a partnership by which the products were sold as joint property.

Senator AIKEN. Well, that is what I am trying to find out, too.

Mr. WALLING. As the committee knows, many States have enacted protective and encouraging legislation for cooperatives, and that varies from State to State according to individual State policy; but there is nothing in this act which deals with cooperatives or gives them any special status in the law.

Perhaps I might refresh your recollection of the definition of agriculture now in the statute, which I think makes very clear what the limitations are. [Reading:]

"Agriculture" includes farming in all its branches and among other things includes the cultivation and tillage of the soil, dairying, the production, cultivation, growing, and harvesting of any agricultural or horticultural commodities (including commodities defined as agricultural commodities in section 15 (g) of the Agricultural Marketing Act, as amended), the raising of livestock, bees, fur-bearing animals, or poultry, and any practices (including any forestry or lumbering operations) performed by a farmer or on a farm as an incident to or in conjunction with such farming operations, including preparation for market, delivery to storage or to market, or to carriers for transportation to market.

You see, there is nothing in there which refers in any way to cooperatives, and I think it is very clear that the congressional policy was to treat cooperatives on the same basis as other types of business organizations; and as I understand it, the bill leaves untouched that policy.

Senator AIKEN. Then you claim that if 6 farmers get together and buy an apple grader, that the labor they employ would come under the law, the wage-and-hour law; but if each one of them bought a grader separately, which they couldn't afford to do, they would be exempt? I can't see that.

Mr. WALLING. Of course, under the present act, Senator Aiken, the operation would undoubtedly be entitled to some kind of an exemption, but that is not because it is a cooperative, but because it is first processing or because they are within the area of production, or something of that sort.

Under the proposed bill, the only ground for an exemption would be for overtime in the case of industries which are found to be seasonal in nature.

Senator ELLENDER. They would still be exempted?

Mr. WALLING. That is under the proposed bill. They would be exempted as to overtime, not as to minimum wages.

Senator ELLENDER. But they are now exempt, as I understand, from minimum wages?

Mr. WALLING. Yes; if they are in the area of production, for example.

Senator AIKEN. Certainly in my part of the country they pay a lot more than the minimum wages in harvest season. I expect they do in most parts of the country.

Here is another thing. I don't know whether you are familiar with the controversy, which came up a year ago between the teamsters union and a certain dairy corporation, in which the union claimed that a farm upon which a milking machine was being operated was not a farm. And then the Selective Service advised me that they received an interpretation from the War Labor Board that a farm that had an incubator on it was not a farm but a processing plant, and therefore the labor employed there did not come under the Tydings amendment to the Selective Service Act.

You don't believe that either the War Labor Board or the teamsters union can change the definition of a farm as easily as that, do you? Would you say that a farm that operated a milking machine was not a farm and should not come under the——

Mr. WALLING (interposing). I think under the definition of agriculture in the Fair Labor Standards Act that is clearly an exempt operation as agricultural. But there is frequently—and that is one of the difficulties—in Federal legislation a variety of definitions of the term "agricultural." There is no uniformity in the use of that term in different statutes. So that one has to look at each particular statute to find out what the definition is for the purposes of that statute.

Senator AIKEN. In the final analysis, that definition which you just read is the definition of agriculture, isn't it?

Mr. WALLING. Well, it is the definition of the Fair Labor Standards Act, certainly.

Senator AIKEN. I cannot see why a farmer should have his status changed simply because he has an incubator and raises his own chickens instead of buying them from somebody else.

Mr. WALLING. I really don't think that problem arises in the administration of this act.

Senator AIKEN. No, I don't either.

Senator ELLENDER. Mr. Walling, in that connection, would you mind stating in a few words the extent to which a farmer can process his own goods on his own farm for marketing or storage or for any other purpose without coming within the purview of the proposed law?

Mr. WALLING. In the language of the definition, all the activities——

Senator ELLENDER (interposing). I have got your definition, but you are the present Administrator, and the purpose of my question was to ask you what your idea was now as to that, based on your past experience.

Mr. WALLING. Perhaps I can give you a specific illustration. For instance, if some lumbering operations are carried on as an adjunct

of the farm instead of as a timbering operation as such, we have always said that the language was very clear in the statute that that was incidental to agriculture and therefore entitled to the exemption.

If, however, a farmer owns a tract of timber, let us say, for purposes of illustration, some distance from the farm where he is carrying on dairying operations, and he operates that as a lumber operation without any reference to his farming activities, and those logs which are cut and sawed are shipped in interstate commerce, then I think that isn't incidental to farming and therefore would not be entitled to the agricultural exemption.

Senator ELLENDER. Well, suppose instead of the tract of timberland being away from his farm it were adjacent or contiguous to it, and in order to carry on an all-year-round operation he did that, would he not be exempt?

Mr. WALLING. I think it depends on the degree of integration of the timbering operation with the farming activity. As a practical matter, Senator, I think there has been very little difficulty either in enforcing that provision, administering it, or on the part of farmers themselves in knowing whether they were or were not exempt. In a practical case before you, it is pretty easy to tell whether the farmer is just doing some incidental lumbering operations, or whether he is really engaging in the lumber and timber industry.

Senator TUNNELL. Isn't your distinction whether he could sell the farm and still continue his operation of the timber without any detriment at all, or whether it is carried on in connection with the farming and the stoppage of one would have a tendency to stop both?

Mr. WALLING. Certainly if the operation is so separate that the sale of the farm doesn't affect the production of timber, let's say, that would be very clear.

Senator ELLENDER. But if he were engaged solely in timbering, it wouldn't be farming. I think that is what the Senator had in mind.

Mr. WALLING. That is obvious.

Senator AIKEN. You haven't had much trouble in that respect the last few years, have you?

Mr. WALLING. No.

Senator AIKEN. There was for the first year or so in getting an understanding of just what was exempt and what was not?

Mr. WALLING. Yes. I don't think it has been a problem for some time, actually. I think it is pretty well established.

I fully endorse the proposel to cancel entirely the minimum wage exemption hitherto available under section 13 (a) (10). It seems to me that this major step forward can easily be taken at this time. The general wage structure of the country has improved markedly since 1938, when the Fair Labor Standards Act became law. During extensive hearings which the Division recently held in connection with the redefinition of "area of production," numerous industry representatives testified that they were currently paying wage rates above the minimum required by the act. No conclusive evidence has been presented indicating that these processing and assembling industries are economically unable to move along with other industries of the country toward improved standards for their workers. It is particularly important at this time of major readjustment in economic activity and labor utilization to extend the boundaries of the area

within which the wage earners are afforded the fundamental protection of the minimum wage.

I may remark here that the cancellation of exemptions based on the area of production concept will remove a type of exemption that has resulted in serious inequities and has led to the most difficult problems of administration under any provisions of the act. The definition adopted by the divisions, and in effect for several years, which attempted to minimize competitive discrimination between establishments in the same industry was declared invalid by the Supreme Court in the Holly Hill case. I am now in the process of formulating another definition which, because of the limitations of Supreme Court interpretation and the present language of the statute, is bound to be unsatisfactory from an economic standpoint as it will inevitably create and extend unequal competitive situations and cut industries in two with some establishments subject and some exempt. The only sound solution is to eliminate the area of production concept completely by amendment to the act, as this bill does.

In addition to the minimum wage exemption provided for in section 13 (a) (10) that section also makes available a year-round overtime exemption for employees engaged in operations meeting its requirements. Year-round and 14-week unlimited overtime exemptions are also provided by section 7 (c). In all, industries comprising about 150,000 establishments and employing about a million and a half workers have been eligible for year-around or 14-week exemptions under sections 13 (a) (10) and 7 (c) taken together, provided that certain requirements of these sections are met. The proposal to eliminate not only 13 (a) (10) and the area of production part of 7 (c), but the remainder of 7 (c) as well, raises the basic question of what justification there is for granting total or partial overtime exemptions to the various industries engaged in the handling and processing of agricultural commodities. This question must be answered in terms of the basic objectives of the act. The two questions to be answered are (1) to what extent do these industries need to work more than 40 hours a week all year or during seasonal operations and (2) will the objectives of the act be furthered by requiring premium pay for such overtime work.

For a number of the industries in question, the need for overtime work is apparent. The industries subject to severe pressure of seasonal activity in the moving and processing of a crop fall in this category. In the canning of perishable fresh fruits and vegetables, for example, the entire available labor supply in the areas in which the establishments are located is frequently utilized during seasonal operations. At such times, employees often must work considerably more than 40 hours in order to prevent the spoilage of food. If the purpose of section 7 is to spread employment through penalizing overtime work, I wonder whether it would be appropriate to apply the penalty under such circumstances. I question that the objective of the act to spread employment would be achieved, since it would hardly be feasible for workers to move to other centers for a few weeks of work, except in some rare instances where such seasonal work might tie in with other kinds of activities at other times of the year. On the other hand, there is a question of social policy as to whether the worker should be rewarded by extra pay in the form of overtime where emergencies require long hours of work.

There does not seem to me to be any sound justification, either economic or social, for the all-year-round exemptions provided for in section 13 (a) (10) and certain portions of 7 (c) for industries that operate all year around, even though they may handle perishable commodities. Such industries can and should contribute to increased employment by reducing their normal workweek. It is probable, however, that such industries would require some overtime tolerance during the course of the year because of sharp fluctuations in the volume of commodities handled.

Some industries involved in sections 13 (a) (10) and 7 (c) would, under S. 1349, still retain a 14-week overtime exemption up to 12 hours a day and 56 hours a week under section 7 (b) (3) of the act. Included among these industries are those engaged in packing and canning fresh fruits and vegetables, which constitute by far the largest groups of industries to which the overtime exemption may apply. Other industries eligible for the 7 (b) (3) overtime exemption include cotton warehousing, tobacco auction warehouses, country grain elevators, and the processing of sugar beets and cane. It would not seem to me to be equitable to continue this exemption for these industries unless similar provision is made for other industries involved in section 13 (a) (10) or 7 (c) which are in equal need of overtime tolerances.

As the Secretary of Labor pointed out in his statement, the elimination of section 7 (c) from the act would still leave section 7 (b) (3) which would be available for the agricultural processing industries which are of a truly seasonal character and which cannot expand their labor force during periods of peak production. This suggestion involves a technical problem in that some of the industries for whom overtime exemptions are now provided under section 7 (c) would not qualify for the section 7 (b) (3) exemption, although they may need overtime themselves as much as industries which do qualify. The regulations issued pursuant to section 7 (b) (3) are based on a careful study of the congressional intent as indicated at the time when section 7 (c), as well as section 13 (a) (10) of the act, was placed in the act. If it is the committee's desire that some of the industries mentioned in 7 (c) or 13 (a) (10) should now become eligible for the 14-week exemption provided by section 7 (b) (3), some indication should be given of a broadened scope intended for 7 (b) (3), in order that the Administrator may have the necessary guide for revising the regulations issued pursuant to this provision of the act.

Now, I would like to talk about the revision of the fishery exemption.

Section 13 (a) (5) of the act, as presently written, provides for the complete exemption from both minimum wage and overtime provisions of the act for employees engaged in fishing and in processing and in handling fish and fish products. It applies not only to fishermen but also to manufacturing establishments which process fish and wholesale establishments which handle fish. S. 1349 proposes to eliminate the exemption for processing and handling of fish, restricting it in general to the actual fishing operations, including going to and coming from work. The industries comprised in the present exemption employ about 215,000 workers, of whom about 125,000 are engaged in actual fishing operations.

Senator ELLENDER. Mr. Walling, I am sure you will agree that there is quite a lot of fish processing that is seasonal to the same extent as is true with fresh fruit and vegetables. Why should you make a distinction between them?

Mr. WALLING. I suggest in just a moment that I think they should be treated like other seasonal industries, and that was what I had in mind in what I said a minute ago in suggesting that if 7 (b) (3) is to be the only exemption available, and that only on a seasonal basis, that the committee should consider broadening the scope of it, if they intend that to be done, in order that other industries which are not now qualified for the exemption, as seasonal, may be included, because I think that, as you say, Senator Ellender, all industries with the same seasonal characteristics should be treated alike.

Senator ELLENDER. As the bill is now drafted it does not do that, as I understand it.

Mr. WALLING. I think there should be clarification of what is meant by "seasonal," because the regulations which have been in effect for nearly 7 years now naturally were phrased in terms of the original act, and if there is to be a fundamental revision of that, we need guidance from the Congress as to whether they intend seasonal to be more broadly or more narrowly construed, and I think at the present time it would be difficult to include, under the term "seasonal," some of these other occupations which are as much entitled to be considered seasonal because of the nature of their operations as some of those which are now able to qualify.

Senator ELLENDER. Would you propose that the exemption for seasonal handling and processing of fish and other perishable goods be exempted from the act entirely?

Mr. WALLING. No; I think the committee's suggestion for overtime exemption only is proper.

Senator AIKEN. You would give them the 14-week exemption but not year-round exemption?

Mr. WALLING. That is right; for overtime only.

Senator AIKEN. But not for the minimum wage?

Mr. WALLING. Not for the minimum wage.

Senator AIKEN. Most of the objection that I heard raised has been to the overtime rather than to the minimum wage.

Mr. WALLING. I think that that is the difficulty.

Senator AIKEN. Because, after all, the wage level of agriculture is getting up closer to the wage level of labor in industry than it has been, particularly in the Northeast, where we have so many part-time farmers, anyway. They have to pay the same thing that they get in industry or they don't get any labor.

Senator ELLENDER. That is due to the impact of the war, isn't it, Senator?

Senator AIKEN. No; I think it was working up before the war.

Mr. WALLING. I believe the objectives of this proposed amendment are desirable. There is no reason why establishments which freeze, can, or wholesale fish should be treated any differently, as Senator Ellender has just pointed out, in terms of the basic coverage of the act than those establishments which handle, freeze, or process fresh fruits and vegetables. S. 1349 recognizes that the exemption for fishing operations, as such, is legitimate. It is impracticable to regulate hours of work for this industry and the regulation of hours would not further the basic objectives of the act in spreading employment. Since it is not possible to measure hours of work, it is also

impossible to establish any hourly minimum wage. Wage payments in this industry are frequently on a share basis, and it does not seem urgent at this time for the Federal Government to establish other methods of wage payments to fishermen. It may be desirable to study the earnings and income of fishermen to see if there is some special provision which might be required to give them such protection as may be found necessary, but at the moment I do not believe we have a basis for suggesting that such legislation is needed.

Senator ELLENDER. Mr. Walling, at this point could you, in a few words, tell us how the fishing industry is affected by the proposal?

Mr. WALLING. By the proposal?

Senator ELLENDER. Yes. I don't think you have covered that in your manuscript so far.

Mr. WALLING. What it does, of course, is to take away the overtime and minimum wage exemption for fish processing but leave fishing itself totally exempt.

Senator ELLENDER. Well, they have that now.

Mr. WALLING. No; not all parts of the industry.

Senator ELLENDER. Oh, you are advising that it should?

Mr. WALLING. I am advising that the proposal in the bill is sound, but that there is no reason for requiring minimum wage payments in the fishing industry because of the practical difficulties, among others, of trying to do that, the impossibility of estimating the hours worked, and the fact that the method of compensation is generally not on an hourly basis in the fishing industry.

I think it ought to be made clear, because my statement may not have been clear, that at the present time the bulk of the fishing operations are exempt.

Senator ELLENDER. That is what I understood. The question, then, is how are they affected by this new proposal?

Mr. WALLING. Well, it is the processing and the handling of the fish which are affected.

Senator ELLENDER. And what are you doing in that respect?

Mr. WALLING. Under the bill?

Senator ELLENDER. Under this new proposal.

Mr. WALLING. Well, I am suggesting that they should be put on the same basis as other processing operations; that you treat fish like fresh fruits and vegetables, for instance.

Senator ELLENDER. That is, you ought to have a seasonal exemption?

Mr. WALLING. That is right.

Senator ELLENDER. For overtime only?

Mr. WALLING. That is right.

Senator ELLENDER. All right.

Mr. WALLING. The exemption from the minimum-wage provisions of the act for fish processing and wholesaling, on the other hand, cannot be justified on the basis of perishability of products any more than for handling and processing of agricultural commodities. The necessity for minimum-wage protection for employees engaged in fish processing is indicated by a survey of selected key occupations in fish and sea food canning plants in 10 designated areas during the 1943 season by the Bureau of Labor Statistics, showing average hourly earnings in Mobile, Ala., of 32.4 cents an hour; of 35.7 in New Orleans, La., and of 38.2 in Norfolk, Va. These earnings may be contrasted with rates of 82.7 cents in Bellingham-Everett, Wash.; 63.2 in Portland-Lewiston and Bath, Maine, and 90.8 cents in Salinas, Calif.

However, because of the perishability of fish it may be desirable to consider the need for overtime tolerances for seasonal operations along with the suggestions I have made for the processing of agricultural commodities.

Aside from the provisions for overtime tolerances, at least one additional change should be made in S. 1349. As the bill now stands the exemption would not be applicable to fishermen unloading fishing vessels. This operation is often performed by fishermen, particularly in the case of fish for the fresh-fish market. Thus, these employees would lose the exemption during the workweek in which they engaged in unloading operations. Since they are likely to be at sea during the same workweek, it would be impossible, satisfactorily, to establish hours of work for the purpose of minimum-wage payment and overtime payment.

Senator ELLENDER. As I understand it, in Washington and Maine and California, isn't the processing there limited mostly to the canning of salmon, tuna fish, lobster, and other sea foods of that kind?

Mr. WALLING. I think it obviously is limited to the kind of sea food that those waters produce, because it isn't carried very far because of perishability.

Senator ELLENDER. Of course, because of the size of the fish it naturally takes less labor to handle them than, let us say, would be the case in Mobile or in New Orleans with respect to the canning of shrimp. For instance, the canning of shrimp is all done by hand, and after a shrimp is boiled the shell of each individual shrimp—which is about as big as your little finger—is peeled off, and it is all work done by hand. If the price for labor were, in that section, as much as it is in California or in Maine, I imagine instead of paying 25 cents for a can of shrimp you might pay as much as 50 cents.

Mr. WALLING. My estimate would be that the variation in the rates reflects the going rates in the communities rather than the difference in the amount of labor needed to perform the operation. I don't know that it takes more workers, necessarily, to handle the shrimp than it would for salmon. How can you compare the two? I don't think they are comparable on a poundage basis. Obviously a King salmon weighing 25 pounds is going to be equivalent to a good many bushels of shrimp.

Senator ELLENDER. To prepare a tuna fish weighing 50 pounds, that will make 40 pounds of canned tuna fish, and to prepare 40 pounds of shrimp, I would say, requires 3 to 4 times more workers for the shrimp than for the tuna fish.

Mr. WALLING. What I am proposing is merely that whatever the wage applicable, all employees in these fish-processing establishments get it, whatever it may be. I am not discussing the variation between different sections of the country except I mentioned that in order to indicate the need for minimum wage protection for some of these workers.

Senator ELLENDER. If we were to apply the law as now proposed, it would not affect Washington, it would not affect California, but it

would have the tendency of making it cost two and a half times as much in Alabama——

Mr. WALLING (interposing). Well, of course, that is——

Senator ELLENDER (continuing). And more than twice the price at New Orleans.

Mr. WALLING. That will be the effect in various other occupations, too. That result is not limited merely to the processing of fish. There are many occupations subject to the law which would not be affected in the slightest degree by any minimum wage change proposed, because they are already paying more than that.

Senator ELLENDER. I have heard that argument before. On the other hand, it has been testified that by raising the minimum wage it would have the effect of causing a considerable rise in the wages in the upper brackets.

Mr. WALLING. I am sorry I don't have more up-to-date figures on the actual earnings in this industry. These 1943 figures are, I think, the latest available. But I think we can all say from our general knowledge of what has happened to the general wage structure of the country, and the difficulty which the fishing industry and these related occupations have had in recruiting labor to turn out production, I think we can assume from that that undoubtedly in Mobile and Norfolk, for instance, a much higher wage is being paid than these figures which I have quoted here. I am not able to tell you the exact wage, because no such figures are available.

Senator ELLENDER. Of course, that is due to the impact of war and the lack of meat, and things like that. The consuming public was paying much more and higher wages could be met. But I am looking to the future when we get back to normalcy, as to what is going to happen.

Mr. WALLING. I think your Louisiana shrimp canners have done such a good job in educating our taste to shrimp that we are all going to buy great quantities of it when the war pressures are off and we can again get plenty of meat.

Senator ELLENDER. I hope you are right. Competition from meat and fish products will doubtless affect shrimp prices.

Mr. WALLING. A related problem is posed by the fact that cleaning and filleting is sometimes done on board, between runs of fish or on the inward trip. The difficulties discussed above would make segregation of this work and wage-and-hour regulation impracticable. I suggest, therefore, that the proposed exemptions be extended to the unloading of vessels by fishermen and the performance by fishermen of offshore duties, incidental to the taking and bringing in of the catch, but not work done on such operations as floating canneries.

Now, elimination of the seamen exemption:

The effect of the elimination of the 13 (a) (3) seamen exemption would be to bring under the act approximately 320,000 workers currently employed in the deep sea, Great Lakes, and inland water shipping. Of this total, approximately 50,000 are estimated to be engaged in the inland waters, 20,000 on the Great Lakes, and 250,000 in deep-sea shipping. This employment, however, reflects the wartime situation and it is reasonable to expect that employment in deep-sea shipping will decline when the immediate postwar shipping crisis is over. In deep-sea shipping, the hours on duty of seamen are approximately

56 hours while at sea and 44 hours while in port. It has been estimated that approximately 43 percent of the time of these seamen is spent in port. The effect of the proposed overtime premium pay would be, therefore, a reduction from 56 to 40 hours while at sea and from 44 to 40 while in port, or in the alternative, overtime payments for the excess hours.

I believe that seamen should be brought under the minimum wage provisions of the act as proposed by S. 1349. Seamen's cash wages are relatively low, considering the skills involved and the general undesirability of the work away from home and all the comforts of home. On order of the Maritime War Emergency Board, the greatest part of war bonuses will be dropped on October 1, 1945. At the same time, basic wages for most unlicensed seamen in deep-sea shipping will be increased by $45 per month on directive of the National War Labor Board. The lowest rate of pay will then become approximately 55 cents per hour.

While our seamen are paid at a higher scale than other seamen of the world, I do not believe that their living standards, in comparison with other wage earners in this country, need be sacrificed to support the industry. If it is deemed desirable that we maintain a shipping industry, and on this our recent experience should give the clear answer, the cost of maintaining decent minimum wage standards in this industry should be borne at public expense. There is no reason why seamen should receive less than the minimum wage required for other workers engaged in commerce or in the production of goods for commerce.

The next question is whether the reasonable cost of board, lodging, and other facilities may be included in wages as is provided for other employees covered by the act, or whether it should be an addition to the minimum wage as provided for by S. 1349. There seem to be persuasive reasons for the latter course. It has been traditionally accepted that shipowners should provide subsistence for these men. Seamen live under inevitable restrictions while at sea and do not have the opportunities for utilizing their leisure in the same way that employees on land are able to. Moreover, many men maintain a home to return to and families. The slight savings in cost to the family in providing the meals for the breadwinner would appear to be more than compensated for by the relative discomforts and undesirability of the life.

It has been estimated for the purposes of the Social Security Act that the total monthly value of board and lodging is approximately $35 for an unlicensed seaman, with $13.50 allocated for lodging, and only $22.50 for the cost of furnishing meals. It would seem that this would be a small price to pay for the particular discomforts and dangers to which these men are subject. It may be worth while to consider using the term "seamen" which the courts have interpreted broadly under the Fair Labor Standards Act, instead of the phrase "member of the crew of a vessel" that is now used in the proposed section 3 (m), so as to avoid difficulties in interpretation and retain the positions developed by the divisions in administering the present section 13 (a) (3).

There is one other small point that I would like to call to the committee's attention, and that is that it seems to me that the amendment

also ought to cover seamen on a return voyage as well as on the outgoing voyage. Under the bill, only those seamen who are employed on a ship going away from the United States would be covered; and those same men, returning in the same ship, coming back would not. I think that was an inadvertent omission, which I wanted to call to the committee's attention, because obviously there should be uniform treatment whether the voyage is an outgoing or an incoming one.

It is my belief that the overtime premium pay provided for in section 7 should be treated in normal times as a substantially effective work-sharing device and that it was so intended by Congress. On that view, I raise the question whether it is wise as a matter of public policy to utilize this device, designed to result in work-sharing, in situations where it is unsound or impracticable to reduce hours of work. Deep-sea shipping accounts for the great majority of seamen now employed, and accounted for a substantial proportion employed as seamen in prewar years. While I do not see any reason why the hours of work for these seamen might not be reduced to 40 hours while in port, there may be serious obstacles to such reduction while at sea.

It would mean, in effect, substitution of a four-shift for three-shift operation while at sea, or overtime payments for 16 hours. On the technical problems that would be involved it may be well to obtain the views of the Maritime Commission.

My feeling on the matter of overtime coverage is that a great deal of detailed analysis would be needed to develop sound decisions on the feasibility and effects of such regulation on the various types of shipping. It will be recalled that union representatives appeared at committee hearings prior to the passage of the Fair Labor Standards Act to propose that they be exempt from the act. They were concerned to some degree with possible conflicts on jurisdiction between the Maritime Commission and the agency enforcing the act. This question also needs careful analysis.

With the $45 a month increase recently directed by the War Labor Board, the effect of increasing the pay of seamen in deep-sea shipping to a 65-cent minimum wage would represent a direct increase of, roughly, 3 percent in the basic pay roll for the ship's crew. The reduction of hours to 40 while in port could probably be effected without any increase in cost to the industry since it could probably be handled by more efficient utilization of men. The net burden to be imposed immediately on the industry would not seem to be very great if the minimum wage but not the overtime provisions of the act are applied to seamen. While a decline in the industry's economic position would, it is true, increase the cost burden imposed by minimum wage regulation, to be borne by the industry or through subsidies, the need of the seamen for this protection under such circumstances is apparent.

Senator ELLENDER. How could the union be affected, Mr. Walling?

Mr. WALLING. Their original desire was like that of the railway brotherhoods, as I understand it, to be outside the overtime coverage of the act. Now, I presume from what I have been told that they have changed their minds on that point, but I think the committee should ascertain that definitely.

Senator ELLENDER. Don't you think that the rate of pay fixed in the present law has somewhat tempered their views?

Mr. WALLING. You mean the increase in the minimum?

Senator ELLENDER. Yes.

Mr. WALLING. I don't know, particularly, why that would affect one way or the other their views on overtime.

Section 13 (b) (1) of the Fair Labor Standards Act now provides an exemption from the overtime provisions of the act for any employee with respect to whom the Interstate Commerce Commission has power to establish qualifications and maximum hours of service pursuant to the provisions of section 204 of the Motor Carrier Act of 1935. Under the provisions of this act the ICC has indicated that it has authority to establish qualifications and maximum hours of service for drivers, drivers' helpers (including conductorettes on busses and armed guards in armored trucks), loaders, and mechanics. The Commission has, however, actually established maximum hours of service only for drivers and drivers' helpers. One provision of S. 1349 now proposes to limit the exemption from the overtime provisions for employees who during the greater part of the workweek are engaged in work with respect to which the ICC has established qualifications and maximum hours of service. The effect of this proposal would therefore be to eliminate the exemption for mechanics, loaders, and such other occupations as the ICC may from time to time declare within its authority, or to require that the Commission actually establish maximum hours of service for such employees.

The amendment would therefore serve to eliminate what is now "no man's land" between the two acts: employees who are neither subject to the Fair Labor Standards Act nor to the limitation of hours of work by the ICC. It should be regarded therefore as a step in the right direction. I do not believe, however, that it is a basic solution to the problem. At the present time, the exemption under section 13 (b) (1) of the act is treated as though the provisions of section 7 (a) are inconsistent with ICC control. As a matter of fact, these provisions are complementary rather than conflicting. The purpose of the Fair Labor Standards Act is to make 40 hours a normal workweek through imposition of the time and one-half penalty for hours beyond that workweek. The purpose of the control of hours of service, on the other hand, under the Motor Carrier Act, is to place a flat prohibition on excessive hours of work which may affect the safety of the drivers and the public. This is clearly brought out by the fact that the ICC has established a flat limit of 60 hours a week under the provisions of the Motor Carrier Act. Certainly no one can argue that this represents any desirable norm in hours of work. It expressly represents the point beyond which highway safety is endangered. It would therefore seem quite appropriate to cover motor-carrier employees under section 7 of the Fair Labor Standards Act and to continue the control of the Interstate Commerce Commission over excessive hours of work affecting safety of highway transportation.

In the absence, however, of a basic solution to the problem along the lines I have suggested, I believe the provisions of S. 1349 should be endorsed as a step in the right direction.

Child labor: The bill proposes to add to section 12 of the act the requirement that oppressive child labor shall not be employed in, or about, or in connection with, any enterprise in the United States in

which an employer is engaged in commerce or in the production of goods for commerce. The present language of section 12 merely restricts the shipment or delivery for shipment in commerce of goods which were produced in an establishment in or or about which any oppressive child labor had been employed within 30 days prior to the removal of such goods. Under the proposed revision in the bill, child labor coverage of the act would be extended to the coverage of the minimum wage provisions as well as to all activities exempt from the minimum wage provisions by section 13 of the act. The present definition of "oppressive child labor"—the employment of children under the age of 16 years generally and under the age of 18 years in occupations found to be hazardous—has not been changed by S. 1349.

I hesitate to comment in detail on this provision of the bill, since my responsibility as Administrator is restricted to the administration of the minimum wage and overtime provisions, although the Division does cooperate with the Children's Bureau in making inspections to determine violation of the child-labor provisions. I should like, nevertheless, to take this opportunity to endorse this provision of the bill. It hardly seems to me that anyone could oppose the extension of child-labor protection to the full extent of Federal authority. With the war ended, and with millions of veterans returning from overseas to seek employment, and other millions no longer needed in the production of munitions, one can hardly justify the employment of children. We have an ample labor supply and, indeed, we may find it difficult to provide jobs for all adult workers. If we are to develop our youth to assume their proper roles in a democratic society, they should be kept in school and not in the fields and factories.

Senator SMITH. Might I ask a question there?

Mr. WALLING. Certainly.

Senator SMITH. I gather that you interpret the minimum wage, as applied to child labor, has a tendency toward eliminating child labor entirely; is that correct?

Mr. WALLING. Well, of course the great bulk of the children in interstate occupations are now prohibited from employment under the age of 16, and in the case of hazardous occupations, under the age of 18. This amendment here is a technical one to fill in some chinks which now result in exemption for certain children because of the different wording of the child labor provisions of the law from the minimum wage and overtime provisions, and it would serve to make them uniform.

Senator ELLENDER. How does this new proposal fit in with the present law with respect to employment of children on farms owned by their own parents?

Mr. WALLING. There is no change.

S. 1349 proposes, in substance, the following changes in the minimum wage provisions of the act:

(*a*) A new statutory minimum of 65 cents an hour.

(*b*) A statutory minimum of 75 cents an hour to be reached 2 years from the effective date of the act by increases of 5 cents per year.

(*c*) Provision for reaching the 75-cent objective prior to the 2-year date through industry committee machinery.

(*d*) Provision for the establishment of minimum differentials for skilled-job classifications through the use of industry committees.

I shall discuss each of these proposed changes in turn.

First of all, the new statutory minimum of 65 cents.

S. 1349 provides for an increase in the statutory minimum from 40 to 65 cents, effective 120 days after the passage of that bill.

I believe that there can be no question but that a substantial increase should be made in the present minimum under the Fair Labor Standards Act. In the light of the marked upward movement in hourly earnings over the war period, marginal indeed are the workers who are in any real sense protected by the present 40-cent minimum. Industry's capacity to produce in abundance the goods necessary for a higher standard of living has been amply demonstrated by its remarkable war effort. Industrial facilities adaptable to our peacetime economy have been developed and strengthened. New techniques and new skills can be directed to the achievement of a national income and living standard far beyond our prewar levels.

Millions of wage earners have been able to manage during the war period only by working long hours for which pay was received at overtime rates. With a reduction to 40 hours from a typical wartime 48-hour workweek, an increase of 30 percent in the hourly rate is required to maintain the previous take-home pay.

Senator ELLENDER. Do you mean by that a 30 percent increase from the legal rate?

Mr. WALLING. No; from the hourly rate of pay to offset the reduction in overtime pay.

Senator ELLENDER. Where did you obtain your 30 percent figure?

Mr. WALLING. By taking a 48-hour week, which we assume for purposes of discussion is a typical wartime week—of course there are longer weeks and shorter weeks—and reduce it to 40 hours. I am merely pointing out that the mathematical effect of that is, in the absence of that 8 hours' straight time, plus overtime pay, to require an increase of 30 percent to equal previous take-home pay for the week.

Senator ELLENDER. Is this 30 percent suggestion that you speak of based on a 65-cent minimum?

Mr. WALLING. I am not suggesting this as a goal or talking in terms of any particular hourly rate. I am merely pointing out what the effect of the shorter workweek is, in general terms, without regard to any rate of pay, because the percentage would be the same. I am merely suggesting that with the shorter workweek the individual workman is going to need a 30 percent pay increase if he is going to have the same amount in his pocket when he goes home at the end of the week.

Now it is, I think, for the committee to decide whether that reduction in take-home pay should be compensated in whole or in part.

Senator ELLENDER. Well, do you think it is going to be possible, Mr. Walling, for industry to maintain the take-home pay that has been afforded during the war?

Mr. WALLING. I didn't understand the question.

Senator ELLENDER. I say, do you think it is possible for industry to continue to give full employment, as we did during the war, and afford the same take-home pay as was made available to labor during the war?

78595—45——17

Mr. WALLING. Well, if I had the clear answer to that question I could settle all the threatened strikes and the present strikes. I am not discussing that point here at all, Senator. I am merely suggesting that there is a decrease in pay inevitably involved in a reduction in hours from an overtime workweek to a straight time workweek of 40 hours. I am not suggesting whether that gap should be completely filled or not because that is a question I think quite outside the problem of raising the minimum wage. I am merely pointing out that we do face a problem now which we must take into account in our consideration of policy, and that is the fact that there is actually a reduction of pay involved for people whose workweek is shortened from 48 hours to 40 hours, and that that has some bearing on the question of their minimum wage and take-home pay, on which they will base their standard of living. I am just making that as a general comment without a specific reference to any minimum hourly rate of pay.

Mr. SMITH. You mean that we have stopped working 48 hours and gone down to a supposedly 40-hour week, and obviously that is 8 hours less?

Mr. WALLING. Plus the overtime.

Mr. SMITH. Yes. Formerly we had 52 hours of pay, counting the overtime, for 48 hours.

Mr. WALLING. That is right.

Mr. SMITH. Now, if they are going to get the same take-home pay it would mean 52 hours' pay for 40 hours of work?

Mr. WALLING. Which would be a 30-percent increase.

Mr. SMITH. You are not arguing for or against it, as I understand it?

Mr. WALLING. No; I am just stating that as a fact.

Mr. SMITH. And that also is reflected in a minimum wage because if a person is only working 40 hours a week there is 8 hours less to add to his take-home pay?

Mr. WALLING. That is right.

Senator ELLENDER. Would the enactment of this law cause this 30 percent increase that you are talking about?

Mr. WALLING. You mean the change from 40 to 65 cents?

Senator ELLENDER. Well, we have three increases in 3 years; we have 65 cents, we have 70 cents, and we have 75 cents.

Mr. WALLING. Well, doing the arithmetic very quickly in my head, and I hope correctly, that would be more than a 30-percent increase in the statutory rate of pay. But as was pointed out at the hearings last week, the actual rate of pay is considerably in excess of the statutory 40 cents. So that in gaging the economic effect of any of these proposed rates—65 or 70 or 75 cents—you have to gage it in terms of what people are actually receiving, which is in excess of the statutory minimum, not in terms of that statutory minimum itself, because so few workers are receiving the rock-bottom minimum of 40 cents at the present time.

Senator ELLENDER. Mr. Walling, do you think that the proposed increases are reasonable?

Mr. WALLING. I would like to develop in a little more detail my whole attitude on this thing. I am going to point out in just a minute that it would take pretty nearly 55 cents, for instance, to put us where we thought we were getting back in 1938 when the Congress legislated 40 cents.

Senator ELLENDER. That was because of the war?

Mr. WALLING. That is because of the change in the cost of living, among other things.

Senator ELLENDER. Of course— caused by the war?

Mr. WALLING. I suppose that that is the major reason for it; yes.

Senator ELLENDER. Certainly there is no doubt about that. I am glad you admit it. You say you are going to develop that later?

Mr. WALLING. I would like to comment on that at some length, if I may, to make my position absolutely clear.

Senator ELLENDER. And you have included that in your paper, have you?

Mr. WALLING. Yes, I have; and if I haven't covered it adequately will you raise the question again at the end of my statement?

Senator TUNNELL. Your argument is the same regardless of what the cause is?

Mr. WALLING. Yes; and I am merely stating the inevitable effect which covers the dollar-an-hour man or the $2.50-an-hour man as much at the 40-cents-an-hour man.

Senator ELLENDER. In view of your affirmative answer to Senator Tunnell's inquiry, let me ask this question of you. If, during the war, with full employment, we were unable to raise the minimum hourly wage from 40 cents to more than 55 cents, how in the name of common sense do you expect to raise it from 55 cents, which is now fixed by the War Labor Board, I think, to 75 cents in the space of 3 years?

Mr. WALLING. When you say "unable to raise" it, do you mean to raise it by operation of law, or by operation of economic forces?

Senator ELLENDER. Of course I mean by the operation of economic forces. If you get enough Members of the Senate to vote for the bill as it is—it is very appealing and they might vote that way—but I am thinking of the economic angle of it. I will say this to you, that I was a member of the committee when the present law was considered—in fact I have been a member of this committee since I came to the Senate in 1937—and I was a member of the conference when the act was considered by the Senate and the House conferees.

Mr. WALLING. Yes; I recall.

Senator ELLENDER. At that time many Congressmen took the position that although 40 cents was not the goal that should be written into the bill, yet it was a good start, and they agreed to it. But the Congress as a whole, as I recall it, knew that it would be fatal to some industries if we should increase the minimum wage abruptly. So we agreed to start off at 25 cents for the first year, 30 cents the second year, and then allow a 6-year span before we made it 40 cents.

Now, here, as I have just indicated, during the war we were unable to raise the minimum to more than 55 cents because of certain economic conditions existing, as explained by Mr. Davis, and which I am not going to go over now, but you are now attempting to write into the law an increase from our present fixed minimum of 55 cents to a minimum of 75 cents in the space of 3 years. Well, if Congress thought the way it did at that time, I am wondering how you feel about it now, not from a legal standpoint, but bearing in mind the economics of it, as you put it?

Mr. WALLING. Well, of course it is a question of congressional judgment as to the timing of that—how speedy the process should be.

I would like to raise this question with regard to your assumption of 55 cents. The 55-cent figure is a permissive figure which the War Labor Board has allowed increases to without specific approval from the Board. I don't know that we can say that that is, in fact, the minimum, because there are many thousands of workers, hundreds of thousands of them, who are being paid more than the minimum of 55 cents. So in the first place I think the premise is somewhat questionable.

Now as to the rate of progress, I think that the committee might very well give consideration to the possibility of providing for the increase from the basic minimum, of 65 cents, up to 75 cents, through industry committee action, setting, as has been done in the act itself, an ultimate goal and an ultimate period, but allowing, as we have been operating since 1938, for the appointment of industry committees which will recommend wages between the minimum established and the ultimate goal, over a period of time. That meets, I think, the objection which you and many other Members of Congress have, that you freeze the situation, you require action too quickly and you don't give individual industries an opportunity to present their particular case.

Now, the success of the administrative procedure involved in the industry committees is that you do give an oportunity for a particular industry, represented by its management and the employees, with the general public also added, to time the period during which you reach the ultimate goal, and to take into account whatever particular problems that industry may have, because if we are realistic about this whole question we have to recognize that there are certain industries which are going to be much more seriously affected than others.

There are certain industries whose wage scale comes much closer, on the minimum basis, to these rates which we are talking about, than other industries which will not be affected in the slightest degree even by a present minimum wage of 75 cents. And that suggestion gives an opportunity for those industries who will be the most directly affected to give special consideration to their particular situation and to make a recommendation in accordance with their economic capacity to pay, and with the statutory obligation not to curtail substantially employment opportunities.

Senator ELLENDER. Well, I would much prefer that we write it into the law rather than to permit any of these industry committees to do so because I remember what happened when the first act was put on the statute books. Within 6 months after the 30-cent minimum was reached, there was a movement to increase it immediately to 40 cents, and some of the committees were fairly successful at it as to some industries. With the South producing 80 percent of the textile goods of the country, as I recall the figures, we had from that section but two or three representatives out of about 50. So that the South was snowed under, as it were, and if it hadn't been for the impact of the then impending war in Europe in 1939, I don't know what the result would have been. My guess is that many textile mills would have closed.

Mr. WALLING. Well, although I didn't appoint that first Cotton Textile Committee, my recollection is that it did not comprise as many members as 50, and that naturally the employer representation, in accordance with the law, has to be balanced with the employee representation and the public representation.

Now, I take it from what you say, Senator, that you favor the more rigid application of the bill at present than to have the administrative procedure of the industry committee, which is a perfectly justifiable position. That is the position which the bill takes. I am merely throwing that out as an alternative suggestion in response to your inquiry which I thought was based on a feeling of need for more flexibility.

Senator ELLENDER. You say that you are going to discuss for us in your statement the reason why you think that it is feasible to raise the present legal minimum of 40 cents to 75 cents, in the space of 3 years?

Mr. WALLING. Suppose I complete my statement and you may interrupt me at any time, or question me at the end of it, if you don't feel satisfied.

Senator TUNNELL. We have a half hour to hear the remainder of your remarks.

Mr. WALLING. I am very sorry to have had to go into such detail about this, and to make such a long statement, but in view of the committee's request that I provide certain information, and in view of the highly technical aspects of these amendments, I felt that I owed it to the committee to explain the situation at some length. I recognize that it is unduly long.

Senator TUNNELL. I am not criticizing you—I realize that there is another day.

Mr. WALLING. Organized workers may be able to obtain compensating adjustments in hourly rates of pay, to offset this loss of overtime, but this possibility is frequently not open to the unorganized workers, particularly in industries that traditionally pay low wages.

Since 1938 the dollar has sharply declined in purchasing power so that in real wages a 40-cent minimum represents markedly less than when the Fair Labor Standards Act became effective. The increases in prices and the cost of living occasioned by our intensified defense preparations in 1941 and our subsequent active participation in the war have cancelled out, in terms of real wages, the increase in the minimum from 30 to 40 cents, which was achieved for all covered workers in the continental United States by July 17, 1944, through the industry committee program set-up under the act.

Since Congress intended that the 40-cent minimum should be universally effective in the continental United States by the end of this year, one obvious approach to the question of determining what the new minimum wage level should be is to adjust the 40-cent rate to reflect the rise in living costs since the passage of the act. At the present level of the cost of living, it appears that a minimum of about 55 cents would be required to restore in real wages what 40 cents was intended by Congress in 1938 to provide.

This data is based upon Bureau of Labor Statistics figures of the cost-of-living index in large cities, adjusted.

I believe, however, that we should look beyond the real wage objective in 1938 toward a new standard more nearly in accord with our American standard of living. There is no indication that Congress in 1938 believed that a 40-cent minimum should represent the final goal for all time in Federal minimum-wage policy. That minimum represented, rather, a reasonable beginning towards the ultimate goal: "a minimum standard of living necessary for health, efficiency, and

well-being of workers." Since 1938 the country has demonstrated its capacity to produce a national income far beyond the prewar levels. The Bureau of Labor Statistics estimates that the productivity per man-hour in manufacturing—the largest industrial segment covered by the act—will be between 40 and 50 percent higher in 1940 than in 1938. These increases, together with our governmental policy directed towards a full employment program, strongly suggest that we can now consider further steps toward the objective for achieving for each worker a minimum necessary for health, efficiency, and general well-being. S. 1349 proposes that this objective be 65 cents immediately and 75 cents within 2 years after the passage of the bill.

The effect of the immediate 65-cent minimum proposed in S. 1349 and of the various possible minima below that figure may be roughly indicated by wage information which the Bureau of Labor Statistics has already supplied for the manufacturing industries which encompass a majority of the employees protected by the act.

If the budgetary approach is used in determining what the ultimate minimum wage objective should be, the question becomes one of ascertaining the hourly rate that expresses in monetary terms the minimum wage actually required to insure an acceptable minimum standard of living.

Although this budgetary approach might seem in some ways the most objective basis for determining a concrete goal, there are a number of serious difficulties in this approach, including: which budgetary level to adopt—that is, the emergency, subsistence, maintenance, health-and-well-being, or some other basis; the number of persons provided for—that is, a single worker or a family of any particular size; the area involved—the average cost for the country as a whole, or the lowest city; and so on. A further problem arises from the fact that there have been no comprehensive studies on a budgetary basis since 1935–36.

Because of these difficulties, I am inclined to doubt whether the ultimate minimum wage objective to be achieved by present revision of the act can, for practical purposes, be related to any particular budget, and that in consequence it seems preferable for the Congress to specify the wage rate which will reflect its judgement as to what our economy may be able to afford during the next few years without substantial increases in prices or curtailment of employment.

Senator SMITH. I would like to emphasize that. Isn't that the big issue in this whole discussion?

Mr. WALLING. I think so.

Senator SMITH. I think that that is the essence of it.

Mr. WALLING. I think so.

On this basis, it seems clear to me that the 75-cent minimum proposed by S. 1349 would not exceed our potentialities of the near future or go beyond any reasonable estimate of a minimum necessary for an American standard of living.

Senator ELLENDER. That is what I have been trying to collect figures on. As I recall it, Mr. Hinrichs appeared here and painted a beautiful picture as to what excellent conditions would prevail in each American family by making available to it a minimum of $1,700 or $1,800 or $1,900, but his studies were confined to those groups. Are you prepared to tell us to what extent it will affect other groups?

Mr. WALLING. I think the Office of Price Administration, which has that responsibility, would be in a much better position than I am.

Senator TUNNELL. Your testimony is confined to procedure, isn't it?

Mr. WALLING. Yes.

Senator SMITH. I was interested in this witness stating what seemed to me from the beginning is the essence of this problem. We all desire the finest standards of living for everybody, but what can we do without having inflation on the one hand, or curtailment of employment on the other?

Mr. WALLING. That is the whole problem.

Senator ELLENDER. Are you prepared to answer that?

Mr. WALLING. No, I think that is an economic question. I would be presumptuous to attempt to interpret the position of the Office of Price Administration as to what the effect on prices would be. I think the committee should consult that office for a statement on that situation.

Senator ELLENDER. As I recall it, one of the chief opponents to a greater rise than to a 55 cents minimum or to a breach of the Little Steel Formula was Mr. Bowles, and his reason for it was that by raising wages it would have the effect of raising the cost of living all along the line, and it would be necessary then to revise all prices upward.

Mr. WALLING. Well, I didn't happen to see his testimony but I certainly don't intend to dispute what he said because he is in a position to know.

SENATOR ELLENDER: Well, assuming that he did infer that how can you say here—I think you have indicated previously or maybe it was some other witness—that it wouldn't appreciably increase the cost of living? How can you argue that if, during the war, as I have just indicated, the minimum wage was raised to only 55 cents—and the reason it was not raised to more than that was because of the effect on our price structures—you can now propose to raise the minimum hourly wage from 55 to 75 cents in three years? I am just wondering whether it takes a mathematician, an economist, or a man with any more than good old common horse sense to see that it can't be done unless the price of living, or the cost of living is considerably increased?

MR. WALLING: Senator Ellender, I didn't make the statement, I don't think, and I certainly didn't intend to, that this would not result in an increase in the cost of living, or that it would. I haven't made any statement on that point at all.

Senator ELLENDER. I said either you or somebody else had made it.

Mr. WALLING. It must have been somebody else.

Senator ELLENDER. Very well then, what would be your view on the subject?

Mr. WALLING. I think that you can obtain much more authoritative information on the effect on the cost of living, from other sources, than from the Wage and Hour Division, because we do not have the facilities and we haven't been authorized by the Congress to make such studies, and it is outside our scope. And any statement I might make on that would not be helpful in any degree. I am merely trying to analyze the administrative angles to this proposal and to suggest what has happened to the goal which we thought we were legislating

back in 1938, what it now takes in terms of cost of living which everybody recognizes to be a certain figure, at least that figure, and——

Senator ELLENDER (interposing). I hope somebody can present that information to us. When our distinguished Secretary of Labor was on the stand he said he hadn't made a study of it but that he depended on the good judgment of those who introduced the bill, and he argued that since they thought that 65 cents to 75 cents were the correct figures, that he had so much confidence in them that he agreed with them.

Now, that is not your position, is it?

Mr. WALLING. Well, I haven't made any statement on that point at all. I am merely attempting to——

Senator ELLENDER (interposing). I would like to ask you just as an individual—you have had enough experience while you have been connected with your work to be able to tell us—whether or not there would be an increase and to what extent in your judgment there would be an increase?

Mr. WALLING. I take it, from what you quote Mr. Bowles as having said, that he feels there would be an increase in prices if the minimum is raised. I certainly am not in a position to challenge that statement, because he has information which is not available to me.

A minimum wage as high as 75 cents raises a number of serious questions with respect to prices, effect on employment, productivity, profits, and so forth, for individual industries and for the various branches thereof, concerning which adequate information is not now available to furnish an over-all judgment for all industries and for the country as a whole. Information on these points can be obtained in the course of time, however, and, added to the intimate knowledge of the industry which labor and employer representatives have, could furnish an adequate basis for industry committee recommendations and wage orders. I believe that industry committee action would be a more satisfactory means of progressing toward the defined ultimate goal from the 65¢ statutory minimum than would the automatic progression steps provided for by S. 1349.

Senator ELLENDER. Mr. Walling, I am sorry to interrupt you but I have just now received a telegraph message from a constituent in Louisiana by the name of Will Houchbaum of the Alexandria Steam Laundry, Alexandria, La., reading as follows:

> Understand Administrator Walling now testifying concerning wage-hour amendment and requests authority to make final interpretations of the Act. Will you ask him reasons for his interpretation which holds that laundries doing work for restaurants, hotels and others are covered by the Act despite section 13 (a) (2) exempting service establishments? He has expressly admitted to Congressman Hartley in letters of July 2, 1942, and February 1943 that he believes Congress intended all laundries to be exempt and that the contrary interpretation was made by his predecessor. This disregard for Congressional intent has encouraged many workers to bring unwarranted court action and has caused the entire laundry industry great expense and embarrassment. Will you ask him why he retains an official interpretation which he himself admits violates the intent of Congress?

Mr. WALLING. The answer to that is short. I don't. I will be glad to supply for the committee a record of the position which we have taken based on the decision of the sixth circuit court of appeals in the Lonas case, which held that that type of laundry establishment was entitled to the exemption provided in the act, and I announced, following that decision, that until that was overturned we would observe that interpretation.

(The administrative statement reads as follows:) I will be very glad to write your constituent to that effect if you will let me have his name.

UNITED STATES DEPARTMENT OF LABOR

WAGE AND HOUR DIVISION

New York 19, N. Y.

ADMINISTRATIVE STATEMENT ON WAGE-HOUR ENFORCEMENT POLICY FOR LAUNDRIES AND LINEN SUPPLY COMPANIES

I announced that pending a decision by the United States Supreme Court indicating the scope of the section 13 (a) (2) exemption from the Wage-Hour Act, no enforcement proceedings under the act would be instituted by the Division against laundries and linen supply firms operating primarily in intrastate commerce (Release R–1995). This administrative policy was based largely on the decision of the circuit court of appeals for the Sixth Circuit in the case of *Lonas* v. *National Linen Service Corp.* and on varying interpretations of the section 13 (a) (2) exemptions by the courts.

In view of the fact that the United States Supreme Court has denied certiorari in the Lonas case, I have decided to continue the divisions' policy of not instituting enforcement proceedings under the Fair Labor Standards Act against laundries and linen supply firms the greater part of whose servicing is in intrastate commerce, unless the Supreme Court later should decide that the exemption is inapplicable to establishments serving commercial and industrial customers. This policy will not apply to a laundry establishment performing any operation on goods in the process of manufacture.

Other circuit courts of appeals have indicated that the section 13 (a) (2) exemption does not apply to establishments engaged in work for commercial and industrial customers. (*Guess* v. *Montague*, C. C. A. 4; *Walling* v. *Sondock*, C. C. A. 5; *Walling* v. *Kirschbaum*, C. C. A. 3.) In view of these decisions the Division will adhere to its general position with respect to service establishments other than laundries and linen supply firms as expressed in Interpretative Bulletin No. 6. Therefore, the enforcement policy announced in this release is limited to laundries and linen supply firms only.

L. METCALFE WALLING, *Administrator.*

NOVEMBER 25, 1943.

Mr. WALLING. While necessarily somewhat slower, the industry committees do insure the participation of the affected parties, as well as the public, and provide a mechanism to speed up or slow down the increase in wages as different industries can support them. Any scheme of automatic progression might be too slow for some industries and might result, in others, not only in the curtailment of employment, but also in failure to produce needed goods. Since avoidance of curtailment of employment is a basic aim set forth in the act—and retained in S. 1349—it would seem that the best guaranty against action contrary to this objective would be to have the tripartite machinery—employers, labor, and public representatives—study the situation in each industry before increases are put into effect.

This implies, of course, the recommendation that a definite date after a reasonable period be set in the amendment for automatic achievement of the final minimum wage objective regardless of industry committee action. I feel, however, that with the experience we have had in the industry committee technique, rapid progress can be made toward the ultimate goal proposed in the bill, and I think it would be well to make clear that as of a certain date, regardless of industry committee action, the ultimate statutory goal should be reached,

in other words, a repetition of the same machinery that we have been using in raising the minimum wage from 25 to 40 cents.

There can be no question but that a minimum wage of 65 cents would go a long way toward accomplishing the purposes of the act. In the establishment of the new minimum, the committee has already consulted the price control authorities of the Government as to the effect on prices. In making that last statement I assume that Mr. Bowles has already presented a statement to the committee. If he has not, that will be done, presumably, later on.

I want to talk for a minute about the special minimum wage provisions for Puerto Rico and the Virgin Islands.

The minimum wage recommendations I have made heretofore are not intended to apply to Puerto Rico or the Virgin Islands. In recognition of the critical economic problems existing in these two areas, the act was amended on June 26, 1940, to permit the establishment by special industry committee and wage order action of minimum rates less than 30 cents an hour where necessary. The amendment likewise provided that the wage orders established in those two areas would not automaticaly expire on October 24, 1945, but would remain at their previous level until revised by subsequent wage order action.

S. 1349, while retaining the special industry committee procedure provided under section 5 of the present act, eliminates—I believe through inadvertence—that part of section 6 which permits the establishment of lower rates in Puerto Rico and the Virgin Islands than in other parts of the United States. I am convinced that it would be unwise to abandon this separate treatment, the need for which was clearly demonstrated at the time of the 1940 amendment. Any amendment should also permit the wage orders now in effect in these two areas to stand, but subject, of course, to future industry committee action.

In addition, I believe that serious consideration for separate treatment should be given to the Pacific islands, other than Hawaii, which we now hold or may eventually acquire. Application to Guam, Samoa, and other such areas of the minimum rates established for the continental United States might destroy the major part of their economy. If these islands are to be retained under the coverage of the act, provisions similar to those for Puerto Rico and the Virgin Islands should be incorporated in the amendment, with the further provision that the effective date of the basic minimum should be delayed at least 1 year after passage of the amendment. This would allow time for the convening of industry committees to consider what wage rate orders would be economically feasible.

Senator ELLENDER. From your suggestion about Guam and other places, you have evidently made a study of that?

Mr. WALLING. No; but I will take, as the courts say, judicial notice of the fact that the wage conditions in those remote islands are undoubtedly quite different from those in continental United States.

Senator ELLENDER. Are you prepared to say that such a situation would not prevail in parts of continental United States?

Mr. WALLING. Yes; and the act, of course, clearly proceeds on the theory that you treat only Puerto Rico and the Virgin Islands separately.

Senator ELLENDER. For instance, you advocate that it would destroy the economy of Guam, Samoa, and other places.

Mr. WALLING. I say it might.

Senator ELLENDER. All right. You say that you have just taken judicial notice of that. Now have you studied the effect of this increase as to all parts of the United States?

Mr. WALLING. As to all parts of the United States?

Senator ELLENDER. Yes; that is continental United States, I mean.

Mr. WALLING. Well, I think that the testimony which Mr. Hinrichs gave on the number of employees who would be affected by the proposed change in rate is the information which you request.

Senator ELLENDER. He didn't give any testimony on that, as I recall. He relegated his testimony to the good that would follow by paying employees higher wages and by getting them more per month, and when I asked him the question as to what effect it would have on our economy or to other groups, he wasn't prepared to say, and he hadn't made a study of it. I am asking you that question.

Mr. WALLING. My recollection is that he put into the record the number of employees now receiving less than 55 cents an hour, less than 60 cents, and less than 65 cents, and so on, in manufacturing industries, which is the only information available. We do not have precise information available for other than manufacturing industries.

Senator ELLENDER. Well, I placed in the record last Tuesday a statement from the Labor Department showing that 58 percent of those engaged in the tobacco industry were not at this time receiving 65 cents per hour, and that 54 percent were not receiving 65 cents in the lumber industry. Now if that be true what effect do you think this sudden impact will have upon these industries of going from 65 to 75 cents per hour in 3 years?

Mr. WALLING. I have here, if the committee is interested and doesn't already have it, a table showing various industries which would be affected in the manufacturing field by the proposed rates, at different levels, that is, showing how many employees in each of those industries are now receiving less than the various proposals. In the tobacco industry, as you pointed out, 45,000 are now receiving less than 65 cents.

Senator ELLENDER. What percentage of the industry is that? My figures were taken from the Bureau of Labor Statistics.

Mr. WALLING. That is where these come from, so we are talking about the same table.

Senator ELLENDER. What is it percentagewise, do you know?

Mr. WALLING. Fifty-eight percent, as you stated.

Senator ELLENDER. In other words, the 45,000 that you referred to represents 58 percent of the tobacco industry, is that correct?

Mr. WALLING. That is correct.

Senator ELLENDER. Now if that figure be true—and let us say that the same percentage that I quoted prevails with respect to the lumber industry, which I believe was 54 percent——

Mr. WALLING (interposing). That is right——

Senator TUNNELL (interposing). I would like to ask whether those figures include the growers of tobacco or just the processers?

Mr. WALLING. Just the manufacturers.

Senator ELLENDER. How many are covered in the lumber industry? You have given us 45,000 in the tobacco industry.

Mr. WALLING. 240,000, representing 54 percent, are getting less than 65 cents.

Those are, of course, two of the industries which will be most immediately affected, and it is for that reason that I pointed out to the committee the desirability of at least considering the industry committee procedure for raising those employees above the statutory minimum which the committee writes into the bill, so that consideration can be given to their special problems.

Senator ELLENDER. Textiles—47 percent; wearing apparel—38 percent. To follow through with the question I was about to ask when interrupted by our distinguished chairman, "what effect would it have on those industries to raise their minimum wage to 65 cents, as provided in the bill, the first year, and then to 75 cents in the period of three years?

Mr. WALLING. Well, I think that the employers in those industries, and the employees in those industries, are in a better situation to tell you whether and to what extent and how they could absorb that increase in cost.

Senator ELLENDER. Well, we will hear some of them here next week, and all of them will tell us, I am sure, that they can't do it, and I am certain they can back their judgment with facts. What effect would that have on your voting, if you were a Senator? What would you say about it? Would you rather follow those to be benefited or to those to be affected by the bill? I know it is most appealing to help the underdog.

Mr. WALLING. Well, if the Senator insists on my replying to the question I should say that I would exercise my own judgment as a Senator.

Senator ELLENDER. I wish that would prevail more in Congress.

Senator TUNNELL. I wonder if you would state again the number in the lumber business getting less than 65 cents?

Mr. WALLING. There are 240,000 getting less than 65 cents.

Senator TUNNELL. Thank you.

Mr. WALLING. That is again in manufacturing, not in the timbering operation, Senator.

Senator ELLENDER. On wearing apparel, it would affect 300,000.

Mr. WALLING. That is correct, which is 38 percent.

Senator ELLENDER. And in furniture it would affect 120,000; in electrical equipment it would affect 145,000; and in foods it would affect 280,000. Now, Mr. Walling, isn't it apparent to you that if Congress should by law force that sudden change on these industries it would seriously affect them?

Mr. WALLING. I think that the committee ought to bear in mind that the percentage of employees receiving less than the original minimum of 25 cents, in the case of these very same industries, was very high. A great many workers in those industries received considerably less than 25 cents an hour when that became effective in 1938, and I take it that it was for that reason, because their living standard was one below which good conscience could permit, that this law was originally enacted. Three hundred thousand workers had pay increases when the 25-cent minimum became effective and 650,000 a year later when the minimum was raised to 30 cents.

Senator ELLENDER. All that is true, but at that time, when wages were increased, they raised the price of their commodities. Now it is impossible to do that because of the OPA statute, which remains in effect until June 30 of next year, I believe it is. It may be and I hope it is that Congress will reenact the Price Control Act. I think it will be necessary. Assuming that it does, how do you think industry will be able to maintain itself unless it increases its prices in order to meet these increased wages?

Mr. WALLING. Well, I think there are two comments in answer to that question. First of all, we ought to analyze very carefully what, if any, price increases were actually instituted as a result of the industry committee recommendations. Secondly, may I point out that a great many of these very same industries that we are talking about were almost as seriously affected by the industry committee wage recommendation as would be affected by the proposal now.

In the apparel industry, for instance, which you mentioned, 200,000 workers were getting less than the recommendation of the apparel committee, and those employees all had to have their wages raised, as would be the case in the proposal we now have before us.

When the statutory minimum of 30 cents was changed to 40 cents under the wage-order program, 313,000 workers directly benefited through a wage increase during the fiscal year 1940, 638,000 in 1941, 805,000 in 1942, 278,000 in 1943, and 609,000 in the 13 months ending July 1944. In all, approximately 2,700,000 individual pay increases resulted directly from the wage-order program affecting nearly 1,700,000 workers. These figures, moreover, do not include the higher paid workers who benefited indirectly through adjustment of industry wage structures in the upper brackets to preserve in whole or in part the occupational differentials previously existing nor do they include the untold thousands of employees not covered by the act but whose rates were favorably affected by the minima established for covered workers. Furthermore, it is evident from the figures that these wage gains were not achieved at the expense of profits which after taxes in the case of corporations rose from 1939 to 1943 from $4,088,000,000 to nearly $9,000,000,000 and before taxes from $5,320,000,000 to $22,817,000,000. There was, of course, accompanying this a large increase in production and employment. Considering the manufacturing industries alone, corporate profits after taxes during this period increased from $2,579,000,000 to over $5,500,000,000 and before taxes from $3,213,000,000 to approximately $14,500,000,000. Each of the major manufacturing groups shared in this increase though naturally some to a lesser and some to a greater extent.

I can not, of course, estimate to what extent the Fair Labor Standards Act was responsible for these developments, but I can confidently say that the establishment of a 40-cent minimum wage under the Act did not during this period in any way adversely affect our economy as a whole even though there may have been some marginal producers who had difficulty in adjusting to the wage orders. I think it is doubtful that the normal mortality rate of inefficient and uneconomic enterprise was increased to any significant degree.

Senator ELLENDER: Mr. Walling, I am sure that you have a record in your office of those various industries that were affected back in 1938 by those increases?

Mr. WALLING. Yes; this document I am reading from now is the increases by industry committee action.

Senator ELLENDER. Back in 1938, when the industry committee raised the rate of pay from 30 to 32½ or 37½ cents, I pointed out here that of four concerns in New Orleans that made wearing apparel, two of them, I think it was, closed down. Now have you a record of any other industries having failed or closed throughout the country because of this increase in wages?

Mr. WALLING. I think it is a true statement to say that there were practically no wide-scale closings, or rather that there were no wide-scale closings and practically no individual closings of establishments which could be attributed directly to the operation of the Fair Labor Standards Act, or were claimed by the owners of those establishments to be directly attributable to that Act.

Senator ELLENDER. What about the two in New Orleans that I have pointed out here, and I got telegrams from them stating that that was the case?

Mr. WALLING. Well, I would be glad to consult the record on those particular two. I don't know which ones you are referring to but I do happen to recall that there were several establishments in New Orleans which closed down about that time, as there were in every garment center in the country, because the garment industry is one where long life is more rare than anywhere else. There is a very rapid turnover in establishments in the garment industry, and I happen to recall that one of those New Orleans firms expressly stated at the time they went out of business that it was not because of the operation of the Fair Labor Standards Act. I will be very glad if you will give me the names of the two in question to see if I can find out specifically about them.

Senator SMITH. I would like to ask that there also be put in there the extent to which price rises occurred which saved those concerns from being shut down, or whether, as you have implied in your remarks, that was absorbed some other way in industry. Which was the fact? It is very important, it seems to me.

Mr. WALLING. I think it would be difficult to obtain individual data from particular establishments on price increases, because they were not required to file their prices with any governmental agency or obtain permission to raise their prices. We could only find out, by consulting a particular firm, whether it did or did not increase its prices. I was speaking in general terms about industry price levels as distinguished from particular establishments.

Senator TUNNELL. Can you answer as to whether a particular industry or a particular firm or company can absorb this increase in wages unless you know something about what the profits of that industry or firm have been?

Mr. WALLING. I can only point, I think, to the record which has already been made, of the increases in the wage structure which have already been absorbed. For instance, in the case of the garment industry 200,000 employees were getting less than the minimum wage which was put into effect as the result of industry committee action. Beyond that I couldn't go without knowing a great many other economic factors which affect prices, besides wages, because we must remember that wages are only a part, and generally a relatively small part, of the total cost of production, and you can affect wages by making increases, without affecting price levels in many cases more easily

than you can by making other types of adjustment in your cost of production, and the capacity of industries to absorb wage increases through increasing efficiency of production if for no other reason is quite extraordinary, as has been demonstrated by the record we have made in this wartime period.

Senator ELLENDER. Mr. Walling, I have heard that same statement made by many other witnesses, that the labor cost is a small part of the production cost. You have repeated that today.

Mr. WALLING. That is because it is true.

Senator ELLENDER. Well, you take raw iron from which steel is made, for instance, it is worth little, but it is the labor involved in getting it to the mills that makes its cost rise. In surface mining you have the labor of operating the dragline and the bulldozer and other mechanical devices. In deep pit or shaft mining, you have the labor of the miner with the pick, then transporting it through the tunnel and up the shaft. Then the labor of loading it onto railroad cars and off of railroad cars and onto barges or steamships. Then it goes from the barges to the mill. All of that requires labor costs, and that is where your great cost is. Even the railroads and steamship companies must hire and pay labor.

The same with farming. Take the cotton in the field. You certainly must consider the work that is attached in making the crop, planting it and cultivating it and harvesting it. I would say that labor in that instance is over 50 percent of the cost of producing the raw product.

Mr. WALLNG. Those figures are easily available for every industry.

Senator ELLENDER. But I can't quite understand why you say that the labor is very small, when, as a matter of fact it is the major part of it.

Mr. WALLING. I am talking about the general level of industry, the labor cost which generally prevails throughout industrial operations. Now it varies, of course, from one extreme to another. There are certain industries where the labor cost is relatively high in terms of total cost of production. There are other industries where it is relatively low. It depends on the particular industry. My statement was made about industrial operations in a general way.

Senator SMITH. But if you make a general rule then you are bound to affect adversely the industry that has a very high percentage of labor cost. That is the thing that troubles me in trying to make a flat rule to cover them all.

Mr. WALLING. Obviously, and that is why I have been pointing out the particular industries which would be most directly affected, where the problem would be most acute, and we know pretty definitely which industries those are.

Senator ELLENDER. Well, I hope somebody makes a study of that and gives us all the information. Nobody has done so thus far, but many have advocated a specific sum as a minimum wage without having studied the problem through.

Senator SMITH. I think it is very essential information in order to arrive at a sound and scientific conclusion.

Senator TUNNELL. I don't think you will ever get the answer to the question as to whether a particular industry or a particular company can stand a rise or can absorb a rise in wages until you know what that company is now making.

Senator ELLENDER. But, Senator, what we are doing here, irrespective of what one company makes over another, is applying the same yardstick to all of them.

Mr. WALLING. I have frequently made the statement that minimum wage legislation has been a greater preventive of bankruptcy than almost any other provision that has been enacted into law, because in the first place it makes an employer conscious of his obligations, an orderly way of doing business, and of the need for looking at his labor costs and over-all cost of production to see whether he is operating at a profit or loss.

Senator TUNNELL. Let me suggest something to Senator Ellender in response to his statement that the same yardstick is being used. Unfortunately the corner grocer does use the same yardstick when he hands out the groceries, and the merchant uses the same yardstick. So that there is a similar standard, and if the fellow in one line doesn't get wages equal to another, when he goes to spend his money he is in competition with the person who is getting a higher rate.

Senator ELLENDER. Well of course, Senator, in the retail and wholesale operations, as I understand it, that is done on a percentage mark-up depending upon what the cost of the goods is; but in the manufacturing end I don't think the same formula prevails. You have the most efficient manufacturers of certain articles, and manufacturers of the same articles which are less efficient.

Mr. WALLING. But a direct incentive is given to the least or less efficient producer to take stock of his operating methods and introduce greater efficiency if he has to meet a flat minimum wage bill. Just a few years ago I was down in San Antonio and I talked with one of the pecan-shelling operators there who was particularly opposed to the Fair Labor Standards Act when it was pending, and who predicted dire ruin for the entire pecan-shelling industry if these minimum-wage provisions were ever written into the law. Following a meeting down there this man, one of the leading processors in the industry, came up to me and said:

> I want to say to you that we all feel that we were wrong in our apprehension about the effect on our industry of these minimum wage provisions; it has been the best thing that ever happened to us. We are operating more efficiently, we have a more contented labor supply, we are turning out a much greater production per operator than ever before, and the industry is on a sounder and more profitable basis than it has ever been in its history, and we attribute it directly to the effect of the minimum-wage legislation.

That instance could be repeated over and over again in different parts of the country. There is no question but that once you have a minimum labor cost obligation to meet, you immediately take steps to make your production more efficient, if it begins to pinch, and that is bound to happen.

Senator ELLENDER. And of course in proportion to how much more you pay for your labor, the price that you are going to get for your goods will be increased to meet that initial cost?

Mr. WALLING. If you assume that you do not absorb that cost through greater efficiency of production.

Senator TUNNELL. Now, then, we are at page 25, I believe, of your testimony, Mr. Walling, and there are 35 pages in the statement which you have to present. I was wondering if there would be objection to your filing this in the record which would save your coming back, or what do you prefer to do? It would probably take an additional 2 hours to finish your statement with what discussion there might be on it. What is your preference?

Mr. WALLING. As the committee pleases.

Senator TUNNELL. What do you think, Senator Ellender?

Senator ELLENDER. I have no objection to letting him put it in the record, Senator, and the reason I say that is that Mr. Walling, like previous witnesses, is not prepared to answer questions that I would like to propound on the economics of the subject, that is, the effect that such increases would have on our economy.

Senator TUNNELL. I think that is largely because you have asked him questions about matters outside his province.

Senator ELLENDER. The point is this, Senator, that we haven't had a witness yet who has thought this thing through, as to its effect on our economy and all those concerned. All Congressmen and Senators will desire to think it through, I hope. We have had Mr. Hinrichs spent a lot of time before us telling us of the beautiful effects that will accrue because of giving better wages, but when you ask him how it will affect other groups, he didn't know, and that is your answer.

Mr. WALLING. Senator Ellender, I want to make it clear that I will be glad to insert in the record the exact figures of how many people are going to be affected by these proposed increases. That is a matter of public information.

Senator ELLENDER. Well, Mr. Walling, I am sure you will agree with me, or at least you should——

Mr. WALLING (interposing). You make it very difficult for me to disagree.

Senator ELLENDER (continuing). That the Fair Labor Standards Act has not had a fair trial because of the war. I would have liked to try the Fair Labor Standards Act under normal conditions, and I won't say I would like to see it tried under present conditions, that is, with the increase from 40 to 75 cents, because as I view it—I may be all wrong and I hope I am—it will cause, in my opinion, more unemployment than one can dream of. On the other hand, if prices are permitted to rise to meet the cost of increased wages, our economy will be doomed by an unprecedented spiral of inflation. God forbid that such will happen, because the farmer, the laboring man, the white collar workers, our pensioners and many others will be the greatest sufferers.

Senator TUNNELL. If it is satisfactory to Mr. Walling we will have the remainder of his statement incorporated in the record.

Mr. WALLING. Surely.

(The remainder of the statement is as follows:)

ESTABLISHMENT OF RATES FOR SKILLED JOB OCCUPATIONS

Section 5 of S. 1349 marks a departure from traditional minimum wage legislation by providing for the establishment through industry committee machinery, of minimum wage rates for skilled and semiskilled job classifications. As I read the language of the bill, it appears to me to be a mandatory provision, calling for the establishment of minimum wage rates for such occupations in all industries covered by the act. My first reaction is to question whether the purpose of the act—the elimination of labor conditions detrimental to the maintenance of minimum standards of living for health, efficiency, and general well-being of workers—justifies the establishment of wages above the minimum level. It seems to me this provision of the act goes beyond the basic purpose of minimum wage legislation and requires serious consideration.

78595—45——18

The objective sought by this provision is undoubtedly a sound one. I assume that its purpose is to insure that due recognition is given by employers to the skilled occupations as the minimum wage for unskilled workers is increased, or, in other words to prevent the minimum from becoming the maximum. Some years ago an argument commonly used against minimum wage legislation was that it would lead to a wage structure compressed tightly about the minimum rate. I believe that our experience with minimum wage legislation amply disproves this assertion. By and large, when minima under the act have been raised, there have been substantial increases granted to occupations in the higher brackets although not necessarily in exactly the same amount or proportion that the minimum has been increased. There have been some exceptions of course, one of which may have given rise to this provision. I believe the War Labor Board found, in a recent investigation of the textile industry, that there was a very substantial narrowing of differentials in certain establishments in the textile industry with the result that highly skilled workers in these establishments obtained very little more than the least skilled workers in the plant. I think, however, that taking industry as a whole this was a relatively rare occurrence.

It has always been my belief that wages in the higher brackets should be fixed through collective bargaining and that governmental activity in the minimum-wage field should be restricted to establishment of minimum wages required to reach a standard of living at a socially acceptable minimum level. In the light of this belief, this particular provision of the Pepper bill appears to me to be somewhat questionable. Aside from the basic question of the desirability of this type of wage fixing, I believe the provision, at least as presently written, would be extremely costly and difficult to administer. The collection of adequate information on the basis of which to set up job classifications for all industries and the information on rates actually being paid for all occupations would be quite a substantial task. Then too, there is lack of uniformity in occupational designations and even where the job is identically designated in different establishments, the job content may be quite different. Even more difficult would be the task of obtaining adequate information on transportation costs, costs of production, costs of living, which the committees would need under this provision in order to determine whether there should be geographical differentials in the skilled rates. This administrative burden could be minimized if the provision were made voluntary instead of mandatory so that such questions would be gone into only in those industries where the evidence indicated to the committee that there was serious danger of the minimum becoming the maximum. If the Congress should decide to experiment with this type of wage fixing, I would suggest: (1) That the provision be made voluntary; (2) that the committee be restricted in its authorization to minimum differentials for a few key occupations, which would tend to force the establishment or more or less appropriate rates for all other occupations; and (3) that the committee not be required to consider competitive conditions as affected by transportation, living, and production costs (which criteria, from a practical point of view, are almost impossible to apply) but rather to base their determinations on the differentials commonly found in the industries prior to minimum-wage action. My recommendations for voluntary action will give some recognition to a semblance of collective bargaining in the field where, as a permanent policy, the Government has not hitherto intervened to fix wages.

SUGGESTIONS FOR FURTHER AMENDMENT

S. 1349 provides for an amendment to section 16 (b) to provide that any action to recover liability under that section may be maintained at any time within 5 years from the accrual of such liability, in any court of competent jurisdiction. At the present time there is no statute of limitations in the act, and enforcement is governed by State statutes of limitation, wherever applicable.

As I pointed out in my last annual report to Congress, the present situation is extremely unsatisfactory. Among other suggestions which I made was the addition of a reasonable statute of limitations. If this were done, varying State standards, which penalize some workers in the collection of wages legally due and give competitive advantage to violators in States with arbitrarily lowered statutes of limitations, will no longer prevail. An employee's ability to collect back wages due him should not depend on the accident of geography.

In my testimony before the House Judiciary Committee on the Gwynne bill I suggested that 3 years would be a reasonable statute of limitations. I believe

that this is a more reasonable period of time than the 5 years provided for in S. 1349.

I also suggested in the annual report and in my testimony on the Gwynne bill that the enforcement of the act would be greatly aided by other types of amendment, including authority for the Administrator to bring action directly in the recovery of wages due under the act, and authority for the Administrator to promulgate regulations defining the terms and provisions of the act and protection for an employer from criminal or civil liability when he follows the Administrator's regulations.

Our experience shows that the overwhelming majority of employees who have been paid less than the act requires relief on the Divisions for their remedy. In contrast to the few thousand who sought redress in the courts are some 90,000 who lodged complaints involving several hundred thousand workers with the Divisions. Inspection of the establishments involved in these complaints has resulted in the restoration of nearly $50,000,000 in back wages due under the act. Even more significant is the fact that employees very commonly wait for the Division to secure their rights, taking no action at all. They may be uncertain of their rights, they may be hesitant about asserting them, or they may actually be afraid to do so. In any case, the inspection of 41,000 establishments, in the fiscal year 1944, against which no complaint had been filed resulted in the payment of nearly $9,000,000 in back wages to 293,000 employees. This outcome of the Division's spot-check program of non-complaint inspection repeated the experience of previous years. In the first 7 months of the 1945 fiscal year 132,000 employees who had taken no action on their own behalf received over $4,500,000 in back pay as a result of noncomplaint inspections.

The obligation on the Administrator to assure equally the rights, under the act, of all covered employees is almost too obvious to need mention. From the standpoint of administration, it no less important that the provisions of the act be applied equally to all employers subject to its requirements.

As I said in my last report to the Congress:

"An important part of this program is the collection of restitution in cases where the employer has failed to pay his employees in accordance with the act. Such a step benefits the workers denied wages legally due and denies the employer who has violated the act the advantage which he would otherwise gain over his competitors. The labor laws of several States give the administrative agency in charge of enforcement of their minimum wage laws power to sue directly to secure the restitution of unpaid wages to the employees upon assignment of their claims. If such a provision were added to section 16 (b) of the Fair Labor Standards Act, it would increase the efficiency of enforcement and facilitate the collection of restitution. This would benefit the great mass of workers denied wages legally due and, if a provision for waiving the penalty provided by section 16 (b) except in cases of willful and flagrant violations were included, employers who voluntarily pay the restitution due would be saved from possible injustice by relief against the threat of further court action.

"At the present time, the Administrator has no power to issue authoritative interpretations of the general provisions of the act. This is highly unsatisfactory because it means that an employer who complies with the Administrator's interpretation on a doubtful question cannot be sure that he will not be subjected to liability in an employee suit. For example, an employer who is operating an establishment regarded by the Administrator as a retail establishment, and, therefore, exempt under section 13 (a) (2), may be sued by his employees for double damages and the court may rule that the establishment was not retail and that the employer must pay double damages to the employees for his violation of the act. Accordingly, I recommend that the act be amended to give the Administrator power to make regulations necessary or appropriate to implement the act's provisions, including the definitions of terms used in the act, and to protect employers from any civil or criminal liability where they were complying with the Administrator's regulations. It will be observed that the Treasury regulations issued under the revenue acts are almost an exact precedent for the procedure now proposed.

"The minimum wage and overtime provisions of the Fair Labor Standards Act protect some 21,000,000 workers, but a still greater number are outside its protection. Many of these latter are employed in activities outside Federal jurisdiction. In appropriate forums the Administrator has urged parallel State legislation to broaden the effect sought by the Congress in the act and provide for such workers a similar bulwark against post-war wage slashing, deflation, and consequent unemployment.

"As frequently noted by the courts, however, coverage under the act is not itself as broad as the Federal power. In some directions this has caused difficulties of fair administration and thwarted the purpose of the Congress by actually resulting in unfair competition and leading to disputes. Two examples emphasized by inspection and enforcement experience may be mentioned:

"(1) Employees protected by the act and others unprotected may work side by side at similar tasks in the same plant. Since all employees in an establishment may not be engaged in interstate work, they are not all necessarily subject to the act as at present drawn, even though the operations of the establishment are essentially of an interstate nature. This is exemplified by wholesale houses, in which certain groups of employees working with shipments of goods received from without the State, or on particular types of orders, are subject to the act, while others, concerned with intrastate distribution of goods, may not be covered. Or the same employee, doing exactly the same work, may be covered one week and not the next.

"(2) There are firms in industries of a basically interstate nature, which affect interstate commerce and should be covered, but which because of their location and the nature of the product, are able to operate on an intrastate basis. Although they may compete directly with interstate plants, they are not required to meet the minimum wage or overtime requirements of the act, and unfair competition is not eliminated. The importance of this factor of competition between firms whose positions with respect to coverage under the act differ has been emphasized at hearings before several industry committees, where data have been presented on the serious effects of low-wage competition from non-covered firms. In two instances—the clay products and the lumber and timber industries—the committees suggested to the Administrator that, because of a serious competitive situation, the act be extended to include all firms competing with interstate operations.

"These problems might be dealt with in several ways. One would be to amend the act to include all employment affecting commerce; this would follow numerous precedents, such as the National Labor Relations Act. An alternative would be to change the text of coverage to an industry basis making the minimum wage and maximum hour provisions applicable to all employment in industries found by the Administrator substantially to affect interstate commerce."

CONCLUSION

It may be well for the committee to keep in mind some of the criticisms which were made prior to the original passage of the Fair Labor Standards Act. I have myself reviewed the hearings held by joint committee to consider the original bill. I am impressed with the fact that if the dire predictions of the opponents of the bill had come true our economy would indeed be threadbare. We would not now be holding hearings on S. 1349. Among the most frequent predictions made were (1) that the bill would, by destroying wage flexibility, force wholesale closing down of plants; (2) that it would create uncertainty and cut profits, and cost flexibility to the disadvantage of small manufacturers; (5) that the thus discouraging business expansion; (3) that it would increase costs and prices, thus decreasing sales and employment; (4) that it would destroy price and the power of collective bargaining; and (7) that it would destroy the separation of powers between State and Federal Government.

One has but to look at the healthy progress of industry and labor since that time to find the answer to these dire predictions. Two editorials from newspapers in areas where the prophecies of disaster had been most strident give perhaps the best evidence.

A year after the wage and hour law became effective—before the effects of the war—the News-Leader of Richmond, Va., commented as follows: "In spite of the personnel troubles of the tobacco firms, particularly the small independents, the Federal wage standards have had a gratifying effect in Richmond. The incomes of more than 2,000 families have been substantially increased. Scores of slum tenements have been abandoned for better living quarters. If reports are to be credited, the quality of work of the average stemmer has improved to a point that largely has compensated for the boost in wages. Trial of the Fair Labor Standards Act among southern low-wage industries may mean the same happy experience for other communities that Richmond has enjoyed for the past year."

On February 6, 1941, the Birmingham News wrote editorially:

"This newspaper, frankly, was dubious of the wage-hour proposal when it was enacted, chiefly on the ground that it would impose economic difficulties which,

we feared, would cause so many dislocations that it would do more harm than good, especially in the South, where industrial development is not far advanced. This fear has not been borne out, and there are many evidences, on the contrary, of beneficial results of the act."

The committee has requested data on the number of workers who have directly benefited from the imposition of the statutory and wage order minima established under the act. When the statutory 25-cent minimum took effect on October 24, 1938, 300,000 workers in the continental United States received direct wage increases. The statutory 30-cent minimum which became effective a year later directly increased the wages of approximately 650,000 employees. In addition, the wage order program, which by July 1944 had established a universal 40-cent minimum throughout American industry, resulted in approximately 2,700,000 individual wage increases. The number of employees directly benefited each year through the establishment of wage order minima is as follows: Fiscal year 1940, 313,000; 1941, 638,000; 1942, 805,000; 1943, 278,000; 1944 (including July 1944), 609,000.

Apart from these direct increases, a vast number of workers being paid above the minimum received increases as a result of upward shifts in industry wage structures to reflect the new minimum rates. It is to be noted that these changes on the whole were absorbed without serious dislocation of industry.

I believe that now is the time to advance the frontiers further. The gains proposed in S. 1349 toward the goal of a minimum standard of decency originally set forth by Congress in the Fair Labor Standards Act of 1938 will at this time mean a minimum of readjustment. Now is the time to take another firm step forward.

Senator TUNNELL. Thank you, Mr. Walling.

Mr. WALLING. Thank you very much, sir.

Senator TUNNELL. I have enjoyed this discussion.

Mr. WALLING. I am sorry it had to be so lengthy and so technical.

(Additional testimony submitted by Mr. Walling appears in the Appendix.)

Senator TUNNELL. The committee will now stand in recess until 10 o'clock, tomorrow morning.

(Whereupon, at 12:10 p. m., the committee recessed until 10 a. m., Friday, October 5, 1945.)

AMENDMENT OF FAIR LABOR STANDARDS ACT

FRIDAY, OCTOBER 5, 1945

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON EDUCATION AND LABOR,
Washington, D. C.

The subcommittee met, pursuant to recess, at 10 a. m., in room 357, Senate Office Building, Senator James M. Tunnell, presiding.

Present: Senators Tunnell, Ellender, La Follette, Aiken, and Smith.

Also present: Charles Kramer, consultant to the committee.

Senator TUNNELL. The committee will be in order.

Mr. McDonough, will you take a chair at the other end of the table?

Now, Mr. McDonough, give your name and your position to the reporter for the record.

Mr. MCDONOUGH. I am Patrick W. McDonough, of Oakland, Calif. I am owner of the McDonough Steel Co., and also a director of the Smaller War Plants Corporation.

Senator TUNNELL. All right, Mr. McDonough, give us any statement as to your position on this bill that you desire.

Take your own method of presentation.

TESTIMONY OF PATRICK W. McDONOUGH, OWNER, McDONOUGH STEEL CO., OAKLAND, CALIF.

Mr. MCDONOUGH. I appear before you to speak in favor of the adoption of the bill known as S. 1349. I do this as an employer and a manufacturer, because I feel the best interest of the people of America will be served by a fairer distribution of the production of the country to the underpaid. I feel that such a bill is necessary because the paying of good wages, at least wages necessary to sustain life and a good standard of living, will not be paid by some employers unless it is made obligatory.

The first thing a businessman must learn in order to be successful is that he is not operating an eleemosynary institution. The exigencies of business require that he survey the wages and salaries paid. These must be in line with his competitors' or he just does not stay in business. In crafts or trades which permit unionism, the union is usually a little late finding out that it is not occupying its proper relation to changing conditions. The unions demand a change, usually an increase, and it is granted only if they show a sufficient power to force their demands. Never, in my 42 years as a workingman and employer, have I ever seen an increase in wages freely granted in a competitive field where the end price was determined by competition only.

This minimum of 65 cents to 75 cents an hour in 2 years will reach down to the unfortunate people who, for a great many reasons, are

not in a position to help themselves. Yet they are the people who furnish a great number of our successful men and they are the people who, in time of war, furnish not one soldier per family to make the supreme sacrifice if necessary, but four and five, or even more, boys per family. If, through the stress of circumstances, these people cannot get a fair share of their production; if, from that same stress, these people who are heads of families become what we term the "underprivileged," then it is the duty of our lawmakers to provide remedial laws so that they will enjoy a fair share of the present production and of their potential production. I believe that S. 1349, although not a complete answer to the problem, will tend to ameliorate the abominable conditions due to insufficient wages.

I do not wish to present a mass of figures showing the economic relations of high wages to high production. It is indisputable that our country, which pays the highest wages, has also the highest production per man; also, that the relative production per man in other countries conform, high or low, consistent with the wages paid.

This is not a matter of some unknown economic law. High wages and high production are synonymous, just as a well-kept machine is more productive than a run-down machine. It requires money to keep a machine in order and the costs are amply compensated for by a greater proportionate output.

People who have not enough to eat or have not proper clothing are not in a position to produce and the only way they can attain a higher standard of living is to give them enough money so that they can buy the requirements of life.

I know that if we suddenly would double everyone's pay, that that alone would not alleviate the conditions one bit; but I do know that when wages are high, we mechanize. In my own business, our first test is: What will the operation cost? If the cost is based on a high wage, we make a machine or contrivance of some kind to increase the production. This mechanization, in the aggregate, is what makes our country the greatest Nation in the world, as proved by the recent war. This does not promote unemployment. This means that there is a greater amount to pass around to others.

From the very nature of things this sharing of production cannot wholly be left up to the magnanimity of the employers. This is indictated by the fact that manufacturers close their plants in one State to move to another State because labor is cheaper. This simply means that in some States people have a lower standard of living and employers move in to take advantage of what they think is a favorable business condition. No thought is ever given by the employer that higher wages should be paid.

I went to Puerto Rico recently and visited and inspected manufacturing facilities. I observed there an outstanding example of the moving of plants to regions of low wages. The plant I have in mind is a branch of one in Iowa. Its business is the making of the Great American Apple—also known as a baseball. The manager took me over especially to watch one woman sew. She operated like a machine—a needle in each hand and without any lost motion. I asked how much she made, and he swelled all up and said she often made as much as $8. I asked, "A day?" And he said, "Of course not—$8 a week."

In my business, during the 1930's, wages paid by some employers were as low as 20 cents per hour. There was no check on the avariciousness of the employer. Everyone was damaged by these conditions, most of all the employer. He, too, needs some protection from unscrupulousness.

I wish to offer a fact which I have observed during my working and business life, pertaining to the people whom you now wish to pay 65 cents per hour. I have seen wages increase from 20 cents an hour to $1 per hour, due mostly to organization. During that 40 years that this increase took place, despite the wage increases of five times the original amount, the end cost of the product in our particular line is less than it was 40 years ago. This is, of course, due to mechanization and improved methods, and with this has come a higher standard of living.

I wish to offer an example. Thirty years ago the wages paid in my industry were 30 cents per hour in making a certain type of tank. In 1940 the rate was $1 per hour. Despite the increase of almost four times in wages paid per hour, the labor cost in that particular tank dropped from $120 to $80. This, of course, was due to better methods.

I also recognize that if a floor is put to wages, which is considered just, then an unfair ceiling may eventually be put up, but for the present the low-wage earner needs a good floor. S. 1349 will be a contributing factor to a better and greater America. Therefore, I am wholeheartedly for its enactment into law.

Senator TUNNELL. Mr. McDonough, one of your statements causes me to ask this question: Do you think that high production causes the high wages, or the high wages cause the high production?

Mr. MCDONOUGH. Ask that question again, please.

Senator TUNNELL. You say that high wages and high production go together.

Mr. MCDONOUGH. That is right.

Senator TUNNELL. Which causes the other?

Mr. MCDONOUGH. Well, I liken that to a machine. A man is nothing more or less than a machine, at least treated so by employers, and if the machine is in poor working shape due to not being oiled, and other things, it doesn't produce; and if a man is in poor working shape due to not having enough to keep himself and family, he doesn't produce. They are absolutely inseparable, high wages and high production; they are one and the same thing.

Senator TUNNELL. I think that there is much in what you say, but I was just wondering which was the cause.

Mr. MCDONOUGH. I think a high wage is a contributing factor to high production. That is, it comes about this way: for instance, in my particular plant, I hire men and pay them high wages, and they work harder to keep their jobs; they are more interested in their work. So consequently, they produce more.

Senator TUNNELL. That means that a satisfied employee will do more than an unsatisfied or a dissatisfied employee?

Mr. MCDONOUGH. That is right.

Senator ELLENDER. What kind of business are you engaged in?

Mr. MCDONOUGH. I run the McDonough Steel Co.

Senator ELLENDER. What do you manufacture?

Mr. McDONOUGH. During the war we were manufacturing invasion boats, and at other times we make everything from steel smokestacks to steel buildings or steel barges; anything in steel.

Senator ELLENDER. How many people did you employ——

Mr. McDONOUGH (interposing). Normally we employ about 200.

Senator ELLENDER. When you say "normally," you mean prior to the war?

Mr. McDONOUGH. Yes; and after the war.

Senator ELLENDER. How many did you employ during the war?

Mr. McDONOUGH. Five hundred.

Senator ELLENDER. What is your rate of pay, the minimum wage?

Mr. McDONOUGH. One dollar an hour.

Senator ELLENDER. This bill wouldn't affect you.

Mr. McDONOUGH. No; it doesn't affect me at all.

Senator AIKEN. Well, wouldn't it affect you by requiring your competitors to pay a fair wage, or would any wage in your business be as much as this bill calls for?

Mr. McDONOUGH. I might state that in California—without bragging—we have a fairly high standard of living, and 65 cents an hour is hardly known.

Senator AIKEN. Practically everybody pays over 65 cents an hour for any kind of work out there?

Mr. McDONOUGH. That is right.

Senator TUNNELL. You know, there is certain latitude allowed to Californians in bragging about their own State.

Mr. McDONOUGH. You know, I come from the part of California where we don't have to brag.

Senator AIKEN. Are you a native?

Mr. McDONOUGH. Yes; I come from San Francisco.

Senator ELLENDER. Mr. McDonough, I agree that California has a much higher standard of living than any other part of the country; there is no question about that. I suppose you folks produce everything on earth there in the way of farming except, I think, sugarcane, and I am glad of that. How long have you been in business?

Mr. McDONOUGH. Twenty-two years.

Senator ELLENDER. Would you remember the progress of your business, let's say, during the last 7 or 8 years before the war in respect to——

Mr. McDONOUGH. Well, my business——

Senator ELLENDER (interposing). That is, in respect to the minimum rate you paid per hour, and the number of people you employed from time to time.

Mr. McDONOUGH. When I began business in 1924, the rate of pay covering these men, which is unskilled, was 50 cents an hour; and since then it has gone up gradually to where I pay at least a dollar an hour.

Senator ELLENDER. But when did you start paying the dollar?

Mr. McDONOUGH. Well, I always paid more than the required wages. I started paying a dollar an hour about 1941.

Senator ELLENDER. 1941?

Mr. McDONOUGH. Yes.

Senator ELLENDER. Before that, how much did you pay?

Mr. McDONOUGH. Eighty cents an hour.

Senator ELLENDER. When did you start paying the 80 cents?

Mr. McDONOUGH. Right after the depression. In the depression we went back to 50 cents an hour again.

Senator ELLENDER. You mean in 1929?

Mr. McDONOUGH. In 1929 we were paying 65 cents an hour, the same as this bill calls for.

Senator ELLENDER. That was not during the depression?

Mr. McDONOUGH. No.

Senator ELLENDER. Things were going on pretty well then?

Mr. McDONOUGH. Yes.

Senator ELLENDER. And that is the top wage you paid, 65 cents?

Mr. McDONOUGH. Yes, in 1929. And beginning with about 1934, there was a gradual increase. They paid as low as 20 cents an hour in the early 1930's as the average, but I never paid below 50 cents.

Senator ELLENDER. How long did you continue to pay the 50 cents?

Mr. McDONOUGH. I believe not more than a year.

Senator ELLENDER. About what year was that?

Mr. McDONOUGH. That was about 1932.

Senator ELLENDER. And then from that date you gradually increased until 1941 when you went to a dollar an hour?

Mr. McDONOUGH. Yes.

Senator ELLENDER. How long did you continue to pay 80 cents?

Mr. McDONOUGH. I would say it would average about 2 years; 65 was the next, and then I would say that in about 1938 it went to 80, and then to 90.

Senator ELLENDER. How many people did you employ, let's say, just before the depression, in 1929? Do you remember that?

Mr. McDONOUGH. Oh, yes; a good average would be about 80 men.

Senator ELLENDER. And then after the depression?

Mr. McDONOUGH. Do you mean after or during the depression?

Senator ELLENDER. I was asking you to tell us before the depression, that is, about 1929, when everything was going on pretty well over the country.

Mr. McDONOUGH. We went from 80, say in 1929, to the vanishing point in 1932 or 1933.

Senator ELLENDER. Why did you do that?

Mr. McDONOUGH. There was absolutely no work of any kind.

Senator ELLENDER. What was the cost per unit of production at that time in contrast to the period just before the war?

Mr. McDONOUGH. Just before the war we produced just as cheaply per dollar as we did in 1929, or more cheaply. That was due to better methods.

Senator ELLENDER. That is what I want to bring out. And you wouldn't attribute it to better skilled labor, would you?

Mr. McDONOUGH. No; it is due more to the management than to the men.

Senator ELLENDER. In other words, when you say better conditions, you mean improvements in technology?

Mr. McDONOUGH. That is right.

Senator ELLENDER. And of course, when your per unit cost was decreased because of these technological advancements, then it was that you could pay labor a little more per hour, and of course your per unit costs were still lower then than they were before the war and before 1929; am I correct in that?

Mr. McDONOUGH. Yes; 1929 in the steel business, although it was coming before that, marks the point where there was a complete change in methods. Up to that time the greater percentage of the business was what we call riveted construction, and then just about that time was invented what they call the coated welding rod, and with the general use of that and the improvements in the welding, the riveting dropped off to where it is now almost a minus quantity.

Senator ELLENDER. Why did you raise wages?

Mr. McDONOUGH. I raised wages just like everybody else——

Senator ELLENDER (interposing). I don't believe you did.

Mr. McDONOUGH. I raised them because I was forced to raise them.

Senator ELLENDER. Let me ask you this: You say you were paying a dollar per hour during the war?

Mr. McDONOUGH. Yes.

Senator ELLENDER. And you propose to continue that rate after the war?

Mr. McDONOUGH. Yes.

Senator ELLENDER. Suppose you were asked to increase all your wages, say, 40 percent, within 3 years, without increasing your prices; would your business be able to withstand the shock?

Mr. McDONOUGH. Oh, no.

Senator ELLENDER. Of course it would not.

Senator TUNNELL. Wouldn't that depend upon what you had been putting away?

Mr. McDONOUGH. No. I tried to cover that here. I stated that I also knew that if you suddenly double wages, that that wouldn't help conditions.

Senator TUNNELL. Suppose you had been putting away—I will just name a flat amount—a million dollars a year as profit. Then could you afford to raise wages?

Mr. McDONOUGH. Well, I tell you, I can answer that question. I have made a million dollars a year profit, but when I got through with taxes, I was lucky to pay my bills.

Senator TUNNELL. What is that?

Mr. McDONOUGH. Due to the improvements I made in my plants, I was lucky to pay my bills.

Senator TUNNELL. You mean you put that million dollars into improvements?

Mr. McDONOUGH. No; I made a million dollars, and the taxes reduced it to about $60,000, and then I put $100,000 in improvements, so I owed $40,000.

Senator TUNNELL. But you had an additional capital investment of $100,000?

Mr. McDONOUGH. That is right, of which I owed $40,000.

Senator TUNNELL. But what I am trying to get at is this: whether or not you could afford to raise wages, leaving the tax out—of course the tax would have been different if the wages had been higher, wouldn't it?

Mr. McDONOUGH. The great——

Senator TUNNELL (interposing). Let me finish my question—whether or not you could raise wages would depend on whether your business had been sufficiently profitable?

Mr. McDONOUGH. That is right, whether or not you can raise wages is entirely regulated by your competitors. You have nothing to do with it. If your competitor can pay a lower wage, you can't compete because he can buy just as cheaply as you can and then the only advantage you have is better management; but the point I want to make is that when you pay high wages, then you get to using what you call your noodle and begin figuring ways of doing the work cheaper by mechanizing rather than just by labor.

Take, for instance, in Japan, when they coal boats they do it by a series of women alongside of each other, passing the coal baskets along; but in this country, where we have machinery, we do it instantly, almost, by machinery, and with very little intervention of labor.

Senator TUNNELL. Let me turn your argument on you just a little. You say your competitors pay a lower wage and can produce cheaper. If that is true, do higher wages cause greater production?

Mr. McDONOUGH. Oh, you bet they do, and for this reason. It incites you to mechanize rather than use unskilled labor. If you pay low wages you figure, "Well, the machine costs $1,000, and I am only going to use $900 worth of labor, so why make a $1,000 machine." But if your labor costs you $6,000 and you can make the machine for $1,000, then you will figure, "We will make the machine." In that way you produce more, and the production is cheaper, and you can pass your savings along to your employees.

Senator ELLENDER. I have been trying to point that out to this committee ever since we started these hearings. Of course, due to the fact that you have employed these machines, and I presume they cost you a lot, it is to your advantage to employ the best skilled labor you can procure?

Mr. McDONOUGH. You can't make any money from unskilled labor. A businessman knows you can't make any money off of 65-cent labor.

Senator ELLENDER. Now, Mr. McDonough, I would like you to be a little more specific in answer to a question asked by Senator Tunnell. You say that you raised your wages because you were forced to?

Mr. McDONOUGH. That is right.

Senator ELLENDER. What do you mean by that?

Mr. McDONOUGH. I might have sometimes beaten them to the punch, so to speak. But you could hear the rumbling, and they were about to present their requirements, so I raised wages. I have seen wages increased—I learned the boilermaking business. When I learned the boilermaking business the wages for boilermakers, a practical boilermaker, were from 25 to 30 cents an hour. At the present time a boilermaker gets $1.28 an hour, that is about a dollar more. During those 40 years of every increase granted those men—none of them were ever given freely, they were always gotten by the union—if not by a strike, by a demand—and employers never raise the wages unless they are forced to.

Senator ELLENDER. Let me ask you this: When you were forced to raise your wages, did you follow through by raising the prices at which you sold your products?

Mr. McDONOUGH. At times. It was according to each job. Each job is separate. You estimate your job. I point out specifically that in 1915 I was superintendent of a company and we paid, top, 30 cents an hour. Now under the methods used then, that tank cost $120——

Senator ELLENDER (interposing). You mean the labor or the whole tank?

Mr. McDONOUGH. The labor at 30 cents an hour.

Senator ELLENDER. I see.

Mr. McDONOUGH. At the present time, due to mechanization, improved methods, you can make the same tank for $80 and pay the men a dollar an hour.

Senator ELLENDER. How many people are employed now to make that tank in contrast to the number of people employed to make the same tank that you made years ago?

Mr. McDONOUGH. It is just in proportion, less than four, say about three.

Senator ELLENDER. Would you be able to say whether or not your plant is now in a better condition to turn out work than it was before the war?

Mr. McDONOUGH. Yes; mine is; yes.

Senator ELLENDER. Would you say that your per-unit costs after the war will be less than they were before the war?

Mr. McDONOUGH. I think mine, and practically everybody else's, will be; yes. I think during the war there is one thing we have to consider, that now, with the improvements made in almost every industry, it will only take five men where it took six before. That is just my guess. So consequently, that is going to leave a surplusage of men.

Senator AIKEN. Raising the wages after the war wouldn't necessarily mean that you would have to raise prices to the same extent, if you are 20 to 25 percent more efficient?

Mr. McDONOUGH. No; but the raising of wages would have to be considered. But as we are more efficient, that should reduce the selling price or the end price of the article produced.

Senator ELLENDER. And on the other hand, if you are forced to raise wages, you could, by mechanization, do the same job with less people?

Mr. McDONOUGH. I believe, yes.

Senator ELLENDER. Isn't that what naturally follows?

Mr. McDONOUGH. That is right.

Senator TUNNELL. But you said a few minutes ago, as I understood you, that you could make the same article for the same amount of money with the higher wages.

Mr. McDONOUGH. No; I didn't make that statement.

Senator TUNNELL. You said in proportion to the amount of money.

Mr. McDONOUGH. No; I didn't say that, Senator.

Senator AIKEN. My question was that even though he paid higher wages, because the shop was more efficient now that the cost of the finished product wouldn't necessarily have to rise the same percentage as the increase in wages.

Mr. DONOUGH. No; that is the statement that I made.

Senator AIKEN. Your material might cost the same or a little more, your wages might cost the same or a little more——

Mr. McDONOUGH (interposing). Wages, as applied in any individual plant, are very seldom more than 25 percent of the cost. You have to buy material.

Senator AIKEN. Wages have been rising the last 20 years or 10 years or even 5 years, and wages have risen at a much greater rate than costs have in that period.

Mr. McDONOUGH. No; I think——

Senator AIKEN (interposing). I know some claim that they haven't, but I am speaking of your finished product, I am not speaking of the cost of living.

Mr. McDONOUGH. In my finished product, steel hasn't risen very much during the war. We used to pay $2.62 and now we pay $2.80.

Senator AIKEN. You say you have doubled your wages since 1935. Has the cost of a smokestack doubled since 1935?

Mr. McDONOUGH. No; it hasn't.

Senator AIKEN. That is because you have more efficient equipment and facilities?

Mr. McDONOUGH. And then we have been progressing technologically since 1935. You can't just boost the thing up like an elevator and expect something to happen. But you can boost wages, I think, over a period of, say, 10 years gradually, and then your technological skill is changing, and as I mentioned, over a period of 40 years the wages are five times as high, but still in my particular business the unit price is no higher now than it was 40 years ago, because there has been a complete change in operation. We have changed from riveting, on one hand, which required a tremendous amount of operation, and now when we weld we just roll the thing up and weld it, so it is a very simple thing now to make the same product.

Senator ELLENDER. Mr. McDonough, I have to leave in about 3 minutes, and I want to ask you a couple of questions.

When you say that you will continue to pay 1 dollar per hour from now on, did you take into consideration the profits that you are now making in your business?

Mr. McDONOUGH. No. You mean the establishment of the dollar rate?

Senator ELLENDER. In other words, you are now saying to us that you are going to continue to pay the dollar per hour.

Mr. McDONOUGH. Yes.

Senator ELLENDER. What causes you to say that?

Mr. McDONOUGH. Well, as I said, I am not running an eleemosynary institution. It is the pressure that is put upon me. I can't turn around and say, "Well, I will give everybody $2 an hour," because then I couldn't get any business, the price would be too much.

Senator ELLENDER. That is the answer I expected from you.

Suppose you had to depend strictly on labor's skill and not on technology, say in the next couple of years——

Senator TUNNELL (interposing). I don't understand that question.

Senator ELLENDER. I haven't finished it yet. I am asking the witness, and if he doesn't understand, let him say so.

Senator TUNNELL. It is on the presumption that he has either technology or labor and doesn't have both.

Senator ELLENDER. I want his views on the subject.

Suppose that within the next 2 years you had to depend strictly on labor's skill and there were no technological improvements, and you were forced to pay, let's say, from 25 to 30 percent more for your labor, how much more would you have to increase the price of the products that you produce?

Mr. McDONOUGH. It is probable that I wouldn't have to increase it any.

Senator ELLENDER. Why is that?

Mr. MCDONOUGH. Because there is a difference in men, there is a difference in the way the same man works. Some men, for instance, dig a ditch. There is no technological skill required there. But one man can dig six times as many feet as the other man, and the same man who digs six times as much as the other, if he lies down on the job, will only dig three times as many feet. So under proper direction, you can still increase the wages without the intervention of any technological skill.

Senator ELLENDER. And sell your product for the same price?

Mr. MCDONOUGH. Yes; because they produce more.

Senator ELLENDER. Well, your answer is contrary to what you stated a while ago; when I asked you if you were to increase your wages from 30 to 40 percent, over a period of 3 years, your answer was that you would be obliged to raise the price of the products you produce and sell.

Mr. MCDONOUGH. Well, I misunderstood your question, then, because I am answering your questions one at a time. The thing is this: I also stated you could increase wages 40 percent over a period of perhaps 10 years by proper management, even without the intervention of technological skill, that is, no machines. For instance, a simple thing like laying bricks, one bricklayer can lay 1,000 bricks a day, say, without any effort. Somebody else will only lay 400 bricks a day, and by proper direction you can maybe make them all lay 1,000 bricks a day.

Senator ELLENDER. Let's be practical about that. Let's apply that to the country as a whole. Do you think it would be possible for management, all management, to get the type of labor that you speak of now?

Mr. MCDONOUGH. Yes; I think it is. If they can't do it they won't stay in business if the other fellow does it.

Senator ELLENDER. That is all, Mr. McDonough. I am sorry I must leave.

Senator TUNNELL. Have you any questions, Senator La Follette?

Senator LA FOLLETTE. No.

Senator TUNNELL. Have you, Senator Smith?

Senator SMITH. No; I have no questions.

Senator TUNNELL. I misunderstood you a while ago, I guess, to the extent that I thought you said that by increasing the technology and increasing production, you could get the same amount of profit per dollar of wages.

Mr. MCDONOUGH. Of course, there is a lot of variance in all of these things. Even in a very costly operation, the wages are only 25 percent. Take, for instance, in making barrels, which is a steel line, the wages are only about 5 percent. But still you have what you call overhead, which is the bills you pay by the month and the taxes you pay by the year, and they are twice as much as wages.

Senator TUNNELL. As you raised wages, did your profits decrease? I am not speaking of taxes now, I am speaking of your profits without taxes.

Mr. MCDONOUGH. Well, now, wages has nothing to do with my profits. It is my competitors that regulate my profits.

Senator TUNNELL. Well, your competitors help regulate your wages, too, don't they?

Mr. MCDONOUGH. That is right. They regulate my profits because if they sell below cost, if I wish to get anywhere I have to adopt the same methods.

Senator TUNNELL. Can't you give me some idea about that? Have your profits increased or decreased with the raise in wages?

Mr. MCDONOUGH. I might state this, that one of the great stimulants to production in this country is a unified wage, because then it takes the responsibility off of the employer. If everyone pays the same rate per hour, then it puts the responsibility on management to manage so they can stay in business; while if people are permitted to pay different wages, the fellow who pays the lowest wage has the best opportunity of remaining in business.

Senator TUNNELL. You still haven't answered my question. If it is a difficult one——

Mr. MCDONOUGH (interposing). I don't wish to avoid your question. Maybe I don't understand it.

Senator TUNNELL. I would like to know whether your business experience has shown that your profits decreased with a rise in wages?

Mr. MCDONOUGH. Your profits absolutely increase with a raise in wages, because you figure if you pay a man 50 cents an hour and you figure 10 percent an hour, on that man you make 5 cents an hour. Ten percent is the usual amount you figure. When you pay him a dollar an hour, you make 10 cents profit. It is really advantageous to pay higher wages, from the profit angle, for that reason, figuring the same percentage.

Senator SMITH. You mean by that you get a more interested worker and higher production per unit?

Mr. MCDONOUGH. No; I mean the profits of management are greater, as the profits are based on wages as well as everything else. If you pay a man a dollar an hour and figure 10 percent, you make 10 cents. If you pay him $2 an hour—wages will eventually get there, I guess—so when you are paying $2 an hour, if he figures 10 percent he makes 20 cents. So his profits are necessarily higher by paying higher wages, providing only one thing—is his business profitable? There might be other things that intervene that make him lose money.

Senator SMITH. When you said a moment ago that you would like to see a standard wage all over the country so there would be no competition in the labor market, do you think that that could be applied in all industries? Some industries have a larger percentage of their cost at the labor end than others. Yours apparently is small. Do you think that runs pretty uniform, or do you think it is variable?

Mr. MCDONOUGH. I think it should be standard in all parts of the country. There is no reason why we should pay a minimum of a dollar an hour in California—and the reason why it should be standard, in places where they pay high wages you have a higher standard of living.

Senator SMITH. I realize that. Are you talking now about industry by industry country-wide, or all industry, so that no matter what a man is working at he should get a certain wage for his time?

Mr. MCDONOUGH. Yes. You have certain exceptions in this law, S. 1349—agriculture and other things—as I read the law. I am talking about all industries not excluded or exempted by this law. Sixty-

78595—45——19

five cents is a pittance, I don't care where it is in this country, for any wage. It is really not American to pay 65 cents an hour, not nowadays.

Senator SMITH. Well, I think any one of us would like to see that go to the highest possible figure, but what we are thinking of is the effect that that is going to have on prices throughout the country.

Mr. MCDONOUGH. Well, I don't think a rise to 65 cents an hour is going to affect prices one iota, in the country.

Senator SMITH. Wouldn't you expect, if you raised your minimum wage from 40 to 65 cents, there would be a movement correspondingly to move all wages up in that same proportion?

Mr. MCDONOUGH. Most people get considerably more than 65 cents now, and I don't think that it necessarily would push up wages. There might be too great a disparity now between the top man and the 65-cent-an-hour man. As I pointed out, down in Puerto Rico, where they were making baseballs, that company apparently moved down there because they could get women for—at least one woman, who was really a wonder, made $8 a week when she was going good.

Senator SMITH. That is the very kind of a case we want to know about so that those people can't be exploited in that way.

Mr. MCDONOUGH. Another thing about Puerto Rico, they pay those low wages, and the people live worse than animals. A lot of wild animals live better than those people, some of them, do down there. In fact, they live a cleaner life. And this low-wage schedule puts that kind of employer down there, just to live off of the people.

Senator SMITH. What I am trying to get at is continental United States, leaving those special areas aside for special treatment. But here you think we could have uniform wages all over the country so there would be no competition in the labor market at all, and that all of the competition would be in efficiency and——

Mr. MCDONOUGH (interposing). I think it would be wonderful if they had the same wages, it doesn't make any difference whether North or South, and those same classes of employers would be incited to be better managers.

Now as it is, a factory can go to a certain part of the country, and with no inducement to manage better, get a cheaper production by paying these lower wages. That is the reason they move there.

Senator SMITH. I agree with you that that is most undesirable. There are certain conditions that have grown up in certain parts of the country, and whether you can change them overnight by changing this minimum wage, that is one of the things I am not sure about.

Mr. MCDONOUGH. I think that might stop a lot of plants that have moved there, or intend to move there, from going down there, remaining where they are. They just move from the North down to the South because they pay lower wages in the South, which means that the people have a lower standard of living, because any person goes to any place in the South and it costs just the same to live there as it does here, if you live the same way.

Senator SMITH. Now, let me go to another classification, and that is the farmer. Are you including the farmer there?

Mr. MCDONOUGH. No; I am not.

Senator SMITH. There is a real problem, because he has got to compete in the labor market with industry.

Mr. MCDONOUGH. That is exempted.

Senator SMITH. Yes; but we have to deal with it or the farmer won't be able to get any help at all, if a person can go to industry and get a minimum wage which is higher than the farmer can pay.

Mr. MCDONOUGH. As the world goes on, everybody can't work in industry. The farmer will still have labor that he can obtain; everybody can't work in industry.

Senator SMITH. I am from New Jersey, and I have a great many farmers in my State, and they are quite concerned about this being put at a figure which would prevent them from getting labor on the farm.

Mr. MCDONOUGH. It might be a good thing for the farmer to pay 65 cents an hour, too.

Senator AIKEN. There are not many farmers that are paying less than the minimum wage now, I believe, but what concerns them is probably that they feel they will lose exemption on the overtime provision, and certain kinds of farm help have to work long hours during the day. I think that through the Northeast, farm labor is receiving as much or more than the lower-paid industrial labor receives today.

Senator TUNNELL. There is just one other thought. California is considered a high labor market, isn't it?

Mr. MCDONOUGH. Yes; it is.

Senator TUNNELL. Have you been able to compete with your products, with the products of other sections of the country where the standards of wages are lower?

Mr. MCDONOUGH. I might tell you this: There were 23 manufacturers making these invasion boats, and they made them on the west coast, they made them on the south coast, and they made them in the Mid-Western States. I think I can state without any fear of being disputed that I paid the highest wages in the country, and made the lowest price. You can check that up with the Navy. In fact, if you notice in the foreword to my remarks I state that we used to get $25,600. We made the boats 6 feet longer and my last price was $11,800.

To show that there is something in management, in the Mid-Western States they made them on the Mississippi River, and they were never able to meet the Pacific coast prices where the wages were higher.

Senator AIKEN. Where did you get your steel?

Mr. MCDONOUGH. And we had to bring the steel—they had that advantage—we had to bring the steel from the east coast or from Chicago and pay a higher shipping cost.

Senator AIKEN. How did it come from Chicago?

Mr. MCDONOUGH. All-rail during the war.

Senator AIKEN. All-rail?

Mr. MCDONOUGH. Yes. Then in addition, the Navy had to pay approximately $1,000 an invasion boat to ship it out to the coast.

Senator AIKEN. If you had had all-water transportation, you could have built the boats still cheaper?

Mr. MCDONOUGH. Yes; it would have been much cheaper.

Senator AIKEN. If you had had the St. Lawrence Canal built, you could have built them still cheaper.

Mr. MCDONOUGH. Yes; and then you reduce the price of steel from $4 to $3.50.

Senator TUNNELL. I hadn't heard that they were going to run that canal west.

Senator AIKEN. We are going to make transportation cheaper, between Oakland and Chicago, anyway.

Senator TUNNELL. When you were able to make the same product in competition and did actually furnish that product at the lowest price, how about your profits?

Mr. MCDONOUGH. I will tell you about the profits. Last year I gave the Government back voluntarily $2,059,837.

Senator AIKEN. You say "voluntarily." How much did you give them involuntarily?

Mr. MCDONOUGH. Then I gave them $1,070,000 due to renegotiation. I am just showing you the profits. That is the reason we reduced the price, it was just exorbitant.

Senator TUNNELL. I wasn't trying to get you to say just how much you made, but whether you could produce the same thing at a lower rate, pay the highest wages, and at the same time make good profits.

Mr. MCDONOUGH. Yes; we made too much profit; not only good, but too much.

Senator TUNNELL. I am sure the Government felt gratified.

Has anyone else any questions?

Thank you, Mr. McDonough.

Mr. MCDONOUGH. Thank you, Senator.

Senator TUNNELL. Mr. Barkin is the next witness.

Mr. BARKIN. I see that you are director of research of the Textile Workers Union of America?

Mr. BARKIN. I am appearing here, members of the committee, on behalf of the CIO. I am chairman of the CIO committee on the revision of the wage and hour law, the revisions which you are here considering. I am here appearing, not on behalf of the textile union, which is my formal association, but in my capacity as chairman of the CIO committee for the revision of the wage and hour law.

Senator TUNNELL. You may proceed in your own way, Mr. Barkin.

TESTIMONY OF SOLOMON BARKIN, CHAIRMAN, CIO COMMITTEE ON S. 1349, REVISION OF WAGE AND HOUR LAW

Mr. BARKIN. Mr. Chairman, you have before you two documents. One is a statement and the other is a statistical supplement, both of which I have handed to the reporter. I do not wish to read the entire document but rather offer them in evidence and have them incorporated in the record.

Senator TUNNELL. You would like to have both incorporated in the record?

Mr. BARKIN. Yes. And I will rely primarily on a summary discussion of the contents, and hope that we can clarify any questions which still remain unresolved.

(The statements appear in the Appendix.)

Mr. BARKIN. We are very much concerned with modernizing the wage and hour law. The present law was characterized by the President of the United States as obsolete. We are here supporting the proposed revision in order to modernize it. In more customary language of the day we would also like to reconvert the wage and hour law to the standards which now prevail.

When I wrote this particular statement last week after some extensive estimates I was able to arrive at an approximation that under the present coverage of the Law, some 4,000,000 people would be affected, and that would represent about——

Senator TUNNELL (interposing). What do you mean by the statement that some 4,000,000 people would be affected?

Mr. BARKIN. In other words, 4,000,000 people would receive direct wage increases by reason of this Law.

Senator TUNNELL. In all lines of industry?

Mr. BARKIN. In all lines of industry covered by this law.

I am very happy to tell you, Mr. Chairman, that during the last week, and by reason of the current developments in the wage scene, I think that by the time your committee considers recommending this bill for adoption by the Senate, that that 4,000,000 will probably, be halved to 2,000,000.

Senator TUNNELL. Why?

Mr. BARKIN. Because, Mr. Chairman, I am happy to announce to you that our union, as one of a number of unions, has now consummated an agreement with the northern cotton textile industry for a 65-cent minimum, on Tuesday of this week. The one industry which hitherto has been the symbol of oppression, the symbol of substandard wages, is now at the 65-cent level.

Senator LA FOLLETTE. How many workers are affected by that agreement that will be brought up to 65 cents?

Mr. BARKIN. The present agreement is directly entered into between our union, the textile union, and the Fall River and New Bedford manufacturers, and companies located there that have other plants throughout New England, employing about 28,000 people. But we have contracts with companies employing 92 percent of all of the northern cotton-rayon textile workers——

Senator AIKEN (interposing). How far south does that cover?

Mr. BARKIN. That goes through Pennsylvania.

Senator AIKEN. What is the minimum below that line?

Mr. BARKIN. Well, I will come to that, Senator, in a moment. We have consummated the agreement in Fall River and New Bedford, and these plants, for example the American Thread Co., have plants in Connecticut and Massachusetts. They are bound by that agreement. The Berkshire Fine Spinning Co. has plants in Vermont, Massachusetts, and Rhode Island, so they are tied in directly.

Also I may announce that we have, the previous week, signed a contract for the rayon throwing and weaving industry in Paterson, N. J., for 65 cents; and only 2 weeks prior to that we had already, before we had gotten this agreement for 65 cents, negotiated contracts in the State of Pennsylvania for 60 cents minimum, which obviously will, in time, be subject to review by reason of this higher minimum, because we maintain, as Mr. McDonough has indicated, a uniform wage scale throughout the industry.

In the South we now have a 55-cent minimum and a 57½-cent minimum. That is, some mills voluntarily——

Senator AIKEN (interposing). What increase does the 65-cent minimum in the North represent?

Mr. BARKIN. An increase from 57 cents to 65 cents.

Senator AIKEN. However the northern mills, some of them, have been paying 65 cents, haven't they?

Mr. BARKIN. No.

Senator AIKEN. They haven't?

Mr. BARKIN. No—I mean as a minimum.

Senator AIKEN. And you have had an industry-wide contract with them up to this time?

Mr. BARKIN. We have had approximately an industry-wide contract. The major part of the industry, or the leading part of the industry, is located in these two communities, Fall River and New Bedford, and some of the concerns located there have plants throughout the rest of New England and everybody follows.

Senator AIKEN. You say that that has been the minimum. Has the minimum also had a tendency to be the ceiling?

Mr. BARKIN. No; we have a classified wage scale. For example, at the present time loom fixers—before the 65-cent minimum, got $1.02, and they will now go up to $1.10.

Senator SMITH. You say that the New Jersey plants are included?

Mr. BARKIN. Correct, they have a 65-cent minimum.

Senator AIKEN. That represents an increase of 15 percent in the minimum?

Mr. BARKIN. Approximately, but not that much overall.

Senator SMITH. Let me bring out this point. This was accomplished by collective bargaining?

Mr. BARKIN. Correct.

Senator SMITH. Which has always seemed to me to be the fairest approach to these questions. Do you see any danger to the whole principle of collective bargaining by our slowly moving the legislative minimum wage up?

Mr. BARKIN. On the contrary it is the best guarantee for free collective bargaining to provide a support for the freely negotiated rates which are secured through the collective bargaining process.

I might add that our union is probably in the best position to appreciate the importance of the contribution which the wages-and-hours law makes toward industrial stability, because without it I am sure that there would be a great many employers on the fringe who would be constantly eating away on standard wages and established wage terms in the industry.

Senator SMTH. Then you would suggest that probably the management of the better industries would be glad to see a floor put under wages too in order to prevent cutting by the fringe industries?

Mr. BARKIN. Correct. All progressive managements that realize the necessity of stable industrial relations which are constantly progressing and which share attitudes such as Mr. McDonough has expressed, favor it as soon as they become aware of the constructive effects of such action. A great many employers fear the action because they don't appreciate or haven't experienced the values and contributions which stable wage rates make. We have found in our experience that a suspicion which precedes an experience is soon erased by living under a stable wage structure.

Senator AIKEN. Mr. Barkin, are there any textile mills where collective bargaining does not prevail?

Mr. BARKIN. Correct. We do not have a 100 percent organization.

Senator AIKEN. And those mills that do not, that are not unionized and have no collective bargaining arrangements, could cut prices and wages, they could cut under their competition unless they were controlled by law?

Mr. BARKIN. Correct. They are a serious threat to industrial stability. One of the great virtues of our experience under the wages-and-hours law up to now is the great willingness of employers throughout the industry to accept the law, particularly because they say, "If my competitor is paying it, I am also willing to pay it." That is the contribution which this law has made in the past, and which your revision, in line with the proposed amendments, would make.

I should like, during the course of my comments to also make pertinent observations on the section of the proposed revision dealing with occupational rates above the minimum, on which I think I can make a substantial contribution to your knowledge and the background of experience with that type of problem.

Senator TUNNELL. Mr. Barkin, Senator Ellender is not present but he has at different times interjected questions with reference to the textile situation in the south. I am sorry he is not here——

Mr. BARKIN (interposing). I am too.

Senator TUNNELL. But I would like to hear you discuss that matter.

Mr. BARKIN. I am sorry Senator Ellender is not present, I hope he returns——

Senator SMITH (interposing). Might I ask one question? Mr. McDonough just suggested the advisability of an over-all standardization of wages throughout all industry. Do you share that view or do you think we will have to do it industry by industry?

Mr. BARKIN. I believe that you have to progressively move your minimum rate to a uniform level throughout the country. As you raise it, for example, up to 65 cents, you are taking our industry, or helping take our industry, and other industries, and bring them on a par with American wage standards. We had the drag of history pulling our wages down because we were an early industry. Our industry was the first American industry, and the drag of history kept our wages down. Newer industries appeared subsequently and effected more and more, by the general philosophy of American industry of higher wages, bigger markets, better workers, lower costs, more output, lower prices. Our industry was not motivated by or permeated with that kind of philosophy.

Now as our industry has moved ahead, and higher wages have come, that philosophy is beginning to permeate, and we need to bring our minimum up. I am fully in accord with the general proposition of a uniform minimum for industry, so that we can standardize at least the minimum rate of pay throughout industry.

Now the rates of pay above the minimum will vary among industries, because you have different jobs, different skills and different job values to contend with.

But to return to the problem that our friend Mr. Ellender might be concerned with, we have a particularly good case with which Mr. Ellender is intimately acquainted.

One of the plants in New Orleans, which the city did not particularly care to boast about, was the Lane Cotton Co. whose industrial-relations history has not been of the best. Back during the depression it was not unknown for that company to pay 10, 12, and 15 cents an hour. During subsequent legislation there was no company in the textile

industry which violated the NRA, the wage-and-hours law, the NLRA, and every other wage law, more continuously and more brazenly than did that company. There was no company in the city of New Orleans which was disowned more frequently by the other companies in the city than that one.

That company was finally unionized, and I am happy to say that that company now is paying a 55-cent minimum and we hope now, by reason of the law and our renegotiation of wages, to bring them up to the 65-cent minimum. That company is not keeping all its people at the minimum wage as it did years ago, and that company now is producing more cheaply than it ever did before, because what has happened is that management has begun to look into the mill, and has begun to see how its plant, its looms, and its spindles, and its twisters, are operating. It is wondering whether its machinery was broken or not, whether its aisles were clean or not, whether there was lighting in it—all of which affects production and cost.

And I know that Senator Ellender knows that our contribution in raising wages for the people of the Lane Cotton Co. has tended to change the reputation of that company. While it was one of the greatest delinquents in the war production in the textile industry, when we began to change the mind of that management, it increased its production. We raised its output, got people to come in to the plant, and that plant is beginning to look up as a self-respecting member of our industry and of the community of New Orleans.

Senator AIKEN. Mr. Barkin, you were speaking about the antiquated and broken machinery. Do you know whether it is true that just previous to the war many of the Japanese textile mills had more modern and up-to-date machinery than many of the mills in our own country? I have heard that from what I consider authoritative sources.

Mr. BARKIN. In the textile industry, in many of the processes, I would say their equipment was equal to ours. As a matter of fact they bought American equipment and revamped it to adapt it to the size of the Japanese people.

Senator AIKEN. I have heard that they had, in some mills, equipment which was superior to ours, and of course superior equipment, plus slave labor, 7 cents a day or something like that, enabled them to cut into the market of almost every other country on the globe, whether that country had a protective tariff or not.

Mr. BARKIN. I am glad you raised that point——

Senator AIKEN (interposing). I don't say that that was general, but I do say that I have been told that in some of the mills equipment was found which was superior to that which we had in most of our mills.

Mr. BARKIN. There might be a little turn here or there but there was nothing superior. They have not advanced the art of textile manufacture beyond our levels. They adapted some of our equipment, but by and large they did not——

Senator AIKEN (interposing). They have equaled it, have they?

Mr. BARKIN. In many respects, but not all through the mill.

I would like to say this for the record, that the same increase which I have just spoken about in cotton, is taking place in the woolen industry where the employers are already voluntarily granting, and have granted, a 12½-cent-an-hour increase. It so happens that one of the large nonunion employers beat us to the gun and gave a 12½-cent-an-hour increase before we even raised the issue.

The synthetic rayon industry has given a 10-cent-an-hour increase.

I can therefore say, gentlemen, that before your committee votes on the recommendation to put this bill before the Senate, that there will be very few people in the cotton textile industry that will not have come up to the 65-cent minimum.

Senator TUNNELL. Are you familiar with those four plants, I believe it was, that Senator Ellender said had gone out of business in New Orleans?

Mr. BARKIN. That was in the men's clothing industry.

Senator TUNNELL. Oh, yes.

Mr. BARKIN. I could make a general observation about them but there are going to be witnesses who are going to recite that problem ad extenso, and are going to relate all the details of the specific history, and what the volume of production is. I think that after that recital—and I have read the recital—Mr. Ellender will also be joining with us in concluding that those companies have been benefited from higher wages, and that it has been a stimulant to them becoming better manufacturers.

Senator TUNNELL. But they are out of business.

Mr. BARKIN. No; they were just corporate reorganizations. In the clothing industry there are seasons, and it is sometimes desirable, for corporate and financial reasons, for a corporation to close down and reorganize the corporate structure between seasons when the plants close down for production purposes.

Senator AIKEN. Do you think that the fact that the textile industry has employed low-wage labor has discouraged the installation of modern, up-to-date, more efficient machinery?

Mr. BARKIN. I wouldn't put it that way. I would put it this way: that it has discouraged the employers from thinking.

Senator AIKEN. The result has been ——

Mr. BARKIN (interposing). The same.

Senator AIKEN (continuing). That many mills have never modernized?

Mr. BARKIN. Correct. I would put it this way. One of the most interesting experiences I have personally had during this war is to see the transformation of the minds and attitudes of textile management. The greatest contribution which this war has made to the textile industry is to open up the eyes of textile management to the fact that they are running a mill and that they don't just have equipment in the plant. They have begun to look into the plant, they have begun to see that they had workers there. When we got the 55-cent minimum in February of this year—and we were before your committee, you may recall, in January, when the issue was still unsettled—in February the wage increase, and by March it was in effect. And it was interesting, members of the committee. The War Labor Board decision affected only 23 mills, and over 95 percent of the industry has voluntarily complied with the War Labor Board decision, even though many of those plants are not unionized, because there is a feeling that competition must standardize, and that additional 5 percent may hurt the industry when a contraction in volume of production develops.

One interesting effect—those people got the increase—and what do you think happened? This is my own personal experience, eating and working with these people in the mills in the South and the North

and throughout the country. You would see the milk purchases increase in practically every single textile home. Food was improved. You could see the blood coming back into the flesh of these people, and all the employers in the industry attest to the new morale and the new application which is resulting from this general feeling of satisfaction and general feeling of, "Well, now we are getting some place, we are coming up from the low rungs where we were."

I would like to say, gentlemen, that there are other wage increases in the making now. As you know, they are not always negotiated with the same degree of rationality as has prevailed in our industry, and not with as much understanding of the problems. Very fortunately it is possible in our industry. The fact that we had to rise from such low levels and we have had to educate our employers to the meaning of wages and the fact that wages are not an obstacle to low costs, that they probably are more receptive to rationality. But we were able to negotiate freely.

Similar wage increases are taking place all over the country. Now those wage increases will reduce that 4 million estimate that I made probably before long to possibly 2 million, if not to a lower figure.

Senator TUNNELL. And in what industries will that reduction be, principally?

Mr. BARKIN. Well, we have an exhibit for you which you have seen previously, that contains the Bureau of Labor Statistics estimates of the distribution of employment at the present time. In our table XXIV here you will note that the largest single group of people below 65 cents in the manufacturing industries is in the textile industry, being at the present time 489,000 people. And as I said, that great chunk of 489,000 will practically disappear before long. Then there are 239,000 in the lumber and timber industry; 302,000 in the apparel industries; 276,000 in the food industries; 145,000 in the electrical equipment industry; and 119,000 in the chemical and petroleum and coal products industries.

Senator TUNNELL. I don't suppose you have statistics that would throw any light on the profits made in those low-paid industries, have you?

Mr. BARKIN. I do. If you will turn to table XXV you will note a column entitled "1944 profits before taxes," and the final column entitled "Additional cost to wage bill as percent of 1944 profits"—in other words, how much the wage bill represents of the profits of that industry during 1944. And you will note that the over-all cost will be 3.5 percent for all manufacturing industry, and varying percentages for the constituent industries, the highest being lumber and timber—42.9 percent.

Senator TUNNELL. I think we can work out what I was asking for from this table.

Mr. BARKIN. Correct.

Members of the committee, we now have a 55-cent minimum in American industry by reason of the War Labor Board decision in our case, and its general ruling. I want to call your attention to this fact, that the War Labor Board, in issuing that 55-cent definition of minimum wages, apologized profusely for having set it at 55 cents. It said in its own statement issued in conjunction with that ruling, that all the figures which they had before them justified a higher minimum but at

the time at which they issued it, they said, they did not want to go much further or be bolder because they could not compel uniform application of that minimum throughout industry. They could not reach all companies. They could only effect their will in dispute cases and in voluntary wage cases, but they could not affect the wages of an employer who did not want voluntarily to increase wages, or was not involved in a dispute.

Consequently they were cautious. They said, for example, in the decision affecting the textile case:

> "We do not want to raise wages beyond 55 cents because we are only affecting 54 companies in an industry where there are 1,200 companies. So we do not want to dislocate the competitive relationships among the industry. But if we could follow the dictates of the figures and our own findings concerning what it costs to bring up a person, to eliminate him from the substandard class, we would have raised wages beyond the 55 cents.

So that was a timorous, modest effort, in a period when the War Labor Board was under compulsion to restrict wage increases, and where it could not reach the company which did not want to conform to general wage standards. It took that step; and we urge you now, members of the committee, to recommend to the Senate the adoption of this proposed modernization and reconversion of the wages-and-hours law which the President of the United States has declared to be obsolete, and in that characterization we join.

You will find many industries, during the course of these hearings, graduating out of the below 55-cent level. You know those wage increases are taking place all over the country. I think you will contribute to industrial stability and rational labor relations in this country if your committee, even prior to the announcement of your support of the bill, or the enactment of the bill, would exhort American industry to observe this peg point or this guide point until this becomes a law, so that a summary and rational resolution of industrial disputes can be attained.

American industry and labor is looking for guidance and for a pattern of wage increases which would resolve the contending views of labor and industry at the present time. This law makes a contribution to establishing such a pattern and I hope that it will be possible for your committee to exhort American industry to observe this minimum in the new negotiations and in the new wage disputes which are taking place. With that guidepost you will help to resolve much of this tension at the present time, tension which is in great part created by the uncertainty of industry and labor as to what the proper resolution should be of wage levels in this postwar period.

Senator TUNNELL. This investigation itself is having some effect, isn't it?

Mr. BARKIN. We wish to say, Mr. Chairman, that your hearings were in no small part responsible for the rational and successful collective-bargaining negotiations which we have been conducting in Paterson, N. J., and in New England, where we have now consummated a 65-cent minimum wage.

Senator TUNNELL. Thank you. I am glad to hear somebody say we are doing some good.

Mr. BARKIN. Mr. Chairman, I think the good you have accomplished in our industry can be extended beyond if you could exhort

American industry, prior to this bill becoming law, to also observe it generally.

Now, Mr. Chairman, I don't have to tell you how much public support there is for this bill. You have read, and if you have not I have a copy here, of what the Gallup poll found to be the sentiment of the people which they interviewed. Of course one has to hesitate and say that they have interviewed a complete cross section of the American people. But nevertheless they found that the American people want the 65-cent minimum. I would like to put that into the record, Mr. Chairman, as an affirmative indication of the opinion and attitude of the American people.

Senator SMITH. What is the date of that?

Mr. BARKIN. August 18, 1945. It is very interesting. The question was:

If you were the one to decide, what minimum wage per hour would you set for business or factory workers in this State?

This was a Nation-wide poll. It states:

When replies of those who knew what the term "minimum wage" means were tabulated, the median average came out at 65 cents per hour.

Members of the committee, I think that this Gallup poll itself speaks of the unarticulated desires of the American people, and this covers both industry and labor, you know, that very wide cross section.

As I say, I would like to have that included in the record.

Senator TUNNELL. That may be done.

(The article referred to is as follows:)

For Release Sunday, August 19
or Monday, August 20, 1945

PUBLIC FAVORS IDEA OF SETTING MINIMUM WAGE RATES AT 65 CENTS

FEWER THAN ONE OUT OF FOUR AMONG INFORMED GROUP KNOW WHAT PRESENT MINIMUM RATE IS

(By George Gallup, Director, American Institute of Public Opinion)

PRINCETON, N. J., August 18.—One of the major problems which will face Congress when it returns to take up matters of reconversion is that of raising minimum wage levels.

A bill to raise the minimum wage to 65 cents per hour has been introduced into Congress by Senator Claude Pepper. The bill is in the form of an amendment to the Fair Labor Standards Act of 1938.

In order to probe public opinion on the whole problem, the institute had field reporters put four questions to a scientifically selected cross section of the country—a cross section so designed as to reflect accurately the views of all adults of the Nation.

The first of these questions was:

"What does the term minimum wage mean to you?"

Fewer than half—48 percent—said lowest legal wage or lowest wage. Twenty-two percent gave incorrect answers. Thirty percent said they did not know.

Among people who attended college, 75 percent gave a correct answer; among those with no more than a grade school education, 32 percent gave correct replies.

The second question was asked to find out how many know what the present legal minimum wage per hour is at the present time:

"Do you happen to know what the minimum wage rate per hour throughout the country is now?"

Among people who gave a correct answer to the first question, 23 percent replied: 40 cents. Forty-five percent said they did not know. The median average of replies is 45 cents per hour.

The last two questions sought a measure of public thought about what minimum wage rates should be and about the amount proposed in the Pepper bill. The first of these:

"Would you favor or oppose making the minimum wage 65 cents an hour for all workers in business and industry?"

Among persons who know the meaning of the term "minimum wage," replies added up as follows:

	Percent
Favor	56
Oppose	32
No opinion	12

When replies are broken into two main groups (1) wage and salary earners (white collar and manual workers) and (2) employers, executives, and self-employed (business and professional people, small business owners, and farmers) marked differences are found. This is shown as follows:

	Percent
Wage and salary earners:	
Favor	63
Oppose	25
No opinion	12
Employers and self-employed:	
Favor	48
Oppose	41
No opinion	11

The final question was used in a completely separate survey, in which an entirely different but comparable cross section was asked:

"If you were the one to decide, what minimum wage per hour would you set for business or factory workers in this State?"

When replies of those who knew what the term "minimum wage" means were tabulated, the median average came out at 65 cents per hour.

Replies of the employer and self-employed group on this question came out at a median average of 60 cents per hour, while replies of the wage and salary group averaged out to 75 cents per hour.

Mr. BARKIN. I do not have to tell you, members of the committee—because you have had hearings previously and the statement which I am filing with you is a rather extensive one on the subject—of the ill effects of low wages. But I have one statement which I would like to make, just one sentence that I would like to read. It is a bit dramatic but I think it summarizes the problem and the challenge. We are asking for a reconversion of the wage and hour law, and I say a country with a national income of $64,000,000,000—which was the national income in 1938—set a 40-cent minimum wage. A country with a national income of $160,000,000,000 I am sure you will agree can set a 65-cent minimum wage. We say that the times are as wide apart as that, we have progressed that much—64 billion national income to 160 billion national income, 40 cents—65 to 75 cents in 2 years.

I think America is able to support it. It is an inescapable obligation of the American people to use their resources to eliminate the tragedy of substandard conditions.

Just one word about the old law. Several members of your committee participated during the hearings on that law, Mr. La Follette and Mr. Ellender I recall definitely in the cros-examination, and many witnesses appeared before you explaining the need for the law. I think you will agree with me that when you recommended that law that this was a summary of the kind of sentiments that moved you. You believed that it was a first step taken to provide a stopgap for a crumbling wage structure, to lift the more backward sectors of American industry to some degree of stability at a relatively tolerable

level. That is what the 1938 law was. You will recall that the depression was on us, industry was trying to cut wages, the NRA had passed, people were violating NRA standards, people were trying to break wages all around the country, and the wage and hour law was passed on the plea before your Senate and House committees, "Let's have a wage and hour law to prevent us from getting back to the depression." People were asking for props to a crumbling wage structure, and an oncoming depression.

Well, it was right in there, as the law was passed. You will recall that the hearings were held back in '37 and '38. Gentlemen, we have got to support the present wage structure at 65 cents or else we are going to have trouble because a crumbling wage structure means contracting purchasing power and all the good resolutions of a full-employment bill will come to naught. Those who fear that a full-employment bill means more Government expenditures will have their fears realized.

There is only one way of having a full-employment bill or having full employment and a minimum of Government expenditures, and that is to be sure that there is a purchasing power which will replace the Government check. That is the equation. Dollars in the hands of the people instead of dollars in the hands of a Government buying officer. And if you are going to do that the first step is this kind of legislation.

Senator SMITH. I would like to ask a question right there. You said a minute ago that the jump from $64,000,000,000 income to $160,000,000,000 was an indication, we will say, of increasing production and wealth of the country, and therefore the higher wage was justified on that basis. Is there anything in the point that that is indicative of increasing the level of costs, a higher cost of living? A mere dollar advance doesn't help unless it reflects itself in what people can buy. We don't want to see inflation, in other words.

Mr. BARKIN. Correct. I think that much loose thinking has taken place. I think Mr. McDonough's practical experience eloquently displayed and emphasized the dynamics of modern industry more than all the statistics in the world could do. Here is a man talking out of the wealth of his own personal experience. But if I were to reduce this to the more academic and summary manner what would I get? Every time there is a wage increase management looks around, and what does it do? Management investigates. "Well, sometimes I am going to absorb that wage increase through my profits." Let's assume that that is one case——

Senator SMITH (interposing). Through price increases?

Mr. BARKIN. No; through profits. You may recall, Mr. Smith, that in 1938 the U. S. Steel Co. was threatening a wage reduction because it was losing money, it said, or its profits had declined. It was talked out of it, out of making that wage reduction, by the United Steel Workers and by the President of the United States. It kept it, it shouldered it, there was no price increase. It kept prices and wages stabilized. In 1941 there was a wage increase for the steel workers; there was no price increase. Wage increases do not result in price increases. As a matter of fact a very interesting study was presented to the TNEC back in '38 and '39, to that committee that was studying our general economic life, a special staff study, which proved that

American industry price increases always preceded wage increases—price increases do not follow wage increases. The employer absorbs wage increases through profits from lower costs, better management, and better workers.

I am sure you have observed in your own personal life, that if you have eaten a good meal you are better disposed to work. I have seen it. All medical science proves that a full stomach—I don't mean an overfed stomach—but a well-fed stomach produces a satisfied worker, it produces a worker not distraught by tensions and uncertainties, not disturbed by the insecurities of life, and a worker better able to take care of his problems at home, and a better producer.

Senator SMITH. Let me get that. A better producer because of better conditions?

Mr. BARKIN. Correct. I, personally, in our own union have a department which is called the research department and half of our staff consists of engineers who——

Senator TUNNELL (interposing). Excuse me Mr. Barkin. It is now half past 11. We are not going to close now but I just wanted to remind you of the passing of time so that you can guide yourself accordingly. If you don't complete your statement this morning we will have to hear you again.

Senator SMITH. Are these points covered in your prepared statement?

Mr. BARKIN. The statement is a much more direct statement of these problems without this type of close analysis.

Senator SMITH. I want to bring this out because I feel myself that a raise in wages increases the productivity of the individual.

Mr. BARKIN. Correct.

Senator SMITH. And should not necessarily result in higher prices.

Mr. BARKIN. Correct.

Senator SMITH. I feel we must keep our prices down and distribute what we produce as widely as possible. Do you agree with me?

Mr. BARKIN. Senator Smith, that is the most important thing we have got to do. After all, if we are going to have a stable, full-employment economy, we have got to be sure that profits don't back up on us and find no outlet. Profits are exorbitant and huge—remember that profits now before taxes in 1944 were $25,000,000,000. That is not all the corporations made. They had liberal depreciation allowances, easy money terms, they had reserves of all kinds, they had carry-back provisions. All of those gave them a financial capacity such as they have never had in the history of this country, and they have got a place in which to absorb the wage increases.

Interestingly enough, before the present wage increase industry came into the OPA to ask for price relief. There was no wage increase then. Industry wasn't concerned about its effect on the economy. But a sane, coordinated view, shows that price increases are not necessary to accomplish most of the wage increases required by this particular proposal. We are getting our 65 cents in the cotton textile industry and it is not going to result in a price increase. The woolen industry is certainly going to go to 70 or 75 cents minimum and that doesn't mean a price increase. The synthetic rayon industry is going to go from 70 to 75 cents or higher—no price increase. The carpet industry is going to go up—no price increase.

Senator SMITH. You mean that there will be competition to keep it from increasing? You wouldn't want to have the Government control prices, would you?

Mr. BARKIN. No; but the competition itself will keep the prices there.

Now I would like to call your attention, gentlemen, to something we have repeated. The people themselves speak so much more eloquently than any figures can summarize. Low wages, as you know, mean poor health, inadequate medical care. We have several exhibits in this summary which are extraordinarily impressive.

Look at table VII, and these are facts. Your committee is interested in medical care. The States where people earn the least money are the States which have less doctors and inadequate hospital beds in relation to the population. Your deficit States, your black States, your bad States on medical care, are the States were people earn an inadequate income. Why do you have to have Federal supplements and subsidy grants? Because there are parts of this country where the people aren't earning as much as in other States. Why do you have State aid within the State, from county to municipality, for instance? Because there are some States where the people aren't earning a sufficient income. It costs the Government money to support an economy where people are not earning enough.

Close study shows that if you brought incomes throughout the country somewhere close to $2,000 a year, you could probably eliminate most of your slum problems, you could eliminate a good deal of your medical care problem, because people would then begin to buy these things on a free-competitive basis, and wouldn't have to depend on public subsidy.

In the Carolinas our mills are located in communities where there are no hospitals in the whole county except for a State clinic. They haven't been able to afford them. But I prophesy that after this war, as soon as money is available, hospitals will be built, in part by public money and probably also by private money, because our people are beginning to have money. They want medical care and there are going to be hospitals in those communities because we are going to demand them. People are going to have money with which to pay for them.

In some of our communities a doctor won't come to a textile worker unless the textile worker tells him over the phone that he has got money at home. He won't come to the mill village unless the worker reassures him that he will pay him cash immediately on the conclusion of his visit.

Senator TUNNELL. When you say "our communities," to what do you refer?

Mr. BARKIN. All through the textile communities of Georgia, Alabama, and the Carolinas.

Senator TUNNELL. You didn't refer to a particular place?

Mr. BARKIN. No; that is characteristic. The last story I heard was in Durham, N. C., a big community. The doctors won't come to our workers there unless they reassure him over the telephone, "We have got your fee."

Senator TUNNELL. That is where Duke University is; isn't that correct?

Mr. BARKIN. Correct; where there is the best medical care in the whole State of North Carolina.

We have quoted here Mr. Blandford of the Public Housing Administration. He knows what the slum problem is. He says that—

> the cancerous effect that substandard housing areas have upon the city's fiscal well-being is augmented by tax delinquencies. Not only do the substandard areas absorb a disproportionate share of the city budget, but in addition they show a higher rate of tax delinquency than other resident districts.

You know what it means to have a slum area in a community. It costs the city money and it costs our economy money, to have substandard workers. They are not producing. Back in the twenties you may recall that we talked about the "scrap heap at 40." I happened to study that problem for the Legislature of the State of New York, made a study, and prepared a legislative document on that subject.

Senator TUNNELL. Did that "40" refer to people's age?

Mr. BARKIN. That is right. The "scrap heap at 40" was the problem. Why? There were several reasons. There was no purchasing power. Industry's productivity was rising during the twenties and peoples' wages stood still, and the prices remained stable. The industry didn't give lower prices.

You know Brookings Institution, which has appeared before you—a very conservative organization—has pleaded with industry since 1933, "If you are making money and it costs you less, don't put it in your own coffers—reduce prices." And industry has laughed.

Senator SMITH. Well, you agree with that philosophy, do you not?

Mr. BARKIN. Yes; but there is no action on the philosophy. It remains a document on the shelves of the Brookings Institution, and American industry hasn't followed it. It is one thing to have a philosophy and another thing to depend on industry to act on it.

When costs decline we can only depend on it in a free competitive economy, and you know we don't approximate that in most of our industry.

Senator SMITH. You would like to see wages more or less standardized but the benefit to the people comes through keeping prices down and wider dissemination of goods?

Mr. BARKIN. No; I want a continuous rise of wages, I want a continuous rise in our national income, and I want a continuous correction of excessive prices. That is the economy we want and that is the only economy which will give us an approximation of full employment.

Senator SMITH. Well, of course it all has to be related.

Mr. BARKIN. Correct.

Senator SMITH. I want to see a cooperative effort between management and labor leadership to bring these things about without having this warfare between them.

Mr. BARKIN. That is what we would like to see.

Senator TUNNELL. We will have to recess about 5 minutes, Mr. Barkin.

Mr. BARKIN. Very well, sir. One of the things we are concerned about in our national position is our population, and I have recited here the facts on that subject which certainly indicate that you are not going to maintain your population growth on any wage which is substandard, which is below the 65 to 75 cents an hour.

78595—45——20

Senator TUNNELL. Well, is the increase in population in various sections of the country in proportion at all to the wages?

Mr. BARKIN. No.

Senator TUNNELL. Is it an inverse proportion?

Mr. BARKIN. Yes. Here is what happens, and I have spelled it out in the text of my statement here. It is an inverse proportion. The people at the poverty level generally have large families. Then there is a drop and then after a certain point there is a rise again. In other words, when you graduate out of your substandard group the young family is insecure unless it has got a pretty handsome wage. As soon as it attains any degree of security the normal family desire is to establish a family. Now what you will find is that just as soon as some degree of well-being is established, the family is started. Now if we raise wages to that degree of security we will overcome the old deterrent to population, the expansion of our country, which has come from the insecurity of inadequate wages.

We say also to the Middle West, the South and the Far West, "Remember, unless you have adequate wages your areas will not grow."

I know in the South, with which I have been associated now for many years, that we need wages to build up a middle class to build business. There is no middle class in the South; there are no private enterprises. You go into textile communities in North Carolina and South Carolina, and there is nobody there but the mill owner, his mill store and the worker. Doctors can't come there, businessmen can't come there. There is no place for private initiative because there is no one to buy, there is no one to service. The mill is the only person in the community and that is not a free competitive society.

I have also spoken to you about the need of wages for our full-employment economy. The Department of Commerce, which is not associated with the labor movement, has made certain studies on what affects retail sales, and in one of their surveys which appeared in October, entitled "1944 Retail Sales and Consumer Incomes," they have a very interesting chart. It is a straight line. That simply means the more income there is in the hands of the consumer the more retail sales there are. You don't have retail sales unless the people are buying.

I would like to introduce that into the record.

Senator TUNNELL. That may be done.

(The document referred to appears in the Appendix.)

Mr. BARKIN. Mr. Chairman, there are two additional thoughts I would like to state which are very important.

Foreign trade is not going to support a permanent economy in this country. We have got to have a buying power that will buy the imports, and unless people have income they won't buy. You can't conduct foreign trade by exporting and lending. You have got to buy. Unless you have purchasing power in this country you are going to stop foreign trade sooner or later.

Senator TUNNELL. Do you think exports should equal imports?

Mr. BARKIN. I say this, that for a few years we are going to have to lend——

Senator TUNNELL (interposing). You said that exports were not going to support the economy, but don't you think that exports aid, and that there should be exports equivalent to imports?

Mr. BARKIN. Correct. We are going to find that during the next few years we are going to have to lend both money and goods abroad. But sooner or later we want to have that back. We have got to have buying power in this country to buy those goods. If we don't have high wages in this country we won't be able to buy the things people sell. Then we will go back to the 1929 debacle that helped to create the depression.

One further consideration. The savings of this country are not in the hands of the workers. I quote this statement from Business Week, and Business Week is a McGraw-Hill publication and you can't associate it with the labor movement. They made the statement in Business Week of February 24, 1945 that 80 percent of the individual holdings of Government bonds, which constituted $49,000,000,000 out of the $210,000,000,000 debt at the time they made the survey, that 80 percent of the 49 billion was in the hands of the upper income groups.

The United States Department of Agriculture made a survey in Birmingham, Ala., and in Illinois, a field survey, as to who had the cash in this country. It is not the low income group. You can't depend on your savings during the war to keep your postwar economy, because those savings are in the hands of business, those savings are in the hands of unincorporated businesses, incorporated business, in the hands of financial agencies, in the hands of insurance companies. They are not in the hands of the workers of this country. I can't impress that conclusion too seriously upon you, I am simply pointing that out as a very important fact.

Senator TUNNELL. It would be interesting to know what proportion of the savings are in the hands of the workingman. I believe our deposits are now 144 billion dollars. I know that banks with which I am acquainted have increased their deposits wonderfully, and a reasonable proportion of that is from the lower income group.

Mr. BARKIN. They have increased, no one is denying that, but the proportion of the total is small. People are talking of the total amount of money that is available in savings for postwar economy. On inquiry you find that, for example, in December 1944 the total liquid assets in this country were 193.6 billion dollars, an increase of 120 billion from 1940. Now what happened was that those liquid assets are primarily business assets, whether incorporated or unincorporated businesses; banks, trusts—they are not primarily in the hands of the workers or the general buying mass who will support a postwar economy.

Senator TUNNELL. Are you near enough through now, Mr. Barkin, so that you can either submit a statement other than the ones you have already submitted, or do you feel that you have pretty well covered the ground?

Mr. BARKIN. Mr. Chairman, our union is going to appear again before you through the person of the acting president of the union—the president of our union is in Paris right now—and at that time I shall also be glad to present any additional data required and to answer any further questions in connection with this presentation.

However, I would like to have these two documents, my statement and the supplementary data, incorporated in this record.

Senator TUNNELL. Yes, both of those documents will be incorporated in the record of this hearing.

It is 10 minutes of 12 and we have a special occasion over in the Senate this noon, so I think we had better adjourn at this point until Tuesday morning at 10 o'clock.

(Whereupon, at 11:50 a. m., the committee adjourned until Tuesday morning, October 9, 1945, at 10 a. m.)

(The documents referred to are in the Appendix.)

AMENDMENT OF THE FAIR LABOR STANDARDS ACT

TUESDAY, OCTOBER 9, 1945

UNITED STATES SENATE,
SUBCOMMITTEE OF THE
COMMITTEE ON EDUCATION AND LABOR,
Washington, D. C.

The subcommittee met, pursuant to adjournment, at 10 a. m., in room 301, Senate Office Building, Senator James M. Tunnell, presiding.

Present: Senators Tunnell, Ellender, and Smith.

Also present: Charles Kramer, consultant to the committee.

Senator TUNNELL. The committee will come to order.

Mr. Bowden, will you give the stenographer your name?

Mr. BOWDEN. My name is R. B. Bowden. I am executive vice president of the Grain & Feed Dealers National Association.

TESTIMONY OF R. B. BOWDEN, VICE PRESIDENT, GRAIN & FEED DEALERS NATIONAL ASSOCIATION

Mr. BOWDEN. As I said before, I am executive vice president of the Grain & Feed Dealers National Association, which has headquarters in St. Louis, Mo.

This national association customarily acts as the clearing house on national affairs for 28 States and regional associations in the grain and feed trade, and additionally represents more than 1,000 direct members.

It is the only national association speaking for country grain elevators in all of the surplus grain-producing areas. Elevators which we represent are largely privately owned, although many cooperatives are direct members or members of our affiliated associations.

Our principal concern in S. 1349 is your proposed elimination of the section 13 (a) (10) exemption now provided in the Fair Labor Standards Act of 1938. The amended language which you propose for section 13 would place all of the 14,000 country elevators of the United States under the coverage of the act. For the past 7 years most of these country elevators have been considered by the Administrator as exempt from the wage-and-hour provisons. We believe it is quite generally recognized that no other business operation—except an operation performed on the farm itself—is closer, in its effect upon the producer of grain than is the country grain elevator. It is our desire here to point to what we think will be some of the effects of this proposed amendment to the Fair Labor Standards Act. Our position is in opposition to the removal of section 13 (a) (10) of the act.

If employees of these country warehouses—or elevators—are placed under the coverage of the act, the cost of additional wages naturally must come from only a few sources. To explain this: First, about one-third of the Nation's country elevators are cooperatively owned by farmers, so that as you increase the operating costs, the increase will be taken directly from the farmer. In privately owned elevators, any added labor cost must come from one of two sources, either from the present income of the operator, or from an additional margin to be taken by the warehouseman when buying grain.

A country grain elevator operator has only a few sources of income; from warehousing or storage, from services such as handling or elevation, from the purchase and sale of grain, and from side lines. Under this bill there still is exemption for an employee engaged in strictly retail selling of side lines, so the employees engaged in purely grain elevator duties would get any wage increases from either the service charges, from the operator's profits, or from the extra margins taken in grain purchases.

Let us take the services first: In many States there are laws setting exact rates for these services; that is, maximum rates; and these rates generally are those in force many years before the war and based upon prewar price levels.

Senator TUNNELL. You mean that in many of the States there is a maximum wage rate?

Mr. BOWDEN. No; the State legislatures commonly put a maximum rate on the service which the elevator performs, a service such as warehousing, storage of the grain, handling of the grain, and other such services. Some States put an exact rate on those services that is neither a maximum nor a minimum. It is an exact rate.

Even where there is no State or legal rate, the OPA regulation No. 165 makes it generally impossible for the warehouseman to increase any service charge. In recent years a considerable volume of grain has been handled for the Federal Government—Commodity Credit Corporation—under what is known as the uniform grain-storage agreement. These limits on service charges will not be changed except under the doubtful chance of State legislation or amendatory action by a Government agency.

Therefore, there are left two items against which any wage increases can be charged; against the present income of the warehouse operator himself, or against additional income from an increased buying margin on grain.

Obviously the increase cannot be absorbed in elevator operation, as it might be absorbed in some industry where labor is a smaller fraction of total cost. It is estimated that the labor cost in a country elevator runs between 50 and 60 percent of total operating cost in years of normal grain marketing. Your bill proposes to increase this minimum labor rate by 62 percent in the first year, by 87 percent in the third year. This increase obviously cannot be buried in the present cost of operation.

Senator TUNNELL. Are those old rates that you are speaking of?

Mr. BOWDEN. The rates governing our service charges?

Senator TUNNELL. Yes.

Mr. BOWDEN. Yes; practically all of those rates are prewar, except, may I say, in the States of Utah, California, Idaho, Washington, and Oregon, where the rates were changed during the war to conform to the uniform storage agreement rate set by the Federal Government before the war.

Senator ELLENDER. How does that affect the wages?

Mr. BOWDEN. I am afraid I don't understand you.

Senator ELLENDER. How did that change affect the wages? Did it increase them?

Mr. BOWDEN. The Office of Price Administration allowed an increase of the handling charges, not the wages, and the storage charges in those Western States to conform to the rate that had been set by the Government in a uniform grain storage agreement. It merely permitted and made legal the rates which the Government had set up.

Senator ELLENDER. As to the wages that you were paying prior to that time, did you increase those thereafter?

Mr. BOWDEN. I cannot answer that question for the Pacific coast.

You will ask if this increase can be taken from the warehouseman's earnings or profit. We know that some country elevators now are paying straight wages of 40 cents per hour or more. But most of the employees are not now under the wage and hour provisions of the act, so overtime is not now a general problem.

Senator TUNNELL. I wonder what the argument was for the change in rates.

Mr. BOWDEN. In the Pacific coast area?

Senator TUNNELL. Yes.

Mr. BOWDEN. As I remember it, and I was in the meeting where they appeared before the Office of Price Administration, it was based upon their change of structure out there. They used to have what they call flat houses on the Pacific coast where grain is bagged and stored in bags in the warehouses.

In the last 5 to 7 years, it has changed from about 60 percent flat houses to less than 5 percent flat houses, so that all the grain is now handled in what they call bulk handling out there. So they practically made a new rate based upon a new and different type handling of grain. And this rate on the Pacific coast is generally still lower on those services than the rate prevailing through the Middle Western States.

Senator SMITH. Have you any figure in mind that would meet your peculiar situation? I mean, an absolute figure, not a percentage figure.

Mr. BOWDEN. Yes; we could give you a figure like that if we knew the purpose of the bill. If the purpose of the bill is to raise the general level in order that the national income may be raised to, say, around 140 billion, so we could pay off this Government debt, and all prices are raised evenly, and we are able to recapture our costs evenly, the wage level is not so very important to us. But if the motive is to redistribute wealth by taking away from one person and giving to another person without an increase in their income, then we want to point out to you just what is going to happen if you try to do that in this bill to country grain elevators, where wage rates are 50 to 60 percent of the total operating cost of the elevator.

It seems quite obvious to us that you cannot raise the wage rate that proportion, 87½ percent, and expect that to come out of the operators' income or profits. It just doesn't exist, and it never has existed.

With the passage of the amendment proposed here, the 40 cents per hour minimum would be increased by 62 percent, and the longer hours worked commonly in a country elevator would bring the added problem of overtime. The country elevator is not a 40-hour-per-week establishment; it is so close to the farm that its hours must conform more closely to the farmer's hours, especially during the harvest season.

We estimate that the average employee works, or is at the elevator, 56 hours per week; that he may work as many as 80 hours per week during the peak of a big harvest season. There will be weeks during the year when he is on duty perhaps for 56 to 60 hours, but will have little actual trade to handle, or work to do. Our concern obviously is more with overtime than with the hourly rate before overtime.

Thousands of these country elevators are in the one-crop high-risk areas of grain production, where volume of farm production and marketing has wide variations.

May I interlard here by saying that I think you will find that 50 percent of all country elevators are located in nine Midwestern States, and those Midwestern States are commonly States of high-risk production on some profits.

While the elevator owner may be able in a year of high production to pay wages more comparable to industrial wages, a year of low crop production in his community may make it unprofitable for him even to keep his elevator open. Wages in these elevators now are probably at their highest levels, mainly because the past 3 or 4 years, fortunately for our country, have been successive years of record grain production. We have never before had such years of volume of grain production in succession, due to weather factors. But in many of our grain surplus producing areas we must assume from the weather records of many decades, that there will return occasional years of low to very low grain production.

In most of these elevators the employees have been retained through the years of subnormal crop production as well as through the good years; because the functioning of the elevator is very important even when farmers have only a very small crop to market.

Senator TUNNELL. I suppose they have to work as many hours when the crop is small as they do when it is large.

Mr. BOWDEN. I don't believe that is commonly true, Senator. You mean during the harvest season?

Senator TUNNELL. You spoke of the 56-hour week, and I was wondering whether that keeps up all the year.

Mr. BOWDEN. We took a survey about a year ago on the hours worked in the country elevators, and found that the average employee worked about 56 hours per week the year round, because these elevators are located in very small country towns usually; and in the very small country towns, as you know, the general business, the grocery store, and the other stores of that community stay open during hours that are fairly comparable to the hours of the farmers.

Senator TUNNELL. That is what I am trying to get at now. Would the average week in your opinion run as high as 56 hours when the crop is small?

Mr. BOWDEN. Yes. They keep the elevators open. There would not be as much work to do each hour, but the elevator would be kept open. At least, the manager would have to be there.

Senator ELLENDER. Kept on duty?

Mr. BOWDEN. That is correct, sir.

I say it is important because in some States the elevator may not be closed without State permission. I have seen an auditor's report—this is a certified public accountant's statement—on 10 years of successive operation of 825 grain elevators in one area, the years being from one of our recent drought cycles. The average net profit per year per elevator was less than $30. Those were years when labor costs were very high in percentage of total operation cost. Greatly increased labor costs during those years, we believe, would have prompted the closing of many of these elevators, and the adding of employees to the lists of unemployed, as well as withdrawal of facilities needed by farmers.

In closing let me say that the country elevator industry is not an industry of large labor units. On an average throughout the Nation, less than two men are employed per elevator; in many elevators only one man is employed throughout the year. There is only a very small amount of so-called casual labor employed during the year. In each elevator one man is manager and usually is bonded. He is responsible and must be on hand at all hours when grain is received or shipped. Naturally, he must put in overtime during busy periods.

Concluding, we ask that the exemption provided in section 13 (a) (10) of the Fair Labor Standards Act of 1938 be retained for country elevator employees.

Senator SMITH. Is the elevator business largely a cooperative operation by the farmers in the area, or is it a business comprised of separate firms?

Mr. BOWDEN. The country elevators of America, 14,000 of them, are roughly one-third cooperative, one-third independent, and one-third line. By a line elevator, I mean where two or more elevators are owned by one concern. Some of the cooperative elevators, of course, will fall in that classification, too.

Senator SMITH. You would like to see the elevator business put in the same classification as farm labor?

Mr. BOWDEN. I wouldn't say that, Senator. I want to say this hesitatingly, because we do not want to take the position against good wages, or high wages. Our wages are high now.

I would be glad to give you some of these figures if you are interested. This testimony was given at a New York hearing by the farmers' elevators, that is the Cooperative Farmers' Elevators of Minnesota; and these figures were given, as I said, in the New York hearing.

Their survey showed that their managers in the small towns have an average salary, that is, throughout the year, of $226.62 per month. In the larger towns, the average salary is $295.32.

The second man, and the second man usually is the only other man in the elevator, learning his way up through the grain business to be a manager himself some day, in the small towns was being paid an average of $153.86, and in the larger towns $179.31.

In both the large and small towns, the very small amount of casual labor that was employed was shown as being paid during this last year 60 cents an hour.

Now, you will see that when we are paying men $226, $295 a month, overtime becomes the serious problem.

Senator ELLENDER. Over what period of time did those figures you have just stated come?

Mr. BOWDEN. I am sorry. I jotted these figures down from the testimony given in the case up there. I assume, from knowing the gentleman who presented them, that they came for the last year, because I know he took a survey. I can only assume that, Senator Ellender.

Senator TUNNELL. In your statement that the profits averaged $30 per elevator for the year, was there much variation? Did some of them lose?

Mr. BOWDEN. Over a 10-year period, Senator, covering 825 elevators, there were years when probably most of them made a pretty good profit. But there are other years when they lost so heavily that the average for the 10 years through this drought period would not be very high. I don't want you to understand that I am giving the best period; I am giving you one of the worst, and the type period that we may have to expect again some day.

But this certified public accountant's report showed that the net profit per elevator was under $30.

I gave the figures in a hearing recently, and if my memory serves me, the figure was $27; and I will say under $30 to be safe.

Senator TUNNELL. Can you give us any idea as to what the wage rate per hour was?

Mr. BOWDEN. Do you want the period before the war, or do you want the figures for the present?

Senator TUNNELL. During that period when you were making $30 in elevators per year.

Mr. BOWDEN. We have no figures covering that. I could make some personal observation estimates, but they would be only guesses, if you would care for that.

I think the wages range all the way from $100 a month up.

Senator TUNNELL. And you say they ran about 56 hours?

Mr. BOWDEN. About 56 hours per week; yes, sir.

Senator ELLENDER. But if this bill were enacted as written, how much more would it cost you to run your elevator? Have you any idea?

Mr. BOWDEN. Labor cost is about 50 percent to 60 percent of total cost in the average year. If you add 87 percent to the 50 percent, you can see what the additional cost would be. And a point I wanted to bring out, Senator, with our charges fixed for storage and handling, we have no way to recapture that, unless we take a very much wider margin whenever we buy a farmer's grain. And in bad years, even to come out evenly, we would have to take such a wide buying margin, I think, that farmers would say it would be completely unfair to the farmers to have you force that buying margin on them.

Senator ELLENDER. Suppose you get the commissions in the various States to raise storage rates, so that you can meet these additional wages, if this bill goes through, would you be able to state how much more it would be necessary to charge for the storage of grain?

Mr. BOWDEN. No, sir; I don't have any such figures.

Senator ELLENDER. Any additional storage charges would have to come out of the farmer, wouldn't they?

Mr. BOWDEN. Insofar as it could not be taken out of the warehousemen's earnings and profits.

Senator ELLENDER. I see.

Senator TUNNELL. Why do the elevator men have to stay there all the time? Are there continuous calls on them?

Mr. BOWDEN. I think there are many answers to that, Senator Tunnell. May I give you one or two which I think probably will direct you toward an answer?

In the last 15 years, especially, the grain-producing area has become very well covered with hard-surfaced roads, so that now where farmers used to drive in with a team and wagon for 4 and 5 miles, and start after the chores were done in the morning, it is literally possible for a farmer to start today very early in the morning and get to town and do some business and get back to the farm, 10, 15, or 20 miles off in time to start his morning's work.

Quite frequently, they have come in for a piece of machinery, when the hardware store opens, that they need for their binder or that they need for some piece of equipment; and they come in early to get that. When they come in, they will sometimes bring a load of grain, and they will come to the country elevator to buy binder twine, or some of the things they need.

Now, during the harvest season, it is obvious, if you leave grain in the field, it starts to shatter and fall to the ground; and when it is ripe, it must be gathered and gathered quickly, and the farmers literally work around the clock during those seasons. And the elevator man must work around the clock to receive the grain as it comes from the field, because the farmers have very little place to put it, no equipment to handle it on the farm and it must be rushed into this primary assembling point, in the nearby country station.

Senator TUNNELL. Are there any further questions, gentlemen?

Senator ELLENDER. I have none.

Senator SMITH. No.

Senator TUNNELL. All right. Thank you, Mr. Bowden.

Mr. BOWDEN. Thank you.

Senator TUNNELL. Mr. Nichols, I believe, is the next witness on our list.

TESTIMONY OF S. R. NICHOLS, NATIONAL COTTON COMPRESS & COTTON WAREHOUSE ASSOCIATION; ACCOMPANIED BY A. L. REED, SECRETARY-COUNSEL, SOUTHWESTERN COMPRESS & WAREHOUSE ASSOCIATION

Senator TUNNELL. Give your name and position to the stenographer.

Mr. NICHOLS. My name is S. R. Nichols. My home is Des Arc, Ark.

Senator TUNNELL. I didn't hear.

Mr. NICHOLS. My home is Des Arc, Ark. I am a compress operator in Arkansas.

I am speaking for the National Cotton Compress & Cotton Warehouse Association, with headquarters at Memphis, Tenn. It is an organization of the cotton compresses and cotton warehouses located in the cotton-producing States. For the season of 1944–45 the Commodity Credit Corporation listed as approved cotton warehouses for the handling of Government cotton 1,274 separate operating companies. The membership of our national association embraces approximately 600 of those companies.

The cotton-warehouse industry is a service institution; it is a labor turn-over organization performing services for the cotton producers

and cotton trade which could be performed by labor on the farm or by labor employed by the owner of the bale of cotton. The industry does not buy cotton, neither does it sell cotton. It is not engaged in the manufacturing business of any character. It has no control over the volume of business tendered to it annually for this is determined by the annual production and market demand for cotton and not by any sales effort or any other activity of the industry. In appendix A we reproduce a historical statement of the production of cotton by the United States and throughout the world.

In addition, we have shown the consumption for the same period of years and the stocks on hand in the United States as of July 31 each year. From 80 to 90 percent of the carry-over will be in storage in public warehouses; the rest in the consuming establishments.

The factors which control production and consumption control the volume of business which this industry may expect annually to receive from the cotton producers of the Nation.

At the outset we desire to say that we are opposed to the provisions of S. 1349. We wish it distinctly understood that our opposition stems not only from thoughts concerning our industry, but also from our thoughts as to what is best for the vast number of individuals engaged in the production of cotton on the farms who are our customers.

While we are only engaged in the handling, storing, and compressing of cotton, the way you are treating our industry necessitates our also discussing the producers and ginners of cotton and thus referring to two other segments of our economy, namely, the cotton farmer and the cotton ginner.

In order that you may have in mind all through our presentation the effect of the proposed law on this industry, we wish to point out that insofar as we are concerned you are not merely considering the question of raising the minimum wage, but are passing on the question of whether this industry will be subject to the Fair Labor Standards Act at all. Heretofore section 13 (a) (10) has exempted all employees engaged in the handling, storing, ginning, or compressing of cotton in the area of production from both the minimum wage and overtime provisions of the act.

In addition, section 7 (c) has granted immunity from the overtime provisions for all employers wherever located engaged in the ginning or compressing of cotton. Thus, up until the present time, no operator of a cotton gin or a cotton compress has been required to pay overtime, and those gins, warehouses, and compresses located in the area where cotton is produced have not been required to pay either the minimum wage or overtime. As all gins, all except one compress, and the vast bulk of the cotton warehouses are located in the area of production, it can be truthfully said that none of the employees in these occupations have been subject to the act. S. 1349 abruptly changes this; both section 13 (a) (10) and section 7 (c) are repealed; upon passage of this bill these employers are exposed to the full rigors of the overtime and minimum-wage provisions now proposed.

In all of our discussions here the following fundamentals should be kept in mind:

1. Every cotton compress stores cotton, and, is therefore, a cotton warehouse, but every cotton warehouse does not own a compress machine and is not, therefore, a cotton compress. When we speak

of warehousemen we are referring to both compress and noncompress facilities unless the contrary is expressly stated or indicated.

2. The compression of cotton is neither a manufacturing process nor procedure, but merely consists of reducing the size of the bale of cotton without any change in the state of the cotton itself. See appendix B.

3. We will, from time to time, quote from or paraphrase source material. When this is done we will, in the interest of time, usually refer to the base material by footnotes rather than stating the reference. With the committee's permission, a copy of this statement will be filed so that these references will be readily available.

Cotton is a peculiar commodity. As it is produced on the farm it is not suitable for consumption by the spinning mills for two very definite reasons. First, the lint must be separated from the seed. This is performed at the cotton gin and it is known as cotton ginning. Second, cotton consists of a large variety of staples and grades. The Department of Agriculture recognizes some 700 different combinations of grades and staples of cotton. The spinning mills consume this cotton in uniform lots of even running grades and staples. See appendix C. The average production per American farm is approximately 5 bales. It frequently happens that these 5 bales will all be of different grades and different staple lengths, although there has been some effort on the part of the Government to promote uniformity in the production of grades and staples. The grade is determined by the type of soil, weather conditions, conditions and factors beyond the control of man.[1] The staple length can be governed to some extent by the type of seeds planted.

Thus, it will be seen from the average production that the cotton gin performs in volume a service essential to the production and marketing of cotton and that the cotton warehousemen perform the next essential step in making the commodity marketable and available for consumption, namely, the gathering of large stocks of different varieties of grades and staples and the assorting of these stocks into uniform lots of even running grades and staples to meet the consuming mills requirements of 100 bale lots of the same grade and staple. Thus, the warehouse and cotton gin are essential to the production of cotton and are, therefore, a part of the general agricultural economy necessary for the production and marketing of cotton. See appendix D.[1]

It is obvious from the foregoing that in order to serve the producer and to provide these essential services the warehouse as well as the cotton gin must be located with peculiar reference to the farms that produce the cotton. It is not only a fact that the facilities of the warehouse industry are located close to the farms, but it is true that the warehousemen utilize farm labor in the performance of these services. The same labor that plants, cultivates, and gathers the cotton crop on the farm in between times performs the handling services involved in the warehousing, assorting, and distribution of the cotton into consumable lots for the cotton mills. An authoritative study made of the source of warehouse labor in one State found:

> The labor employed by Tennessee compresses for handling and compressing cotton usually comes from the farms or area about the compress.[2]

[1] The Compression of Cotton and Related Problems, U. S. Department of Agriculture, November 1940 p. 2.

[2] Cotton Compressing in Tennessee and United States, Agricultural Experiment Station, University of Tennessee, April 1, 1938.

This is particularly significant as most of the compress-warehouse facilities in Tennessee are located in cities such as Memphis, which is one of the largest cities in the South. While it is true that in the larger communities, such as Atlanta, Ga., New Orleans, La., Memphis, Tenn., and other cities of that character, the competition between the warehouses and the farmer is not as great as it is in the smaller communities, the competition is nevertheless present to a greater extent than most people would normally suppose. But even considering the facilities located in the larger cities, 99 percent of the warehouses are located in close proximity to the cotton fields and the farms that produce the cotton.

The Secretary of Agriculture, in his statement before this committee, testified that in his opinion the proposed bill would not increase the cost of farm products to the consumer. We concur in that statement, but it should be noted that the Secretary did not deal with the other phase of the effect of this bill, namely, who pays for the increased labor costs of warehousing and handling the cotton and the ginning of it—the consumer or the farmer.

It is a well-known fact that cotton has been, is now, and apparently will continue to be a commodity subject to a buyer's market where the seller is forced to absorb all cost of delivery. It is a known fact in this industry that the cotton merchants and the consuming mills purchasing cotton do so under fixed limits which result in the farmers of cotton absorbing transportation costs, warehousing costs, handling costs, insurance costs, and all of the other incidental items involved in the distribution of this commodity. When the export market predominates these factors are predicated upon freight rates to the ports of exportation; when the domestic market predominates, as has been the situation for several years, the freight rates to Columbia, S. C. determine the delivered cost and the amount of freight charge deducted from the price received by the farmer for the cotton.

This committee will find that the Department of Agriculture in fixing loan values deducts from the value allowed to the farmer under a loan the freight charges to Columbia, S. C., at the present time. Several years back freight charges to the ports were considered in connection with the production of cotton in certain States, but generally it is a fact that the farmer pays the costs whatever they may be.

Senator SMITH. That is because there seems to be an oversupply?

Mr. NICHOLS. Yes, sir. The oversupply has made it a buyers' market; and the costs have been passed back to the producer because of that fact.

Senator SMITH. The ordinary economic law seems to work very clearly.

Mr. NICHOLS. Yes, sir. Your committee will find that the Department of Agriculture, in fixing the values on cotton farms in the South will have to take that into consideration.

This industry cannot stand or bear the increased costs that would be imposed by S. 1349 and, therefore, they would have to be passed on to the farmer.

Senator TUNNELL. There is a subsidy on cotton, isn't there?

Mr. NICHOLS. Senator, there is an export subsidy on the cotton that is sold to foreign countries right at this time.

Senator TUNNELL. How much is that?

Mr. NICHOLS. I believe it is approximately 4 cents a pound, or $20 a bale at the present time. That is necessary in order to try to get American cotton into world channels at something near competitive prices. But you still don't get American cotton as cheap as foreign cotton.

Senator TUNNELL. The quality is about the same, is it, or is our cotton better?

Mr. NICHOLS. Generally speaking, American cotton is of very highest quality, possibly with the exception of Egyptian. We certainly produce better cotton than South America or India. But the difference in quality is not as great as the difference in price, as is reflected by the willingness of the farm spenders to use other ropes when there is a saving.

Senator ELLENDER. Now, that is assuming that you would have to absorb the labor costs.

Mr. NICHOLS. Yes, sir.

Senator ELLENDER. But you say the farmers will.

Mr. NICHOLS. I point out that our earnings are not sufficient to absorb it.

I would like to comment further that that earning of $2,400,000, roughly, $2,000,000 of that is nonoperating income that has accrued in the form of rental and other nonoperating items during the war. Many compress and warehouse facilities have been taken over by the Government in the storage of war materials; and there is only about $600,000 of operating income in that figure.

Senator ELLENDER. The point that I desire to make now is this: As you stated awhile ago, any additional costs would have to come out of the farmer's pocket.

Mr. NICHOLS. Yes, sir.

Senator ELLENDER. Now, can you tell us how much more would that increase the farmer's costs for storage?

Mr. NICHOLS. We figure, Senator, that that will increase the farmer's costs on an average of $1 a bale. There are, roughly, 12,000,000 bales produced.

During 1945 auditors employed by the Office of Price Administration checked the accounts of selected companies engaged in the cotton warehouse business for the purpose of determining ceiling prices for the industry. The companies were selected as representative of the industry. They, in fact, covered the most profitable and the largest operating companies engaged in the cotton warehouse business.

In appendix E, attached hereto, we have shown the results of this audit for 54 companies which are the only ones for which we have the segregated expenses of plant wages and labor costs. Also in this statement we have shown the results of the audit of the base period figures—1937 to 1942—for the same 54 companies. These 54 companies had on hand on May 31 approximately 50 percent of the cotton in storage. Therefore, they are representative of the largest and most profitably operated companies.

There is no definite information showing precisely what the minimum wage is in this industry at the present time. Prior to the war the minimum wage was approximately 20 cents per hour for unskilled labor. It is known from surveys conducted under the auspices of the War Labor Board that there are no companies that do not have some employees that receive no more than 50 cents per hour. The industry,

therefore, estimates that at the present time the minimum wage has risen to an average of 45 cents per hour. Wages for the skilled services have increased in proportion.

Senate bill 1349 will directly affect item No. 1 in appendix E attached hereto which is plant wages and labor costs. This composite figure for the companies servicing 50 percent of the cotton in storage would be immediately increased 45 percent by S. 1349 which means that the labor and plant wages would be increased for these 54 representative companies by $4,022,779 and thus completely wiping out their meager profits of $2,657,869. The increase to 75 cents per hour would add $5,953,712 to the labor bill. Neither of the above figures take into consideration the increases in general office wages and salaries, which would be brought about by the bill and, therefore, must be considered as minimum figures.

However, assuming the above to be 50 percent of the labor involved in the entire industry, it means that the farmers of the country will have to immediately absorb, as a result of this bill, an additional $8,000,000 out of the price which they receive for their cotton. Within a short time this would be increased to $12,000,000.

And $12,000,000 would be approximately a dollar a bale.

Senator ELLENDER. That is per year?

Mr. NICHOLS. Yes, sir; and that would be approximately 1 percent of the gross value of the bale cotton on the present market.

Therefore, while it may be true that this bill will not increase the cost of farm products to the consumer, it will obviously decrease the purchasing power of the farmer, the producer of cotton, by more than $8,000,000 immediately and $12,000,000 within 2 years if enacted in its present form. If we extend these provisions into the cotton ginning and other services allied with the production of cotton, the results far exceed the $8,000,000 and $12,000,000 which will necessarily and immediately be exacted because of the additional cost of warehousing and handling the cotton.

From the above figures it is clear that to the extent we increase the purchasing power of one man in our economic scheme we obviously decrease the purchasing power of another man; namely, the farmer.

Insofar as this industry is concerned, attention is specifically called to the enormous increases in plant wages and labor costs which has taken place since the 1936–37 season and as compared with the average of the base period, consisting of the 6 years ending in 1942. The base period figures are also contained in appendix E hereto.

The farmer is in no position to absorb these increases.[3] In 1943 the average gross revenue from cotton of persons living on cotton farms was $153.[4] Note that this was gross income. In 1942 the cost of production was close to two-thirds of the sales price.[5] These costs were at least as great in 1943. Thus, the net revenue would only be about $50 per capita.

Does the Congress want to further reduce this even by 1 cent? Particularly in the face of the Secretary of Agriculture's statement last year that—

> Even if farmers received parity for every pound of cotton that could be grown in the South, the incomes of a great many of them still would be too low to afford an acceptable level of living.[6]

[3] Hearings before the subcommittee of the Committee on Agriculture, House of Representatives, 78th Cong., 2d sess. (hereinafter called Pace committee hearings), p. 135.
[4] Ibid., p. 110.
[5] Pace committee hearings, pp. 45 and 119.
[6] Pace committee hearings, p. 95.

The Supreme Court of the United States has already pointed out[7] the reason for exempting industries, such as this one, from the Fair Labor Standards Act, is to protect the farmer, particularly the small farmer, against increased costs in services they need but cannot provide economically for themselves. Is the Congress now prepared to increase his costs and reduce his living standard?

As the farmer cannot now, except in rare instances, get the benefits of the Government loan or purchase programs unless he places his bale in the facilities of this industry where it is protected from the elements and insured against loss or damage by fire, is the Congress now willing to reduce the net return to him from these programs?

We think not.

As important as the above considerations are, there is still another and more far-reaching effect of the current bill. This is the effect which will be felt on farm labor. We have already pointed out the competition that exists between the warehouses, gins, and the farmer for the same labor.

The Secretary of Agriculture has pointed out that the increases that will be brought about by this bill will not be passed on to the consumer of farm products, therefore the only way these increases can be handled is for the farmer to absorb them. Statistics show that as late as June 1943, although daily farm wages had risen 86.2 percent over January 1941, the average for the United States was only $2.96 per day and for that portion of the Cotton Belt, excluding California, averaged $2.57 per day.[8]

For the 10-hour day customary in the farming country this is 29.6 cents and 25.7 cents per hour. Even allowing for some increase since that time the rates still will not be very high. A recent article pointed out 40 cents per hour as being a very high rate for skilled farm labor in the Cotton Belt.[9] This is true as ordinary farm labor is not even now being paid as much as 40 cents per hour. Obviously, with a rate of 65 cents per hour, not to mention 75 cents, the warehouses and gins will attract such labor as they need from the farmer. There is no need to discuss the well-known shortage of farm labor in any detail. It should suffice to point out that even with cotton selling around 22 cents per pound the farmer doesn't have the money to compete with industry in bidding for labor.

> Some areas have lost half of their labor supplies. Last fall, tens of millions of dollars' worth of unpicked cotton was left in the fields.[9]

Senator TUNNELL. Is cotton labor paid less than other agricultural laborers?

Mr. NICHOLS. Not in the South, Senator. I would say that all agricultural labor has about the same wage in the South, and I couldn't speak for the other fields.

Senator TUNNELL. I meant, in the same section.

Mr. NICHOLS. About the same; farm wages are about the same. Of course, cotton is the principal crop there.

Senator ELLENDER. In the case of gathering cotton, it is virtually all piece work.

Mr. NICHOLS. By the hundred, yes.

[7] *Addison* v. *Holly Hills Fruit Products Co.* (232, U. S. 607).
[8] Memorandum to Industry Committee No. 62, U. S. Department of Labor, Wage and Hour and Public Contracts Division, and the U. S. Department of Agriculture Farm Labor Report.
[9] Revolution in Cotton, Collier's, for July 21, 1945.

Senator ELLENDER. By the hundred pounds. Some pickers will make $2.50, and others make as much as $5. Of course, those $5 boys are mighty scarce, but still some of them do make that much at present prices.

Mr. NICHOLS. Yes.

For a number of years the labor cost of producing cotton has been about 60 percent of the total cost.[10] Even if the farmer only increased his hourly rate to 50 cents in order to meet the competition offered by the 65 cents and time-and-one-half scale of the gins and warehouses, his cost of production would equal or exceed his sales price of cotton, which is at the highest level in about 25 years.[11]

One of the strangest results of S. 1349 is that it will force the farmer in many cases to compete against himself for labor. This arises out of the fact that there has been a rapid increase in the number of producer cooperatives engaged in the ginning, warehousing, and compressing business. The proposed legislation would require the farmer to pay the employees he uses in ginning, warehousing, and compressing his cotton at least 65 cents an hour even though these are the same employees that form the labor pool for his farm labor and which he needs to obtain for less than 40 cents an hour in order to harvest his cotton and realize a profit.

We believe the fact that the present bill continued to exclude agricultural labor shows that there was no intention to increase the farmer's cost of doing business. We believe that the failure to understand that this industry is not of the industrial type, such as a steel mill or a garment factory, has resulted in an inadvertant proposal to make it subject to the Wages and Hours Act.

We trust that this committee will see fit to restore the former exemption granted to us in even more vigorous language. If it does not, it is our judgment that the industry will either dry up and vanish or materially restrict its services on a high cost level. This is not only because of the financial conditions mentioned above, but because most of the services we perform are in competition with the farmer. This arises out of the fact that the principal services of the industry are the handling and storage of cotton. Obviously, the purely warehouse facility receives no revenue from compression and statistics show that even the compresses only obtain about 30 percent of their income from this source.[12]

Records reveal that at least 10 percent of the farmer's cotton is stored on the farm prior to sale.[13] In other words, enough farmers perform their own storage and handling prior to sale to account for 10 percent of the total number of bales produced. At the present level of the industry's charges this is not feasible for the farmer unless he has a relatively large number of bales of cotton. As the charges of the industry increase as they would have to do in view of the increased labor bill, the industry would be subject to, it would become feasible for a farmer with a smaller number of bales to perform this service for his own account. However, it should be pointed out that 62.06 percent of the cotton farms produce five, or fewer, bales of cotton per annum.[14] It can be reasonably assumed that the smaller farmers

[10] Pace committee hearing, p. 119.
[11] Pace committee hearing, p. 45.
[12] The Compression of Cotton and Related Problems, p. 1.
[13] Marketing Practices in Producers' Local Cotton Market, U. S. Department of Agriculture, May 1938, p. 25.
[14] Pace committee hearings, p. 63.

will need our services. If our volume is restricted, necessarily our cost per bale will be higher and thus reflected in higher charges per bale to the small farmer. It should be obvious that we cannot continue to compete with the individual farmer when he is paying 40 cents for the same labor we must pay 65 cents per hour. This is particularly so because this is a labor turn-over industry and the cost of labor is such an important part of our operating expenses.

We submit, therefore, that the handling, ginning, storing, and compressing of cotton should be completely exempt from the Fair Labor Standards Act in the interest of both this inudstry and the cotton farmer. To do otherwise is to fly directly in the face of the persistent efforts of the Department of Agriculture and Congress to reduce the cost of producing and marketing to the farmer and an outstanding example of the left hand wiping out in one stroke what the right hand has accomplished over a period of years.

In this connection, we request that the amendment proposed by section 7 of S. 1349 be changed so that the amendment to section 13 (a) of the act will contain the following language:

(11) To any employee of an employer engaged in the handling, ginning, storing, or compressing of cotton.

The reasons for this are, first, as stated by the Administrator of the Fair Labor Standards Act, all ginning, compressing, warehousing, and assembling, with the possible exception of a small amount of warehousing, is conducted in the cotton-producing area.[15]

Second, the Administrator has shown himself to be totally unwilling or incapable of formulating a definition of the area of production of cotton. As early as May 1941 the Federal courts had declared the Administrator's definition of area of production void insofar as it pertained to cotton. On June 9, 1944, the Supreme Court found his definition void as to all commodities, yet the Administrator has not yet attempted to issue a valid definition of the area of production of cotton. Although every court, without exception, passing on the definition in relation to cotton has invalidated it, the lack of a clear-cut statement has caused confusion in the industry and has caused certain employees to spend their hard-earned money in futile attempts to maintain suits under the act.

The remedy to this situation is so simple that Congress should not allow this state of confusion to exist any longer, but should completely clarify it by adopting the language set forth above.

In this connection we call attention to section 8 of the pending bill which prescribes a 5-year statute of limitation. As the Supreme Court has said that the new definition of area of production when, and if, promulgated will be retroactive until the date of the passage of the Fair Labor Standards Act in 1938, many industries now find themselves in the position of having an enormous contingent liability for violations of the act. This arises out of their reliance on court decisions declaring the old definition void and the stubborn refusal of the Administrator to issue a valid definition. It would be totally unfair to these employers to allow a new definition to deprive them of their exemption and then penalize them for all actions taken in the last 5 years. Industries that have definitely known whether they

[15] Memorandum to Industry Committee No. 62, U. S. Department of Labor, Wage and Hour and Public Contracts Divisions, July 1943, p. 23.

were or were not under the act have been able to take such steps as were necessary to protect themselves against such a contingency.

No such an opportunity has been afforded to those employers affected by the area of production definition. We suggest that a 1-year statute of limitation be imposed similar to that now proposed by H. R. 2788 which is pending before the House Judiciary Committee.

In order to shorten our presentation we are presenting our objections to section 5 of S. 1349 in appendix F hereto. This should not be taken in any manner to mean that we do not consider the provisions of this section of vital importance to all industry. We respectfully request that the experience of this industry, as outlined therein, be studied by the Senate before making any decision upon the proposed section 5.

In closing we would like to suggest that if the Senate does not feel that it can exempt those few facilities outside of the area where cotton is produced, that it limit its exemption to those employers in the States and counties shown by the Department of Agriculture to produce cotton commercially. For your convenience we are tendering herewith a map prepared by the Department of Agriculture depicting the areas where cotton is produced and we have attached a list of those areas hereto as appendix G.

(The appendixes referred to are as follows:)

Appendix A

Cotton production and consumption, United States and world: Carry-over stocks in United States by crop years

Crop year [1]	United States		Production, world, other than United States [4]	Consumption, world, other than United States [4]	Carry-over stocks in United States [5]
	Production [2]	Consumption [3]			
1924 to 1925	13,627,936	6,193,417	11,530,000	16,541,000	1,609,848
1925 to 1926	16,103,679	6,455,852	12,135,000	17,712,000	3,542,560
1926 to 1927	17,977,374	7,189,585	10,942,000	18,489,000	3,762,367
1927 to 1928	12,956,043	6,834,063	11,934,000	18,608,000	2,536,472
1928 to 1929	14,477,874	7,091,065	12,403,000	18,687,000	2,311,988
1929 to 1930	14,824,861	6,105,840	12,035,000	18,769,000	4,530,429
1930 to 1931	13,931,597	5,262,974	12,268,000	17,169,000	6,369,953
1931 to 1932	17,095,594	4,866,016	10,753,000	18,023,000	9,677,754
1932 to 1933	13,001,508	6,137,395	11,447,000	18,514,000	8,164,634
1933 to 1934	13,047,262	5,700,253	13,873,000	19,902,000	7,743,695
1934 to 1935	9,636,559	5,360,867	14,174,000	20,119,000	7,208,477
1935 to 1936	10,638,391	6,351,160	16,192,000	21,178,000	5,409,389
1936 to 1937	12,398,882	7,950,079	19,101,000	22,688,000	4,498,848
1937 to 1938	18,945,028	5,747,978	19,684,000	21,825,000	11,533,439
1938 to 1939	11,944,340	6,858,426	17,147,000	21,649,000	13,032,513
1939 to 1940	11,815,759	7,783,774	17,153,000	20,702,000	10,564,170
1940 to 1941	12,564,988	9,721,703	18,014,000	16,820,000	12,165,752

Appendix B

The compressing of cotton means the reducing of the size of the bale from the size produced by the gin to a more compact package. When a bale of cotton is compressed to what is called standard density it is reduced to approximately one-half of the size of a flat bale and has a density of around 22 to 25 pounds per cubic foot. The dimensions of the average standard-density compressed bale are approximately 30 by 60 by 19 inches. When a bale of cotton is compressed to high density it is reduced to a size of approximately 20 by 60 by 18 inches and has a density of approximately 34 pounds per cubic foot. The flat bale has a volume of about 40.5 cubic feet, the standard compressed bale of about 19.2 cubic feet, and the high-density bale of about 12.5 cubic feet.

Appendix C

For explanation and broadly speaking the staple is the length of the fiber and the grade is the condition of the fiber. Under the standards established by the cotton trade and the United States Department of Agriculture there are over 700 different categories or classifications into which a particular bale may fall.

The consuming mills, however, purchase and use cotton in 100-bale lots of even running grades and staples, i. e., the same grade and staple. One description of cotton may be suitable for making sheeting but not for making towels, another description of cotton may be fine for towels but not sheets, and neither of these combinations may be safe to use in making cords to be used as parachute rigging. Thus it is necessary that facilities be maintained where large stocks of cotton can be assembled and sorted. It is not unusual to have to assemble 1,000 bales from a given area in order to get 100 bales of the same grade and staple. In view of this it is no wonder the Department of Agriculture states that our industry is "essential" in the marketing of cotton.[1]

Appendix D

The value of the services of the industry to the farmer has been succinctly stated by study made by the agricultural experiment station of the University of Tennessee as follows (pp. 33–34):

"*Value to farmers.*—Farmers often desire to have their cotton stored and compressed as near home as possible, as it permits them to inspect and perform the necessary services in connection with sale and delivery without the additional cost of intervening agents and excessive resale expense. If the cotton remains on hand at interior points, the farmer is free to sell his cotton into normal trade channels without additional cost over and above the initial amounts paid for handling and storage.

"When cotton is received into the compress warehouse, either flat or compressed from wagon, truck, or railroad, it is properly checked, tagged, weighed, marked, and sampled by Government-licensed samplers who are experienced in that line of work. The compress at once begins to perform the services previously performed by the carrier, protecting the producer against claims. The producer's cotton may be resampled while at the compress, and damaged cotton may be reconditioned. The compress company immediately assumes the risks of fire hazards and damage from the elements, although it is not liable or responsible except as otherwise required by the United States Warehouse Act and regulations thereunder.

"Such functions as typing for mills, assembling bills of lading lots as to destination order, and for one consignee at one destination from a large variety of origin points, collecting freight charges on cotton moving into compress, and other activities listed in the compress tariff are becoming more and more valuable to the cotton producer each year.

"Due to the fact that a farmer is able to concentrate his cotton near home a better feeling is created between the grower, the merchant, and in many cases the mill buyer, as it gives the farmer an opportunity to straighten out any differences, which would be difficult if the cotton were not concentrated at such interior points. Compresses are usually situated near large cotton markets, and are logical places for cotton merchants or representatives of cotton merchants to

[1] The Compression of Cotton and Related Problems, p. 2.

congregate when buying cotton for distribution to mills. This makes possible the highest competitive prices.

"The producer receives, at the time he deposits his bale in the compress, a negotiable warehouse receipt which is considered first-class collateral at banks. Under the Federal Warehouse Act, each year many thousands of receipts are issued which carry the grade and staple designation. The tendency is for this to increase yearly. Such warehouse receipts form the base of the Commodity Credit Corporation loans, since these receipts accompany the loan cotton class sheets at compresses. Cotton compresses under the 1937–38 loan plan are responsible for any variation between the classification when cotton is received at the compress and that fixed by the Bureau of Agricultural Economics, under which the Government will check cotton on which it makes loans."

Appendix E

Statement of operating results and certain specified expenses, season 1944–45 and average for 6 seasons, 1936–37 to 1941–42, inclusive; the figures having been audited by the Office of Price Administration

THE CURRENT FIGURES (1944–45 SEASON)

1. Plant wages and labor costs	$8, 939, 509
2. Cotton insurance	1, 577, 523
3. Total expenses	18, 671, 304
4. Gross revenue	21, 329, 173
5. Net revenue	2, 657, 869

BASE PERIOD AVERAGE (1936–37 TO 1941–42, INCLUSIVE)

1. Plant wages and labor costs	$5, 329, 430
2. Cotton insurance	969, 677
3. Total expenses	13, 574, 117
4. Gross revenue	16, 530, 534
5. Net revenue	2, 956, 417

Appendix F

Section 5 of S. 1349 in effect proposes to use industry committees to establish minimum wage standards for all of the job classifications within given industries. To anyone who is familiar with the variations in job contents and job descriptions between various members of a given trade, it seems almost preposterous to turn such a task over to such an inexperienced group as constitutes industry committees. We believe that our experience with committees of this sort will be illuminating.

As you know, industry committees have been provided for since the passage of the act for the purpose of raising the minimum wage from 30 cents to 40 cents per hour. This industry was placed under the jurisdiction of one of these committees. One hearing was held by the industry committee and at that time they considered the problems of this business simultaneously with a vast number of other enterprises. The official records of the Administrator of the Fair Labor Standards Act show that among other industries being considered concurrently were:

"Handling, packing, storing, preparing in their raw or natural state, first processing or canning of perishable or seasonal fresh fruits or vegetables.

"Storing of grain, soybeans, flax, and buckwheat in grain elevators.

"Receiving of grain, soybeans, flaxseed, and buckwheat into grain elevators.

"Certain branches of the decorative-greens industry.

"Storing and packing of nursery stock.

"Handling, packing, shelling, or other processing or storing of peanuts.

"Packing of unshelled, paper-shelled, or improved varieties of pecans.

"Drying, packing and storing of unshelled walnuts and filberts.

"Skinning of wild rabbits and other wild fur-bearing animals.

"Cleaning and processing of certain seeds.

"Receiving of raw shorn fleece wool at primary concentration points and country receiving stations.

"Certain operations performed on cigar leaf tobacco." [2]

It should be apparent to any one that there could be no conceivable relationship between the storing of cotton and the skinning of wild rabbits, or the shelling of peanuts. The industry committee consisted of 18 members, of which 6 represented industry, 6 represented labor and 6 represented the public. These were of course all chosen by the Administrator. Of the industry members, only one was from the cotton compress and warehouse field. Of the labor members only one represented a union which had any contracts with the compress and warehouse industry. Not more than 2 of the public members were even from States where cotton is produced. The committee convened at 10 o'clock on the morning of July 27, 1943, adjourned for an hour at noon and completed its deliberations at 6:15 the same day.[3] The information presented to the committee by the Administrator conceded that there was no reliable data to present to the committee concerning the cotton compress and cotton warehouse industry.[4] Yet, before the committee adjourned at 6:15 they had given such consideration to the problems of all of the industries outlined above and more in addition to such an extent that they were able, by the unanimous vote of the labor and public representatives, to recommend the establishment of a minimum wage of 40 cents in all of the above industries.

The above is not intended in any way to be facetious, but merely a statement of the facts. We do not believe that the members of the Senate realize that the procedures of the so-called industry committee are so inadequate and unfair that they would even put the so-called kangaroo courts to shame. Inasmuch as the proposed bill would provide for indentically the same kind of industry committees as established the 40-cent minimum wage for this and the multitudinous other industries, we see no reason to believe that the establishment of minimum wages for particular job classifications would be treated any differently.

If the Senate had any thought that there would be any detailed study of the question of wages for individual job classifications, we are afraid that they are doomed to disappointment. Just as in the 40-cent minimum-wage proceeding, the Administrator had prepared and presented to the industry committee precisely the recommendations he wanted written out to the last comma [5] the industry committee consideration called for under the proposed bill will be limited to meeting with the representatives of the Administrator who will have already prepared their idea of just exactly what should be done and this will be unanimously ratified by the public and labor members of the so-called "industry" committee.

It has always been our understanding that the purpose of the Fair Labor Standards Act was to impose minimum living standards for certain employees. This is accomplished by establishing a minimum wage. We know of no basis upon which Congress or anyone else can say that minimum living conditions for a man while engaged in loading or unloading cotton is 65-cents per hour, but that when he is trucking this cotton through the plant by use of a hand truck that his living conditions have so changed that he must then receive 85 cents per hour. We earnestly request that the Senate refuse to impose this additional straightjacket upon industry.

(7) The counties of Hidalgo, Luna, Sierra, Dona Ana, Otero, Eddy, Chaves, Lea, Roosevelt, Curry, Quay, and Harding in the State of New Mexico.
(8) The counties of Chautauqua and Montgomery in the State of Kansas.
(9) The counties of Taney, Ozark, Howell, Oregon, Ripley, Butler, Stoddard, Scott, Mississippi, New Madrid, Pemiscot, and Dunklin in the State of Missouri.
(10) The counties of Pulaski and Alexander in the State of Illinois.
(11) The counties of Fulton, Hickman, Carlisle, Ballard, McCracken, Graves, Calloway, Marshall, and Livingston in the State of Kentucky.
(12) The counties of Lake, Obion, Weakley, Henry, Dyer, Gibson, Carroll, Benton, Humphries, Lauderdale, Tipton, Shelby, Fayette, Haywood, Crockett, Madison, Hardeman, Chester, McNairy, Henderson, Decatur, Hardin, Wayne, Perry, Hickman, Lewis, Lawrence, Giles, Maury, Williamson, Marshall, Lincoln, Bedford, Rutherford, Wilson, Cannon, Coffee, Moore, Franklin, Marion, Grundy, Warren, White, Van Buren, Hamilton, Rhea, Meigs, Bradley, McMinn, Polk, and Monroe in the State of Tennessee.
(13) The counties of Pittsylvania, Halifax, Charlotte, Prince Edward, Lunenburg, Mecklenburg, Brunswick, Nottoway, Amelia, Chesterfield, Dinwiddie, Greensville, Southampton, Sussex, Prince George, Surry, Isle of Wight, Nansemond, Norfolk, and Princess Anne in the State of Virginia.
(14) The counties of Alachua, Baker, Bay, Bradford, Calhoun, Citrus, Clay, Columbia, Dixie, Dival, Escambia, Flagler, Franklin, Gadsden, Gilchrist, Gulf, Hamilton, Hernando, Holmes, Jackson, Jefferson, Lafayette, Lake, Leon, Levy, Liberty, Madison, Marion, Monroe, Nassau, Okaloosa, Orange, Pasco, Pinellas, Putnam, Saint Johns, Santa Rosa, Seminole, Sumter, Suwannee, Taylor, Union, Volusia, Wakulla, Walton, and Washington in the State of Florida.
(15) The counties of Rutherford, McDowell, Burke, Caldwell, Wilkes, Alexander, Catawba, Lincoln, Cleveland, Gaston, Mecklenburg, Cabarrus, Iredell, Davis, Yadkin, Forsyth, Davidson, Rowan, Stanly, Union, Anson, Montgomery, Randolph, Guilford, Richmond, Scotland, Moore, Lee, Chatham, Alamance, Orange, Caswell, Person, Granville, Durham, Wake, Harnett, Cumberland, Roberson, Bladen, Columbus, Brunswick, Pender, Duplin, Sampson, Wayne, Johnson, Wilson, Nash, Franklin, Vance, Warren, Halifax, Northampton, Edgecomb, Pitt, Greene, Lenoir, Jones, Onslow, New Hanover, Carteret, Craven, Pamlico, Beaufort, Martin, Washington, Tyrrell, Hyde, Dare, Bertie, Hartford, Chowan, Gates, Perquimans, Pasquotank, Camden, Currituck, Hoke, and Polk in the State of North Carolina.

Senator TUNNELL. Are there any questions?

Senator SMITH. Yes. Our other witnesses have testified to the effect that the minimum wage which is proposed in this bill is based on what would be a fair standard of living for a family of four, in industrial areas.

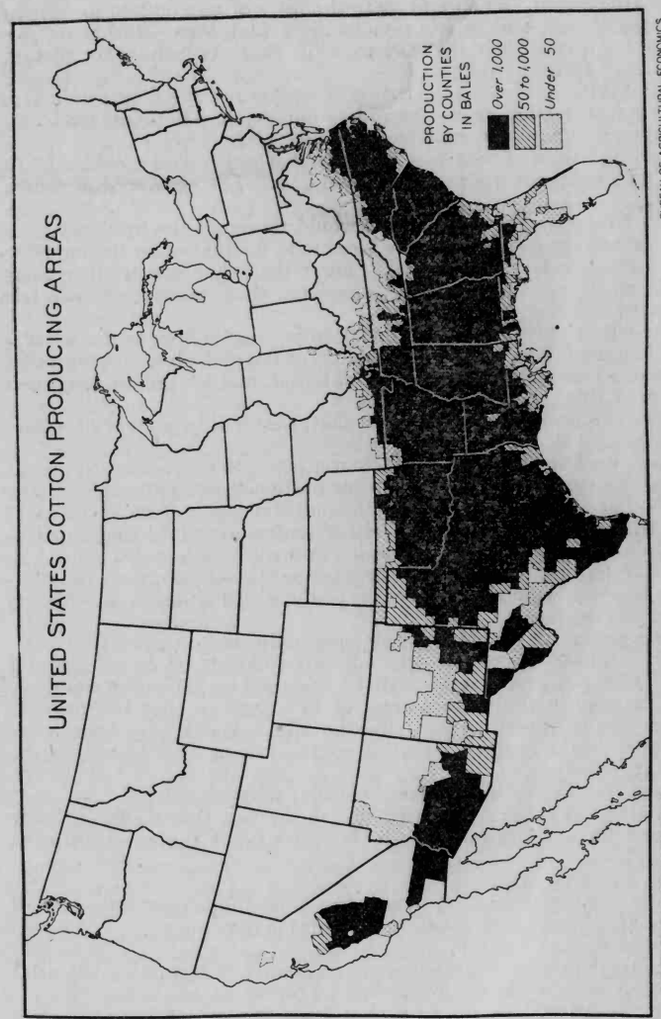
In other words, 65 cents as a minimum wage would yield around $1,300 a year, which is alleged to be rock bottom for a family of four. The argument has also been made, generally speaking, that the standard of living in the North and South are not the same. The rates that you pay for your work down there do give them a reasonable standard of living, and those rates are lower than in other parts of the country, or are lower than what the 65-cent rate would be on the 40-hour week.

Do you get my point?

Mr. NICHOLS. You ask if the wage we pay does give them an acceptable standard of living.

Senator SMITH. Yes, or whether it is substandard due to the condition of the industry. If they can't pay that, does the industry go out of business?

Mr. NICHOLS. Well, Senator, I would say it is my general impression that labor costs in the smaller towns where most of our facilities are



located, and perhaps throughout the South, are somewhat lower than in the Nation as a whole. Probably a man can get along just as well on a little less money in the smaller towns.

Senator SMITH. When you state the rates of pay do you include in the rate of pay, and in addition to the actual dollars and cents pay any living quarters for the workers while they are picking the cotton, and doing all these things?

Mr. NICHOLS. No, sir; the cotton compress and warehouse industry, when we state that figure, considers only money actually paid out, and does not furnish quarters or anything else.

Senator SMITH. I was just wondering whether you would add to that possibly some quarters, or something. Then it would be worth more.

Mr. NICHOLS. No, sir; 45 cents would represent the total pay.

Senator SMITH. Then you are faced with a situation in the industry where the standards are probably lower than they are in other parts of the country. And, generally speaking, these people are on a fair standard of living.

The whole purpose of this legislation is to set a floor under what is paid to our workers all over the country, a floor which would represent at least a reasonably decent scale of living; and we are all interested in that, I think.

If we can bring our wages up to that, that will be a good situation, if we can get it.

Now, we have to make a differentiation. If you ask us to except the cotton workers as you do in your particular amendment, we have to say that in this particular case the industry is so "down in the heel" that they can't do it; and they either pay substandard wages or else they fold up. Is that the conclusion you want us to come to?

Mr. NICHOLS. We feel, Senator, that to raise the wages of the compress workers would make a corresponding deduction in the income of the cotton farmer.

Senator SMITH. That seems obvious under cotton price control.

Mr. NICHOLS. Since the price of cotton cannot be raised. And I would like to say on that point that I have had no indication whatever from anyone in the Government, or in Congress, that the price of cotton can be raised further, substantially. And I have heard considerable doubt expressed that it could even be maintained at the present level.

Now, that is a problem that is peculiar to cotton alone.

Senator ELLENDER. Isn't that due to the fact that we have in our cotton warehouses at present a little over a year's supply of cotton in storage?

Mr. NICHOLS. Yes.

Senator ELLENDER. And even though we didn't produce a bale of cotton this year, there would be enough for next year.

Mr. NICHOLS. Yes, sir.

Senator ELLENDER. And there is no chance of increasing the price of cotton so as to absorb the additional outlay except to store it.

Senator SMITH. That is just what I am trying to bring out. You have a weak situation there, and that is the reason why you are asking for an exception. I think as a matter of national policy, we will have to consider that whole thing, because here we have a large area of people employed in this industry, who will just have to submit to

that local standard of living, because of the peculiar situation of cotton.

We want to get to the market abroad, which raises the question of subsidizing cotton for exports, and so forth. All of these things are mixed up with a broad national policy. It is not only important, but it is very interesting to think through what your solution is.

Senator ELLENDER. How many people would this affect? Do you know?

Mr. NICHOLS. I believe there are—I would like to ask Mr. Reed.

Senator ELLENDER. Mr. Reed, suppose you come up here.

Mr. REED. About 250,000.

Senator ELLENDER. Will you give your name for the record?

Mr. REED. A. L. Reed, Dallas, Tex. I am secretary to the National Cotton Compress and Cotton Warehouse Association.

About 250,000 would be the number directly affected, and the indirect number would probably run it up to 350,000; 256,000 was the figure by the latest survey that we have which was made sometime during 1940.

(See letter from Mr. Reed, p. 328.)

Senator ELLENDER. You stated a moment ago that the average pay at the moment is 45 cents. Am I correct?

Mr. NICHOLS. That is right. That is the average minimum pay.

Senator ELLENDER. How many of those 300,000 are now receiving the minimum that this bill would fix in the first year? That is, 65 cents.

Mr. REED. I understood your question to be how many would be affected, and what I gave you were those that were not making the minimum wage, in 1940. Now, I am assuming that the situation has changed with respect to them, to where they are on the 45-cent-minimum day, and therefore, that number would be affected by the proposed amendment.

Senator ELLENDER. I see.

Mr. REED. That survey, Senator, was made by the representatives of the Government and the industry for the purpose of considering the matter by an industrial committee.

Senator ELLENDER. Out of that 300,000, Mr. Reed, would you be able to tell us how many are now receiving the minimum that this bill seeks to fix, that is, 65 cents for the first year?

Mr. REED. I mean by that number I gave you, that they are receiving not more than 45 cents.

Senator ELLENDER. Oh, I see. So none of them is.

Mr. REED. None of them is receiving it. That is correct.

Senator TUNNELL. Then the cotton industry, in order to compete with foreign countries, has a subsidy of 4 cents a pound.

Mr. REED. That subsidy, Senator, is not on the sale price of the cotton merchant. I doubt if it benefits the producer other than enabling him to dispose of some of his cotton in foreign countries.

Senator TUNNELL. You mean the farmer gets no benefit from that 4 cents?

Mr. REED. He gets the benefit of it if that price you fix is a parity; and we are thus able to market in foreign countries. He gets no more than parity regardless of where the cotton goes. As a matter of fact, he is not getting parity today.

Senator TUNNELL. Now, is it a standing fact that the Government is putting 4 cents a pound into the cotton industry, where it is shipped abroad, and there are still 250,000 workers who are getting but 45 cents?

Mr. REED. I would say that is a reasonable statement, that they are in fact a part of the farm labor. They are performing services that the farmer should perform himself, but he is not big enough and economically or financially in a position to do so. So we are performing it for him.

There isn't any difference in fact, if he handled that today and sorted it out himself.

Senator ELLENDER. Quite a few witnesses have so far testified that if this bill is enacted into law, that it will not appreciably increase the cost of production.

According to your view, as I understand it, if this bill does go into effect, this additional cost would either have to be absorbed by the farmer, or else you go out of business.

Am I right?

Mr. NICHOLS. Yes, sir.

Senator ELLENDER. And that would, of course, as you just indicated, affect not only the 300,000 that are now employed, but the thousands of cotton farmers of the South.

Mr. NICHOLS. Yes.

Senator ELLENDER. Mr. Bowden, who preceded you as a witness, testified in effect that the passage of this bill wouldn't hurt very much, should we start from the bottom and help everybody in proportion to what we are trying to accomplish for a certain group.

Assuming that this were true, is it not a fact that if we do help all, that is, if we start from the bottom of the ladder and take care of everybody in the same manner and to the same extent we are proposing to help a certain group, that all groups would be in about the same fix as they are now; that is, they might have more dollars, but they couldn't buy more with those dollars? Isn't that true?

Mr. NICHOLS. Yes, sir.

Senator SMITH. You mean, if prices are raised accordingly?

Senator ELLENDER. Yes. If this bill is enacted into law, and we start from the bottom rung of the ladder and try to take care of everybody so as to create an income of 150 to 200 billion dollars per year, that will lead to an inflation of the worst kind. It will mean less production because money will be too cheap. Industry will lose its incentive for expansion.

Mr. REED. Senator, may I interpose a statement there? Also, if you go the other way, and take it out of the farmer and pass it to the man who manufactures the radio, and so on, you haven't increased your buying power. You have simply taken it away from one man and given it to another.

Senator ELLENDER. Right, you help one group at the expense of others. That is what I have tried to point out during these hearings. Every time we enact legislation to help a special group, you are bound to affect others. And unless you take care of all concerned, somebody is going to pay the bill. There is no doubt about that.

We have here, I believe, a perfect example of what would happen to this big group of farmers who produce the raw product that all of us use. We must be careful in our consideration of this measure.

Senator TUNNELL. Do you think that the cotton industry in this country can continue to sell at a higher price than the rest of the world, and at the same time pay its laborers substandard wages?

Mr. NICHOLS. Senator, it is doubtful as to how long this country can maintain the price of cotton at the abnormal, or artificial, level, as compared to the cotton grown elsewhere in the world. It is a question of when we will just finally force ourselves out of business, just price ourselves completely out of the cotton business.

Then we have another factor that comes in there, especially since the war, the manufacture of synthetics, which are being made cheaper and better every day, and in fact are now quite comparable in price to the price of cotton. So we have these two factors. It raises serious doubt that the price of cotton can be maintained where it is today, and admittedly it is too low today to afford the right kind of income to the cotton producers.

Senator TUNNELL. And in competition with the rest of the world, you would be out of business now, if it were not for the Government subsidy?

Mr. REED. Yes, sir.

Senator SMITH. Can you give the relative percentage of foreign consumption of cotton, and our own production? I mean, what share of our crop is consumed here, and what is exported?

Mr. NICHOLS. Yes. Appendix A which we are incorporating into the record sets this up from 1924 to the current year. And to answer your question, Senator, just taking the current year, the United States produced 12,000,000 bales and consumed a little more than 9,000,000 bales. This represented about 75 percent of our total production. And the rest of the world produced 14,000,000 bales and consumed the 14,000,000 bales.

Now, these are high consumption figures, and we have never seen them before.

Taking 1937 as a good illustration, it shows where we started getting into trouble. We produced 18,000,000 bales in this country and only consumed 5,000,000 bales of it. We consumed less than one out of every three bales we produced at that time.

Senator ELLENDER. What year is that?

Mr. NICHOLS. 1937.

Senator ELLENDER. That was the year of our largest production.

Mr. NICHOLS. The rest of the world produced 19,000,000 bales.

The history of American cotton has been one of constantly declining exports. Since 1928, or 1929, we have sold less and less cotton to the rest of the world, and more and more countries have produced cotton in competition with us.

Senator TUNNELL. Who owns that surplus cotton?

Mr. NICHOLS. The Government owns the big end of it, Senator. I believe some 5,000,000 or 6,000,000 bales are either owned by, or pledged to, the Government on nonrecourse loans.

Senator TUNNELL. And that is bought at 4 cents a pound higher than they could buy the same cotton somewhere else.

Mr. NICHOLS. If we were to import cotton, we could bring it in at a saving of 4 or 5 cents a pound.

Senator TUNNELL. The cotton industry is a peculiar one, and in a peculiar position.

Mr. NICHOLS. It is. It is in a peculiar situation, and it has been burdened by a world surplus; and no one has found any way to dispose of it.

Senator TUNNELL. Are there any further questions?

Senator ELLENDER. Mr. Reed, do you desire to add anything to what has been said?

Mr. REED. No, sir.

(Following is a letter from Mr. Reed received subsequent to the hearing:)

CALLAWAY & REED,
Dallas 1, Tex., October 16, 1945.

Hon. ALLEN J. ELLENDER,
Senate Office Building, Washington, D. C.

DEAR SENATOR. This is the first opportunity I have had to write you and thank you for the courtesy and consideration extended to the cotton compress and cotton warehouse industry concerning Senate bill 1349 and the hearing before the Subcommittee on Education and Labor, October 9, 1945. On behalf of the industry and myself personally I desire to thank you for your efforts and assistance in connection with this hearing.

During the course of the hearing I believe Senator Tunnell, of Delaware, asked a question concerning the number of employees involved in the matter under consideration. The writer was called upon to answer the question. I understood the question to relate to the total exemptions involved under the existing bill with reference to agricultural industries, and I gave the figure from the testimony of Administrator Walling of 256,000 employees. I am advised that the record indicates that Senator Tunnell's question related to the number of employees in the cotton compress and cotton warehouse industry, and if his question was so restricted, the answer given is in error.

The cotton compress and cotton warehouse industry is highly seasonal; we operate the year round but during the off-season the employees approximate 12,000; during the peak season approximately 25,000 employees are involved in the labor of handling the cotton in the plants and facilities.

Based upon the surveys made by the War Labor Board concerning the average wage now paid, we have estimated that the entire plant employees and labor of this industry would be affected by S. 1349 to the extent demonstrated in the testimony of Witness Nichols, taken from the actual records of the plants for the facilities handling 50 percent of the cotton.

I shall appreciate it very much if you will have incorporated in the record the above correction to the question of Senator Tunnell. It may be an addition to his question, but I think it advisable to have the record show the correct number of employees involved insofar as the cotton warehouses and cotton compresses are concerned.

Again thanking you, I am

Sincerely,

A. L. REED.

Senator TUNNELL. Mr. Crowley.

Mr. BAILEY. Mr. Chairman, may I have just a half-minute before Mr. Crowley begins?

Senator TUNNELL. What is your name?

Mr. BAILEY. My name is Clyde S. Bailey. I am the executive vice president of the United States Independent Telephone Association.

Mr. J. C. Crowley, of St. Paul, Minn., is here, and we had hoped to make a joint presentation before your committee.

We learned, however, from the clerk of the committee, that the time limitation is such that only one of us can be heard. Mr. Crowley is here from St. Paul, and I am bowing to him.

I would like, however, Mr. Chairman, to submit in writing the statement that I have already prepared and to have that statement go into the record, and if the Chairman please, immediately in front of the statement to be made orally by Mr. Crowley.

Senator ELLENDER. What is the time limitation you speak of?

Mr. BAILEY. We understood that only one witness could appear for an individual industry.

Senator ELLENDER. Who made that rule?

Mr. BAILEY. I don't know who made that, Senator. It was merely related to us.

Senator TUNNELL. I don't know that there is any exact rule, but there have been, as I understand from Mr. Kramer, a great many applications.

Senator ELLENDER. I do believe, however, Senators, that you will agree with me that on this very important issue we should obtain all the facts possible. This measure is far-reaching.

Senator TUNNELL. We should obtain all the facts. But I don't think it is necessary to call innumerable witnesses to get those facts. I think that there should be representatives of the different industries.

Senator ELLENDER. It strikes me that, in this instance, if the other gentleman is present, that they might both appear and present their statements, and subject themselves to such examinations as we might find fitting. I don't suppose there would be any objection to that.

Mr. BAILEY. We hold ourselves subject to the opinions of the committee, Mr. Chairman. It is agreeable to me to submit my statement in the record, and I will be here with Mr. Crowley.

Senator TUNNELL. That is very good.

(Mr. Bailey's statement is as follows:)

STATEMENT OF CLYDE S. BAILEY, EXECUTIVE VICE PRESIDENT, UNITED STATES INDEPENDENT TELEPHONE ASSOCIATION, BEFORE SUBCOMMITTEE OF SENATE COMMITTEE ON EDUCATION AND LABOR, ON S. 1349, TO AMEND THE FAIR LABOR STANDARDS ACT

GENERAL STATEMENT

My name is Clyde S. Bailey. I am the executive vice president of the United States Independent Telephone Association.

This association, with headquarters in Washington, D. C., is the trade organization which represents that branch of the telephone industry usually referred to as the "independents."

There are approximately 6,200 independent telephone companies which furnish telephone service in 12,000 cities and towns throughout the United States. The Bell system operates in only 7,000 communities, but its companies provide service principally in the large metropolitan cities.

The independent telephone companies maintain approximately 63 percent of the telephone exchange offices in the United States. The Bell system companies maintain about 37 percent.

Of a total of 24,850,000 telephones in the United States, approximately 4,800,000 or 20 percent, are served by the independents. Independent telephone companies operate principally in the smaller communities and in the rural areas. It has been estimated that these companies serve about 70 percent of the geographical area of the country. They employ approximately 72,000 people.

The dotted map placed before you shows the locations of the 12,000 cities and towns our companies operate in.

Bill would bring about wholesale telephone rate increases and deprive thousands of workers of jobs

Our association and the independent companies it represents are greatly concerned over the provisions of the bill which is the subject of this hearing. For reasons which I shall endeavor to present, the purpose of this bill could very aptly be said to be to produce wholesale increases in telephone rates at most of the telephone exchanges in the cities and towns and the rural areas in which our independents operate. Its purpose could also be said to be to deprive thousands of persons of their jobs in our branch of the telephone industry.

This is no mere idle assertion, and I crave your indulgence while I explain the basis for it.

Small-town telephone revenues can't support proposed wage levels

Of our 12,000 exchanges, approximately 10,000 have fewer than 500 stations. More than 11,000 have less than 1,000 stations. Thus our companies are small business in a very real sense. In a news article in the Wall Street Journal some time ago it was stated that the independent telephone industry was the largest small business in the United States. It was alluding, of course, to the large number of small entities. Our companies operate generally in towns having a population under 4,000 and in the rural areas.

It is true that some of our independents operate also in such places as Rochester, N. Y., Tallahassee, Fla., Tampa, Fla., Santa Monica, Calif., Fort Wayne, Ind., Jefferson City, Mo., and other towns. But these are the exception. In appearing here, while of course solicitous of the interests of our larger companies, we are primarily concerned about the smaller companies.

Our companies are unable out of the revenues they receive to pay wages similar to those which are paid in large cities. A subscriber in a metropolitan area will willingly pay from $3 to $5 a month or more for residence telephone service, but in the smaller communities where we operate telephone rates much in excess of $1.75 or $2 a month are considered prohibitively expensive. At many of our exchanges the rates are as low as $1.25.

The average annual per station gross operating revenue of the Bell system companies, which operate in the metropolitan centers and do more than 98 percent of the long-distance business, is $82. The average per station revenue of even the class A companies in the independent field is only $46.10, or 56.22 percent of the per station revenues of the Bell companies. A class A company is one having revenues in excess of $100,000 a year. In the independent field we have 169 class A companies.

The average annual per station gross operating revenue of 60 independent class B companies, those having revenues of between $50,000 and $100,000, is $37.77, or only 46.06 percent of the per station revenue of all Bell system companies.

The remaining 5,870 of our 6,200 independent companies are class C (revenue $25,000 to $50,000), class D (revenue $10,000 to $25,000), and class E (revenue under $10,000). We do not have Nation-wide figures from which to draw off the per station revenue of class C, D, and E companies, but a fair estimate of the per station revenue of a class C company would perhaps be about $25 or $30. We have, then, the following per station revenues for the various revenue classes of companies:

Bell system	$82.00	Class C independents	30.00
Class A independents	46.10	Class D independents	[1]
Class B independents	37.77	Class E independents	[1]

[1] No figures available.

It will thus be seen that the per station telephone earnings of our independent companies are far lower than those of companies which have the benefit of higher service rates because they operate in metropolitan centers and serve more people.

Facts, gentlemen, are stubborn things.

General economic conditions in independent towns are different from those in metropolitan centers

A substantial number of our independent companies operate in the very smallest towns and in farming communities—towns having a population of from 5,000 down to 150 or even less. Many of these companies have never been able to earn anything even approaching a fair return on the capital invested in them. They have been able to continue in operation from year to year mainly because the employees living in those communities have found it possible to get along satisfactorily on wages which, while lower than those paid in larger places, were sufficient to meet their needs in the relatively simple circumstances in which they live, where they live. This is understandable when it is realized, for example, that a five-room house that would normally rent for $60 in a city of 50,000 people, or for $75 or more in a metropolitan area, will seldom bring more than $15 or $20 in a community having a population of 2,500 or under.

We have listened to the economic and cost-of-living testimony introduced here by Dr. Hinrichs and others. Dr. Hinrichs spoke learnedly and with apparent conviction. He said there was a difference of only about 10 percent between living costs in large cities and small towns. We do not believe that he had in mind living expenses in the very small towns in which our independents operate, and furthermore, we are sure he did not have specifically in mind the particular class of people who make up the bulk of telephone employees, viz, switchboard operators.

We believe that practically all living expenses in small towns, such as are typical of those in which the majority of independent telephone companies operate, are much lower than those to be found in the larger and more populous centers. These small communities are self-sufficient in many respects. Vegetables, poultry, eggs, etc., are usually produced in the backyard or are available from local trades people, and hence are not loaded with the usual costs of passing through several intermediate hands before reaching the consumer. Many a household raises its own chickens and has a cow in the barn. Telephone operators walk to work, and live at home. Movies cost only one-third of the cost in a large town.

A few years ago a dentist in Washington extracted one of my teeth and charged me $5. I visited a small town a few days later, population about 1,500, and by a dentist friend of mine practicing there was told that his charge for an extraction was $2.

Despite attractively drawn charts and testimony offered by perfectly honest people from a bureau of our Government, we say that social and economic life is far less complex and far less costly in the small towns than in the larger communities.

To require small employers in small towns, under the conditions I have described, to pay metropolitan wage rates would, we think, be manifestly unjust. The equal treatment of unequals is itself unequal.

The girls who work as switchboard operators are usually young girls just out of local school. They ordinarily have no dependents. They live at home with their parents. They are not the breadwinners of the family. Their earnings merely supplement what dad makes and provide pin and dress money pending the time when they find husbands. They usually find them, and thereupon the telephone company finds and trains successors.

The 500-station exemption in the present law

As the members of this committee know, in 1939 Congress adopted an amendment to section 13 (a) of the Fair Labor Standards Act exempting from the wage-and-hour provision "any switchboard operator employed in a public telephone exchange which has less than 500 stations." This is the only amendment which has been tacked on to the statute since it was enacted 7 years ago in 1938. The reasons which actuated Congress in adopting the amendment are described in House Report No. 1448, Seventy-sixth Congress, first session, August 3, 1939, reading as follows:

"The exemption for the operators of some small telephone exchanges is necessary to insure uninterrupted telephonic communication service for the farmer and for the small rural community. Small telephone companies, on the whole, are financially unable to comply with the wage provisions of the act, and the sporadic character of the demand for services makes the application of the hours provision of the act impracticable."

That exemption, it should be noted, applies only to switchboard operators. All other employees at the 500 station and underexchanges, and, of course, all employees including switchboard operators at all other exchanges, are covered by the act.

This 1939 exemption has enabled many an independent company to continue in existence and give unimpaired service.

But it may be pointed out, at the same time, that experience has shown that, notwithstanding the exemption, even the small exempted exchanges have not been able entirely to avoid the impact of the establishment of the minimum wages and maximum hours provided for in the law up to this time. This is understandable when it is remembered that switchboard operators have a way of getting together, and comparing notes. If in town A there is an exempt exchange having 200 stations and in town B, 5 miles away, there is a nonexempt exchange with 510 stations, the town A exchange is almost compelled to meet the wage level of the other.

Hence, it will be seen that even down to the very smallest town filter repercussions of any wage increases that may be made. Fortunately, not all towns are close together; and it is this fact which has enabled the 500-station exemption as to switchboard operators to provide the relief Congress contemplated.

78595—45——22

Loss of telephone jobs definitely threatened

At the outset of my remarks I stated that the bill which is the subject of this hearing could be called one to destroy employment opportunities for thousands of telephone workers. I would now like to explain that statement.

Of our 72,000 employees in the independent field, roughly 55,000 are telephone operators. If the wage costs of our companies are increased many of our telephone companies will be compelled to take three steps:

(1) Curtail telephone service as it is known today.
(2) Convert as soon as possible to dial operation.
(3) Go in for wholesale rate increases.

Curtailment of service would be inevitable

Although we would hate to curtail service, that would be the first step in many cases as an expedient to avoid increasing rates. The duty of a telephone company, not necessarily prescribed by law but done to meet the needs of the community, is to provide a 24-hour service. Ours is a round-the-clock business. Our service is a personal service that in many, many cases is manufactured on the spot according to the individual specifications of each subscriber. We are on the job 24 hours every day in the week. We have not deemed it proper to work only 8 hours a day, close up shop for the night and then open in the morning. It is in the middle of the night when doctors are needed, when babies arrive, when fires occur, when robberies take place. But if you put in a higher wage we will be forced to resort to measures that will have a definitely harmful effect on telephone service as we know it today.

It should be borne in mind that when service is curtailed in any community there are repercussions in all other communities by reason of the fact that subscribers living elsewhere are unable to reach subscribers in the community where service has been reduced. The economic and social implications may well be far reaching.

Furthermore, we should like to have you bear in mind that we are on three 8-hour shifts, and any increase in wages to us is, therefore, a triple increase. It would be bad enough to be hit once by a wage increase but to be hit three times in one day is something to cause more than a mere case of the jitters.

Curtailment of service would have to be limited to those services for which there is no direct or added charge. This would include elimination of free calls between two exchanges having a community of interest, information calls including time of day, location of fires, early morning calls and calls as to directory information, secretarial service, etc. In addition there would undoubtedly follow a curtailment of night service at the smaller exchanges as well as Sunday and holiday service.

Some of our small exchanges have already been compelled by rising expenses to limit service, and increased costs of operation would substantially increase the number.

All of these measures mean loss of jobs to telephone operators.

Furthermore, in exchanges with approximately 1,500 stations or less, where the companies now maintain commercial offices for the collection of customers' accounts, the local bank would be employed for such work and the employees of the telephone company hired for this purpose would no longer have their jobs.

Further job losses through dial conversions

But the principal cause of the expected loss of jobs will come from conversions of manually operated exchanges to dial operation.

In a small community the average telephone company employs from three to a dozen telephone operators, depending on the size of the manual exchange. These people are all an integral part of the community and regard the telephone company as one of the "opportunities" for employment along with the local stores, the light company, the flour mill, and other local business concerns. If the imposition of a wage scale higher than the local telephone company can support causes the replacement of manual switchboards which require operators, with dial switchboards which do not, has the town or have the employees benefited by an increase in the wages paid?

Although the dial method of telephone operation came into being over 40 years ago, less than 20 percent of independent telephones are now dial operated. In the Bell System, over 60 percent of the telephones are dial. Independent companies have continued to operate on a manual basis and been able to give reasonably good service at small-town rates, and their employees have apparently been contented and satisfied with the wages the companies could afford to pay. The proposed wage increase will unquestionably swing many companies over to dial with the result that the small community will suffer to the extent that less employment opportunities are available. If a community has a total of 200 opportunities for employment in a business district the telephone company with 10 operators represents 5 percent of the total. Is a community to be helped by eliminating 5 percent of the available jobs?

The answer is "no." Curtailment of employment hurts a community.

It may be asserted that conversion to dial is an inevitable technological development and that eventually our companies generally will come to it, regardless of what minimum wage is prescribed. It is true that there is a definite economic advantage to installing dial equipment. But we have found that life is not all economics. The jobs of thousands of girls and women are at stake. So is the welfare of the community. We individually and as a group feel this responsibility. It would force many of these women to hunt other occupations in communities where steady employment for women is hard to find, if there is an elevation in the minimum wage. Thus the administration of the Fair Labor Standards Act would operate to defeat the purposes of that act in smaller towns and in many large ones, too.

It would be a great deal cheaper to pay the interest on a debt created to buy dial equipment than to pay the wages of the telephone operators whom the dial equipment would displace.

If this bill is passed there will be a truly astounding recourse to mechanization of telephone service. But even if only 50 percent of the present manual exchanges go in for dial equipment there will still be a displacement of telephone operators running into the thousands. The tempo at which conversions will take place will be limited only by the capacity of the manufacturers to turn out the equipment.

Wholesale rate increases will be required

Another result of the institution of higher wage levels in our branch of activity will be the submission to the public service commissions of the several States of rate increase applications covering telephone service in hundreds and hundreds of small towns throughout the country.

An increase of 25 or 50 or 75 percent in wages may not in each and every case call for an increase of a corresponding percentage in telephone service rates. But in most cases it will, and in all cases it will call for substantial increases. There is no place other than the subscriber to which our companies can look for the necessary money with which to pay the bill for the increased cost of operation. Unlike unregulated enterprise which may adjust its prices at will, we are a regulated industry whose rates are subject to strict public supervision. Our earnings are limited under our system of regulation usually to about 6 percent; but many of our companies have never made anything approaching even that amount of return.

The small independent companies do not look with equanimity upon telephone service rate increases because they know it is terribly difficult to increase rates without losing customers. In large towns and the metropolitan centers it is easy enough to lose subscribers with rate increases, but in the small towns where family incomes are lower the hazards are particularly great.

And even where traffic studies may show that a net revenue increase may result notwithstanding loss of subscribers, the job of persuading a public service commission that a rate increase should be granted, remains. Anyone familiar with regulatory processes knows that certain requirements must be met before a rate increase is permitted. This involves the making of engineering studies, accounting studies, and other studies to enable a commission intelligently to deal with a rate application.

But it will nevertheless be apparent, particularly from some down-to-earth figures that will be presented to you by Mr. J. C. Crowley of Minnesota, who will follow me, that if wages are increased and rates are not increased, or if rates are increased and subscribers are lost, telephone service as it is known today in the smaller towns also is lost.

This bill will leave us between his satanic majesty and the deep blue sea.

There is a rather interesting thing connected with the rate increase situation. As you know, in the Emergency Price Control Act of January 30, 1942, Congress in section 302 (c) of title III provided that the maximum price regulation of the OPA should not extend to the rates of common carriers and other public utilities. This was because such rates were already subject to public regulation by State and Federal commissions. Congress did require in section 1 of the October 2, 1942, amendment of the Emergency Price Control Act that 30 days' notice of proposed increases in rates by public utility companies shall be served on the

President's designee and that permission to intervene in any resulting rate increase proceeding before a regulatory commission be given.

The Transportation and Utilities Division of the OPA, the President's designee, has been pretty active. That Division has let it be known during the past 3 years that it looked askance at rate increases. Director Nixon of the Division in an address to the National Association of Railroad and Utilities Commissioners in Chicago in September 1943, said:

"All price increases are inflationary * * * the mandate (of the law) is to prevent all increases except * * * where increases are shown to be necessary to aid in the successful prosecution of the war * * * regulatory agencies may give effect to the national policy by denying proposed increased rates unless necessary to promote the war effort."

How during the war could a little telephone exchange, removed from defense plants, Army camps, and other branches of accelerated business activity, and serving only an inland farming town, prove that an increase in its rates was necessary to the successful prosecution of the war or was necessary to promote the war effort?

And now that the war is over, what do we find? We find the same OPA Transportation and Utilities Division creating a Telephone Industry Advisory Committee for the purpose of considering telephone rates. We may be sure that the calling into being of such a committee is not designed to facilitate the making of rate increases. On the contrary, we may be sure that the purpose is to keep telephone rates from rising, through the power of persuasion since the OPA has no rate regulatory power.

We are thus witnessing a very strange combination of events, a combination that is far from reassuring to most of the 6,200 independent telephone companies—the Congress of the United States considering an increase of staggering proportions in the minimum wage, and the Office of Price Administration creating a committee whose intended purpose, stripped of unnecessary verbiage, is to make it more difficult for telphone companies to obtain rate increases with which to meet increased costs of operation.

There may be surer ways of accomplishing economic suicide for much of our independent telephone industry, but we do not know what they are.

Having said what I have concerning the OPA, I think in all fairness it is due to that Government agency, and to its Transportation and Utilities Division, to add that although it has intervened in a number of rate-increase proceedings before State regulatory commissions, it has refrained from intervening in a number of others. Its failure to intervene in the latter was due to recognition, on the basis of information submitted in rate increase notices, that the increases applied for were reasonable and should be granted by the State regulating body.

Our proposal

Mr. Chairman, by the time Mr. Crowley, who will testify following me, concludes I hope we shall have demonstrated to the committee that these independent telephone exchanges are simply unable to stand the burden that would be involved in the proposed wage increase. In any bill which the Congress may see fit to enact we respectfully ask that the present 500-station exemption as to switchboard operators in section 13 (a) of the present law be increased to 1,000 stations.

At the time the 500-station exemption was given us by Congress there were many people who thought it should be a 1,000-station exemption. The Wage-Hour Administrator sent a questionnaire to various State regulatory bodies, and even a number of them recommended 1,000. If there was a justification for exempting the 1,000-station exchange then, the justification is increased manyfold now.

The effect of this recommendation of ours, if Congress adopts it, would be to make possible at our smaller exchanges in the smaller communities in the country a continuation of telephone service as it is enjoyed today, and thus forestall inevitable and unavoidable rate increase applications at such exchanges. Adoption of this amendment would also insure a continuation for an indefinite period of jobs that would otherwise certainly go out of existence at a fast tempo as a result of service curtailments and conversions to dial operation.

At the same time, we would like to urge the Congress to give serious consideration to the desirability of eliminating the liquidated damage provision of section 16 (b) of the present law. This is the provision which requires an award of double the amount when a suit is brought in court for wage arrearages. The inequity involved in the liquidated damage provision was commented upon by the House Appropriations Committee early last summer when reporting out the Labor Department appropriation bill. The House committee said:

"The liquidated-damage provision was, no doubt, intended to be helpful in establishing and maintaining the minimum wage and perhaps has had a salutary effect. It appears, however, in some instances that advantage has been taken of this mandatory provision to the detriment of innocent employers and in other cases violations have been permitted to continue in order to collect the increased amount provided in liquidated damages. In view of such situations, it is suggested that the proper legislative committee give consideration to whether or not an amendment to the statute is needed to the the effect that before the mandatory provision of the statute becomes effective the employee shall give notice to the employer that he (the employee) is not receiving the minimum wage and expects to make claim for the legal amount, which would put the employer on notice that thereafter he might be subject to the liquidated-damage penalty."

Wage-Hour Administrator Walling, himself, in his last annual report to Congress recommended that the act be amended in such manner as to enable the waiving of the double payment penalty "except in cases of willful and flagrant violations."

Period of limitation

Section 8 of the bill before you would amend section 16 (b) of the Fair Labor Standards Act by providing a 5-year statute of limitations for bringing suit for back wages. There is a real need for a period of limitation for bringing such suits, but in our opinion 5 years is far too long. We think the period should be not more than 2 years. Our association appeared last July at a hearing before a subcommittee of the House Judiciary Committee in support of the Gywnne bill, H. R. 2788, which would make the period of limitation 1 year.

There is a separate bill now pending before the Senate, in the nature of a companion bill to the Gwynne bill, which would also make the limitation 1 year. This is Senator Butler's bill, S. 1013, introduced May 17.

In view of the extended testimony which we offered before the House Judiciary Committee on this statute of limitations matter, we content ourselves with merely noting here that a reasonable period of limitation for bringing wage suits is not hostile to the interest of the employee but on the contrary may very well be to his advantage by causing him to bring his suit while his evidence is fresh and his witnesses are still available, and thus increase the chances of success in his litigation.

Senator TUNNELL. Mr. Crowley, proceed in your own way.

TESTIMONY OF J. C. CROWLEY, JR., SECRETARY OF THE MINNESOTA TELEPHONE ASSOCIATION AND CHAIRMAN OF SUBCOMMITTEE ON EMPLOYMENT RELATIONS COMMITTEE OF THE UNITED STATED INDEPENDENT TELEPHONE ASSOCIATION

Mr. CROWLEY. Honorable members of the Committee on Education and Labor of the United States Senate, Mr. Chairman, my appearance here is on behalf of the Minnesota Telephone Association, an organization consisting of some 200 small independent telephone companies. I appear also on behalf of the United States Independent Telephone Association, the national trade organization which represents the entire independent telephone industry.

In our branch of the telephone industry there are approximately 6,200 independent companies which provide an indispensable telephone service in about 12,000 cities and towns and in the rural areas. Of our 12,000 exchanges, more than 10,000 have less than 500 subscribers. We are the little fellows. It is estimated that our companies serve approximately 70 percent of the geographical area of the Nation.

The dotted map which has been placed before you shows the locations of our 12,000 exchanges. There are 12,000 dots on the map.

Mr. Clyde S. Bailey, the executive vice president of the United States Independent Telephone Association, had hoped that an opportunity would be afforded him to appear at this hearing also, but consultation with the committee clerk revealed that there was not enough

time available for two witnesses. Mr. Bailey has, however, filed his statement with the committee in writing. I concur in what he says in his statement, and I wish to embrace this opportunity to express the hope that the members of the committee will read carefully what Mr. Bailey has to say.

I welcome this opportunity to be heard on Senate bill 1349. In my letter of September 24 to your honorable chairman, I requested to be heard on behalf of the smaller independent telephone companies operating in our many States. I probably should have added in that letter that I was also appearing for and on behalf of the many telephone users in the smaller cities, towns, and villages of the Nation.

For the information of this committee, I have been engaged for 52 years in the telephone business and its various departments in construction, operation, and maintenance of telephone properties, mostly in our central Western States. For the past 24 years, I have served as secretary of the Minnesota Telephone Association, which represents some 200 companies operating in Minnesota; and it is needless to say that I have been constantly in touch with the progress and development of the telephone industry.

You gentlemen are fully aware, as well as I, that we have more telephones in this United States per hundred of population than any other nation on earth. I wish that time would permit me to point out to you the improvements and progress that we have made, and having this progress and development in mind, based on the experiences of the past, I fear the consequences and results of what will happen to the continued progress and development of the industry if such legislation as is proposed in this bill should become a law, and it is my honest opinion that had the smaller telephone companies and the telephone users in these smaller communities not been misled in the belief that telephone companies would be recognized as "service establishments" under said law, I doubt very much whether the original bill would have succeeded in passage without a clarification of the exemption of telephone companies.

I call your attention to the exemption that was adopted some few months after the passage of the act, and, as far as I know, the only exemption that has succeeded in passage to this law in which telephone operators in exchanges of 500 telephones or less were exempt. I call this to your attention from the fact, in my opinion, Congress did not go far enough in this exemption, and I trust that after you have studied the chart before you and my explanations thereof, you will give serious consideration to raising this exemption to where it justly belongs, so that the farmer, the small merchant, mechanic, nurse, and charwoman may be able to retain their telephone service throughout the smaller communities.

Before referring to the figures that are on this chart, I would particularly call to your attention that the telephone business is not a 40-hour-a-week business such as manufacturing, but rather the telephone business, to be a benefit to the public and for the public's safety, is a 24-hour business per day, 168 hours per week, 365 days per year, or 8,760 hours per year, and a most essential necessity for the protection of life, limb, and property, as well as the conduct of business and social life of our Nation.

Therefore, I have taken the figures on this chart based on an hourly basis as to receipts and disbursements with the average investment per exchange reduced to the average investment per telephone on an hourly basis. The results are self-explanatory.

In arriving at these classifications, B, C, D, and E, I call your attention that our regulatory commission has set up these classifications: Class A companies are those having average annual revenues in excess of $250,000; class B companies are those having average annual revenues in excess of $50,000 but not more than $250,000; class C companies are those having average annual revenues in excess of $10,000 but not more than $50,000; class D companies are those having average annual revenues in excess of $4,000 but not more than $10,000; while class E companies are those owning telephone exchanges whose annual operating revenues are less than $4,000.

Gentlemen, in discussing this bill I am giving no attention to the fact that it provides an automatic increase from 65 cents an hour to 75 cents an hour over a 2- or 3-year period, for the reason that I feel certain that you gentlemen are close enough to the situation in the smaller communities and rural areas of the United States to know that a 75-cent minimum wage would be so upsetting to employment that it is almost preposterous to consider it.

While I am going to talk to you about the effect of the 65-cent minimum on the telephone industry and I am, therefore, not representing any other business, I know that the effect of a 75-cent minimum on the grocery business, the hardware business, the drygoods business, the filling-station business, the drugstores, and all other kinds of local business, even though not directly interstate in character, will be most serious in its effects upon business in the smaller communities.

If you believe in inflation, this is a wonderful start for it. However, let me repeat that I cannot believe that you will seriously consider a 75-cent minimum, and my presentation from this point on will be directed toward the serious adverse effects upon the independent telephone industry of a 65-cent minimum.

Senator ELLENDER. You pass it right on to the consumer, of course, in the telephone industry. Your rates are regulated by public service commissions, I take it, and they simply add extra costs to the consumer's bill. So in your industry the consumer would pay it.

Mr. CROWLEY. That is correct, sir. And, Senator, if I may add, if that rate is put to a point where the customer can't pay for it, these telephones will be taken out and the service for the remaining subscribers diminishes.

Senator ELLENDER. Have you any statement as to how much more it would cost?

Mr. CROWLEY. I am going to come to that, sir. I should be glad to.

Senator ELLENDER. I don't want to anticipate you.

Mr. CROWLEY. That is all right, sir.

Now, while I refer to and have compiled this chart—on the easel before you—based on figures taken from the annual reports submitted under oath by the officers of these respective companies, I assure you that they are a fair example of like-sized companies throughout our many States. In looking over this chart, I trust that each and every one will appreciate that whether that telephone exchange is located in a metropolitan center or not, the little exchange located at the crossroads in a community of 300 people or less is just as important to the people of that community as the telephone exchange is to the residents of our larger metropolitan areas.

It is true that in many of these communities the apparatus is not of the latest type. There is no expensive engineering in its construction, but it serves the people of that community economically and interconnects with the long-distance lines of the Nation.

It is my understanding that this bill proposed to recognize the exemption of the operators in exchanges serving 500 telephones or less, but under this bill establishing 65 cents as a minimum, and to my mind that is misleading from the fact that this means within 36 months the minimum shall be 75 cents; all right, Congress has recognized the necessity for the exemption of telephone operators in towns or communities serving 500 telephones or less, but if this bill succeeds in passage it will impose on these smaller companies a construction and maintenance charge far beyond the gross income received for the service.

As an illustration: The average rural line may be built for approximately $150 per mile under the present 40 cents an hour minimum scale, keeping in mind the differentials for mechanics above that minimum, but if this bill becomes a law and 75 cents becomes the minimum, it establishes a rate of $6 a day of 8 hours for common labor to set poles. It establishes a minimum of $6 a day for apprentices who watch the highways for the safety of the public while construction is under way, and with the differentials to be added to the truck driver, the lineman, the foreman, and the timekeeper, what will be the result?

We must keep in mind that the purchase of supplies such as wire, glass, equipment of various kinds, instruments, and cable are all interstate products and this 65-cent minimum applying on all industries will apply to every bit of equipment or material used by these smaller companies, and will increase the cost per mile of farm line, which under present conditions can be built for approximately $150 a mile, to approximately $250 per mile or more, and that cost will, in my opinion, be prohibitive in order to serve these rural communities economically.

For many years prior to the war, telephone engineers have given considerable thought, study, and experiment as to how to reduce the cost of construction to serve these smaller communities as well as the farms with telephone service, thereby reducing the cost of maintenance, and, like many other improvements, this has been retarded on account of the war for the past 4 or 5 years.

Now comes this proposed piece of legislation that will, if enacted into law, wipe out any savings and make the furnishing of economical service prohibitive in these smaller communities.

Now may I call your attention to the chart?

Taking the B and C companies, the average capital investment in the B companies is $67,561.

These figures are taken from the biennial report of the supervisor of telephones to the Minnesota Railroad and Warehouse Commission, a copy of which I shall be glad to furnish.

The average investment per telephone——

Senator ELLENDER (interposing). Will you tell us first, what is the difference between the B, C, D, and E classification?

Mr. CROWLEY. Yes, sir. I read the classification as set by the Commission as to revenues per year.

Senator ELLENDER. I see. That is the basis?

Mr. CROWLEY. Yes, sir.

Senator ELLENDER. All right.

Mr. CROWLEY. Our Commission has employed a simple method of accounting for the smaller companies; and, of course, more intricate systems for the larger ones have been devised.

The average investment per station in the B companies is $118.37. That is per telephone. When we speak about "per station," we mean "telephone served."

The gross revenues are $16,528.

The net income is $2,358.

Now, the gross revenue is based on that. The net income per hour of service is 27 cents.

The gross revenues per station are $28.96.

The hourly gross revenue per station is $0.0033.

The ratio of net income to capital investment is 3.49.

For the information of this committee I will say this: What we term "service stations" are pole lines erected by the farmers themselves; they go in groups, and they connect to their market center. And they pay nominal switching fees, and no regular service other than the switching fee.

Now, that represents a total of 43,871, serving communities of 114,946.

There are 72 exchanges, and the average is 1,596.

Then there are the C companies and the D companies; and then we get into the small ones.

Now, in my own State—I am speaking of Minnesota, but this is representative of our Western States—I mentioned two hundred-odd companies. I didn't tell you that in the State of Minnesota, we have 1,870 so-called farmers' companies that connect to the entire system.

Senator ELLENDER. But you term that "services."

Mr. CROWLEY. Yes; those are services. That is correct, sir.

Senator ELLENDER. Why is it that the farmers are compelled to do that? Is it because it wouldn't pay a company to do it?

Mr. CROWLEY. No, Senator. If I may go back to the earlier history—and I should have gone there to give you that development—please remember, Senator, that we have gone through three stages in the telephone business in your lifetime and mine. We have gone through 17 years of absolute monopoly.

Earlier history shows that the American Bell Telephone Co. collected $10 per telephone royalty for 17 years of the patent on every telephone that was used.

We went through that patent period. And then, when the patent expired, we went through what was called the competitive period. This was about 1896.

Now, remember, the telephone development took place first in the larger areas. The Bell Co., of course, naturally, being able to get a royalty of $10 per telephone, put it where the groups were closest.

Oh, my dear sir, that is where the income foundation was laid for some of this big telephone property.

Then we went into the competitive period. We had at one time 26 manufacturers of independent apparatus in the United States.

And remember, Senator, there were no toll lines in those days. It is in your time and my time that the toll line was established from Chicago to New York, and New York to Chicago, depending upon at which point you are. Later this was extended to the coast. Until

1905, we had no connections to the west coast. Those things have all come in later.

Now, the larger company was developing the commercial areas and the metropolitan areas. It was not until the business of the Nation become more closely tied in with the rural areas that the demand by the rural people arose.

John Smith and his son sent for a telephone, and they connected it to the farm. Then the neighbor said, "I want to get one." And then someone else wanted one.

Now, that is how this telephone business grew up.

As a rule, when you went to use a long-distance service, for a number of years you had to go to the drug store to use the telephone. Then gradually, as time went on, their use spread.

We have found that the competitive period was not the answer to serve the public. That was recognized by our legislatures. They granted power to the public-utility commissions to regulate, rather than to make, a competitive condition.

My dear sir, in small communities, where we had a general store, we had three or four telephones, one on each wall.

But we eliminated that through regulation. And these farmers kept extending their service, and you couldn't push them out. And it has been growing ever since.

Does that answer your question, sir?

Senator ELLENDER. I followed you.

Mr. CROWLEY. I shall confine most of my remarks to both class B and C companies from the fact that it is self-evident that there is insufficient revenues in the class D or E companies to even consider applying the 65 cents per hour minimum for this type exchange, but upon these two classes, D and E, will fall an additional construction cost as well as an increased maintenance cost if the bill becomes a law from the fact that the present exemption in the law does not include male employees.

I do not wish to burden the members of this committee with a lot of repetition in statistical information from the many comments and exhibits submitted to me by many companies, but I have selected the figures—not the highest results nor from the poorest showing, but a fair average example—and I therefore will confine myself to two companies under the class B classification.

Let us take the letter of Mr. W. A. Eckles, president of the Blue Earth Valley Telephone Co., operating exchanges at Blue Earth, Winnebago, Wells, and serving the villages of Huntley, Guckeen, and Elmore. I believe it is sufficient just to quote Mr. Eckles' letter for the information of the committee. [Reading:]

BLUE EARTH, MINN., *September 25, 1945.*

DEAR MR. CROWLEY: You ask what effect the proposed increase of wage minimum in the telephone business would have on our business here at Blue Earth, Elmore, Wells, and Winnebago.

As you know, our present minimum wage rates are 40 cents per hour, although the fact is that only a few learners receive that low wage, and most of the other employees receive considerably more.

We have calculated that on a percentage basis, if the minimum wage was raised to 65 cents, it would mean an increase of our wage scales of 36 percent——

Senator SMITH. Is it shown that all wages would be raised correspondingly?

Mr. CROWLEY. Yes, sir; that is correct. [Reading:]

Last year (1944) our total wages paid was $48,407.12. An increase of 36 percent would mean $17,430.52 additional wages, or more than our net return for the year 1944, which was $17,238.79.

Senator SMITH. That is assuming, of course, that a wage increase would be applied to the whole scale. Just assuming that you raise your minimum to 65 cents, does that mean you raise everybody else to the same percentage?

Senator ELLENDER. It might follow, but does it necessarily follow?

Mr. CROWLEY. I would like to know how you are going to keep an organization together, Senator, if you raise one group and not another.

Senator SMITH. That is what I want to bring out. You are raising that argument?

Mr. CROWLEY. Yes, sir. Does that answer your question?

Senator SMITH. Yes.

Mr. CROWLEY (reading):

But there is also another factor to be taken into consideration. In 1944 our net income from toll commissions was $19,015——

Senator TUNNELL (interposing). On what capitalization?

Mr. CROWLEY. Well, on the capitalization of the estimated amount of $67,000. Now, this is the toll commission.

Senator TUNNELL. About $19,000 profit on the $67,000 capitalization?

Mr. CROWLEY. Yes, sir. I see. But if you will let me clear this up as I go on, I am sure it will be all right.

Senator TUNNELL. I am just trying to get your statement. You may have some explanations and some deductions.

Mr. CROWLEY (continuing reading):

In 1944 our net income from toll commissions was $19,015 over and above our toll commissions in the normal year of 1939.

When our boys come home to stay, there will be no more long-drawn-out "collect" messages from distant States and distant countries. In another year we expect business to become more or less settled, and we do not think it unreasonable to expect that at least two-thirds of what we might call super toll business over 1939 will fall off.

Therefore, considering the $12,760 shrinkage in toll, plus the deficit of $191.73, will leave $12,861.73 to be made up by the increasing of telephone rates to the subscribers in order just to keep even. And we all know that a business must have some profit in order to make satisfactory progress and satisfy its patrons.

We ask that we may continue to give fair wage rates to our employees and low telephone rates to our patrons—then every family can have a telephone and all will be satisfied.

The following are the rates in effect at Blue Earth, Winnebago, and Wells, Minn.:

	Rates per month, gross	
	Blue Earth and Wells	Winnebago
Individual-line business	$2.75	$3.00
2-party line business	2.50	2.75
Individual-line residence	1.75	2.00
2-party line residence	1.50	1.75
4-party line residence	1.25	1.50
Rural multiparty	1.50	1.50
Rural switching charge		.40

You will note, Mr. Eckles says in his letter that the first step in the first year of the operation of this law, if passed, would place an increase of 36 percent in increased costs of service to the telephone users served by the Blue Earth Valley Telephone Co. The Blue Earth Valley Telephone Co. serves 2,330 company-owned stations and 1,156 service stations at Blue Earth, Wells, Winnebago, and surrounding rural community.

Now, then, let us take up the next company that serves 3,342 telephones out of one central office, and let me quote from the figures submitted by the manager, Mr. L. A. Mills, as to what effect this bill will have on them. The population of New Ulm is 8,743, and the number of local telephones is 2,611, rural phones 731, or a total of 3,342.

	Hours worked	Average hourly rate	pay-roll amount	Percentage
Female employees	37,893	$0.469	$17,773.81	
Male employees	14,097	.735	10,367.05	
Total			28,140.86	100
			Increase over 1944	Percentage over 1944
Proposed rates of pay:				
First year:				
Female employees	(1)	.65	$24,630.45	
Male employees	(1)	[2].80	11,277.60	
Total			35,908.05	
Increase			7,767.19	21.6+
Second year:				
Female employees	(1)	.70	26,525.10	
Male employees	(1)	[2].85	11,982.45	
Total			38,507.55	
Increase			10,366.69	36.9—
Third year:				
Female employees	(1)	.75	28,419.75	
Male employees	(1)	[2].90	12,687.30	
Total increase			12,966.19	46.1—

[1] Same.
[2] Estimate.

Senator SMITH. Why do you say "minus" there, while the other one is "plus"?

Mr. CROWLEY. Well, Senator, it is just the fraction point.

The New Ulm Co. operates under the following rate schedule:

	Per month gross
Individual line business	$3.00
2-party line business	2.50
Individual line residence	1.75
2-party line	1.50
Rural multiparty	1.75

Now let us refer to the Norman County Telephone Co., of Ada, Minn., a class C company. In order to meet a 75 cents an hour provision of this proposed bill, this company would require an increase of $13.56 per annum per telephone for 769 telephone users at Ada, Minn., of which there are 481 local stations and 288 rural stations.

The following rates are in effect at Ada, Minn.:

	Per month gross
Individual line business	$3.25
2-party line business	2.75
Individual line residence	1.75
Rural multiparty business:	
Grounded	2.25
Metallic	2.50
Rural multiparty residence:	
Grounded	1.50
Metallic	1.75
Service stations	.40

The Hastings Telephone Co. operates Hastings, Dakota County, Minn.—population 5,662. Telephones operated, 1,393, of which 1,051 are local and 342 rural. From information received from their secretary, Mr. Irving Todd, their accountant furnishes the following report:

	Paid in 1944	65-cent rate	70-cent rate	75-cent rate
Operators	$9,478.83	$12,655.18	$13,628.65	$14,602.12
Increase (percent)		33.50	43.77	54.05
Increase in money		$3,176.35	$4,149.82	$5,123.29
Commercial employees	1,650.00	2,202.75	2,372.21	2,541.83
Increase		552.75	722.21	891.83
Plant men	3,461.28	4,620.81	4,976.28	5,332.10
Increase		1,159.53	1,515.00	1,870.82
Estimated increased expenses:				
Operators, 100 percent		3,176.35	4,149.82	5,123.29
Commercial, 100 percent		552.75	722.21	891.83
Plant men, 70 percent		811.67	1,060.50	1,309.57
Superintendent, 70 percent		609.31	796.10	983.08
Total		5,150.08	6,728.63	8,307.77
Increase per telephone, annually		3.70	4.83	5.96
Increase per telephone, monthly		.31	.40	.496

The following schedule of rates is in force at Hastings:

	Per month net
Individual line business	$3.00
2-party line business	2.50
Individual line residence	2.00
2-party line residence	1.50
4-party line residence	1.25
Rural multiparty metallic	1.50

Senator TUNNELL. What profit did that company make last year?

Mr. CROWLEY. The Hastings Co.? I will have to refer to the file, sir. 6.44.

Senator TUNNELL. What does that mean? 6.44 percent return on the investment?

Mr. CROWLEY. That is right.

Senator TUNNELL. And had no surplus?

You named two or three others there. What are they?

Mr. CROWLEY. I should be glad to take the time, if the committee wishes.

Senator ELLENDER. That was for 1944?

Mr. CROWLEY. That was for 1943, Senator. I am referring to all my figures for 1943, Senator, for this reason—1944 won't be in the hands of the Commission.

Senator ELLENDER. Would you be able to say how those figures of 1943 would compare with those of the present year?

Mr. CROWLEY. There has been an increase, largely due to this volume of toll commission revenues that have come in from every little company, which we all anticipate is going to recede at the conclusion of the war activities.

Senator ELLENDER. Do you manage the company yourself? Do you own all the stock in your company?

Mr. CROWLEY. No, sir.

Senator TUNNELL. Could you anticipate any increase of local business in the telephone line after the war?

Mr. CROWLEY. There will be some burdens.

Senator TUNNELL. I ask you if you anticipate an increase in the business, in the local service.

Mr. CROWLEY. Well, what we are more seriously thinking about is not so much the development of the demand, but what the result of public improvements is going to impose on us in the way of maintenance costs.

Senator TUNNELL. But I would like to have your answer to the question.

Mr. CROWLEY. May I have the question? I didn't hear it.

(The question referred to was read by the reporter.)

Senator ELLENDER. In other words, will he be able to expand his business?

Senator TUNNELL. I am asking him if he is anticipating a greater local business after the war.

Mr. CROWLEY. In some communities, I think that will be true, Senator. In others, I doubt it.

Senator TUNNELL. In what kind of an area will there be no increase, in your opinion?

Mr. CROWLEY. I think in your rural communities, in our well-settled farms, we have gone about as far as we can. Nonetheless, the large farms could be divided again, although that is not a trend.

Senator TUNNELL. Don't you think that people will be able to buy more? They will have more business to transact after the war?

Mr. CROWLEY. Yes, I think there will be a demand, naturally.

Senator TUNNELL. Won't that increase the telephone business?

Mr. CROWLEY. I doubt very much whether that increase will take the same pace that it did for the first 18 months of the war.

Senator TUNNELL. But you do think that it will increase the business, don't you, over the prewar, for instance?

Mr. CROWLEY. Yes, over prewar, it will.

Senator TUNNELL. All right.

Mr. CROWLEY. I have given you the figures for the Hastings Co.

Now, let's take the little Zumbrota Telephone Co., operating Zumbrota, Minn.; population, 1,350. This company has a total of 701 stations—423 local and 278 rural. That is a strictly rural community. Mr. F. C. Marvin, manager of the company, makes the following statement:

65-cents-an-hour basis

Estimated operating expense	$15, 855. 93
Operating expense, 1944	10, 037. 03
Total	5, 818. 90

or an increase of 58 percent on rentals.

70-cents-an-hour basis

Estimated operating expense	$17, 071. 46
Operating expense, 1944	10, 037. 03
Total	7, 034. 43

or an increase of 70 percent.

75-cents-an-hour basis

Estimated operating expense	$18, 291. 62
Operating expense, 1944	10, 037. 03
Total	8, 254. 57

or an increase of 82 percent.

In other words, it means an average increase per phone on the 65-cent basis of $8.30 annually; on the 70-cent basis, $10; and on the 75-cent basis, $11.78.

Senator TUNNELL. A little less than a dollar a month.

Mr. CROWLEY. Yes. Oh, but, Senator, have you ever attended a hearing and tried to get 75 cents a month more from the farmers?

Senator TUNNELL. Well, I don't know. I was raised on a farm, and I think they are pretty fair people.

Mr. CROWLEY. I didn't say they were unfair.

Senator TUNNELL. I think one might assume that they were unfair, from your answer.

Mr. CROWLEY. The Pine Island Telephone Co., a border-line company, operates in a town of 1,000 inhabitants, and has 507 subscribers, 270 local and 237 rural. The following comparison of wages paid by the company for 1944, 1945, and the proposed wage scale of 65 cents, 70 cents, and 75 cents per hour, was made by Mr. J. P. Keane, president of the company, in his letter of September 24:

Operators' wages for 1944, no overtime	$2, 451. 56
Operators' wages for 1945, time and one-half overtime	6, 540. 30
Operators' wages at 65 cents and time and one-half for overtime	6, 540. 30
Operators' wages at 70 cents and time and one-half for overtime	7, 091. 50
Operators' wages at 75 cents and time and one-half for overtime	7, 642. 70

Comparing the operators' wages for 1944 of $2,451.56 with those at 65 cents per hour of $6,540.30, we find an increase of over 265 percent.

During 1944 we had other wages of manager and lineman of $5,600. If we gave our other employees the same percentage increase as we would give the operators at 65 cents per hour, our other labor costs would be $14,840.

Operators' wages at 65 cents per hour	$7, 540. 30
Other labor at the same percentage increase as operators	14, 840. 00
Total labor costs	21, 380. 30

Our total revenues for 1944 were $13,157.06, and we had a deficit of $209.46.

You may say that increasing the wages of other employees the same percentage as the operators is a little farfetched. Surely our manager and the other help are entitled to as great an increase in wages as the operator class.

If the 65-cents-an-hour wage scale is placed on the Federal statute books, you can see from our 1944 income statement that the Pine Island Telephone Co. will be hopelessly bankrupt.

This will be sufficient, in my judgment, and is a fair comparison that might be drawn from any of the B or C companies of my State or adjoining States for companies of a similar size.

I call your attention to the geographical location of the Blue Earth Co. which is in the southern part of the State, the New Ulm Co. is located in the central part, the Hastings Co. in the eastern part, and the Norman County Co. in the northern part of Minnesota.

Now may I ask you to give the most serious consideration to the importance of telephone communication? Do not impose upon the industry any legislation that will hamper its continued growth and development.

Please bear in mind that the telephone industry is now regulated by our Federal Communications Commission insofar as those companies doing an interstate business are concerned, and throughout our many States, with the exception of two, they are regulated by the public utility or railroad and warehouse commissions of their particular States.

These commissions have within their powers the regulation as to capital accounts, prescribe the accounting methods to be followed, and last, to say as to the reasonableness of the costs of the service to the public. With their trained staffs and their close proximity to the situations within their respective States, they are familiar with the costs of construction, operation, and maintenance of the various companies.

Then also, consider that in most of our States the industrial commissions have made a careful study as to the costs of living in the metropolitan areas as compared to the smaller cities, towns, and villages, and have adopted a graduated minimum weekly wage to be paid female employees for a maximum number of hours per week based on population. This method should by all means be given consideration and adopted in the bill before you.

I trust that I may be pardoned if I inject this question. Surely no one would contend that the monthly salary paid to the policeman or fireman in the cities of New York or Chicago that the same salary should be paid to the members of all police and fire departments located in all other cities, towns, and villages, whether they be a fully organized department, a subject-to-call department, or volunteer department, but just because they are policemen or firemen they should receive the same compensation. In effect, that is what this bill proposes to do to the telephone industry.

It should be interesting to the members of this committee and our Members of Congress, as well as to those who are interested in creating more jobs for our people so that all may be employed at a gainful occupation, and I call your attention to the fact that there is now in operation in Minnesota in communities serving less than 500 telephones, 64 mechanically operated switchboards, the greater part of which have been installed since the passage of the Fair Labor Standards Act, notwithstanding that such companies' operators are exempt from the provisions of the act. It is estimated that these installations have replaced an average of three operators, or a total of 192 telephone operators in Minnesota alone. I regret that I have not the aggregate figures as to all of the other States.

Senator TUNNELL. Do you think that it is wrong to use machinery?

Mr. CROWLEY. I beg your pardon?

Senator TUNNELL. Do you think it is wrong to use machinery?

Mr. CROWLEY. I wouldn't say it is wrong. I think we are coming to that. Answering that is going to be our problem, Senator.

It is a well-known fact that many telephone operators that come from large families of moderate means in these smaller communities, would not have been able to complete their high school education had it not been for the fact that they were able to secure employment in their home town telephone office and at the same time continue

their studies toward the completion of their education. It now appears that through legislation these opportunities will become less and less.

This must be rather discouraging to the parents of these girls in our smaller communities, who are anxious to keep their families together and away from the larger centers of population. Home is much preferable to these young ladies but necessity of employment compels them to seek elsewhere, as gradually and steadily the jobs are becoming scarcer and scarcer in such communities; and, in the opinion of my fellow workers and my own, this bill, as proposed and unless modified, will but add to the problems of our smaller communities.

In my earlier statement referring to the chart, I said it was self-evident that the class D and E companies could not survive if a 65- to 75-cent minimum per hour for labor was imposed upon them, which this bill proposed to do. I also said that I feared the results as to extensions and further developments of the industry in the smaller communities of our several States. I call your attention that many of such communities are served by the larger companies and such companies may absorb through a "rob Peter to pay Paul" policy and continue to operate.

But by far the greater number of these class D and E companies are operated by individual owners and groups of citizens interested in an economical telephone service for their respective communities. It is not a question of financial return as much as it is the convenience and protection that telephone service affords them.

Let us assume—and I mention this not as a probability but as a possibility—that in order to meet these ever-increasing costs they decide to curtail the service by limiting the hours of service—no service between the hours of 9 p. m. and 7 a. m.; no service on Sundays and holidays. In years past that was considered telephone service. Would it be considered telephone service today?

Then let us consider further that they should decide to refuse to accept any calls to or from any interstate points, and limit the business strictly to intrastate calls.

Gentlemen, do you realize what a chaotic condition any such steps would create in our communications system? We must keep in mind that a large volume of our telegrams originate and terminate through these smaller telephone exchanges. I know of no such intentions, but let us not adopt legislation that will compel them so to do on the grounds of self-defense and confiscation.

Now, gentlemen, what proposal do these independent telephone companies have to offer if the peculiar circumstances surrounding them are to be given due recognition by the Congress? In our opinion, if any increase in wages is going to be legislated, it will be imperatively necessary—I want to make that just as strong as I can—for Congress to increase the present exemption of 500-station exchanges to 1,000-station exchanges. As a matter of fact, when the 500-station amendment was before Congress 6 years ago in 1939, there were many people in private and public life who felt the exemption then should be placed on a 1,000-station basis. The Wage-Hour Administrator sent a questionnaire to the various State public utility commissions, and in their answers many of the commissions

expressed the definite conviction that the exemption should be on the 1,000-station basis.

It is, as I have said, imperatively necessary that this increase in the exemption be given if these independent companies operating in the smaller communities of the country are to continue in business as we know it today, if we are to avoid Nation-wide, wholesale rate-increase applications, if we are to avoid serious curtailment in telephone service, and if the jobs of literally thousands of telephone employees are to be saved by continuing to operate exchanges on a manual basis instead of being converted to dial operation. It may be asserted that dial operation is a technological development to which our telephone companies will come regardless of legislation. But I assert here and now that the rapidity with which the conversions will take place will increase tremendously if the legislation is enacted. And I further point out that as conversions take place and as employment opportunities by the thousands are thereby destroyed, the economic life of many a small-town community will be substantially altered to its detriment.

Before I conclude there are two other matters to which I would like briefly to refer. One of these is the proposed 5-year statute of limitations for bringing suits for back wages, set forth on page 13 of section 8 of the bill before you. In our opinion 5 years is much too long a time. We believe that the period of limitation should not be more than 2 years; and, as a matter of fact, the United States Independent Telephone Association has already endorsed the Gwynne bill in the House, H. R. 2788, which provides a 1-year statute.

The other matter I would like to mention is not covered in any way in Senate bill 1349. I refer to the liquidated damage provision of section 16 (b) of the present Fair Labor Standards Act. Under this provision employers are required, when a wage suit is brought, to pay double the amount that is due. There may have been some justification for such a harsh provision at the time the Wage-Hour Act was first enacted, but we believe that there is no justification for it now, at least for our independent telephone companies. In the statement which has been filed here by Executive Vice President Bailey of our National Association this matter is discussed more at length, and hence I shall say nothing further about it myself at this time.

Many thanks for your time and patience.

Senator TUNNELL. I wonder if your plan to increase the exception from 500 to 1,000 telephones or stations is not a plan to place the shortage in living standards on the operators rather than on the persons benefited. Do you think that is true?

Mr. CROWLEY. I will say not, for this reason, Mr. Senator: We have an industrial commission in our State that we think a good deal of. They are elected by the people, and they pass upon the fair standards there. And I think there is the protection on those thousands that you speak of. Your industrial commission in your State can give that protection.

Mr. TUNNELL. But they can't take it out of the air. That money has to come either from the users, or it has to come from a shortage in pay to your employees.

Mr. CROWLEY. Yes; that is true. That is where the telephone business differs from any of your manufacturing establishments.

We sell nothing. As a matter of fact, Senator, in my opinion it is a far-fetched idea to place the telephone communication under an interstate regulation, such as commodities moving from one to another State.

There is no commodity moving in a telephone communication. The physical lines and poles don't move. We don't sell any part of that commodity.

It is the two human voices that interchange. And that is called an interstate product.

Senator TUNNELL. You are selling the use of that machine.

Senator ELLENDER. Just one question. It has been testified here on several occasions that this moderate increase in the present minimum rate, as well as the rate fixed by the W. L. B., will be absorbed by business.

Now, judging from your testimony, that would be entirely impossible to the industry which you represent.

Mr. CROWLEY. Absolutely.

Senator ELLENDER. It would be necessary to increase the rates so that you could be able to give service?

Mr. CROWLEY. Yes, sir.

Mr. BAILEY. And of course, Senator, if I may interject, that involves the assumption that the subscriber is willing to pay. You know, there is no law in the United States that will compel the subscriber to pay the increased rate.

Senator TUNNELL. The law of necessity. Don't you think that operates?

Mr. BAILEY. In some cases, Senator. But there are many marginal cases where necessity doesn't have such a place.

Senator TUNNELL. I agree with you. There are.

Senator ELLENDER. Let me ask you this question, to be a little more specific: Do you know of any company that can absorb this loss today if the bill were enacted?

Mr. CROWLEY. I do not know of a company that can absorb it.

Senator TUNNELL. Without raising the rates?

Mr. CROWLEY. Senator, you asked me a question about the return. This appears in the annual report that I have here.

Senator TUNNELL. For the different companies?

Mr. CROWLEY. Yes, sir; for the different companies.

Senator TUNNELL. I should like to have that put in the record.

(The report referred to appears in the Appendix.)

Senator TUNNELL. We will meet tomorrow at the same hour, in room 424–B.

(Whereupon, at 12 noon, the committee adjourned until Wednesday, October 10, 1945, at 10 a. m.)

AMENDMENT OF THE FAIR LABOR STANDARDS ACT

WEDNESDAY, OCTOBER 10, 1945

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE
ON EDUCATION AND LABOR,
Washington, D. C.

The subcommittee met, pursuant to adjournment, at 10 a. m., in room 424–B, Senate Office Building, Senator James M. Tunnell presiding.

Present: Senators Tunnell, Ellender, and Smith.

Also present: Charles Kramer, consultant to the committee.

Senator TUNNELL. The first person on my list today is Mr. Mortimer Cosby.

TESTIMONY OF MORTIMER COSBY, PRESIDENT AND MANAGER, JEFFERSON HOTEL, COLUMBIA, S. C. (ACCOMPANIED BY M. O. RYAN, WASHINGTON REPRESENTATIVE, AMERICAN HOTEL ASSOCIATION)

Senator TUNNELL. Will you give your name and your connection to the stenographer.

Mr. COSBY. Mr. Chairman and gentlemen of the committee, I am Mortimer Cosby, president and manager of the Jefferson Hotel in Columbia, S. C.

I am appearing as a witness for the American Hotel Association.

The 1940 census reveals approximately 1,500,000 hotel rooms in the country. The industry today employs, roughly, 800,000 persons, which is 200,000 short of our actual requirements on the basis of present-day volume of business.

May I acknowledge, at the outset, that hotels are not covered by the Fair Labor Standards Act. It might be argued that we would not be affected by the provisions of this bill. But it has been our experience that we compete in a crowded labor market with all other employers and are thus directly affected.

Few industries have such a complex wage pattern as do hotels. The wide variety of job classifications under a hotel roof find us engaging staff ranging from professional people, through the skilled artisan class, down to unskilled and even part-time and seasonal workers.

Real wages vary from stock dividends and bonus on profits down to meals, tips, housing, uniforms, et cetera, in addition to cash wage. The whole program of wage controls, therefore, has been one of the most difficult of our wartime problems. Under wage and salary

stabilization we were denied the right to reward key employees with sufficient pay to retain their services.

The hotels of America do not, in any sense, oppose a declaration of 65 cents an hour as a desirable minimum wage toward which our domestic economy should aim—based on the present costs of living. Your committee is cognizant however of some of the problems which would ensue. Let me point out to you that we are among those industries which are now subject to cross pressures which cannot be reconciled. As long as rents for guest rooms are frozen, and menu prices are frozen, our maximum potential income is rigidly controlled, allowing only a rapidly narrowing gap within which additional cost increases can be borne.

I doubt that any native industry experienced a mortality rate equal to ours following the last war, when 85 percent of all hotels were either bankrupt or had to be refinanced. Right today, on the basis of increased operating costs, the industry would again be bankrupt were we to return to that level of occupancy formerly experienced. The break-even point in hotels has risen from an average of around 60 percent in 1940 to about 75 percent, and a great deal higher in some hotels.

Before we decided to appear before your committee, the American Hotel Association canvassed the industry in every State in the Union to learn just what a 65-cent hour minimum wage, with differentials up to 90 cents, would mean in terms of present operating costs.

I present, for your information, a tabulation showing the actual figures for sample hotels in every State, and for all sizes of properties. These reveal that the 65-cent minimum with differentials, would mean a pay-roll increase averaging 21.7 percent. In one hotel, the figure rose to 128.6 percent. Small towns would be hit far harder than would larger centers, with the smaller hotels being more adversely affected than the larger ones. Price increases of 7 percent would be required if this added cost were indicated. Hotels generally are full today, and offer little change for an increased volume of business out of which new and added costs could be absorbed. While it is true that this particular survey shows the actual records of only 85 hotels, studies of upward of 300 hotels across the Nation by a national accounting firm substantiate these averages precisely.

An example of the type of squeeze which is currently effective is the following: On September 4, the War Labor Board amended General Order 30 to provide that increases in wages up to 55 cents an hour could be made by employers without approval of WLB, even though such increases were later made the basis for an appeal to OPA for increased prices. But on September 20, when conferring with OPA officials, a task committee of the hotel industry advisory committee was told that a hotel could not be permitted to recover any of these added costs except by presenting an application for relief under the hardship provision of the regulations.

When I explain that only two hotels, to our knowledge, have qualified for relief under this provision during the period of price controls, you will understand our concern. It isn't that hardship was not present in some cases, because some hotels have been forced into receivership when denied relief. The hardship provisions are too stringent, and in most cases the hotel would be bankrupt before it could qualify. We are for price control, when necessary, and we

favor the highest wages our American business economy can possibly pay, but in the face of so inexorable a squeeze, we are truly distressed.

There are several fallacies known to the employers which we fear are sometimes overlooked in attempting to force wage levels higher.

First, a hotel owner who is financially able today to step up wage scales is taking a fearful risk when he does so. For this reason: He runs the risk of being frozen to the new and higher wage regardless of whether business a year or two hence would permit his maintenance of such wage level. Our information in this field comes direct from the War Labor Board.

Also, tips received by employees should always be included in the minimum wage. The employer is constantly faced with liability for withholding and social security taxes for employees who do not declare their tip receipts to management. Also, it is usually difficult to estimate these receipts.

A very careful check was made recently in leading transient and residential hotels in a certain city, with the following receipts noted:

	Weekly tips
Coffee shop and low-priced lunch rooms	$31.06
Medium-priced restaurants	53.25
High medium-priced dining rooms	66.40
High-priced dine and dance rooms	85.40

Senator SMITH. Would you say the average tip ran about 10 percent of a meal served?

Mr. COSBY. Yes, sir, I would say that is the usual practice. In higher-priced places it runs higher than that, probably.

Senator SMITH. If it would run from 10 to 15 percent, you could make an estimate on an over-all basis?

Mr. COSBY. Well, you could make an estimate; yes, sir. Some people do not tip, but you could estimate it on that basis, probably.

Senator TUNNELL. Why do you think the hotel should be allowed credit for the tips?

Mr. COSBY. Well, in figuring the minimum wage of an employee, you need to consider that some of them are dependent to a greater extent on tips than they are on the wage scale.

Senator TUNNELL. Don't you think that the tendency would be to reduce their wages to that extent?

Mr. COSBY. No, sir; I do not think they would reduce it.

Senator TUNNELL. Would they not make their first contract on that basis?

Mr. CROSBY. I do not think the tendency ever would be to try to reduce the wages of those particular people.

Senator TUNNELL. You mean to tell me an employer in a hotel who was hiring a man who will take in $85.40 in tips, will not rely on that to get his employee?

Mr. COSBY. I am sure that he would, as an inducement. He probably would not have to pay that man as much money, you see.

Senator TUNNELL. That is what I am getting at.

Mr. RYAN. Mr. Chairman, there are special reasons for this evidence. We are simply calling attention to the fact that though a tip is part of the real wage, all Government agencies habitually fail to differentiate between tip and nontip employees. That is the purpose of this evidence.

Senator TUNNELL. They have to account for that, do they not?

Mr. RYAN. Yes, but the War Labor Board and other agencies have failed to differentiate in the past between tip and nontip employees, pointing to the basic wage of the tip employees, which, of course, is lower.

Senator TUNNELL. All right.

Mr. COSBY. And yet, whenever wage scales are mentioned, the basic cash wage paid waiters or waitresses, or other tip employees, is always the wage recited for that occupation.

We have sought comparative figures on wages for numerous job classifications in hotels from the United States Department of Labor and from other Government sources. But the Department of Labor's detailed figures for an industry do not run back prior to 1943. However, Labor Department figures reveal that from 1935 to the present, the average female service employee in New York hotels has increased her hourly earnings more than 100 percent. This is not uncommon in comparisons of unofficial figures from other sections of the Nation.

We are grateful for this opportunity to reveal to your committee some of our reactions to the legislation now before you.

Senator TUNNELL. Now you say this legislation does not directly affect you.

Mr. COSBY. Not directly; no, sir.

Senator TUNNELL. What is the difference between the effect on you of a general rise in wages the Nation over, and a rise in wages in a particular hotel where they do pay higher wages?

Mr. COSBY. Well, generally hotels have wage scales locally which are more or less average in the same type of hotel.

Senator TUNNELL. But you referred to the fact that some hotels can pay more than hotels in small towns, for instance.

Mr. COSBY. Yes. On that tabulation you will find that the larger the hotel and the larger the town, the better type of hotel has an income which is greater, and therefore they have a better class of workmen and are able to pay more for the same job classification than is possible in a small town or in a small hotel.

Senator TUNNELL. Is it your position that you do not want any other hotel to pay voluntarily a minimum wage of 65 cents?

Mr. COSBY. No, sir; I was just taking it from a national scope, you see.

Senator TUNNELL. Well, if other hotels pay more, it will have the very effect that you are complaining about, don't you think?

Mr. COSBY. Well, the prices in hotels in New York, for instance, would not affect my price level in South Carolina, or some other place.

Senator TUNNELL. Is not your argument just as strongly against the payment of higher wages anywhere for anything?

Mr. COSBY. Well, I think that has to be dealt with locally, sir.

Mr. RYAN. May I please supplement that, sir?

Senator TUNNELL. Yes.

Mr. RYAN. Our problem springs entirely from Government procedure. During the war we have been short of help throughout the country, but the Federal agencies like USES would not recruit for any industry which did not offer wartime wage levels. Also the War Manpower Commission declined to list as a locally needed industry any industry which did not pay up to a certain level. So, you see the squeeze was put on the industry for recruiting people because of a wage situation which did not take into effect other factors in the real wage.

Senator TUNNELL. You mean the Government agencies created for wartime purposes would not aid you in getting employees unless you paid the wartime schedule?

Mr. RYAN. That is right.

Senator TUNNELL. But after they are eliminated, then you would be as you were prior to the war, would you not?

Mr. RYAN. Under State recruitment and under State employment offices, Mr. Chairman, the industry was never substantially undermanned.

Senator TUNNELL. Is it true that you are generally opposed to higher wages?

Mr. COSBY. No, sir.

Senator TUNNELL. That is not true?

Mr. COSBY. No, sir.

Senator TUNNELL. Why would the higher wages draw your employees away from you?

Mr. COSBY. Because we would not be able to pay the higher wages under OPA price controls. In other words, we are pegged on our room income and on restaurant prices, you see.

Senator TUNNELL. I understand, but don't you think that is a pretty good argument for higher-priced rooms? If you are put in a position where your revenues will not pay the amount that you have to have for help, is not that a pretty good argument for raising the price of your rooms?

Mr. COSBY. Well, of course, if we could get more money and be in a better position to pay higher wages, we do not mind paying higher wages.

Senator SMITH. You mean if rent controls are off?

Mr. COSBY. Yes; if we could push the whole level up to where it would leave us with a fair margin of profit after we paid for supplies and labor.

Senator TUNNELL. It seems to me your objection is not because this bill in any way affects you directly; it is because of the general tendency to higher wages which you think this would create?

Mr. COSBY. Yes. We believe this bill does affect us directly.

Senator TUNNELL. Then, according to your reasoning, all standards should be kept down to your level.

Mr. COSBY. No, sir.

Senator TUNNELL. Well, what is the solution?

Mr. COSBY. We do not want it to happen so that it will require us to pay more until we take in more.

Mr. RYAN. Mr. Chairman, he is, of course, reciting the fact that if the OPA would allow merely a seven point rise to the industry, he would gladly subscribe to your bill. Throughout America there are two hotels only which have qualified for relief under the ceilings to date, in spite of the fact that a number of hotels have been driven into receivership because of their inability to meet rising cost under a pegged level of prices. Therein lies the squeeze. Hotels are not objecting to the 65-cent minimum, they are objecting to the fact that under fixed ceilings, they are unable to meet increased prices beyond a given point.

Senator TUNNELL. Do you have figures showing it, or do these charts show it?

Mr. COSBY. Yes, sir.

Mr. RYAN. Those charts show in each State, by a specific hotel or two, what this bill would mean in pay-roll increases, by total dollars and cents, and percentagewise.

Senator ELLENDER. Has that been put in the record yet, Mr. Chairman?

Senator TUNNELL. No. Copies have just been distributed here.

Senator ELLENDER. What is this statement attached to the chart?

Mr. COSBY. This is a statement from our president, Mr. J. E. Frawley, which we submit for the purposes of this committee.

Senator TUNNELL. Mr. Frawley has not testified.

Senator ELLENDER. Mr. Cosby, you are evidently in the same position as many other groups in that you do not mind the raising of wages, provided that all selling prices and wages go up the same for everybody.

Mr. COSBY. Yes.

Senator ELLENDER. Is it your view, that if the wages and prices are raised for all groups in the same proportion that the pending bill seeks to do for special groups that everybody will eventually be in the same position. They will have more dollars, but they will not be able to buy more goods?

Mr. COSBY. I would say so. Of course, when everything geos up, you cannot object to a higher standard, but you are proportionately in the same position.

Senator ELLENDER. In response to the question propounded by Senator Tunnell, would it be possible for you to give us an idea of what occurred to your business during the war, as to wages?

Mr. COSBY. Yes.

Senator ELLENDER. You say you do not object to higher wages?

Mr. COSBY. No, sir.

Senator ELLENDER. But since you are not able to meet these higher wages because of OPA ceilings, what has been your experience in the labor market during the war?

Mr. COSBY. We have had to increase our wages.

Senator ELLENDER. To what extent?

Mr. COSBY. Oh, I could not very well say what percentage of increase. We have not done it on any percentage basis. We increased it as we thought it was necessary in the different departments, you see.

Senator ELLENDER. I see.

Senator TUNNELL. This analysis shows the percentage of increase.

Senator ELLENDER. I was asking the witness as to his own hotel. I thought he might be able to give us some specific example of how higher wages during the war affected his rates.

Mr. COSBY. The War Labor Board held us down in our salaries and wages that we were allowed. In other words, if we wanted to raise a man we had to get permission from the War Labor Board.

Senator ELLENDER. Why was that done; do you know?

Mr. COSBY. I think it was to hold the wages down.

Senator ELLENDER. Not only the wages but prices?

Mr. COSBY. To hold the cost of living down, I mean.

Senator ELLENDER. Yes.

Mr. COSBY. But we took advantage of it as far as we could. The maximum permissive wage was increased from 40 to 50 and then to 55 cents an hour.

Senator SMITH. You are referring to the minimum wage?

Mr. COSBY. Yes. That was the maximum then. The War Labor Board considered 55 cents an hour the maximum wage that we could raise without permission from them.

Senator ELLENDER. This statement that will be placed in the record indicates the extent to which a minimum of 65 cents per hour would cause an increase in the prices necessary to absorb the higher wage?

Mr. COSBY. Yes, sir.

Senator TUNNELL. Which is not proposed under this bill; is that right?

Mr. COSBY. No, sir; I do not think so.

Senator ELLENDER. But it would have the effect, though, if they raised the prices of everybody around you, to pay the higher wages or else close up.

Mr. COSBY. That is what I contend.

Senator ELLENDER. Certainly.

Mr. RYAN. May I answer your question, sir?

Senator ELLENDER. Of course.

Mr. RYAN. There are many cities in which increases of 100 percent in wage levels have been granted in most jobs within the hotel between 1940 and 1945, subject only to the restraint of the War Labor Board and salary stabilization directives.

Senator TUNNELL. This analysis, as I read it, does not tell us what they are now paying. It bulks all of the employees under 90 cents, the number of employees receiving less than 90 cents per hour. Now, whether that takes in all of the employees, I do not know.

Mr. RYAN. It does, Senator. You see, in a large hotel you have a thousand different job categories. It would have made too copious and bulky a sheet to prepare.

Senator SMITH. The present pay roll, then, in this table means the total pay roll?

Mr. RYAN. That is right, sir.

Senator SMITH. It is not just the pay roll of those under 90 cents?

Mr. RYAN. That is right, sir; but that does figure the differentials up to 90 cents, which is the regular War Labor Board procedure.

Senator TUNNELL. It says if it should be made a law that you had to pay a minimum of 65 cents, or if business conditions drive you to do it, that it would be an increase of 21.7 percent.

Mr. RYAN. Yes. I wonder if it is not pertinent to just recite the formula that OPA employs before granting relief, because that shows the inexorable pressure at the other end. In Mr. Cosby's restaurant, or in their dining room, before he is entitled to relief on his menu prices, he must show he is headed for bankruptcy, and that if he did go bankrupt, those who are eating with him will have to pay more somewhere else for what they are now eating than they paid at his place.

In rent control, there have been, as we recited, only two instances known to us throughout the country where an adjustment has been made in the rents, even though a number of hotels have actually gone bankrupt. So it is a pretty rigid formula that we face on the other end.

Senator SMITH. Your objection is more to the so-called squeeze than it is to the minimum wage?

Mr. COSBY. That is what we are worrying about, the squeeze.

Mr. RYAN. If it is pertinent, we should like to have that exhibit included in the record, sir.

Senator TUNNELL. Then, as I understand it, you want Mr. Frawley's statement, and this analysis included in the record?

Mr. RYAN. Yes, if your committee think it is pertinent.

Senator TUNNELL. I think it is.

Senator SMITH. Yes.

Senator TUNNELL. All right, let that be included.

(The statement and tables referred to are as follows:)

HOW THE 65 CENTS PROPOSED MINIMUM WAGE WOULD AFFECT THE NATION'S HOTELS

(Statement by J. E. Frawley, president, American Hotel Association)

The attached statistics are the findings of a survey conducted by the American Hotel Association to analyze the present pay rolls of a representative group of member hotels and the effect proposed Federal legislation raising the minimum wage rate of 65 cents an hour will have upon hotel operating costs.

This survey covered hotels of all sizes in all sections of the Nation. Based on scientific principles, it embraced the small, medium, and large hotels—the hotel located in small and large cities—and the hotel situated in the North, East, South, and West. Therefore, the findings are representative of the hotel industry, which is made up largely of small business establishments. Approximately 90 percent of the Nation's hotels are 200 rooms or less.

The study includes all those employees who now are paid less than 65 cents an hour and, in addition, all other employees receiving less than 90 cents an hour whose rate would be increased by the differentials arising from a 65 cents an hour minimum.

These hourly wage differentials are based on War Labor Board formula. For example, an employee now earning 65 cents an hour would have his scale increased to 68 cents. An employee now receiving 80 cents an hour would be boosted to 83 cents. An employee now paid 86 cents an hour will receive 90 cents an hour.

In this study we have assumed that the Government will credit tips as part of wages in order to determine the 65-cent minimum—a practice followed by State agencies in computing earned income. If this is not done, the pay-roll increases resulting from a 65-cent minimum will be much greater than those shown in the survey.

The survey revealed:

(1) The pay roll of the hotel industry would be increased 21.7 percent if minimum wage rates were raised to 65 cents an hour.

(2) Individual hotel wage increases, necessitated by the 65 cents an hour rate, would vary from a low of 7.6 percent to a high of 128.6 percent.

(3) These increases vary, in general, according to the size of the hotel and its location. The smaller the hotel the larger the percentage of pay-roll increase. And the smaller the community in which a hotel is situated, the larger the percentage of pay-roll increase.

(4) Total sales of the industry as a whole would have to be increased 7.1 percent, if present OPA ceilings on rooms, food, and beverages are maintained, to cover the wage increases resulting from a 65 cents an hour rate.

(5) Total sales of individual hotels would have to be increased in amounts from a low of 2.6 percent to a high of 26.9 percent, at present OPA ceilings, to cover the wage increases.

There is one more important point to take into consideration. Hotels today are operating to capacity in virtually every department. It is almost impossible, therefore, for a hotel, under OPA ceilings, to increase materially its income from the sale of rooms, food, and beverages. Hotels in New York, for example, had an all-time of 98-percent occupancy in June 1945. Washington hotels had a 95-percent occupancy. Average for the Nation's hotels in June 1945 was a record-breaking 91-percent occupancy. Because of manpower, food and supply shortages, many hotels are forced to curtail their dining-room service while patrons still are standing in line for tables. Consequently, dining-room sales in most cases cannot be increased to any appreciable degree.

To expect hotels to increase their sales 7.1 percent, under present conditions and OPA ceilings, is expecting the impossible.

Irrespective of the possible merit of proposed Federal action—legislative or administrative—seeking to increase the minimum wage rate to 65 cents an hour, I feel it is my duty, as president of the American Hotel Association, with 5,500 members throughout the Nation, to call your attention to the effect such a wage increase would have upon the hotel industry if individual operators must meet this additional pay-roll cost under today's OPA ceilings on rooms, food, and beverages.

I am presenting the results of this Nation-wide survey now in order that you may be fully cognizant of the serious financial situation facing hotels and, therefore, appreciate why hotel operators will be forced to seek relief from present OPA ceilings if operating expenses continue to rise.

Analysis of pay rolls of 85 hotels (of various sizes and locations) and effect on pay-roll costs of a proposed 65-cents-an-hour minimum wage

State	Code No.	Hotel name	Number of rooms	Number of employees receiving less than 90 cents per hour	Present pay roll	Proposed pay roll if 65-cent minimum should become effective (including differentials from 65 to 90 cents)	Pay-roll increase	Percent of pay-roll increase	Present total revenue	Percent increase in price necessary to absorb increase in pay roll
Arkansas	34	Garrett, El Dorado	110	33	$37,208	$61,446	$24,238	65.1	$92,406	26.3

Source: American Hotel Association, July 1945.

Senator TUNNELL. Thank you, gentlemen.

The next witness on my list is Dr. Claudius Murchison, the Cotton Textile Institute.

TESTIMONY OF CLAUDIUS T. MURCHISON, PRESIDENT, THE COTTON TEXTILE INSTITUTE, NEW YORK (ACCOMPANIED BY H. E. MICHL, ECONOMIST)

Mr. MURCHISON. My name is Claudius T. Murchison. I am president of the Cotton Textile Institute, whose main office is at 320 Broadway, New York City.

The Cotton Textile Institute is the central trade association of the spinning and weaving divisions of the cotton textile industry. The industry as a whole consists of about 1,200 manufacturing plants, employing currently about 413,000 people.

The institute embraces in its membership both southern and northern mills, and represents 75 percent of the cotton spindles of the United States.

At the outset, Mr. Chairman, I would like to take a few moments to describe the scope of this industry and its functions.

This industry is composed of about 1,200 mills engaged in spinning cotton yarn and thread and weaving fabrics. Its products cover a wide variety of goods, ranging from the heavy duck to fine voiles.

Except for a few items, such as bed sheets, pillow cases, and towels, the industry does not produce finished products for the ultimate consumer. It is rather a producer of raw materials which are subjected to further processing by the finishing and dyeing industries, which are considered to be separate industries, and are then sold to the various industries which fabricate them into finished products for the consumer for apparel, household, and industrial uses.

This industry presently employs 413,800 workers and in peacetime is one of the largest employers in the country.

According to the Bureau of Labor Statistics, the majority of the workers are semiskilled, representing about 56.2 percent of the labor force. The remaining workers are skilled and unskilled in almost equal proportions. These proportions vary considerably as between the spinning and weaving divisions. In the spinning division 76.3 percent are in the semiskilled group, 8.4 percent are skilled, and 15.3 percent are unskilled. In the weaving division, 46.5 percent are skilled, 28.5 percent are semiskilled, and 25.0 percent are unskilled.

Cotton textile industry and the act of 1938: The cotton textile industry has as long an experience with minimum wage legislation as any manufacturing industry in the United States. It was the first industry for which an industry committee was appointed under the Fair Labor Standards Act of 1938.

After almost 9 months of careful deliberation the committee recommended a minimum wage of 32½ cents, which became effective on October 24, 1939. This rate was in force until June 30, 1941, when the minimum wage was raised to 37½ cents. That rate prevailed until April 30, 1942, when it was increased to 40 cents, the highest mandatory rate permitted under the act.

Since then wage rates have continued to move up as the result of both directives issued by the War Labor Board and voluntary action

on the part of the mills. In August 1942, the Board ordered a 7½-cent-per-hour increase for employees in 51 mills, and under wartime pressures and a tightening labor market this rate spread generally throughout the industry. Early in 1944 cotton mills were given permission to raise the minimum to 50 cents, and on February 20, 1945, the War Labor Board issued a directive providing, among other things, a minimum wage rate of 55 cents for employees in 54 mills. This rate was later made permissive for all other mills.

Accordingly, since October 1939, when the first wage order became effective, to June 1945, the most recent date for which wage statistics are available, average hourly earnings increased from 38.5 cents to 69.2 cents, an increase of 30.7 cents, or expressed percentually, an increase of 80 percent.

Straight-time average hourly earnings, which exclude premium overtime pay, during the same period increased from 35.7 cents to 64.4 cents in the South, or 80 percent, and in the North from 44 cents to 74.1 cents, an increase of 80 percent. It should be emphasized that while these earnings are the highest in the history of the industry, they do not yet fully reflect the total increases resulting from the last WLB directive. Since June, more mills have increased their minimum wage rates to 55 cents and not all of the adjustments in rates above the minimum, ordered by the War Labor Board, have yet been made. These are still under negotiation and what the final effect will be on straight-time average hourly earnings is now impossible to say.

Compared with the increases proposed in this bill, the above increases were relatively small. The first wage order of 32½ cents was only a 2½-cent-per-hour increase, or 7.7 percent, above the prevailing statutory minimum and the industry was given 20 months to adjust itself to the new rate before it was raised to 37½ cents. This rate was permitted to remain unchanged by law for almost a year, before it was again increased 6.7 percent to 40 cents.

Senator SMITH. Might I ask right there if there was a ceiling on prices at that time, or was there a lift in prices to absorb this wage?

Mr. MURCHISON. During part of that period, the ceilings became generally effective throughout the industry in the spring of 1942. That is, ceilings were in effect during the entire period when increases were occurring.

Senator SMITH. Under the War Labor Board jurisdiction you absorbed the increase in the industry, except insofar as ceiling prices were concerned?

Mr. MURCHISON. Well, the ceilings have been increased, which I will point out later, giving the exact figures, because I do think that is a very important consideration.

Senator TUNNELL. I would like to get this clear in my own mind. The Fair Labor Standards Act was passed in 1938. Now, what was the provision with reference to wages?

Mr. MURCHISON. It provided a minimum statutory wage of 30 cents per hour, effective at once.

Senator ELLENDER. Twenty-five cents an hour?

Mr. MURCHISON. It was 25 cents.

Senator ELLENDER. And 30 cents the second year?

Mr. MURCHISON. Then it moved up to 30 the second year, and thereafter the increases occurred after hearings and on recommendation of industry committees.

Senator TUNNELL. Now, that was confined to the textile industry, was it?

Mr. MURCHISON. No, no. That was the practice generally for all industry.

Senator TUNNELL. I was under the impression it went to 40 cents more rapidly.

Senator ELLENDER. Senator, if you will permit me, as was just suggested, the minimum was fixed at 25 cents the first year, 30 cents the second year, and then a period of 6 years was provided in which to raise the minimum to 40 cents. But, as he pointed out, the advisory committees raised the 40-cent minimum before the 6 years expired to the amount indicated in this paper.

Senator TUNNELL. Yes. All right then, you may proceed.

Mr. MURCHISON. Timing of the increases: More important than the gradual increase in the rates was their timing. During the 2½ years between the first wage order and the 40-cent wage order in 1942, the cotton textile industry, in common with all other industries, entered a new economic world.

Throughout most of 1939 this industry was struggling to work itself out of the depression of 1938, in which year it had sustained a deficit of more than $4,000,000. In October however, when the first wage order became effective—I mean the first wage order issued through the industry committee—the Second World War was already 2 months old. The consequences of this event to this and all other industries are so obvious that they need not be elaborated.

The general recovery of the American economy, the demand arising from our defense effort, lend-lease, and later our entrance into the war presented this industry with a condition unprecedented in its history.

In place of the overproduction which had been a chronic condition in this industry since 1926, the huge requirements of the military, our own and our allies, the expansion in civilian requirements, the short supply of competitive materials, textile and nontextile, foreign and domestic, created a demand for cotton textiles that was without limits.

No longer was it necessary for this industry to concern itself with competition from Japanese cotton textiles or Indian jute and burlap; the inroads which the paper industry was making into our markets were brought to an abrupt halt; and the threats of the recently negotiated trade agreements were completely removed by the cessation of international trade.

As a result of these developments the chief problem in this industry since 1926—excess productive capacity—was temporarily liquidated. Whereas during the 4-year period 1936–39 hours run per average active spindle amounted to 3,872, in 1940 they amounted to 4,381, in 1941, 5,307, and in 1942 to 5,794.

Senator ELLENDER. Will you explain that to us?

Mr. MURCHISON. That is hours per spindle per year.

Senator ELLENDER. What does that mean?

Mr. MURCHISON. That means the number of hours which each spindle on the average operated.

Senator ELLENDER. How many spindles could a worker attend to?

Mr. MURCHISON. I do not know.

Mr. MICHL. That varies considerably from plant to plant.

Mr. MURCHISON. It varies a great deal according to the type of yarn which is being produced. I do not know what the average would be.

Mr. MICHL. What the figure indicates, Senator, is the extent to which the productive capacity of the industry was being utilized; in other words, the number of hours that a spindle operated, increased greatly between 1931 and 1942, removing that idle capacity which has been chronic in this industry.

Senator SMITH. You had more shifts during that period?

Mr. MURCHISON. Yes.

Senator SMITH. Did the production per worker increase with an increase of his wage? Was he more productive because of his wage increase?

Mr. MURCHISON. Later on, Senator, I have the figures on that.

Senator SMITH. I do not want to anticipate you. I just want you to have that question in mind.

Senator ELLENDER. The question I was going to ask you is this: If the spindles operated in 1936–39 were 3,872 in contrast to 5,307 in 1941, and 5,794 in 1942, was it necessary to employ more men in order to accomplish that?

Mr. MURCHISON. Oh, yes.

Senator ELLENDER. To what extent?

Mr. MURCHISON. The industry generally went on a three-shift basis.

Senator ELLENDER. Do you have in your statement the added employees?

Mr. MURCHISON. Yes; we do give that.

Senator ELLENDER. All right.

Mr. MURCHISON. The industry generally went on a three-shift basis. That meant operations 24 hours a day, 6 days a week in many cases. That was not absolutely the practice throughout the entire industry.

Capacity utilization based on 80 hours per week, increased to 133.2 percent, whereas in the 6 years prior to 1939 it reached the 90-percent figure only once and in 1 year was as low as 57.4 percent.

As against 7.5 billion yards produced in 1938, much of which was added to already high inventories, the industry produced 9 billion in 1939; 9.5 billion in 1940; and more than 11.3 billion in 1941; and almost 12.5 billion yards in 1942.

I might add that the 1943 production was almost as high as 1942. We did have in 1944 a downward tendency due to the increasing shortage of manpower. Now, those industry accomplishments were brought about without any addition to plant or equipment. We continued to use the same machinery we had at the beginning of the war. The Government was not called upon to finance emergency construction projects to enlarge the capacity of the industry.

From 1939 to the end of 1942, the number of workers increased from 394,000 to 510,000.

Under these conditions it was not difficult to pay higher wage rates. Under these conditions wages would have increased without minimum wage legislation. Indeed, it was no exaggeration to say that the wage orders after 1939 merely formalized by law what had already been established by most mills as prevailing practice. During the early part of the defense period and prior to the establishment of price ceilings, the rapidly expanding market readily absorbed price increases for cotton textiles. After the establishment of price ceilings and until the spring of 1943, rising labor costs, resulting from the rising wage rates and decreasing efficiency, could be and were absorbed in part by the decrease in unit overhead costs. By the end of the year, however, increased costs could no longer be absorbed and to assure the cotton growers parity and to maintain the supply of cotton textiles, it was necessary for Congress to provide price relief for cotton mills in the legislation extending the Emergency Price Control Act. That had reference to the Bankhead amendment.

Further price relief had to be granted this year to meet the higher labor costs which resulted from the last directive of the War Labor Board.

Present wage structure: The June average hourly earnings of 69.2 cents are not based on a uniform basic minimum wage rate. As a result of the February 1944 War Labor Board directive, the 55-cent minimum was made mandatory for 48 mills and later permissive for all other mills. Many mills have voluntarily raised their basic rate to 55 cents with adjustments in wages above the minimum, but a substantial number of mills employing a large number of workers are still below the 55-cent rate.

Senator ELLENDER. Would you mind answering one question here? As I understand in early 1939, as your statement shows, the industry employed around 394,000 persons.

Mr. MURCHISON. That was a monthly average for that year.

Senator ELLENDER. Yes. In 1942 it rose to an average of 510,000 persons.

Mr. MURCHISON. That is right.

Senator ELLENDER. Then with an average of 394,000 persons you produced 7½ billion yards, and in 1942 12½ billion yards.

Mr. MURCHISON. That is right.

Senator ELLENDER. In other words, as I see the picture, with 116,000 more people, or about 21 or 22 percent more employees, you produced almost 40 percent more yardage.

Mr. MURCHISON. That is right, Senator. That is because of the more regular working time.

Senator ELLENDER. Yes. Of course, that meant more profit to your industry, and therefore your ability to absorb a greater amount of the wage increase than you otherwise would be able to do if you did not have a sale for the full output of the mill; is that right?

Mr. MURCHISON. That is right. I might say that, in part, the great increase in yardage was due to the production on the average of heavier materials, taking coarser yarns which could be run through the spindles and looms more rapidly.

The proposed minimum of 65 cents for the first year after the enactment of this bill, would therefore require an increase of 18 percent in the minimum rate for mills now paying the 55-cent rate, and a considerably higher increase for mills with lower minima. How many such mills there were we do not know, but those mills which are below the minimum of 55 cents at the present time, have only a very small percentage of their workers under the 55-cent rate. Those workers are usually those classified as yard workers, or sweepers in the mills.

The increase for the former group would be more than four times as large as any increase made under the Fair Labor Standards Act

and almost twice as large as the increase ordered by the War Labor Board at the peak of wartime wage inflation.

When I say four times as large, I mean four times as large as any increase made at any one time under the Fair Labor Standards Act.

The increase in total labor cost would, however, be greater than the above figures would indicate because this bill would require, in addition to increases in the minimum rates, industry committee action to raise wage rates for all other job classifications to maintain "reasonable" wage differentials. Since there are no limits to the wage levels which the committee may fix for such classifications, other than meaningless criteria, meaningless in a technical sense, it is impossible to estimate what the labor cost, the total labor cost may be if this bill is enacted into law.

Senator ELLENDER. Have you any past history of what that increased rate might be in the upper brackets? If you should raise the minimum, let us say, to 65 cents what would be the normal increase in the upper brackets? Have you any data that you could furnish us on that subject?

Mr. MURCHISON. Well, in the past, Senator, although adjustments have been made upward in all the brackets after the establishment of the minimum, such adjustments have been management-labor agreements, you see. They have not been determined by law, and consequently, we had what has been commonly referred to as a tapering off of the increases as we went up. Now, under the plan set forth in this bill, it is likely that the adjustments all the way up would be in proportion to the increase in the minimum. That is only an assumption, because we do not know what the committees would do in particular cases.

Senator TUNNELL. I understand your statement to be that the average now is 69.2 per hour.

Mr. MURCHISON. That is right.

Senator TUNNELL. What percentage of those would be below the 65 cents?

Mr. MURCHISON. Well, I would say a majority would be below the 65 cents.

Senator TUNNELL. Then there must be a very much higher rate on the others.

Mr. MURCHISON. The point of the greatest concentration would fall somewhere between 55 and 65 for the industry as a whole.

Mr. MICHL. That is substantially right.

Senator ELLENDER. I placed figures in the record last week that show that in the textile industry, 54 percent as I recall are not now receiving 65 cents per hour. Is that right?

Mr. MURCHISON. That would sound about right, I should think.

Senator TUNNELL. Then 44 percent are getting more than half of the money.

Mr. MURCHISON. Would be getting more than 65 cents?

Senator TUNNELL. Yes.

Mr. MURCHISON. That would depend on the number, you see.

Senator TUNNELL. It must be 44 percent if 56 percent are getting below that.

Senator ELLENDER. 44 percent are getting 65 cents and up.

Mr. MURCHISON. That is on the total pay roll.

Senator TUNNELL. Yes. It is sufficient to carry the average up to 69.2.

Mr. MURCHISON. Of course, you have a great many occupational brackets, Senator, that rise with skills, which explains it.

Senator TUNNELL. Does this take in superintendents?

Mr. MURCHISON. No.

Senator TUNNELL. What do these figures mean?

Mr. MURCHISON. Only those who receive hourly wages.

Senator TUNNELL. Only the hourly wage group?

Mr. MURCHISON. Those who are in a salary classification, of course, are not included.

By the way, I might say our figures here were taken directly from the Bureau of Labor Statistics. They are official Government figures, those figures which we have given as to the average wage rate.

Senator ELLENDER. Now, before you go into your next subject, would you be good enough to tell us, if you know, why it was that the War Labor Board did not permit a greater minimum rate than 55 cents?

Mr. MURCHISON. They did it because of the hold-the-line order, Senator, and even that 55-cent rate was gone to naturally very reluctantly.

Senator ELLENDER. In other words, as I understand it, if the rate had been raised more than 55 cents, it would mean that the hourly rate structure on up the line would be disturbed, and the probabilities would be that you would have to raise the cost of goods, which in turn would mean a higher cost of living.

Mr. MURCHISON. That did happen, because at the same time the War Labor Board established the 55-cent minimum, it also required the mills to increase the wages across the board 5 cents an hour, so that did have its effect on prices, and I will point out a little bit later just precisely what that effect was. We have the actual figures here.

Senator TUNNELL. Do I gather from you that the operators wanted to make it more than 55 cents and the War Labor Board would not agree to it?

Mr. MURCHISON. I would say many of the operators did, but the War Labor Board turned down applications from many mills for higher wage scales.

Senator TUNNELL. These raises to 55 cents were only allowed in settlement of disputes; is that right?

Mr. MURCHISON. That is right. The War Labor Board could take action only where there was a dispute.

Senator TUNNELL. That is right.

Mr. MURCHISON. That is why there was a limited number of mills involved in the War Labor Board decision.

Senator TUNNELL. And each decision was based on the facts in that particular case?

Mr. MURCHISON. In that particular group, that is correct.

Senator ELLENDER. Is it not also true that many of the mills asked for raises in wages in order to obtain full production? In other words they pursued that course so they could obtain sufficient labor to obtain more production?

Mr. MURCHISON. That is true. Of course, that is not the only reason, Senator, because they really wanted to pay more wages.

Senator ELLENDER. Was not the request to pay higher wages accompanied by a request for higher prices in order that the requirements of the Government and the trade be met?

Mr. MURCHISON. That is precisely what happened. The increase in wage rates led to higher prices.

Senator TUNNELL. They got the higher prices anyway, did they not? They were granted by the OPA?

Mr. MURCHISON. Well, they are still in process of being granted. A number of new price schedules have come out during the past few months.

Senator TUNNELL. However, they did get the increase in prices.

Mr. MURCHISON. Oh, yes.

The effect upon costs and prices: Whatever the total adjustment in the wage structure may prove to be, there can be no doubt whatsoever what the effect will be on the cost of manufacturing cotton textiles. Despite the high degree of mechanization in this industry, wages are the largest item in the processing of cotton and represent for the industry as a whole 60 percent of the value added by manufacture. This proportion is about 50 percent more than for all manufacturing industries in peacetime.

Let me also emphasize that any increase in labor costs could not be absorbed by any significant increase in the productivity of labor in the near future. Let there be no illusion about that. There have been no revolutionary technological changes in this industry during the war, such as have characterized the munitions industry. We have the same machinery today that we had in 1939, but because of the excessive wear due to expanded running time and the inability to replace worn equipment, the mechanical plant in this industry is much less efficient. As is indicated in table I, labor productivity at the end of 1944, according to the Bureau of Labor Statistics was only 0.3 percent higher than in 1939 and unit labor costs, reflecting the higher wage rates and the dilution of our labor supply, but not reflecting the last wage increase, were 61.2 percent higher than in 1939.

(The table referred to is as follows:)

TABLE I.—*Productivity and unit labor cost in the cotton textile industry*

Year	Output per man-hour	Unit labor cost	Year	Output per man-hour	Unit labor cost
1939	100.0	100.0	1942	102.2	135.8
1940	102.5	103.3	1943	101.0	150.1
1941	102.7	116.2	1944	100.3	161.2

Source: Bureau of Labor Statistics, May 1945.

Mr. MURCHISON. I want to point out that the cotton-textile industry wages represent 60 percent of the value added by the manufacturer. That is, if we subtract from the total cost of making cotton goods, the cost of the raw cotton, 60 percent of those remaining costs are chargeable to wages.

Senator ELLENDER. Does that mean investment capital, wear and tear, and things of that kind equal 40 percent?

Mr. MICHL. The value added, Senator, is the difference between the value of the product minus the cost of the raw material and container. So that figure which is known as the value added and covers all expenes, 60 percent represents labor costs.

Mr. MURCHISON. So the size of that figure indicates the importance of wages in relation to prices.

Now, taking all manufacturing industry in America, that ratio of wages to value added according to the Bureau of the Census is 39.3 percent, but for cotton, it is 61.3 percent.

Senator TUNNELL. You are not reading now from your statement?

Mr. MURCHISON. No, I was just referring to figures aside from the manuscript.

Senator ELLENDER. You say for cotton it is 60 percent?

Mr. MURCHISON. For cotton goods.

Senator ELLENDER. And the other is what?

Mr. MURCHISON. Thirty-nine percent for the industry as a whole throughout the country.

Senator ELLENDER. Does the 39 percent represent the entire labor cost from the time that the ore, for example, leaves the mine until it is made into steel and from steel into the various finished products that go to the ultimate consumer?

Mr. MURCHISON. No, that is the value added to the raw material.

Senator ELLENDER. Does it take the labor cost of the steel from the blast furnace, or from the mine?

Mr. MURCHISON. That point I do not know, sir.

Mr. MICHL. The cotton mills take it when the cotton is delivered to the mills. It has nothing to do with the raising of the cotton.

Mr. MURCHISON. That is right.

Senator TUNNELL. You start with the value of the cotton at the time it is sold to the mill?

Mr. MURCHISON. Yes.

Now, in the consideration of wage increases, of course great value is attached to the possibility of increasing the productivity of labor, but in our industry we feel that the possibility for any important increase in the productivity of labor is rather scant. There has been no technological change of importance during the war, such as characterized the munitions industry. We had the same machinery that we had in 1939.

Because of the excessive wear due to the expanded running time and inability to replace worn equipment in the mechanical plants in this industry, the equipment was much less efficient than it recently has been. You see we were unable to get any new machinery during the war, except for some bottleneck equipment and repair parts.

Referring again to table I in the manuscript, labor productivity at the end of 1944, according to the Bureau of Labor Statistics, was only .3 percent higher than in 1939, and unit labor cost reflecting the higher wage rates and dilution of our labor supply but not affecting the last wage increase was 61.2 percent higher than in 1939.

That table is extremely illuminating. They are official figures. Running your years down, the output per man-hour from 1939 to 1944 shows almost no change. There was some increase in productivity in 1940, 1941, and 1942, but it dropped again in 1944.

Senator TUNNELL. How about the total production?

Mr. MURCHISON. Well that total production has also gone down in 1944 and 1945, due to scarcity of manpower.

Senator TUNNELL. No doubt profits went down also, did they not?

Mr. MURCHISON. Yes, sir, very sharply, as was indicated by the action of the OPA.

Now, look at that unit labor cost. That means the labor cost per hour of output on the average. That is again from the Bureau of

Labor Statistics. That means the labor cost per pound or per yard of cotton goods has gone up 61.2 percent since 1939.

Senator ELLENDER. There is just one question on that point I would like to ask you. A while ago you said that with 116,000 more people, or 22 percent in round figures, more labor than you had in 1939, you produced around 40 percent more yardage.

Now, Senator Tunnell asked you the question: Isn't it a fact that although the per unit cost was a little higher, yet by producing more yardage with less labor, your final costs were not any greater than they were in 1939?

Mr. MURCHISON. Of course, we have reference here to the unit cost, the cost per pound or the cost per yard. A big increase did take place, looking at the total figures as to the increase in yardage, but not so great a percentage increase in number of workers. This would appear to be rather paradoxical.

Senator ELLENDER. The number of laborers increased only around 22 percent, but your production, with only that additional amount of labor and with no technological advances, as you said, increased 40 percent.

Mr. MURCHISON. There was a sharp increase, of course, in wages during that period.

Senator TUNNELL. How about your sale price? Was there any increase in that?

Senator ELLENDER. I cannot quite get it.

Mr. MICHL. I think I can clear it up, Senator. What you have done was take the number of workers in the labor force in 1939, as compared with the big figure of 510,000 which gave you an increase of 22 percent, taking your figures. Those figures are correct, but what you did not allow was that those workers who were employed in 1939, the 394,000 were not working a full week then. The result was that in 1942, when we employed 510,000, we had increased our staff by more than 100,000, and they, together with the 394,000 were working more hours in 1942 than they had ever worked in 1939.

Senator ELLENDER. That is what made that per unit labor cost higher?

Mr. MICHL. No; that is the thing that made possible the increase in our total production. The productivity of that labor, the amount they produced in 1 hour in 1944 was only three-tenths of 1 percent higher than in 1939, but due to the increase in wage rate, plus the decrease of efficiency in the workers, due to the dilution of our labor supply, the cost of producing a given unit of cotton textiles in terms of labor cost increased 61.2 percent.

Sentor ELLENDER. I see.

Senator TUNNELL. You say there was an increase in cost of labor per unit 61.2 percent. Now, what was the increase in the sale price per unit?

Mr. MURCHISON. Well, of course, that varied tremendously, Senator. We are going to come to that table to illustrate those differences.

Senator TUNNELL. That is fine.

Mr. MURCHISON. I think we can go right straight to that now.

Sentor TUNNELL. It would be well to have that testimony.

Mr. MURCHISON. Not only have there been no changes in productivity during the war but, at the present time, there is nothing on the horizon which promises any great improvement in textile technology

in the near future. Textile machinery manufacturers were converted entirely to war production and research in textile machinery was almost entirely suspended.

The only increase in productivity in the near future must come primarily from the return of our experienced workers from war industries, better maintenance of our existing equipment, and gradual replacement of our present worn machinery. All increases in costs beyond the very narrow margins provided by these factors must be paid for with higher prices for cotton textiles.

The industry needs almost complete machinery replacement and the capacity of the machinery manufacturers is so limited, or at least is normally so limited—it may go through a phenomenal expansion in the near future—it would take the machinery manufacturers about 20 years to replace the industries' equipment. So it is essentially a slow process.

Senator TUNNELL. You do not mean by normal number of factories not now in war work?

Mr. MURCHISON. They are now making the machinery, just going through a conversion process.

Senator TUNNELL. You mean they are now in the process of making cotton textile machinery to supply as many factories as you expect to have a year from now?

Mr. MURCHISON. We hope there will be some more.

Senator TUNNELL. You mean those now in operation would require 20 years to get fixed?

Mr. MURCHISON. At the prewar rate of output, because normally, before the war, the new machinery produced each year was only about 5 percent of the existing machinery.

Senator TUNNELL. The demand was not for any more; is that right?

Mr. MURCHISON. That is right.

Senator TUNNELL. You wore them out during the war?

Mr. MURCHISON. During the war it has been run continuously.

Senator TUNNELL. Yes.

Mr. MURCHISON. Now, we come to the effect of the recent wage increases on prices as determined by the Office of Price Administration.

The Office of Price Administration, in order to make clear that the price increases were due to the labor increases, made their new price determinations in two classes, or two bands, as you will see there. The lower band represents those price increases which were due to higher cost of cotton, and higher conversion cost generally, excluding the recent wage increase.

Now, the higher band represents the price increase to those mills who had incorporated the recent wage order into their wage structure—that is, the mills were paying the 5 cents across the board and the 55-cent minimum.

Senator ELLENDER. When you say "higher wages," would you indicate to us from what period to what period? Is it from 1938 to 1941, or 1942?

Mr. MURCHISON. No, no. The increases which were authorized by the War Labor Board in June of this year.

Mr. MICHL. In February.

Mr. MURCHISON. In February of this year, the very last increase.

Senator ELLENDER. From what to what was that?

Mr. MICHL. Roughly it was from anywhere from 47½ to 50 cents minimum, 55 cents plus five cents across the board.

Senator ELLENDER. And this table reflects the additional amount?

Mr. MICHL. That is correct. Your prices had to be increased over those that prevailed a year ago, or at the time of the decision

Senator ELLENDER. I see. That is most interesting. We have been looking for evidence of that kind right along, in the light of the fact that quite a few witnesses from the departments testified that wage increases would not have any appreciable effect on the price structure.

Senator TUNNELL. I would like to know what the third column means, "Percent higher over lower band." Is that the percentage by which the prices increased?

Mr. MURCHISON. The higher band exceeds the price increases in the lower band, you see.

Senator TUNNELL. Let us get it down to something we can understand.

Mr. MURCHISON. You take the first item, carded cotton yarns, the higher band is 4.44 percent. That is the percent increase in price that was given to those mills that had raised their wages in line with War Labor Board recommendations.

Now, those mills who had declined to accept the War Labor Board recommendations are in the lower band, and they got an increase of only 2.23 percent, so that the mills in the higher band got an increase which was 99 percent greater than the mills got in the lower band.

Senator TUNNELL. That is just a percentage of the rise?

Mr. MURCHISON. That is right.

Senator TUNNELL. Do you mean that the rise was only 2.23 percent in price as compared to what it was prior to the war?

Mr. MURCHISON. No.

Senator TUNNELL. What does that 2.23 percent mean?

Mr. MURCHISON. That means the increase over the then existing price which, in the case of the carded cotton yarns, goes back to the spring of 1943.

Senator TUNNELL. Then it was as compared with 1943?

Mr. MURCHISON. That is right.

Senator TUNNELL. And the highest increase over 1943 in carded cotton yarns was 4.44 percent?

Mr. MURCHISON. That is right.

Senator ELLENDER. But this 1943 price was the price that prevailed just before the wage was changed?

Mr. MICHL. That is right.

Senator ELLENDER. So that the cotton mills were receiving from 1943 to February of this year, the price that was fixed back in 1943?

Mr. MICHL. That is right.

Senator TUNNELL. Was that because they were not making sufficient profit, or why was it that they were wanting that increase?

Mr. MURCHISON. Well, these price increases were granted by the Office of Price Administration on strict cost-accounting methods. They sent their cost accountants out to the mills in the field, and spot-checked the costs.

Senator TUNNELL. And did they take into consideration the profits being made in the business or not?

Mr. MURCHISON. Oh, yes; they took everything into consideration.

Senator TUNNELL. They took everything into consideration and allowed 4.44 percent increase as the highest addition?

Mr. MURCHISON. That is right. You see, the classifications vary greatly, Senator. The first item is carded cotton yarns. You notice that it comes to bed linens, bleached pillow tubing and the figures are very much higher. Now, that is due to two reasons:

In the first place, the labor factor is more important in that type of commodity, and, in the second place, they were in a much more disadvantageous price situation to start with than the cotton yarns, and they got a bigger increase.

Senator ELLENDER. Why should the lower band be 6.46, which represents, I understand an increase in price of bed linens, in contrast to the carded cotton yarns of 2.23 percent?

Mr. MURCHISON. It was not exclusively cotton. It is primarily cotton, but it is due to other conversion costs, mill supplies, things of that sort. It is not exclusively an increase in the cotton price.

Senator ELLENDER. Would you be good enough to tell us what the lower band increases consisted of? The price of cotton and what else?

Mr. MURCHISON. The higher band prices represent the sum of first the landed mill equivalent of July 15 parity for cotton plus a tolerance of one-fourth cent per pound.

Some conclusions of the extent of the price revisions that could be expected from the proposed rates may be drawn from table II. This table shows the price relief granted by the OPA on a variety of cotton textile products. The higher band prices represent the sum of (1) the landed mill equivalent of July 15 parity for cotton plus a tolerance of one-quarter cent per pound (2) the weighted average of current conversion costs, including the cost of the last wage increase, and (3) a margin of profit. The lower band prices were computed on the same basis, except that the weighted average of conversion costs does not include the cost of the last wage increase. It should be pointed out that the adjustments of these prices were brought about by a wage increase considerably smaller than the rates in the proposed bill.

(The table referred to is as follows:)

TABLE II.—*Revised maximum prices for certain cotton textiles*

Item	Percentage		
	Increase		Higher over lower band
	Higher band	Lower band	
Carded cotton yarns	4.44	2.23	99
Bed linens, types 180, 140, 128, 112	9.28	6.46	44
Bed linens, back-filled type	24.74	19.58	26
Bleached pillow tubing, type 128	22.75	19.66	12
Cottonades and whiperods	9.95	6.95	43
Pants coverts	9.95	6.95	43
3.60 chambray	4.975	1.975	152
3.60 shirting covert	12.67	9.86	27
All other shirting, chambray and coverts	19.73	16.31	21
Print cloth	7.19	4.06	77
Osnaburgs	8.95	6.19	45
Flannels	6.48	3.46	87
Terry products	6.7	3.2	110
Denims	7.0	4.6	57
Warp sateens, grey carded gabardines, birdseye, diaper cloth	11.8	8.13	45
Pin checks and pin stripes	11.4	9.0	27

Senator TUNNELL. You mean they were not supposed to increase their profit?

Mr. MURCHISON. No, sir; they applied the net worth formula which kept the profit factor a constant.

Senator TUNNELL. You mean constant as to total profit or constant as to the unit profit? What was the constant there?

Mr. MURCHISON. Constant as to the dollars-and-cents profit in the base period.

Mr. MICHL. It was return on net worth.

Senator TUNNELL. Net worth of what?

Mr. MICHL. Of the industry.

Senator TUNNELL. What was the net worth of the industry?

Mr. MICHL. I could not give you the figure offhand. I would be reluctant to say. It was pretty close to a billion dollars.

Senator TUNNELL. Pretty close to a billion?

Mr. MICHL. Yes.

Senator TUNNELL. Wasn't it over a billion?

Mr. MICHL. Not in the base period. It is now.

Senator TUNNELL. Base period of what years?

Mr. MICHL. Base period of 1936–39.

Senator TUNNELL. Is the machinery worn out? Why should it be worth so much more?

Mr. MURCHISON. Of course, the net worth includes much more than the machinery, Senator. It is made up partly of the relationship between the mill liabilities and assets. During the mills' prosperous period they paid off their liabilities and increased their assets, and of course, they had maintained their machinery. They were able to get replacement parts and repair parts.

Senator TUNNELL. Yes.

Senator ELLENDER. Well, there is no doubt that the cotton mills all over the country made big profits during the war, as contrasted to prewar, for the simple reason that all of their machinery ran to full capacity at all times. Isn't that true?

Mr. MURCHISON. That is right.

Senator TUNNELL. Well, they were not making such terrific profit when they had to go and ask for rises in the prices in order to keep out of bankruptcy, were they?

Mr. MURCHISON. That is exactly right, Senator. The general estimates of the cotton-mill profit have been thrown around, and they have been very misleading.

Senator SMITH. Let me ask one question more on this table here. It is not quite clear to me. I understand the lower band figures do not include the wage increases.

Mr. MURCHISON. That is right.

Senator SMITH. If that is true, how do you get as big a percentage increase in bed linens there and the pillow tubings, and so on, 19 percent plus? If it does not include the wage increases, what was the condition in that particular case that made it so much higher in this table?

Mr. MURCHISON. You are speaking of what?

Senator SMITH. The bed linens, back-filled type, 19.58 percent; bleached pillow tubing, 19.66 percent, in the lower band column, and in the higher band column, where it does not include the wages, 24.74 on the one and 22.75 on the other. If you do not include the wages

in the lower band, I am not quite clear what those items could have been that expanded that percentage so much.

Mr. MURCHISON. The ratio of wages in those end-use products, you see, becomes much higher. In the case of carded yarns, the wage would have an importance, we will say, of 20 percent. That is only a guess, or an approximation. It would have a weight of 20 percent as compared to the total value. Whereas in the case of the bed linens, which are actual sheets, the wages would have a weight much more than 50 percent.

Senator SMITH. I still am not clear. I thought in the lower band column, the wage increase was not included, and that is the reason you had these two contrasting columns.

Mr. MURCHISON. I beg your pardon. I thought you were comparing the 19.58 with 24.74.

Senator SMITH. I am comparing both.

Mr. MURCHISON. I was explaining that difference.

Senator SMITH. I do not see why an increase was allowed in the lower band column which I assume means that that increase was allowed, if that does not include the wage increase. What were the items that made up that spread there?

Mr. MURCHISON. Senator, I think the explanation there is that the various products in the industry were made at different times, and consequently in the case of bed linens, they were running badly behind at the time this price adjustment was made, and they were much worse off than the carded yarn people.

Senator SMITH. That is what I assume. This is a sort of over-all picture of the whole price structure. That is, you show here the extra allowance made to the mills that did get the increases and those that did not.

Mr. MURCHISON. This table shows the irregularity existing throughout the industry. Many mills would be making very handsome profits at a time when other mills were operating at a loss.

Senator TUNNELL. Then the second column simply means the increase was given to them to pay their bills, their old debts?

Mr. MURCHISON. In the higher band there, it is just simply saying to the mills, "If you come up to the wage increase, you get the increased price."

Senator TUNNELL. What about the second one? What would you say about that?

Mr. MURCHISON. In the case of the lower-band increase, that was partly due to the rise in cotton, you see, and they had to give an account to them under the Bankhead amendment.

Senator TUNNELL. It was partly due to that. Now, what was the rest?

Mr. MURCHISON. Then all conversion costs exclusive of wages entered into it.

Senator ELLENDER. Did all mills that made carded yarns receive the same percentage; that is, the one reflected in the higher band and the one reflected in the lower band?

Mr. MURCHISON. No; those percentages are all different there, Senator.

Senator ELLENDER. Well, a mill that qualified under the lower band, did it also qualify for the rise in the higher band, or were each treated separately?

Mr. MURCHISON. No; it would step over the lower band, you see. If it qualified for the higher price, it just ignored the lower band.

Senator ELLENDER. A mill could take either one to qualify under?

Mr. MURCHISON. That is right.

Senator TUNNELL. Was that individually, or just in two classes that that ruling was made?

Mr. MURCHISON. Well, that ruling was made applicable to practically the entire industry.

Senator TUNNELL. They just took their choice?

Mr. MURCHISON. There was an exception in the case of combed yarns. These cotton mills specialize in certain products.

In the case of these carded yarns, most of those mills would make nothing but yarns. In the case of bed linens, the same mill making bed linens might be making a profit there on fabrics. So there is a tremendous variation in the type of the different mills.

Now, gentlemen, I hope I have made that clear. The purpose of introducing that price list was just for one thing, just to show that the Office of Price Administration engaged in the process of holding the line, and was compelled, as the result of recent wage increases, to increase prices, as shown in these tables, and that is the best evidence that I know of anywhere as to the effect of wage increases on prices.

Senator ELLENDER. Have you in any place in your paper, or could you prepare for the record, a statement showing the effect on price increase of yarns and other textile materials, should the wage be increased from 55 cents, which is now in effect, to 65 cents for the first year, 70 cents for the second year, and 75 cents for the third year?

Mr. MURCHISON. We would have to assume, in order to do that, the adjustment in the upper bracket would be in the same proportion.

Senator ELLENDER. I see.

Mr. MURCHISON. But we would be glad to undertake that, Senator.

Senator ELLENDER. Well, if you will, I think it might be most helpful.

Mr. MURCHISON. It, of course, would represent a very much greater increase than those indicated here on table II.

Senator ELLENDER. I think it would be very important to show that, in view of the fact that there has been so much testimony by the proponents of the bill that this increase in wages will not show an appreciable increase in the cost of living.

Senator TUNNELL. What I am interested in, is how much increase it would be over what is now paid, not over the legal rate.

Senator ELLENDER. That is what I said, Senator, the 55-cent rate and not the legal rate.

Senator TUNNELL. Yes; but they are paying 69.2 cents now.

Mr. MURCHISON. That is an average, not the minimum.

Senator TUNNELL. I would like to know what increase it would be actually.

Mr. MURCHISON. Well, it certainly would be more than 10 cents an hour across the board for the entire pay roll, which would be practically twice as much as the recent wage increase.

Senator ELLENDER. That is for the first year?

Mr. MURCHISON. For the first year.

Senator ELLENDER. And then 10 cents an hour more for the next 2 years?

Mr. MURCHISON. That is right.

It should also be emphasized that the increase in price of cotton textile products would not be limited to the increase in the prices of cotton yarn and fabrics.

As was pointed out earlier, since the spinning of yarn and the weaving of cloth are only the first of several manufacturing operations through which cotton passes on its way to the ultimate consumer, the effect of this bill would be to increase costs at every stage of the manufacturing and distribution structure. As most of the knit goods and needles trades require the use of a large amount of labor, and since their wage structure is comparable to that of this industry, the impact of this bill would be as heavy as on this industry.

During the last year, officials of the Office of Price Administration have repeatedly expressed alarm over the trend of prices of textiles and clothing. In February, Mr. Bowles stated that

> inflation in clothing prices * * * threatens the stabilization line more seriously than any other single factor.

Mr. Ney, Deputy Administrator of Price, a month later stated that—

> the main reason for the resumption of the climb in the cost of living and the principal danger of a further rise is to be found in the textile and clothing area.

Since these warnings were issued the OPA, according to press reports, has again found it necessary, because of rising costs in the clothing industry, to postpone its long promised roll-back of clothing prices. Further increases in wage rates in this industry and in the textile finishing and fabricating industries will require a further rise in prices. With cotton clothing accounting for about 20 percent of all clothing items in the BLS Cost of Living Index, the effect of a substantial increase in the price of textiles and textile products on the cost of living is apparent. In short, the proposed bill is definitely inflationary and should be recognized as such.

Can the market absorb higher prices? As has been previously shown, the large increase in wage rates since 1939 was made possible by a market such as this industry has never known before and one which is not likely to continue much longer. There is good reason to believe that the present shortages, both domestic and foreign, will provide this industry in the immediate future with a market somewhat larger than it enjoyed in 1939. That the market will be as large as during the past 3 years we seriously doubt. We think it will fold up for a while; it is bound to.

The tremendous direct and indirect military requirements, which accounted for about 50 percent of total requirements, have already been drastically reduced. The size of the socalled "vaccuum" for cotton textiles is entirely a matter of conjecture, and the extent of military surpluses and the effects of their disposal is at present unknown.

Beyond the immediate future the situation which confronts this industry is radically different from the conditions which prevailed during the past 4 years. The reconversion of the American industrial plant to peacetime production will again unleash the competition between this industry and other domestic textiles and textile substitutes such as paper. In this competitive struggle the cotton textile industry because of its large labor requirements is already in a disadvantageous position and this bill would weaken it even more.

78595—45——25

Many of the expanded markets will shrink with the resumption of international trade, notably with the return of Indian jute and burlap. As a result of shortage of shipping facilities beginning in 1940 imports of jute and burlap were drastically reduced in the face of growing requirements, and the burden of supplying a substitute fell upon this industry.

This shortage will be eliminated as soon as shipping facilities are made available and with a widening spread between the prices of jute products and cotton textile products jute will make inroads into markets we enjoyed prior to 1939.

Hanging over the industry's international position is a dark cloud compounded of the reconversion of Great Britain's textile industry, the rise of the textile industry in Latin-America, and possible further reductions in textile tariffs under the recently extended Reciprocal Trade Agreements Act.

Already handicapped with raw-cotton costs that are more than 4 cents a pound higher than those of foreign spinners, and for which no protection exists in the present tariff law, with a wage differential already more than twice as high as our highest-cost competitor, the enactment of this bill with the proposed rates would shackle American cotton textiles in competition with imported textiles in the domestic market and remove them as an important factor in world exports.

Senator SMITH. May I ask you a question there?

That seems to imply that we have to make the workers in these mills pay the cost of maintaining the industry. Cannot we be thinking in terms of a policy that would protect our workers? I mean a revised reciprocal-trade-agreement policy in our international dealings under which we can try to raise the standards of living of our people and also encourage other countries to come up to our standards by tariff concessions where they do so. I think there is a big national policy involved in this whole picture.

Mr. MURCHISON. A tremendous national policy. As far as our industry is concerned, we are not for 1 second in opposition to the highest possible wage that can be paid; we are merely pointing out what the implications are.

Senator TUNNELL. Is this 4-cent subsidy any good at all?

Mr. MURCHISON. Well, the cotton is going out very fast, Senator.

Senator TUNNELL. What do you mean by that?

Mr. MURCHISON. We are now exporting cotton at the rate of 2,000,000 or 3,000,000 bales a year, when, for a period of several years there were practically no exports.

Senator TUNNELL. So it does make a heavy drain on the Treasury?

Mr. MURCHISON. Yes; 4 cents a pound is $20 a bale, and with 2,000,000 bales you can figure for yourself what that amounts to. It would be $40,000,000.

Senator TUNNELL. I am trying to figure out whether it has a beneficial effect on the industry, in your opinion.

Mr. MURCHISON. Well, it benefits the farmers, Senator.

Senator TUNNELL. It does benefit the farmers?

Mr. MURCHISON. It benefits the farmers because it enables that cotton to flow out, otherwise it would pile up here. It could not possibly compete with Brazilian cotton without parity prices.

Senator TUNNELL. Does the farmer get the full benefit of that 4 cents?

Mr. MURCHISON. I am sure he does. As a matter of fact, cotton now is above parity slightly.

Senator TUNNELL. I have been hearing people talk about cotton goods during the period of the war. They said they could not get them at all. Now, I was interested in your statement that you feared that the market was not going to be so greatly increased.

Mr. MURCHISON. Well, we must distinguish there between raw cotton and cotton goods. Now, the limiting factor on cotton goods during the war has been only the machinery, the machinery and manpower. There has been, on the other hand, a very large surplus of raw cotton prior to the war, a very burdensome surplus.

Senator TUNNELL. The Government owned several million bales.

Mr. MURCHISON. Several million bales. Our reference to the markets had to do with the cotton products, cotton goods.

Senator TUNNELL. Well, if people can get them I still think they would want cotton goods.

Mr. MURCHISON. Yes, sir; and we will do all we can to see that people get them. I think most of the shortages we now see will have disappeared in January or February.

Senator TUNNELL. The profits were 50 percent at least from Government bought articles, I take it, from your statement.

Mr. MURCHISON. Yes; that is right. The Government, directly or indirectly, for military purposes, was taking at least 50 percent.

Senator TUNNELL. That is what I thought you said.

Mr. MURCHISON. Fixing of occupational minimum rates: Our objections to this bill arise not only from our deep concern over the inflationary pressures it will exert on our cost and price structure, and the adverse effect it will surely have on the competitive position of, and employment in, this industry. We are also opposed to it because it grants too much authority to the industry committee by permitting them to recommend minimum wage rates for interrelated job classifications in order to maintain "reasonable" wage differentials within the industry. More specifically, we are opposed to this additional grant of power to the industry committee because—

1. It completely distorts the purpose and intent of the Fair Labor Standards Act.

2. It gives the industry committees duties which they could not intelligently and efficiently administer.

3. It will introduce into the wage structure a high degree of rigidity which, in practice, would be impossible to change when such changes are made necessary by a developing technology.

4. It is unnecessary because increases in the minimum wage for unskilled workers automatically force increases in wage rates above the minimum.

Senator ELLENDER. Exactly how far can industry advisory committees go?

Mr. MURCHISON. Oh, all the way up to the top of the wage structure.

Senator ELLENDER. Is it your understanding that these advisory committees have the right to give the same rate of increase to those in the higher brackets as is sought to be done in the bill now under consideration?

Mr. MURCHISON. Oh, yes.

Senator ELLENDER. There is no limitation?

Mr. MURCHISON. No limitation. Senator, as we look at it, the bill is greatly misunderstood.

Senator ELLENDER. You mean by some.

Mr. MURCHISON. Yes. It is commonly thought of as being a minimum wage bill. We have been discussing it as a minimum wage bill for the last few months, but, as a matter of fact, the more important implication is it is not primarily a minimum wage bill, it is primarily a bill for the purpose of placing under the jurisdiction of the Fair Labor Standards Act the entire wage structure of the whole economic system, from the bottom right up to the top. It is that feature of the act which I would like to discuss now.

Purpose of the act: The purpose of the Fair Labor Standards Act is to place a floor under the wage structure and a ceiling over hours. It was recognized by Congress that competition for jobs was most severe among the workers in the unskilled group and that in hard times their wages recede to levels which it considered undesirable. Accordingly, it was for this group that Congress through this act undertook to establish a minimum standard of living necessary for health, efficiency, and general well-being. It was frankly minimum wage legislation and nothing more, and was not intended to determine or influence the wage of all workers in industries subject to the act because Congress recognized it could not legislate wisely on such details even if it had the desire to do so.

This bill completely distorts the purpose, intent, and effect of the law. Under the guise of maintaining reasonable wage differentials between the minimum wage for unskilled workers and rates for interrelated job classifications, it places the entire wage structure of this industry under the jurisdiction of industry committees and, through them, under the control of the Government. If this provision of the bill is enacted into law the Fair Labor Standards Act ceases to be a minimum wage law to fix the wages of all workers employed in manufacturing industries. Such drastic and comprehensive wage fixing has never been undertaken before, and has no place in what purports to be minimum wage legislation.

But even if it were the desire of the Congress to extend the power of Government over the wage structure of an industry, we submit, on the basis of experience, that the mechanism of the industry committee is totally inadequate for the task and imposes upon the committee responsibilities which they could not efficiently and intelligently exercise.

Senator ELLENDER. You feel better results in this field could be arrived at by collective bargaining with the organized workers?

Mr. MURCHISON. Exactly. Our recommendation is that the devices which management and labor use should be used in those upper brackets.

Senator ELLENPER. That is what I mean.

Senator TUNNELL. Is the system of leaving it to a settlement between the employer and employee working out very satisfactorily now?

Mr. MURCHISON. Well, it is hard to use the word "satisfactorily". I would say, over the long run, yes.

Senator TUNNELL. We hear a good deal of discussion of strikes, walkouts, and so on, at this time.

Mr. MURCHISON. That is true.

Senator TUNNELL. Do you think that is an indication of the desirability of placing them all in the same position?

Mr. MURCHISON. Senator, the strikes we have always had. They are a commonly accepted method.

Senator TUNNELL. You think they are a good deal like fleas?

Mr. MURCHISON. Well, they can be pretty good sized fleas sometimes. I would not want to treat them as casually as that, but I do think that the strike as a device would certainly be preferable to an arrangement which sets up a system of fascism under the Government.

Senator TUNNELL. I would like for you to tell us what provision in this bill changes the whole outlook. Such drastic and comprehensive wage fixing has never been undertaken before. Now, tell us what there is in this bill that warrants your statement to that effect?

Mr. MURCHISON. The bill specifically authorizes the industry committes to establish wages in all the interrelated job classifications, and of course under the administration of the act it would be necessary for the committees to establish the job classifications.

Senator ELLENDER. In all industries?

Mr. MURCHISON. In all industries, to maintain the differentials that would have to go right up to the top of the wage structure. I do not think organized labor would relish that any more than management.

Senator TUNNELL. You mean this bill, if it becomes a law, would authorize the governmental agency to fix anything more than the minimum hourly wage?

Mr. MURCHISON. Oh, yes, sir.

Senator TUNNELL. In what way?

Mr. MURCHISON. All the way up to the top.

Senator TUNNELL. They would fix all wages?

Mr. MURCHISON. The industry committee would first determine the minimum wage and then it would go all the way up to the top in that industry, to establish all the differentials.

Senator TUNNELL. According to your theory, the Wage and Hour Division, or its committees, would go all the way to the maximum wage?

Mr. MURCHISON. That is right.

Senator TUNNELL. And tell what you could pay at each stage?

Mr. MURCHISON. That is right. In order to do that, Senator, they would have to classify the jobs as they went along, because from one factory to another the nomenclature of the jobs may vary. A job will be called something in one factory, it will have a slightly different meaning, a little different work load, and in another factory it would be something different. So, the industry committees would have to standardize the jobs, standardize the work loads, determine all about the occupational differences all the way up to the top. You would have the entire wage structure under the control of the industry committees.

Senator TUNNELL. Your objection is to the fixing of anything except the minimum?

Mr. MURCHISON. That is right.

Senator TUNNELL. Do you object to the minimum?

Mr. MURCHISON. The 65-cent minimum?

Senator TUNNELL. Yes.

Mr. MURCHISON. Well, we pointed out, Senator, that there would be certainly a serious repercussion in the price level. It comes down to

a national policy. If the Government wants a general increase in the cost of living, we are perfectly willing to go along. That is what I mean, we are certain to find out what it means.

Senator TUNNELL. Don't you say then you do object to the 65-cent minimum?

Mr. MURCHISON. I would not want to say that, because it would not be correct.

Senator TUNNELL. Then, you do not object to it?

Mr. MURCHISON. Industry, as a matter of fact, would itself go to the 65-cents as rapidly as it could.

Senator TUNNELL. You, as a matter of fact, do not object to fixing the 65 cents an hour?

Mr. MURCHISON. I do not object to them fixing the 65 cents an hour as such, absolutely not. It is only the procedure, the timing that we object to.

Senator TUNNELL. And not its effect then?

Mr. MURCHISON. Well, we view with some alarm a Nation-wide wage policy which would raise generally the cost of living and so vitiate the benefits of the wage increases. That is all that could happen.

Senator TUNNELL. Do you object to raising the cost of living of the underpaid?

Mr. MURCHISON. His cost of living?

Senator TUNNELL. Yes.

Mr. MURCHISON. We certainly do.

Senator TUNNELL. Those who are getting less than what it takes to support them?

Mr. MURCHISON. We do not object to raising the wages of the underpaid. We certainly object to raising their cost of living.

Senator TUNNELL. Do you mean if you pay him more wages he would not spend more for living if he is underpaid? "Underpaid", as I mean it, is where he is not getting enough to buy the necessities of life.

Mr. MURCHISON. Well, it is a matter of proportions.

Senator TUNNELL. What do you mean by a matter of proportions? Do you mean the proportion who die from it, or what are you saying?

Mr. MURCHISON. No, not at all, Senator. I am not objecting to correcting any underpaid situation that exists. That is not the point.

Senator TUNNELL. Let me ask you this: In your opinion, is there anybody getting less than 65 cents an hour who is not underpaid?

Mr. MURCHISON. No, I would not say that necessarily, Senator.

Senator TUNNELL. Well, what do you say?

Mr. MURCHISON. I would say whether he is underpaid or not depends upon his efficiency, upon his contribution to the national product.

Senator TUNNELL. Does his contribution to the national product have anything to do with his necessities? Does not a person who does not work at all eat fairly well?

Mr. MURCHISON. I think if he is unable to contribute to the national product, then what he gets is something else besides wages. Wages are payment for work performed.

Senator TUNNELL. I understand, but when you take a person with an average family of four, himself, his wife, and two children, if he is not getting enough to support that famliy so that they get the

actual necessities, then he is certainly underpaid. For instance, we had a witness here the other day who said she was not able to have her child's teeth fixed because there was not enough calcium in the teeth. I believe she said they could not fix them because the child had not had the proper food. Now, then, do you think that indicates an underpaid condition?

Mr. MURCHISON. Well, it might very well, Senator; it might, very well. Of course, I do not think the calcium would have any relationship to pay, because many very rich people haven't sense enough to eat calcium in their food.

Senator SMITH. May I ask the witness this question?

You said wages paid for something produced. If a wage was paid for what is actually produced, then if that person needed anything more that would be a matter of philanthropy, a Government dole, or what have you. You have to offset that wage with production or else your whole economy goes to pieces.

Mr. MURCHISON. Wages cannot be paid from anything except the national product.

Senator SMITH. If it goes beyond that, then it is Government dole, or Government aid, or something else.

Mr. MURCHISON. Yes.

Senator SMITH. It has no relation to what it costs to sustain a family. We want a fellow to get a wage to sustain a family, but unless he produces for that he is then, to a certain extent, on Government charity.

Mr. MURCHISON. I do not see how you can escape it.

Senator TUNNELL. Well, your idea is we should get entirely away from the actual necessities and figure on what he produces. Then, should we have a percentage of it, or not, if you go on that theory?

Mr. MURCHISON. If we are thinking strictly of wages I think we should think of wages in relation to production. If we are thinking of the well-being, the necessities of the people not taken care of by wages, then that is something else again. Of course, those necessities should be taken care of.

Senator TUNNELL. Do you think they are?

Mr. MURCHISON. Well, for the most part. I think there are plenty of people who require help, of course, and our whole system of unemployment insurance, old-age insurance, is set up for that, which is quite proper.

Senator TUNNELL. Your idea is this discrepancy should be taken care of by certain eleemosynary institutions?

Mr. MURCHISON. No; I think the right theory of a minimum wage is to take care of the minimum subsistence requirements.

Senator TUNNELL. Now, then, a while ago I asked you something about the profits of this industry You have gone far enough, it seems to me, to be able to give us some idea. You said that the reports as to profits were misleading. Have you any facts to show what the profits have been in this industry?

Mr. MURCHISON. We have only sample facts. There are no complete reports.

Senator TUNNELL. Samples of what? Of the very successful or unsuccessful?

Mr. MURCHISON. Those mills that make public their reports. Many of them do.

Senator TUNNELL. How do you know that the figures here are wrong if you do not know what are right?

Mr. MURCHISON. Well, because we know that the Office of Price Administration, through its own field service, has gone to the representative mills in the various groups and has come back to Washington and reported the necessity of price increases in order to protect the mills from loss.

Senator TUNNELL. Then, you are really relying on the OPA for your figures.?

Mr. MURCHISON. I think the OPA evidence with respect to the last price changes is very conclusive. During the early years of the war, 1941 and 1942, I would say the profits of the entire industry were very good.

Senator TUNNELL. How about 1936?

Mr. MURCHISON. Very bad.

Senator TUNNELL. How much were the profits in 1936 in the textile industry?

Mr. MURCHISON. Negligible. Mr. Michl, do you remember?

Mr. MICHL. I will put it this way: 1936 was about the first year since 1926 that the industry operated on a profitable basis. In 1937, it was also a profitable year for three-fourths of the year. In 1938 we sustained a deficit. In 1939 the industry again made a profit. In 1940, 1941, and 1942 the profits increased before taxes. Until these price increases were granted which we read off a moment ago, the rate of profit at the end of the year had declined approximately 50 percent below that which prevailed at the beginning of the year.

Senator TUNNELL. What year was that?

Mr. MICHL. 1945.

Senator TUNNELL. Now, you said a while ago that the amount of money invested in the textile industry was probably a billion dollars. In 1936–39, before taxes, I see the profits are listed as $38,000,000. That was not a heavy percentage on a billion.

Mr. MURCHISON. A very, very low percentage.

Senator TUNNELL. It is a little less than 4 percent.

Senator ELLENDER. 3.8 percent.

Senator TUNNELL. Yes, 3.8 percent. In 1939, it was listed as $38,000,000. In 1940, it was $71,500,000. Now, that was before the war.

Mr. MURCHISON. And that was before price ceilings. The profits were very satisfactory, but they were higher than that in 1941 and 1942.

Senator TUNNELL. I know. I am going to read them to you. In 1941 they were $214,000,000. That is 21 percent and over. In 1942, they were $378,000,000.

Senator SMITH. Wasn't that before taxes?

Senator TUNNELL. Yes.

Senator SMITH. That was during the step-up for war production, I think. Then, the taxes, of course, took away the profit from the industry.

Senator TUNNELL. They had started before 1941. They were then very satisfactory, so this gentleman said. In 1942 they were $378,000,000, and in 1943 they were $350,000,000; in 1944 they were $340,000,000. It is more than that in percentage over what it had been because you had gone from less than $40,000,000 to $340,000,000—so it is about 800 percent.

Mr. MURCHISON. Senator, those figures which you refer to, the ones that have been thrown around—those figures represent an assemblage of profit from an industry that has no relationship to the industry of 1936–39, with wool rayon and all the new developments. A lot of the mills in 1936 and 1939 did not have any finishing plants; they did not do their own converting operations, so those figures include the assumption of new functions and processing of new fibers, the development of many new fabrics, and all the way to the end uses, resulting in an integration process which was not in existence in 1936–39. So, for the purpose of making a fair comparison, you would have to compare the profits of this war period with the profits of the same mills doing the same things, making the same products in 1936–39, and then you would get a quite different story.

Senator TUNNELL. Well, I asked you if you have a statement as to the amount of investment, and you said you did not, except by examples.

Mr. MURCHISON. Well, now, the investment as it was just before the war was variously estimated at billion to a billion and a half. You cannot get it exactly, Senator, because the industry was going through a long period of liquidation, beginning in 1923 when the industry had 34,000,000-plus spindles which were cut down to about 24,000,000 spindles at the beginning of this war and which at the present time is down to about 23,000,000 spindles.

Senator TUNNELL. Now, all of these profits I have referred to were before taxes.

Mr. MURCHISON. Before taxes and include functions and products which had been assumed by the industry. You see, when you speak of the industry it is such a general term that it includes everything that has to do with textiles. You do not get a fair comparison.

Senator TUNNELL. Don't you think it might include wages which should have been paid the employees?

Mr. MURCHISON. Well, the wages went up very sharply, Senator.

Senator TUNNELL. What percentage?

Mr. MURCHISON. As we pointed out, 80 percent.

Senator TUNNELL. But profits went up about 800 percent.

Mr. MURCHISON. Well, of course that would have been totally impossible.

Senator TUNNELL. Well, you would have thought it was impossible to get eight times as much profit, too, would you not?

Mr. MURCHISON. Senator, that greater profit is not attributable to each and every mill. You are speaking of a rate of profit there which applies to an entire group, which is totally different from this group which existed in 1936–39. It is an unfair comparison.

Senator TUNNELL. If that is true it would mean some of them made many times more than that and some of them much less.

Mr. MURCHISON. You are talking about a very much more variegated group now than the group in 1939. For example, in 1939 there was a mill making nothing but gray goods. Well, in 1942, it was doing its own finishing, its own converting, making its own end-use products, it was just a different organization entirely. Its functions spread over a much greater area. Yet the people who got those figures up would take this mill that is doing two, three and four times the work in 1942 and 1943, with much bigger functions, and you take

the profits involved and compare them to the profits back in 1939, with just a little gray goods mill, and say, "Just look how the profits have gone up." It is like comparing the Ford Motor Co. in 1939 with the Ford Motor Co. in 1914. It simply is not a scientific procedure for measuring profits in industry.

Senator TUNNELL. In 1941, which was the year when our war began, on December 8, your profits were $214,000,000 on an estimated capitalization of a billion, or 20 percent.

Mr. MICHAEL. As a matter of fact, Senator, as far as the war was concerned, it began to exert its influence in this industry as early as 1940.

Mr. MURCHISON. Even in 1939.

Senator SMITH. We were selling cloth to the British.

Senator TUNNELL. Yes, and we had a job getting it there, too. We had to arm the ships, and so on, and finally our ships were sunk when they were attempting to carry those things.

Mr. MURCHISON. Again, Senator, I think it is only fair to point out in this connection that we have got an excess-profits tax that goes up to the 95 percent bracket.

Senator TUNNELL. Yes, but you would not be counting on that if you were paying it in wages.

Mr. MURCHISON. These funds are absolutely essential for the financing of the war.

Senator TUNNELL. Well, it works out very well that way, but I am talking from the standpoint of what you can afford to pay.

Has any section of the cotton-textile industry granted the 65-cent minimum?

Mr. MURCHISON. Yes, sir.

Senator TUNNELL. What one?

Mr. MURCHISON. I understand that contracts were made in Fall River and New Bedford, I think yesterday, granting the 65-cent minimum, which was arrived at through an agreement between management and labor.

Senator TUNNELL. Do they make so much more profit than others?

Mr. MURCHISON. Well, I should not think so, but I do not know, Senator. I do not have the profit figures.

Senator TUNNELL. Is your Cotton Textile Institute against the 65-cent minimum?

Mr. MURCHISON. As a minimum wage or as a statutory requirement?

Senator TUNNELL. As a statutory minimum wage.

Mr. MURCHISON. Well, we feel that it would be an unwise national policy to have that as a statutory requirement.

Senator TUNNELL. Well, you have a statutory minimum requirement now, don't you? So it is not on principle that you are objecting.

Mr. MURCHISON. No, not on principle.

Senator TUNNELL. What is it on?

Mr. MURCHISON. It is on the practical situation as it exists today. You see, right now, Senator, we are starting on the top point of price increases and wage increases brought about by the war.

Senator TUNNELL. I think there is something to what you are saying.

Mr. MURCHISON. As compared to the base period, we are in a distinctly unfair condition at the moment. Now, to use this top peak which we are standing on, which few of us hardly dare to hope to

maintain, to use that as a springboard to go still higher in the air on a Nation-wide basis, simply would mean the United States Government would be, frankly, not only approving the theory of inflation but actually implementing it.

Senator TUNNELL. You think this fear of inflation would be considered by the National Legislature to a greater extent than the fear of starvation?

Mr. MURCHISON. I do not think the two are related. I think we might move closer to starvation by unwise legislation than removing it.

Senator TUNNELL. You believe this unwise legislation might endanger their lives?

Mr. MURCHISON. If it adds further impetus to the inflationary movement we know what the consequences will be. We would have bread lines the longest we have ever had in this country.

Senator TUNNELL. I should be mighty glad to have you hear what was discussed before us in the last week or two, the situation of poverty-stricken people who were getting, say, 40 cents an hour and who could not have glasses for their children, who could not have the proper food for their family, who could not live in decent homes, who could not pay the rent or have places where their children could sleep in separate rooms—all of those things. I would like to hear your ideas as to that situation, but maybe that is not what you are prepared on.

Senator SMITH. May I interject a question there, Mr. Chairman?

Senator TUNNELL. Yes; go ahead.

Senator SMITH. One of the leaders in the textile industry in my State of New Jersey—I will not mention his name—you would know him if I did—said to me recently he favored a floor such as the 65-cent minimum, because he was convinced from his own experience that where he could bring his workers up to a place where they could live decently, have plenty of food, he had higher productivity from the worker. That interests me a lot. Will not a fair minimum wage really increase the productivity, or at least bring a man up to his normal production, while you would get less than normal production if he lives under substandard conditions?

Mr. MURCHISON. I think, as you put the question, Senator, I could not find a flaw in it, but I feel full employment right now is more important as a safeguard against the hardship which you spoke of a moment ago, Senator, and we should struggle for it and then struggle with the things which really create high wages, that is, increase in productivity, increase in efficiency, bigger markets. There is no limit to which wages can go under the right kind of economic system. We cannot legislate a greater total of wages for the American people, or the people of any country, because wages must come from national product, and you cannot increase that total by legislation, but you can, by legislation, do the things which are wise, which will stimulate the economic system, which will make a bigger national product, and then the wages will go up. That should be the ambition of every worker, and every employer, to keep the wage scale going up and up endlessly.

Senator ELLENDER. Well, Senator Smith's question argues the point that by paying more wages you have a more efficient worker, but the facts which you have produced here during the course of your remarks do not justify that. It certainly shows that by increasing the wage level, you must, at the same time, increase the price of the goods you sell. If such a course is pursued the man who

will receive 65 cents per hour in the future may be in the same position as the man now receiving 50 cents, because of this increased cost.

As I attempted to point out the other day, I would be the last man on earth to try and do anything to lower our standard of living. I want to raise it, but I cannot, for the life of me, see how the standard of living is affected if you can go to a store today and buy for $5 what cost you $8 6 months ago. If I can buy the same thing for $3 less that certainly should not affect my standard of living. I believe if we can maintain for labor the basic hourly wages that obtained during the war and forget about the 30 percent, I know labor and everybody else would be better off. We might be in a position to hold down the cost of living.

Senator SMITH. Might I ask you this question in that connection? Isn't it possible, if we can steam up production, if we can keep the prices down because a larger production results in a lesser unit cost, and help control inflation by every effort to steam up production and following up your thought that you had a moment ago, if we do not try to push this too fast so we will not throw out marginal industries, that industry will have a chance to thrive and ultimately lead to a raising of the wage level?

Mr. MURCHISON. I think the basic condition there is to have an increase of production.

Senator SMITH. I think production is the whole thing. If you do not have production, then the only thing you have left is inflation.

Senator TUNNELL. I will just say right now, as far as I am concerned, as one member of the committee, I do not want to see the industry pay more than it can pay, but when I see profits of more than 100 percent made in 4 years on the estimated capital stock I do not believe you are pursuing the right course.

Senator SMITH. I cannot get away from the fact, Mr. Chairman, that this brings us into abnormal war conditions. I do not see how you can relate that to what the normal situation would be.

Mr. MURCHISON. Three years after this war is over, the industry may be wallowing in the throes of insolvency practically.

Senator TUNNELL. I never believed in staying home because I thought there was a thundershower coming up.

Senator ELLENDER. Mr. Chairman, in respect to profits—I am almost ashamed to admit this—I have a farm in south Louisiana and my profits in some years since the war have been greater than my entire gross receipts before the war. I do not expect those conditions to exist after the war. If I thought they would I would resign my seat in the Senate tomorrow and go to farming. I know that all of the profits that you have been talking about came into being as a result of the war; there is no doubt about that.

Mr. MURCHISON. Surely.

Senator ELLENDER. Now, in respect to these enormous profits, I do not know how true it is, but I understand the output of some mills was purchased by concerns not in the clothing business but concerns that bought them and dyed them and made other minor changes and sold them at prices to suit themselves. Am I right in that, or am I wrong?

Mr. MURCHISON. As a matter of act, the prices of textile fabrics have gone up very slightly during the war. The big increases in clothing field have taken placed beyond the mill level.

Senator ELLENDER. That is what I have in mind. After they left the mill something was added to the material and the prices fluctuated upward.

I was out hunting last winter near the coast in my State and I stopped at a little country store. Cotton goods that I myself purchased for 7 or 8 cents a yard several years ago were up to 30 cents a yard.

Mr. MURCHISON. At the retail store?

Senator ELLENDER. At the retail store, exactly.

Senator TUNNELL. That is the black market.

Senator ELLENDER. No, it was not a black market. It was done openly. Take dress goods, and all these ladies can tell you as to the extent to which dress goods have increased. One could buy a cotton dress in the past for $2.98, and that same dress today costs about $10 or maybe more. Maybe the Government has not been able to get after the chiselers.

Senator TUNNELL. That assumes that the mills were black markets, and I do not think they were.

Mr. MURCHISON. Absolutely impossible.

Senator TUNNELL. Our opinion here is that they were not, but we were told in one hearing that they deliberately placed more machines under the control of one weaver, I believe it was, than he could handle, in order to get condemned goods for sale on the black market.

Mr. MURCHISON. Well, that was totally impossible, because the Office of Price Administration had the same regulations on seconds as it did on firsts.

Senator TUNNELL. Apparently, they did not. There was no contradiction of that, that they were deliberately putting the cloth in such condition that it would not go under the OPA regulations and then selling it on the black market at a higher price.

Mr. MURCHISON. No, we could not, under any conditions, escape the OPA regulations. If it is just a racket that is another matter.

Senator TUNNELL. I happen to be in the chicken business, and I know something of that.

Senator ELLENDER. To go back to your statement that you do not object to the 65-cent minimum, you, of course, assume that the prices of the commodities will be raised in proportion?

Mr. MURCHISON. Absolutely.

Senator ELLENDER. Suppose this bill were enacted into law and put into effect within the 3-year limit that is stated in the bill, and suppose further that you were not able to increase the prices of your cotton goods commensurate with the additional labor cost you would have to pay, what would become of the industry?

Mr. MURCHISON. The industry would move to Brazil and China.

Senator ELLENDER. I thought so, or else close up.

Senator TUNNELL. You are not going to move to Brazil and China so long as you are making $340,000,000 a year.

Mr. MURCHISON. Well, Senator, in connection with that, may I point out the Chinese have just bought some mills, mills which you are operating right here in the United States and which would be moved to China right now, that would be over there, if it was not for a prohibition against their exports that now exist.

Senator TUNNELL. I know, but we would make some more.

Mr. MURCHISON. However much can be made here, you can make 10 times as much in South America or in China.

Senator TUNNELL. Well, that would have to be shown to me, that you could make 10 times as much in China.

Mr. MURCHISON. Absolutely. There is no limit to what could be made, and practically no burdensome tax structure along with it.

Senator TUNNELL. There is a selling problem, though.

Mr. MURCHISON. Every yard they can make is just grabbed for in every market of the world. We are importing goods into this country from Mexico that are half as good as our goods at four times the price.

Senator TUNNELL. That does not look very businesslike.

Senator ELLENDER. You have a market for it.

Mr. MURCHISON. The American cotton mills are not doing it, but I am just telling, sir.

Senator TUNNELL. That is black market—whatever you call it.

Mr. MURCHISON. Our industry, with 23,000,000 spindles, produces more cotton goods and produced more cotton goods during the war than the whole United Nations, with 80,000,000 spindles.

Senator TUNNELL. I believe that.

Mr. MURCHISON. We did it better, we did it cheaper, we were there with the goods.

The profits you speak of are an absolutely unfair representation, because as I pointed out it has got nothing to do with the realities at all on a comparable basis.

Senator ELLENDER. At that point, cannot you place in the record, aside from what you have in your statement, what you term comparable profits? I can well understand that a mill that was making ginghams, or cloth of that kind, say in 1939, in contrast with what they manufactured in 1945, if they made the same material, that profit under OPA regulations could not have been as much as the Senator points out. It would be impossible.

Mr. MURCHISON. Take individual mills producing gray goods in 1939, those gray goods up until recent price changes were actually made at a loss. What profit was made was made through the finishing operations.

Senator TUNNELL. You people saying there cannot be any such profit reminds me of the fellow who looked up at the camel and said, "There ain't no such animal."

Mr. MICHL. Could I recite these figures to the Senator?

Senator ELLENDER. Surely.

Mr. MICHL. With regard to these high profits that you have been mentioning, Senator, the cotton textile industry, on the basis of experience, is more impressed by its profits record between 1926 and 1936.

Senator TUNNELL. That is the period when we were just told that they did not even make expenses.

Mr. MICHL. That is correct. That is the condition that we see ahead when the postwar vacuum has been filled. I would like to point out in that connection that in the 10 years prior to 1936, in only 3 years of that 10-year period did the number of cotton mills reporting a profit exceed the number reporting a deficit. In 7 of the 10 years more companies reported deficits than reported profits.

Senator TUNNELL. They are not reporting anything now, apparently. You people cannot give us the figures.

Now, in the period from 1929 on up to in the thirties the textile industry was not the only one that was in distress.

Mr. MURCHISON. That is right, and that followed the period of inflation, Senator, in 1929.

Senator TUNNELL. I do not know what you think, but I am hopeful enough and have enough confidence in the situation in the world today and particularly in the United States, to believe that we are going to have a period of prosperity.

Mr. MURCHISON. Well, we certainly hope for that, and we are going to work for it if we possibly can.

Senator TUNNELL. I believe there will be a period of prosperity in the textile industry. I think that they will be bidding for labor in the textile industry.

Mr. MURCHISON. I certainly hope that prediction comes true, Senator.

Senator TUNNELL. I hope I am right, anyway. You cannot pay out what you do not make; there is not any question about, and I hope you make a profit. I do not care if you made this amount, but I do think when you make this amount you should pay living wages to your employees.

Mr. MURCHISON. That is absolutely right.

Senator TUNNELL. That is my theory. You may finish your statement, Mr. Murchison.

Mr. MURCHISON. This industry comprises more than 800 companies with 1,200 plants. It may be said without exaggeration that the only characteristic these companies have in common is that for census purposes they are classified as cotton mills.

As to location they are dispersed over an area extending from Maine to Texas, with a few units in the Middle West and California.

The companies vary greatly in size, many units having fewer than 10,000 spindles with no weaving or finishing equipment, while many other units have 100,000 or more spindles and are integrated through the weaving and finishing processes.

There is likewise a similar variation in the age, quality, and automaticity of the machinery in these units.

But perhaps the greatest variations among these companies is in the products which they manufacture. Many mills are engaged wholly in the manufacture of coarse carded yarns; others specialize in carded yarns of finer count and quality; others are engaged exclusively on combed yarns, with further specialization as to count and quality. There is still another group of mills which produce only print cloths; others which produce only demin; others which make nothing but duck; others which specialize in draperies; still others that turn out nothing but mattress tickings; others engaged in manufacturing nothing except voiles or fine broadcloths or marquisettes, or sheets or towels, and so on ad infinitum.

The variations in products go even beyond this general description, because an increasing number of mills are blending cotton with other fibers, natural and synthetic, thus eliminating even the raw material as a common characteristic of the industry.

All these differences and others not mentioned, bear upon the responsibility of the industry committee to recommend minima for interrelated job classifications and present them with tremendous difficulties of measurement that are both quantitative and qualitative in character. The variations in machinery, products, raw materials, work loads, degree to which the division of labor is carried, differences

in managerial practices, makes for a complete lack of standardization of tasks, and even of job titles.

With such a bewildering variety of conditions the establishment of a sound wage structure is beyond the capacity of individuals even with a detailed and intimate knowledge of the industry. It is possible, of course, through scientific job evaluation to work out for an individual plant a sound and well-balanced wage structure, but not for an entire industry as large and as heterogeneous as the cotton-textile industry.

The attempt to establish occupational minima would not be substantially simplified if the minima were restricted to broad classifications of unskilled, semiskilled and skilled workers in the industry. It would still be necessary to determine what degree of skill would justify particular tasks to be classed in one of the three divisions, and then to examine each task to determine how much skill it requires.

Background of industry committees: The intimate knowledge of the industry that would be required for such an evaluation is, in our judgment, beyond the capacity of the tripartite industry committee. Differences of opinion between management and labor representatives would be resolved by the public members, who, if former industry committees can serve as a criterion, would have neither the knowledge of the industry or of job evaluation, to reach judgments fair to both industry and labor and in accordance with the criteria laid down by Congress. Table III following shows the occupational background of public members of all industry committees appointed under the act. I submit that the background of the majority of the public members is not such as would warrant the hope that they would possess the knowledge to determine such fine details as appropriate occupational minima for the complicated structure of American industry.

(The table referred to is as follows:)

TABLE III.—*Occupational background of public members*

Background	Number of committee members	Number of committee assignments	Percentage of committee assignments
Academic:			
Professors of economics	81	204	48.6
Professors of sociology	6	6	1.4
Professors of political science	7	9	2.1
Professors of law	18	46	10.5
Other educators	28	49	11.2
Nonacademic:			
Social workers	8	11	2.4
Lawyers	18	24	5.5
Business executives	13	16	3.7
Editors and publishers	11	20	4.6
Clergymen	8	8	1.7
Consumer organizations	6	12	2.7
Industrial organizations [1]	8	14	3.2
Labor mediators	4	17	3.9
Industrial counselors	2	2	.5
Total	218	438	100.00

[1] Includes engineers, chemists, and representatives of farm organizations.

Source: Minimum Wage Fixing under the U. S. Fair Labor Standards Act, International Labour Office, Montreal, 1945.

Mr. MURCHISON. The result of the industry committee procedure would be the establishment of uniform wage rates in this industry and the establishment of a wage structure divorced from the realities of the industry, and inequitable both for particular mills and to the individual worker.

The difficulties indicated above would not end with the establishment of occupational minima. Changes are constantly taking place in the industry and they will probably occur with increasing rapidity in the future—machinery changes, product changes, task-lay-out changes, increasing or decreasing the content of a particular job. With the hierarchy of minimum wages fixed by law it will be impossible in practice to make adjustments in the rates for particular jobs. The result would be a frozen wage structure unresponsive to the changing technology of the industry.

Power is unnecessary: We are opposed to this grant of power to the industry committee because we believe it is as unncessary as it is undesirable and unworkable. It is a well known fact to all who have had any experience in industry that an increase in the basic minimum automatically forces some readjustment of the remainder of the wage structure. Such action is necessary to plant efficiency, and the maintenance of employee morale. Mr. William Davis former Chairman of the War Labor Board and Director of Economic Stabilization, testifying before a subcommittee of this committee said:

> I would like to say something about what happens when you do raise the wage, to 60 cents as a minimum wage in a plant. If you have got, as you are likely to have, and as we have found in these low level wage plants, very little difference between the minimum skilled worker and the next one above him, the semiskilled, you may have a plant where the minimum wage has been 30 cents * * * and then there is another group which gets 32½ cents, and another group 37½, and so forth.
>
> Now, when you put a 40-cent minimum in there, they have to lift some groups above 40 cents * * * You have to make adjustments * * * in the closely interrelated job classifications so as to maintain some part of the wage differential between different occupations.
>
> So when you say you lift your minimum wage to 60 cents or 65 cents, it means, expecially if you go as high as 65 cents, that you have to do a lot of wage raising above 65 cents to maintain some sort of differentials. It would mean a very considerable lifting of the general level of wages in America.

Mr. A. F. Hinrichs, Acting Commissioner of the Bureau of Labor Statistics, who followed Mr. Davis before the committee testified to the same effect.

> I am sure that the experience we had under minimum wage legislation, in which some people interpreted the law literally and came up to 32½ cents and 35 cents and 37½ cents or 40 cents, but did not change anybody's rates above the minimum established at the moment, that the situation which was brought about under legal compulsion would not be brought about by any man's choice, if he was in his right mind. No man is going to change the rates of an individual getting 55 cents an hour and bring those to 65, and to have employees that were getting 65 cents or 68 at the 65-cent or 68-cent rate. That just doesn't make sense.

According, Mr. Chairman, it appears to us that the grant of power to the industry committee to recommend multiple minima is as unnecessas it is undesirable, and that the difficult and extremely technical task of making such adjustments can be worked out more efficiently between mangagement and labor, and with greater equity and justice to both.

78595—45——26

Statute of limitations: We are also opposed to section 18 (b) which permits an employee to institute legal proceedings for unpaid minimum wages and overtime compensation, and an additional equal amount as liquidated damages, at any time within 5 years from the accrual of such liability.

In view of the growing complexity of regulations in the administration of the act and the importance of administrative interpretations, an employer may unwittingly violate a regulation and become liable for large sums of back pay. This will become increasingly true if the act is expanded to cover wages and workers above the basic minimum for unskilled workers. As I have previously indicated, a particular job in this industry may be classified as semiskilled in one plant and skilled in another, or the same job may have different titles in different plants. If, as a result of such varying practices, an employer places a worker in a category which may be different from a later interpretation of the Administrator, he might become liable for an amount of back pay which could easily threaten his financial solvency.

Now under the Fair Labor Standards Act as now written we have industry committees which determine the minimum wage for each industry, and we would still have that pattern under the proposed bill, and their tripartite committees consisting of equal members of labor, management, and public, so-called. Now, the business of setting up occupational differentials for an entire industry, involving hundreds of classifications and very expert technical knowledge, would probably run into a difference of opinion between management and labor, so the public members will decide these technical points. Table III shows how the public membership of the committees was made up. Eighty-one professors of economics, with an average of about three committees for each one, and those 81 having 204 assignments, professors of sociology, professors of political science, professors of law, and other educators, social workers, lawyers, a few business executives, editors, publishers, clergymen, representatives of consumer organizations, industrial organizations, labor mediators, industrial counselors, all perfectly wonderful people. But the point is they do not have the technical knowledge which would enable them to make these decisions, they could not possibly do it, and that is the reason we put those classifications in there.

Senator ELLENDER. Are there any amendments proposed to the pending bill, other than the wage rates and this other matter you mentioned, that would adversely affect the industry?

Mr. MURCHISON. Yes; there is one there.

Senator ELLENDER. In relation to the present law, of course.

Mr. MURCHISON. There is one there that is the extension of the statute of limitations from 1 year to 5 years, which is an extension of the most gigantic racket, Senator, that this country ever saw. That would mean the grievances built up in the 5-year period, and you have got shyster lawyers by the hundreds that would not do anything but spend their lives in that sort of business.

Senator ELLENDER. The limitation is now 1 year and this seeks to increase it to 5 years?

Mr. MURCHISON. Yes.

Senator ELLENDER. What else is there by way of amendment?

Mr. MURCHISON. Those are the things the industry is particularly interested in.

Senator TUNNELL. There isn't any reason for any 5-year limitation?

Mr. MURCHISON. We do not think so.

Senator TUNNELL. I do not think so.

If there is nothing further, thank you, gentlemen.

We will meet again at 1:30 this afternoon.

(Whereupon, at 12:25 p. m., a recess was taken until 1:30 p. m. of the same day.)

AFTERNOON SESSION

Senator TUNNELL. We will come to order.

Is Mr. Haley here?

Mr. HALEY. Yes, sir.

Senator TUNNELL. All right, Mr. Haley, will you give your name and position to the stenographer?

TESTIMONY OF JAMES W. HALEY, ATTORNEY, NATIONAL COAL ASSOCIATION, SOUTHERN BUILDING, WASHINGTON, D. C.

Mr. HALEY. Mr. Chairman, my name is James W. Haley. I appear here as the representative and regular attorney of the National Coal Association. The National Coal Association is the trade association of bituminous coal producers, with membership comprising about 80 percent of the commercial production of bituminous coal in the United States and with members in each of the major coal-producing States in the Nation.

The bituminous coal-mining industry is opposed to amendment of the Fair Labor Standards Act of 1938 as proposed in S. 1349.

We believe it is fundamentally unsound for the Government to attempt to fix wages by general statute applicable to all industries and to all individuals in all industries. We also feel that such a program is impracticable, as well as fundamentally unsound.

The bituminous coal-mining industry is one of the highest-paying industries in America.

Senator TUNNELL. Highest paying to whom?

Mr. HALEY. To the workers, the wage earners in the industry.

Senator TUNNELL. I see.

Mr. HALEY. According to the Department of Labor, average hourly earnings for the month of June in the bituminous coal-mining industry were $1.281 per hour, and the weekly earnings figure was $59.04.

That was the average for all workers in the industry, $1.281 per hour and $59.04 per week.

From these figures, it is immediately apparent that the average wage in the bituminous coal-mining industry is considerably higher than even the ultimate minimum provided in S. 1349. But, unfortunately, in an industry employing hundreds of thousands of workers, as does the bituminous coal-mining industry, there are instances where the higher minimum wage would make a hardship—and I might say a hardship more on the worker and the coal consumer than on the employer. I refer, for instance, to miners paid on the tonnage basis. This wage per ton is set, through collective-bargaining processes, at a rate which is high enough to yield incomes of $6,000 and $7,000, or even more, per year. There are hundreds of such workers in the industry who are now earning $500 or $600 per month.

But, on the other hand, there are some workers who are very old

or for other reasons do not produce enough coal to earn more than $4 or $5 per day. These subproductive employees realize their limitations and are happy to be able to earn even this nominal sum and at the same time make a patriotic contribution to supplying coal sorely needed. The fact that these employees do not produce enough coal to earn more is often due to the fact that they are unable or unwilling to work constantly at the job while they are in the mine. In the same mine and under identical working conditions, one man may earn $5 per day and another $10 or $15 per day; the matter is entirely up to the individual worker. However, it must be realized that the subproductive workers, as well as the superproductive workers, must go into the mine at the same time and must remain in the mine until the so-called man-trip brings them out. But many workers, as I have pointed out, due to physical limitations or for other reasons, do not engage in productive work for the entire time they are in the mine at the usual working place. With the 40-cent minimum now provided by statute, there is obvious compliance with the statute if these subproductive employees receive $24.40 for the full 54-hour week.

I might say that we are still operating on this 54-hour-week basis in the bituminous-coal industry.

This is assuming the entire 54 hours as work time, and, due to the working conditions to which I have just referred, we can make no other assumption. However, if S. 1349 is enacted into law, there would not be compliance unless such subproductive employees received a minimum of $45.75, assuming the same workweek, after the 2-year period.

If the Congress feels impelled to raise the minimum wage, it should not be more than 50 cents per hour, for the reason that any figure higher than 50 cents will constitute a serious problem in connection with these subproductive employees. Certainly, if S. 1349 becomes law and the minimum is placed at 75 cents per hour or any rate in excess of 50 cents per hour, it will mean that a number of subproductive workers in the bituminous coal-mining industry will lose their jobs and the Nation will lose the coal production.

Senator ELLENDER. Do you know how many of those there are?

Mr. HALEY. No, I do not, but I would like to say at this point that Mr. Kramer and his associates have worked out with me to have a practical coal man who will supplement my statement by a 2-minute statement of his own. I have abbreviated my own statement, with that in mind.

Senator ELLENDER. Why 2 minutes?

Mr. HALEY. That is all we had arranged for.

Senator ELLENDER. I don't like that method of fixing a man's time, at 2 minutes.

Senator TUNNELL. I don't know whether anybody has said so, but I think it is a good idea. I don't think we want to protract these hearings deliberately.

Senator ELLENDER. No, but so far as I am concerned, I want to stay here until we get to the bottom of all this and get all the facts possible. I do not propose to rush through it in a week or two weeks.

Mr. HALEY. I would like to say, Senator, that there was no disposition on the part of Mr. Kramer or his associates to limit us.

But, since we are bringing this up, Mr. Ross, a call operator, has a brief statement which will take a couple of minutes to present

affirmatively. He will present the situation in his own mine, which is a relatively small mine out in Illinois.

Senator TUNNELL. I have not asked you, as far as I am concerned, to do anything other than to testify. However, I do not want any witness just to get the notion that we want to prolong the hearings. I think that is carrying it too far.

Mr. HALEY. Well, we won't prolong it, and we will, I think, tell the story, too.

I am sure the distinguished members of this committee and of the Senate generally appreciate that in the bituminous coal-mining industry the union effectively assures that each worker in the industry gets all that is coming to him. It should be remembered at all times that while the statutory minimum is now 40 cents an hour, the workers in the bituminous coal-mining industry make an average of $1.28 an hour. This high rate of pay in the industry is not due to enactment of the Fair Labor Standards Act.

It is our constructive suggestion that S. 1349 should not be adopted but that the Fair Labor Standards Act should be amended to provide that where there is a collective bargaining agreement in effect resulting from negotiations by a certified union, the workers covered by such a collective bargaining agreement will be completely exempted from the wage and hour law

If this proposal were adopted, it would leave the many troublesome problems in a complex industry such as bituminous coal mining in the field of determination by those who best know conditions and how to cope with them—the workers and the employers; and we believe adoption of this suggestion would constitute a forward step in the field of wage stabilization not only from the standpoint of the employer but from the standpoint of the worker as well.

We believe that the great majority of workers in this Nation now realize that they must look to themselves and their employers and not to the Government, to assure themselves adequate wages.

Another factor which enters into this picture is the fact that it requires much more labor to produce a ton of coal than it does to produce the energy equivalent in oil, natural gas, or hydroelectricity. If the Federal Government persists in imposing hardships on industries employing many workers, it will soon become apparent that sponsors of measures like S. 1349 will defeat their own purpose; they will be forcing the coal industry, which employs many workers, to lose out in the competitive fight against other fuels employing few workers. It is obvious to anyone that the matter of an increased minimum-pay requirement is of more concern to the bituminous coal-mining industry than it is to the hydroelectric plants or the natural gas pipe-line companies.

It would seem to us that the real friends of labor would support the suggestion I have made, that workers under bona fide collective-bargaining agreements be exempt from the Federal wage and hour law.

Senator ELLENDER. In addition to the point you have just made, if the rate of pay is increased, what is the probability of having machines do this work, rather than the hand labor that is now accomplishing the task?

Mr. HALEY. Well, of course, there has been quite a program of mechanization in the industry for many years. But coal mining, by its very nature, will ever require considerable manpower. In spite of the mechanization, the output per man per day, while it has risen

slightly, is still approximately where it was before the wholesale mechanization.

There is a very definite limitation to what mechanization will accomplish. The machines are complicated, and the handling of coal, of course, always requires many workers.

It just seems to us that these measures that require high minimum wages for all workers without regard to ability or productivity, in the long run will hurt labor, rather than help labor.

Senator ELLENDER. That is my contention.

Senator TUNNELL. What is the effect of stripping on the coal industry?

Mr. HALEY. Strip mining, of course, does require less employees, but it requires a considerable number, at that.

I am not too much of an expert on the physical and chemical characteristics of the coal.

I do know that coal produced by the stripping methods is not available in all or even many sections of the country.

Senator ELLENDER. Is that open mining?

Senator TUNNELL. That is stripping the dirt off the coal.

Mr. HALEY. It is difficult to do that in any substantial quantity in mountainous areas.

Senator TUNNELL. I have seen so much of it in Ohio.

Mr. HALEY. Yes; there is quite a bit of it in Ohio and quite a bit in Illinois and Indiana. But, by far the greatest percentage of our coal is still produced by underground methods and will continue to be so produced in the foreseeable future, according to the experts.

Senator TUNNELL. It seems to me that the argument you have produced thus far is rather toward making an exception for those people incapable of doing a day's work.

Mr. HALEY. Well, the argument I am making is that the union negotiates for those men.

We have a collective-bargaining agreement. As I said—and I wish to emphasize it, if you know anything about the United Mine Workers of America, you know that these men are well and adequately represented.

The rates are fixed high enough on the tonnage bases to produce incomes of more than $5,000 a year, actually do produce incomes of that amount.

Now, we do have the question of the subproductive employees and the physical factors which enter into it.

These men are often isolated and alone in a room underground, and if the man is paid on the tonnage basis and he feels temporarily ill or, for any reason, does not care to work out the full day, he does what he feels like.

There are instances where he might lie down and take a nap, but he is still in the mine, he is in the room. If he feels like it, he will go on and load some more coal.

Also, it is not generally realized but these coal diggers, as they are called, are now at a rather advanced age.

I believe Mr. Ross told me that the coal diggers in his several small mines, taking some 400 of them, averaged 59 or 60 years, and the older man will just not be capable of doing as much as an ordinary, healthy, young man.

Senator TUNNELL. What does that mean, that the young men are not going into that kind of work?

Mr. HALEY. That may have some bearing on it, although, under present conditions, we have a great number of men in the armed forces. I do believe that coal mining, probably, has not attracted as many young men as it might have.

There are a number of factors which enter into it.

Senator ELLENDER. You suggest amending the bill to exclude collective bargaining Would that mean that under collective bargaining a lesser rate of pay could be agreed to than that fixed by the bill? Would that be it?

Mr. HALEY. I would say it should be completely exempt from collective bargaining by bona fide, certified units.

Senator ELLENDER. Whether or not it is more than the rate fixed in the act?

Mr. HALEY. Why, I have not given any particular thought to that. I think there should be a complete exemption, for the very reason I have pointed out.

Under the tonnage rate now fixed in our contract, we give $2 an hour in many instances and much more than 65 cents an hour in all average instances.

However, there are still some men who would like to do a little more work, and I think they should be given great credit for making what little contribution they are able to make. Some of them are 75 years of age or more.

Senator TUNNELL. Well, are they the only ones of your employees that would be damaged by this bill?

Mr. HALEY. They constitute by far the largest class. However, there are some employees in the industry who do now, I believe, receive less than 65 cents an hour. I refer mainly to some minor office workers and temporary clerks and store employees, perhaps—of course, they are exempted under certain circumstances.

Senator TUNNELL. But they are the exceptions rather than the general rule?

Mr. HALEY. Oh yes. That is illustrated by the fact that the average is $1.28 per hour. That is the average earned per hour, $1.28, so that if there were any low-paid ones, they would be the exceptions.

Of course, the industry could meet the figure, if the 75-cent minimum should go in, the industry could meet the issue, presumably by taking steps to discharge the subproductive employees; but the result there would be that employment would be lost for those men, who feel, I am sure, that they are adequately represented by their wage negotiators now and do not need this committee to look out for their welfare.

Senator TUNNELL. I am not so much impressed by that, when I read about the difficulties that they have, in adjusting matters.

Every year, just at the time when we think that we have got to have coal, there is some threat of a strike. The miners and the employers cannot agree, so that does not appeal to me very strongly, as far as I am concerned, the idea that you have everything in control.

Mr. HALEY. Well, of course, I am sure that if you adopt the act, S. 1349, that it will not contribute one bit toward alleviating that condition.

Senator TUNNELL. That might be so, but I am sure that your suggestion is not going to be the cure for it.

Mr. HALEY. No; my suggestion would have no bearing on that, and neither would S. 1349.

Senator TUNNELL. That makes twice that you have come to the same conclusion.

Now, you say that there is no necessity for this bill because the miners are adequately represented.

Mr. HALEY. I certainly feel that.

Senator TUNNELL. Yes; so that you seem to place this bill in opposition to representation in some way.

Mr. HALEY. Now, we are not in opposition here, but there are many matters.

Take tonnage rates, to illustrate that. After we agree with the union, which makes a hard bargain, we still have these additional aspects of the law, we have to watch out for the minimum wage. I don't know too much about it and, of course, I couldn't presume to speak for the union, but I am not sure at all that the union would be opposed to our suggestion.

Senator TUNNELL. They want to have the 65-cent minimum defeated?

Mr. HALEY. No; I have never heard any expression from the United Mine Workers on that.

Senator TUNNELL. I have never heard any contention of that sort. That is the reason I wanted to know.

Mr. HALEY. I have never heard of any contention in support of it; but they could very well support the 65-cent minimum and our provision also.

Senator TUNNELL. Your provision—what is that?

Mr. HALEY. Our proposal that the collective-bargaining agreement arrangement be exempted from the act.

Senator TUNNELL. Well, that might include anything, "collective-bargaining agreement."

Mr. HALEY. Provided that the collective-bargaining agreement resulted from negotiations with a bona fide, certified union.

Senator TUNNELL. Now, you think that there are some employees in the mines—that is the part that I am impressed with in your testimony—there are some employees who cannot earn a day's pay?

Mr. HALEY. That is correct; yes, sir.

Senator TUNNELL. Don't you think that could be cured by some sort of an amendment to this proposal?

Mr. HALEY. It no doubt could be cured; but I wondered if just making exceptions—my initial impression is that it might tend to weaken the legislation.

Senator TUNNELL. You think it ought to cover everybody or nobody?

Mr. HALEY. I think the law should be as free from exceptions as can be on a narrow basis.

Senator TUNNELL. And yet you think that would be unfair to a part of the mine employees?

Mr. HALEY. What would be unfair? I am sorry, I don't follow your question.

Senator TUNNELL. That is, the 65-cent minimum.

Mr. HALEY. Yes; I do think it would be unfair, because a number of them would lose their jobs.

Senator TUNNELL. Then, your own proposition, according to your own statement, would be unfair to a part of the employees.

Mr. HALEY. To exempt collective-bargaining agreements?

Senator TUNNELL. Yes. You say they ought to be, as nearly as possible, all under the same provision.

Mr. HALEY. Well, if they were all exempted, they would be under the same provision.

Senator TUNNELL. Well, then, you don't want any minimum wage, is that your proposition?

Mr. HALEY. No; I didn't say that I didn't think the minimum wage ought to be placed in excess of 50 cents.

Senator TUNNELL. Why would that affect an industry that pays $1.29?

Mr. HALEY. For the reason that we have these subproductive workers.

Senator TUNNELL. Well, if you except them, what is your objection?

Mr. HALEY. There are other isolated instances of workers who are paid less than 65 cents, but, frankly, I admit that is a very minor problem.

I might say that our exemption proposal, of course, would run to a lot of other more fundamental problems than even the minimum wage issue.

We have any number of other problems, of course, too. I might mention the keeping of overtime and computing of overtime; the regular rate, what constitutes regular rates.

All of these matters are finally settled with the union, after most difficult and trying negotiations, and they must be put under the glass with respect to the law.

Senator TUNNELL. You just object to a law. You want agreements.

Mr. HALEY. Well, I think that when we finally get an agreement with the union, that ought to be recognized by that law, as it is by other laws. It certainly establishes the rate.

Senator TUNNELL. Do you object to the present minimum?

Mr. HALEY. I beg your pardon?

Senator TUNNELL. Do you object to the present minimum wage law?

Mr. HALEY. No.

Senator TUNNELL. Why?

Mr. HALEY. Well, I think that perhaps the theory of a minimum subsistence wage might be all right. But when you get to an attempt to fix a high floor and apply it to an industry employing three, four, or five hundred thousand workers and then get into the question of interrelated job classification, I just don't think it can be done in a practical manner.

They have so many classifications and so many rates—and, where the matter has to be worked out with the union and the employers, who are familiar with it, the manifold problems presented—I just think that is the way to do it, rather than by a law.

As Dr. Murchison pointed out to you this morning, this, of course, is not just a minimum wage law that we are talking about. It involves interrelated job classifications all the way up to nobody knows where.

This law would not apply just to those who earn, in our industry, an average of $1.28 per hour; it could go on up beyond that.

Senator ELLENDER. That is what makes this act, as you tried to point out, so far-reaching.

Mr. HALEY. That is correct.

Senator ELLENDER. It is my humble opinion that if some of the members of these unions would study this bill, with particular regard to fixing the rate for various classifications, they would find that eventually it would do away with their organizations.

Why would a man want to pay a few hundred dollars a year or $50 a year union fees, when he can have it done by law?

Senator TUNNELL. Is that the reason for your objection to this bill, that you fear that it will do away with unions?

Mr. HALEY. No; of course not.

Senator ELLENDER. I am in favor of inviting some of the union membership to study it and get a few of them on the stand. They might give you their views on that phase of it.

Senator TUNNELL. How is that?

Senator ELLENDER. I say, I would like to be in a position to discuss the matter with some of the union leaders. I thought that Mr. Green desired to testify. I proposed to discuss that point with him.

Senator TUNNELL. Well, he did have a representative here who did.

Senator ELLENDER. Yes. I thought it would be better if we could get it from the fountainhead rather than from some of his underlings.

Mr. HALEY. In any event, it would seem to us that the real friends of labor would support the suggestion I have made, that workers who are under bona fide collective-bargaining agreements be exempted from the minimum wage law.

In any event, the wage-and-hour law should be amended to include the following features:

1. The law should be amended to give automatic exemption to any employee who is employed on a guaranteed basis of $10 per day, $50 per week, or $225 per month.

The Fair Labor Standards Act is fundamentally a wage law, and if substantial wages like $10 per day are paid, it would seem that a sensible position would be for employees so paid to be exempt from the law.

As a matter of fact, such an amendment would in all probability cause a number of wage increases, since many employers would no doubt be willing to make the necessary increases and guarantees in order to get away from the red tape, bookkeeping, and general bother of keeping the records and making the calculations required by the law.

2. The law should be amended to provide specifically that work time under the statute shall include only time spent by employees in performing services for which they were employed. This work definition is necessary to avoid repetitions of the difficulties which have arisen in the bituminous coal-mining industry concerning travel time.

3. The law should be amended to provide that no person shall be subjected to any liability, civil or criminal, under the provisions of the statute for any act done or omitted in conformity with any regulation or interpretation issued by the Administrator.

It will be recalled that the Administrator of the Wage and Hour Division had officially interpreted the act as not requiring recognition of travel time as time worked under the law in the bituminous coal-mining industry.

Of course, the industry and the union relied on that, for the time being.

4. The act should be amended to provide that any claim for liability under the act may be compromised, settled, or released by agreement with the parties affected thereby, at any time. As you know, under the statute as presently drawn and under the decisions of the Supreme Court, a claim may not be conclusively settled for anything less than the arithmetic liability, including liquidated damages amounting to 100 percent of what is shown to be owed on a work basis.

5. The statute should be amended to provide a statute of limitations of 6 months for all claims accrued on date of enactment of the amendment, and a general provision that any other liability shall cease 6 months after it accrues, unless within such period action thereon is commenced.

The tendency of governmental officials appearing before this committee has been to minimize the effect of wage increases on prices. We do not see that the Government's position is sound in industry generally. But certainly it is wholly erroneous in connection with bituminous coal mining. Since labor cost constitutes about two-thirds of the total cost of producing coal, it follows that any increase in labor cost will automatically mean an increase in cost of coal to consumers. You may rest assured that the bituminous coal-mining industry is not able to absorb any increased costs, ever how slight.

Senator TUNNELL. You mean, they are not making profits?

Mr. HALEY. The coal industry, for many years, has been operating in the red or at a very slight margin.

Senator TUNNELL. Well, under the Guffey Coal Act did they still continue to operate at a loss?

Mr. HALEY. Under the Guffey Coal Act prices were not in effect for very long periods of time; but, during most of the life of the act, the bituminous-coal industry did operate at a loss; that is correct.

Senator TUNNELL. That is not my information on the operation after that act was in effect.

Mr. HALEY. Well, concerning the Bituminous Coal Act prices, the Bituminous Coal Act was enacted in 1937, and in the next year the industry lost $32,000,000, after taxes.

Senator TUNNELL. After taxes?

Mr. HALEY. Yes.

Senator TUNNELL. Well, there wasn't any tax. You mean income tax?

Mr. HALEY. That is correct. There was no tax on the losses; no; but I was giving the industry picture as a whole, the income of the companies having income and then the losses of the companies having losses. Deducting the taxes, the losses were $32,000,000 in 1938.

During 1937 the loss was $10,000,000 after taxes; $32,000,000 in 1938; in 1939 it was $13,000,000.

I am giving these in round figures.

Senator TUNNELL. Yes; I understand.

Mr. HALEY. In 1940 the industry made $3,000,000; in 1941 the industry made $19,000,000; and in 1942, the latest figure for which official Treasury Department information has been released, the industry made $30,000,000.

Senator TUNNELL. Yes, sir. It was on a profitable basis when the Guffey Act went out of existence.

Mr. HALEY. Yes, at the time the Guffey Coal Act went out of existence.

Senator TUNNELL. That is what I had in mind.

Mr. HALEY. It had been on a slighly profitable basis, if you could call an earning of this nature profitable, since 1942.

I heard some discussion this morning concerning the rate of investment. The investment in the bituminous coal-mining industry has never been determined completely, but it is certainly in the neighborhood of $3,000,000,000.

So, in 1942, the best year shown in the last 20 years, the industry made 1 percent on its investment. Taking the last 20 years together in the bituminous coal-mining industry, the industry, in that period of time, would show a net deficit of $100,000,000.

Senator TUNNELL. There was no special effort made by the coal mining interests to keep the Guffey Coal Act in existence, was there?

Mr. HALEY. I am not advised on that matter. I might say that the National Coal Association does not participate in the campaign for or against the Bituminous Coal Act, since they have in membership companies which favor it and companies which oppose it, so we stay out of that fight, and as we needs must.

Senator ELLENDER. What is the rate per ton that you now pay to produce coal?

Mr. HALEY. To the tonnage workers?

Senator ELLENDER. Yes.

Mr. HALEY. It varies throughout the Nation. Mr. Ross will be able to answer that better than I can, certainly for the progressive coal mines; but it certainly is in excess of $1 per ton.

Senator ELLENDER. The next question I wanted to ask was: What effect, if any would the passage of this bill have on your having to increase the present rate of pay to produce this coal? In other words, if you should raise the minimum, the minimum fixed by the War Labor Board of 55 cents to as much as 75 cents within the next 3 years, what would be the effect?

Mr. HALEY. Well, I presume if this bill were adopted, and those tonnage workers who now make less than 75 cents per hour on the tonnage rate basis were automatically and artificially pushed up to 75 cents per hour, that, bringing into it the interrelated job-classification theory which was in there throughout S. 1349, there would be a comperable adjustment all the way up the line. That is certainly the theory of the bill.

Senator ELLENDER. So that the increase in the upper brackets might be as much as this bill seeks to allow in the next 3 years?

Mr. HALEY. That is right.

Senator TUNNELL. But you said the number of those who would be reached would be inconsequential, did you not?

Mr. HALEY. I did not say the number of tonnage workers would be inconsequential. There are a number of them.

Senator TUNNELL. You mean they are earning less than 65 cents an hour?

Mr. HALEY. That is correct; yes, sir.

Senator TUNNELL. How do you account for that?

Mr. HALEY. Because they are elderly men.

Senator TUNNELL. Oh. Well, you said there were not so many of them.

Mr. HALEY. Well, when I say "not so many" there might be a few thousand in the industry.

Senator TUNNELL. There might be.

Mr. HALEY. Well Mr. Ross has several mines, and he will be able to tell you how many there are, and just what the distribution is. We made no survey on it, but we do know that there are some. Practically every hand-loading mine has several or more.

Senator TUNNELL. Let me get your position. Is it your position that your organization opposes this bill on the ground that you have certain substandard workers who would be injured by it?

Mr. HALEY. We have certain subproductive employees who would be injured by it.

Senator TUNNELL. I say, is that the ground for your objection?

Mr. HALEY. Not the sole ground; that is one of the grounds, not the sole one.

Senator TUNNELL. The rest of it is that you are "just agin it"?

Mr. HALEY. Yes; we are against it; no question about that.

Senator ELLENDER. Well, what I had in mind and intended to develop is simply this: That if today you fix, say, $1 per ton, when the minimum wage is 55 cents, if that wage is raised within 3 years to 75 cents, that would have a tendency of forcing you to raise your cost almost equal to that which is sought in the pending bill, is that not true?

Mr. HALEY. That is exactly what I wanted to make clear.

Senator ELLENDER. That is all I had in view. I didn't have in mind these older men or the crippled going in there to earn a few crumbs. I did not have that in mind, but just the idea that by increasing the minimum wage from 55 cents to 75 cents, there would be a tendency of making those in the higher brackets dissatisfied and a demand for more probably would be made, and probably would be granted.

Mr. HALEY. Certainly. I want to emphasize that. Any increase in wages in the coal industry since the industry operates at such a narrow margin, and since such a high percentage of cost goes to labor, that would result in an increased cost to the consumer.

To that extent, certainly, it would lower the standard of living for those who must pay the increased cost. That is the whole theory we have heard so much of in recent years.

Senator TUNNELL. The same argument would have some potency if people were manufacturing silk, or something else in the neighborhood, wouldn't it.

Mr. HALEY. It would have a degree of the same force. However, I do not believe that any industry in America has had such a high percentage of its total cost going to pay rolls.

Senator TUNNELL. You don't charge the coal up to anything, do you? That is just in the ground.

Mr. HALEY. Of course, the cost of the coal and the depletion aspects of it enter into it. That is, the coal itself costs something but that is insignificant. Coal can be leased on a royalty basis for 10 or 15 or 20 cents a ton.

The labor to produce it is $1.50 or more. Labor is the controlling factor always.

We think that industries like the coal industry, which gives great amounts of work, should be encouraged; and that the workers should be protected in their jobs.

Of course, if the labor costs in producing coal go high enough the industries and home owners using coal will buy natural gas, where

there isn't any labor, and the net result of that would be that labor itself loses.

Senator TUNNELL. It seems to me that I remember you can get five or six thousand tons of coal from an acre.

Mr. HALEY. I am not familiar with that subject, but that certainly would seem to be reasonable.

Senator TUNNELL. The land, underlaid with coal, is selling for probably $30 or $40.

Mr. HALEY. I am not familiar with that, but that sounds like a general figure, but I have no knowledge.

Senator TUNNELL. I am familiar with the farms being sold for that, that is the reason I know.

Mr. HALEY. Well, I will certainly accept the Senator's information as being better than my own.

Senator TUNNELL. What I am trying to get at is that the actual cost of the coal in the ground has not been very high.

Mr. HALEY. That is correct. You are correct in your assumption that it is the labor costs that make the price.

Senator TUNNELL. Yes; labor and the machines, and so on.

Mr. HALEY. Primarily the labor.

Senator TUNNELL. That is all I have. Thank you.

Mr. HALEY. Now, Mr. Warren Ross is vice president of a little company out in Illinois, and he has some specific information on these elderly workers, which he would like to have permission to give.

Senator TUNNELL. Thank you. We will hear you, Mr. Ross.

TESTIMONY OF WARREN P. ROSS, VICE PRESIDENT, PANTHER CREEK MINES, INC., SPRINGFIELD, ILL.

Mr. Ross. My name is Warren P. Ross. I am vice president of Panther Creek Mines, Inc., a coal producer, operating two coal mines in Springfield, Ill., and having a production of 600,000 tons per year.

I am opposed to amendment of the Fair Labor Standards Act of 1938 as proposed in S. 1349, because it will work a severe hardship on our company and many other coal-mining companies and will most certainly force us to reduce our operations and may eventually put us out of business.

Our company employs 600 men working under a union contract with the Progressive Mine Workers of America. Approximately 200 of these men receive a wage of $1 or more per hour for actual working time and extra pay for travel time from portal to portal and $75 annual vacation pay per man. The remaining 400 men are diggers who load the coal into mine cars. Each of these diggers works alone in his own room and is paid at the rate of $1.08 per ton, plus one-ninth extra for travel time. The basis of this rate, established by negotiations with the union, is the amount of coal an average digger can reasonably load to earn the same rates of pay as the other employees who are paid an average of $1 per hour.

The average hourly earnings of these diggers is $1 per hour, with some earning as high as almost $2 per hour. The age average of these diggers is 60 years. Due to their advanced age and for other causes, many of these diggers do not, even at the prevailing high loading rate, earn 75 cents per hour or even 65 cents per hour. Of the 395 diggers employed by the company for the semimonthly pay period ending August 31, 1945: 63 had average earnings of $1.25 or more per hour;

171 had average earnings of $1 or more per hour; 224 had average earnings of less than $1 per hour; 81 had average earnings of less than 75 cents per hour; 65 had average earnings of less than 70 cents per hour; and 51 had average earnings of less than 65 cents per hour.

Thus it will be seen that if S. 1349 had been law the last half of August, 51 workers would have earned less than the 65-cent minimum and 65 would have earned less than the 75-cent minimum. Doing identical work for an identical rate, 40 workers would have earned more than $1.30 per hour, twice the 65-cent minimum.

In addition to inability due to advancing age, there are other reasons why some of these men do not earn more. Some of them have no dependents and no necessity nor desire to earn more by putting forth the additional effort. Therefore, it is apparent that should the minimum rate under the law be raised to 75 cents per hour or even 65 cents per hour, many of our miners will be unemployed, since they have spent their entire lives in the mines and know no other trade.

Senator TUNNELL. Excuse me. Have they the same chance to make more as those who make the $1.40?

Mr. Ross. They are all working under identical conditions.

Senator TUNNELL. I see.

Mr. Ross. Moreover, many men, aware that they would be paid 65 or 75 cents per hour regardless of the amount of coal loaded, would soon become less productive.

In any event, the company could not possibly stand the impact of retaining the men under the minimum wage proposed in S. 1349.

Obviously, if a law like the one contemplated in S. 1349 were adopted and we were forced to cease operations, the miners now earning high wages would lose their jobs along with those unable or unwilling to produce enough coal to make normal earnings.

Another important aspect of the matter is that the cost of domestic coal in Springfield will rise, since coal will have to be shipped in at a higher cost, due to freight and handling expenses; thus the consumer will be adversely affected by this amendment.

Since the men are very efficiently represented and protected by their union, it would seem to me that the proper way to treat the wage matter in the coal industry would be to exempt from the provisions of the act workers covered by a collective-bargaining agreement.

Senator ELLENDER. You have classified your workers as to age and ability to earn.

Would you venture to suggest that your classification would be about the average of the coal mines in your community?

Mr. Ross. Well, in Illinois, in our community, the majority of the mines now are mechanized. They do not hand load the coal like we do.

In fact, I don't happen to be close enough to any company that is working under the same conditions as we are to know whether it would be general or not. But these men have their own rooms, and they are their own boss. If they want to load, they can; if they don't want to do the work, they do not do it.

Senator ELLENDER. Have you any idea how much you would have to ask for your coal if this law were in effect? How much more would you have to pay to extract the coal from the ground?

Mr. Ross. It is not so much how much more we would have to ask for the coal. We might have to add 15 cents or $1 per ton for the

coal. But, if we did that, we would not be in a competitive position with other mines that did not have our problems.

Senator ELLENDER. That would mean you would have to close?

Mr. Ross. We would have to close. There is no way that we can see—these men being their own bosses, in their own rooms, we cannot tell them they have got to work under this agreement. They can load as much as they want to load.

Senator TUNNELL. How much did these 51 who did not earn 65 cents an hour, earn?

Mr. Ross. Well, they earned 45, 48, 50, or thereabouts.

Senator TUNNELL. How much would it have taken for your company to have made up the difference between what they did earn and the 65 cents?

Mr. Ross. Well, I couldn't answer that. I don't know. I never figured that out, what it would take.

Senator TUNNELL. How many tons of coal did you say you mined in a year?

Mr. Ross. Six hundred thousand.

Senator TUNNELL. Six hundred thousand. And how many men earned 65 cents or more?

Mr. Ross. How many earned 65 cents or more? Well, there were 395 diggers, and 51 did not earn that.

Senator TUNNELL. Three hundred and forty-four earned 65 cents and up.

Mr. Ross. Three hundred and forty-four; yes.

Senator TUNNELL. Three hundred and forty-four. Some of them earned very much more?

Mr. Ross. Yes, sir.

Senator TUNNELL. Than the 65 cents?

Mr. Ross. That is right.

Senator TUNNELL. So that it was a small fraction of your total that was mined at less than 65 cents?

Mr. Ross. Well, of course, we are looking a little far ahead of the 65 cents. When the law gets up to the 75-cent minimum an hour, we will be in that much worse position.

In that pay-roll period, we had 81 that had been earning 75 cents.

Senator TUNNELL. You do not intend to mechanize?

Mr. Ross. Our mines are old mines, and there is a lot of dirt in the coal. It is not economically sound to mechanize.

Senator TUNNELL. What sort of vein do you work?

Mr. Ross. Six feet.

Senator TUNNELL. Six feet. That is a good vein, isn't it?

Mr. Ross. Good vein; yes.

Senator TUNNELL. A man can stand up, unless he is too tall.

Mr. Ross. That is right.

Senator TUNNELL. A 6-foot vein, in some sections, is considered very good?

Mr. Ross. That is right. It all depends on the quality of the coal that you are mining.

Senator TUNNELL. What are your impurities, sulfur?

Mr. Ross. Sulfur, clay, slate, bone.

Senator TUNNELL. You mine by rooms?

Mr. Ross. By rooms. Each miner, of course, is supposed to pick out the impurities. He picks out the impurities in his own coal, in a hand-loaded coal mine, so that the coal produced by a hand-loaded coal mine is generally much better than a mechanized coal mine product, unless their coal is washed or repicked at the top.

Senator TUNNELL. What were they paid by the ton?

Mr. Ross. The loading rate, under the contract is $1.08 per ton, plus one-ninth that they were allowed for portal to portal, which means that the loading rate was brought up to $1.20.

Senator ELLENDER. How about diggers?

Mr. Ross. That is the same thing. It is all one operation.

Senator TUNNELL. That is what I meant. Loading.

Mr. Ross. The loaders, or diggers, if you want to call them that, make their own holes and the shots are fired at night and in the morning his coal is down and he loads it.

Senator TUNNELL. It explodes while he is gone, you mean?

Mr. Ross. Yes; they shoot it at night.

Senator TUNNELL. The same man who mines it, puts in the explosive?

Mr. Ross. He puts it in, but doesn't fire it.

Senator TUNNELL. He doesn't fire it.

Mr. Ross. Now, these rates, the loading rates in Illinois always have been based on the comparable rate for the day men. There are 200 of these men, paid by the hour and the lowest rate out there is $1.

Now, if you want to make the minimum, you would have to increase the loading rate to, say, $2 per ton. That would throw it out of balance with your other men, and they would say that they wanted a raise.

Senator TUNNELL. But you have nobody you pay less than $1 per hour?

Mr. Ross. Not the ones that work on straight time.

Senator TUNNELL. That is what I mean. Where you pay by the hour, you pay nobody less than $1 an hour?

Mr. Ross. That is right.

Senator TUNNELL. That is all.

Mr. Jobe is the next man on my list.

TESTIMONY OF WILLIAM T. JOBE, GENERAL COUNSEL, NATIONAL ASSOCIATION OF ICE INDUSTRIES

Mr. JOBE. Mr. Chairman, and members of the subcommittee, my name is William T. Jobe. I am general counsel of the National Association of Ice Industries, the only national organization representing the interests of the ice industry. In this capacity I am speaking for and in behalf of an organization of slightly more than 2,300 ice companies which produced and sold approximately 70 percent of the 48,500,000 tons of ice consumed in the United States in 1944.

Senator TUNNELL. You say 70?

Mr. JOBE. Seventy percent.

Senator TUNNELL. I see.

Mr. JOBE. These 2,300 companies own and operate approximately 5,200 separate plants or establishments, located in practically every city, town, or village, of any size, in the country, engaged in the commercial production, sale, and delivery of ice to the general public.

The ice industry, for whom I am being permitted to speak only briefly this afternoon, is wholeheartedly opposed to at least three of the proposed amendments to the present wage-and-hour law as set

forth in S. 1349. Specifically, these three are (1) the proposed wage increases; (2) the power to fix wage differentials "between interrelated job classifications," through industry committees functioning in collaboration with the Wage and Hour Administrator; and (3) the 5-year statute of limitation for employees' suits.

Not all of the above-mentioned 5,200 ice-manufacturing plants or establishments are affected by the Fair Labor Standards Act, either presently or by the proposed amendments thereto which you are now considering. There are, however, approximately 2,200 of these establishments that are affected by virtue of the fact that varying percentages of the ice produced by them enter the channels of interstate commerce. With this large number of our industry members in mind, the first objection we have to S. 1349 is that provision having to do with the proposed increases in the statutory minimum wage rates.

To begin with, the greatest single cost factor in the manufacture of ice is labor. Of the total cost in manufacturing a ton of ice, approximately 44 percent is directly chargeable to labor. One of the peculiar characteristics of an ice plant is its nonflexibility of use. Once the equipment is installed, there is only one thing for which it can be used and that is to "freeze water." The plant cannot be converted to any other use. The tonnage production of a plant is governed and controlled by such variables as weather, customer demands, and so forth.

With the exception of the initial outlay for the capital investment to construct the plant, the operating labor is the predominant factor in the ice business. For this very important reason the labor costs in the operation of an ice plant must be kept to a reasonable and equitable minimum, or else the returns on a large capital investment will be materially reduced, even to the extent of making the ice business nonprofitable.

If the cost of labor is increased through statutory requirements as proposed in S. 1349, the only possible way that an ice company employer could meet these added financial burdens would be to increase the prices of his ice to the consuming public. Such an increase is impractical and, in fact, impossible for competitive reasons. By and large, the ice business in this country is a locally owned business. It is a highly competitive business, privately owned and operated at the local level. The competition which an ice company faces is of two kinds: (1) Competition within the industry itself, that is, between two or more ice manufacturers operating in the same town or even adjacent towns or cities; (2) competition from the mechanical-refrigeration industry, which, beginning in 1924 has, with increasing force, been cutting serious and heavy inroads into the ice industry's total business.

Because of this inescapable problem of competition, both from within and from without the industry, the ultimate prices of ice to the consuming public are controlled to the same degree of exactness and, perhaps, even more so than they are today with the existing regulations of the OPA.

There is another important element of competition affecting the ice industry which must be considered not only in connection with S. 1349, but with the present wage-and-hour law as well. It is the competition which one ice company, operating in a town or city and devoting itself entirely to intrastate business, can offer another company, operating in the same town or territory that engages only to a certain extent in interstate commerce. The company doing only intrastate business is not subject to the wage-and-hour law, whereas

the second one doing some interstate business is subject to the coverage. I use the word "some" purposely because of its significance to our people. No other term has caused them greater fear and worry since they do not know how much ice they may be allowed to supply the channels of interstate commerce and still not subject their total establishment to coverage of the act.

The Administrator has never taken a definite position on this question and the courts are miserably divided in their views. Some courts have held, under the so-called de minimus rule, that if a company engages in interstate commerce to the extent of a fraction of 1 percent, this is sufficient to subject its employees to coverage. Other courts have allowed a company to engage in interstate business to the extent of 7 percent without compelling it to comply with the act.

The Supreme Court of the United States has agreed to hear at an early date the case of *Southern California Freight Lines* v. *McKewon*, involving this particular issue. It is obvious, therefore, that Congress should correct the mistakes it made in drafting the language of the present wage-and-hour law so as to eliminate this divergence of opinion among our judiciary as to just what they believe Congress really had in mind concerning this question of basic coverage.

Considering further this type of competition as between the ice company doing only intrastate business and the one engaging in interstate business, even though in many instances the amount in total percentage is relatively small, these are a few additional basic facts to bear in mind.

In the first place, the production cost of a ton of ice is virtually the same in both plants. The same general type of equipment and the same amount of labor are required.

Secondly, the characteristics of the ice are, for the most part, identical. Both plants produce a block of hard, crystal ice, ready for whatever use it is put to. Up to this point, both types of operations are the same, but then the picture changes.

The company doing only intrastate business has no minimum wage rates to worry about except as those are determined through collective bargaining, precedent, or otherwise.

With the company doing interstate business, however, there is a statutory minimum wage, a statutory number of hours beyond which the employer dare not work his employees without paying them time and one-half for overtime.

Both company employers are competing in the same labor market, producing the same identical commodity, yet the "take home" pay of one group of employees is considerable greater than the other, caused by this small and oftentimes, insignificant amount of interstate commerce business, which, nevertheless is sufficient to bring them under the act. In actuality, therefore, an ice company is heavily penalized by operating under the act.

Another very important factor of the ice business which I would like to bring to your attention is the seasonal nature of the business.

Approximately 50 percent of the total annual production of ice is produced and distributed in three peak months during the summer. Because of this heavy demand for ice during these 3 months, there necessarily must be continuous, round-the-clock operation. There can be no "pulling the switch" in the ice plant during the hot summer months. This situation alone requires long hours and much overtime.

This heavy amount of business will only last 3 months with a gradual decline to almost no appreciable business during the winter months. In fact, most plants are shut down almost completely during a couple or three winter months to allow for the necessary maintenance and repair work to be done. Here again, the labor problem enters the picture as the employer must continue his pay roll throughout the year or else face the ensuing season with no experienced help.

Permit me to say also that the price of ice has changed very little during the past 20 years. Moreover, the price received for the ice sold to railroads for car icing purposes or other media of interstate trade is lower than the price levels for any other classification of ice trade.

At the present time ice companies are selling ice to railroads and to the shippers of perishable food products at a very narrow margin of profit, and indeed in many cases at no profit at all. Thus, the companies of our industry that find themselves subject to the minimum wage and overtime provisions of the Fair Labor Standards Act are in reality doubly penalized as compared to those companies not covered by the act.

First, their total labor costs are much greater, due to the large amount of overtime required as a result of the very nature of the business.

Secondly, the margin of profit on their interstate business is considerably less than domestic, commercial, or other types of trade.

You might well ask, "Why do these ice companies engage in this interstate type of business if it isn't very profitable?" The question may be answered in two ways:

(1) Few, if any, ice companies devote themselves exclusively to interstate trade. Instead, their domestic, commercial, and industrial customers, together with their usual multiple-type operations, such as fuel, both solid and liquid, et cetera, constitute the greater percentage of their total business. So, the interstate portion of their business merely enables them to maintain a higher and more stable local factor throughout the year.

(2) The railroads, private carriers, and shippers of perishable food products operating transportation facilities throughout the entire United States, must of necessity depend upon the privately owned ice-producing plants to supply them with ice. They cannot, or at least they do not, provide their own facilities, except in a few instances where a transcontinental railroad has constructed an ice plant for railroad car icing purposes, exclusively, at points strategically located along the roads where other facilities are unavailable. Thus, it is from a deep sense of responsibility and obligation to the general public that the ice industry assumes the tremendous task of supplying this indispensable refrigeration, despite the fact that in a great many instances it is the least attractive of all its business.

The ice industry does not wish to go on record before this or any other committee of Congress as wanting to impede the progress of improving the living standards and conditions of the American people, and particularly those of the non-white-collar men. To the contrary, we voice our desire in seeing our country, with all of its diversified ways of life continue its leadership in our many fields of endeavor, to the end that greater comforts and a more abundant life may be attained by everyone.

On the other hand, we do not believe the proper way to accomplish this objective is for Congress to enact legislation which favors only only one segment of our people, namely, the wage earner.

In other words, if Government sponsors the policy of raising wages without raising prices, it drives businessmen, either manufacturers, retailers, or both, to the wall and dries up the source of all jobs.

Management must be able to operate with a reasonable margin of profit or else there will neither be products to buy nor pay-roll funds with which to pay labor in the making of these products. The economic pendulum must not be permitted to swing too far one way or the other. Nor, should it be conceded by Congress or by the American people that the present wave of strikes and flood of unreasonable demands for wage increases, usually referred to as the inevitable aftermath of war, are to be the accepted means by which our national economy is to be adjusted.

The ice industry feels that the present 40-cent statutory minimum wage provided for in the Fair Labor Standards Act is sufficient to maintain an equitable economic relationship between its management and labor and is, therefore, unwilling to accept any increase in this prevailing rate. While approximately 42 percent of the 5,200 ice company plants or establishments, in whose behalf I am authorized to speak, are presently covered by the wage-and-hour law, their total interstate business, expressed in tons, only amounts to approximately 11 percent of the industry's total production. This 11 percent is computed on an industry-wide basis. On an individual company basis the total amount of interstate business varies from a fraction of 1 percent to a much higher percentage in some, but with a general average of probably not more than 7 or 8 percent.

Thus, if an ice company engages in interstate commerce to the extent of approximately 7 or 8 percent of its total business, heavy penalties already are imposed by the present wage-and-hour law. An increase in the minimum wage, as proposed in S. 1349, would only aggravate this situation.

Throughout the South, in particular, and in most small towns and rural communities over the country 40 cents an hour is more than ice companies are presently paying for ordinary unskilled labor. To increase the 40-cent minimum as proposed in S. 1349 would simply make it impossible, or at least unprofitable, for ice companies to engage in any interstate business.

As evidence of this, many ice companies during the war refused to ship ice out of State to localities experiencing ice shortages, or to supply ice for railroad car icing, because to do so would have placed them under the act.

In other words, the 40-cent minimum, and particularly the overtime requirements of one and one-half times the minimum for all over 40 hours, must have been more than they were already paying or else they would have taken on this additional business. Or to say it another way, the total costs accruing from doing business under the act would have exceeded the net profits that might have resulted from the sales of ice for interstate commerce. If this were true at a time when the volume of business was large, as a result of abnormal wartime demands, it would be even more so for the ensuing postwar period when every ice company faces excessive competition and shrinking markets.

The 2,200 establishments of the ice industry presently operating under the provisions of the wage-and-hour law simply could not afford to pay the minimum wages as proposed in S. 1349. Should this proposed bill be finally enacted into law, the railroads, packers, and shippers of perishable foods would suddenly find themselves without a supply of ice so necessary in protecting these perishables during their movements across the country, because the ice companies supplying this ice will eliminate their present interstate business.

Railroads alone used approximately 8,000,000 tons of ice during 1944. The companies supplying this ice sold it to the railroads on a very narrow margin of profit. To produce and distribute this ice, these companies were compelled to maintain heavy crews of labor because the demand came during the same three peak summer months simultaneously with the same peak demands of the companies' other customers.

This condition causes large amounts of overtime to accumulate This requirement for much overtime during the yearly ice seasons is not just a wartime condition. Instead, it is a normal, regular and annually recurring practice imposed upon the ice industry as a direct result of the highly seasonal characteristics of the ice business.

In the event these companies should eliminate their interstate business and therefore escape the minimum wage and overtime requirements of the wage-and-hour law, the movements of perishable foods throughout this country would be seriously paralyzed.

In fact, we know of no way by which a calamity of this kind could be met because the railroads and other carriers of perishable foods neither have facilities of their own to produce the required tonnage of ice for this indispensable refrigeration, nor do they contemplate the construction of such facilities.

It would be very uneconomical for them to make heavy investments in building plants just for this one use in the first place, and, secondly, no diversification of market outlets for their surplus ice would be available, because, pursuant to interstate commerce regulations, they would be prohibited from engaging in competitive retail selling.

Again, the ice business is local, seasonal, highly competitive and one in which there is absolutely no reconversion possibilities. Consumer prices are fixed and susceptible to little or no fluctuation. The absence of speculation in the ice business is particularly conspicuous.

The increase in wartime business which the ice manufacturer has enjoyed during the past 3 years will not continue because wartime demands for ice will decrease. Certain shrinkages in tonnage are inevitable.

Therefore, we respectfully submit the inequity of legislation such as S. 1349 which will, if enacted into Federal law, force a substantial segment of the ice industry to operate under a blanket minimum wage, on a Nation-wide basis, without taking into consideration the fact that labor conditions, wages, practices, and so forth, within the industry vary greatly in different sections of the Nation.

The second objection the ice industry has to S. 1349 is section 5 of the bill wherein it is proposed that the Wage and Hour Administrator, functioning in collaboration with industry committees, would be authorized and empowered to establish wage differentials between interrelated job classifications.

It is our belief that the vesting of such broad discretionary authority in the hands of an individual Government official is wrong. Moreover, even if such authority were spread to encompass a single department or division of the Government, the result would be equally bad because it would only perpetuate the existence of a bureau with its accompanying bureaucratic power to regulate American business.

Also, we submit that a procedure to establish wage rates on interrelated jobs as proposed in this bill will, if enacted into law, destroy the tried and tested means of settling such problems through long-established practices within industry plus the achievements accomplished through collective bargaining.

Job classifications, their relative importance to one another, their scale of wage compensation, are the results of many years of experience in the realm of competitive employment. No legislative mandate should be issued to circumvent or otherwise vitiate this method of operation under our present system of American free enterprise.

The ice industry feels that our present system of regulating interrelated job classification wages has been accepted and satisfactory to both management and labor and that S. 1349 offers no new or workable scheme which would improve it.

The last objection the ice industry has to S. 1349 is directed against that section which provides for a 5-year statute of limitations on employee suits for unpaid wages, overtime, and liquidated damages. This length of time is, we believe, entirely too long and unreasonable for possible suits on the part of employees against their employers.

Already, the ice industry has formally gone on record with the House Judiciary Committee in support of H. R. 2788, specifically identified as the Gwynne bill.

This bill proposes to amend the Federal Code, establishing a 1-year limitation for private actions and public actions where the United States is not the real party in interest, except where a shorter period is provided by State law. On actions in which the United States is the real party in interest, the period of limitation is increased to 2 years.

Should S. 1349 be enacted into law, its provisions for a 5-year statute of limitation, would supersede the more reasonable and acceptable terms of the Gwynne bill even if the latter were finally passed.

It is only proper and equitable to all persons concerned that a Federal statute, such as the Fair Labor Standards Act, should not only create rights but at the same time, should provide definite remedies for violations of these rights and, more especially, should specify a definite period of limitation, within which a claimant must bring his action. Under no circumstances should the present failure of the wage-and-hour law to specify a definite period of limitation be permitted to continue.

In the case of *Smith* v. *Continental Oil Co.* (8 W. H. R. 152), tried in the United States District Court for the Eastern Division of New York, the court said:

> The Fair Labor Standards Act does not itself specify any time within which the right of action it confers must be commenced, though jurisdiction is provided in both Federal and State courts. This omission might well be remedied by the Congress in the interest of uniformity.

Again in the case of *Bright* v. *Hobbs* (56 F. Supp. 723), tried in the United States District Court for Maryland, the court said:

> We are informed that there is now pending in Congress a bill to provide a uniform period of limitation under the Fair Labor Standards Act, but up to the present time Congress has seen fit to leave this matter to the various States, unfortunate as this is, because uniformity in a matter of this kind, especially where the State statutes vary so greatly, is highly desirable.

As to the need then, for uniformity and definiteness with respect to a reasonable period of limitation within the Fair Labor Standards Act, we believe every member of this committee is in complete affirmative agreement.

The ice industry is no different than the scores of other industries that constantly find themselves confronted with the many uncertainties and possible litigation growing out of the administrative interpretations, conflicting court decisions, and so forth, involving wage-hour matters.

There is therefore a very definite need for Congress to rectify this troublesome situation by writing into the present statute a specified time limitation within which all these controversies may be adjudicated equitably and expeditiously.

The important question of the moment then is, How long a period of limitation should be provided?

The ice industry's recommended answer to this question is that the 5-year statute of limitations, as proposed in S. 1349, be changed to comply with the same periods of limitation as provided for in the Gwynne bill.

We believe that from the standpoint of both employee and employer such a limitation is just and fair as well as reasonable and workable. It will neither handicap nor preclude recoveries by an employee on any equitable suits arising out of his employment relationship.

Instead, it provides him with sufficient time in which to avail himself of the full and complete remedial stipulations of the act.

We feel that a failure on the part of an employee to exercise his right of action within 1 year from the date his cause of action originated, should forever bar him from instituting a subsequent employee suit.

Senator TUNNELL. What did you say is the minimum wage now in the ice industry?

Mr. JOBE. Forty cents.

Senator TUNNELL. Forty cents. And did you not say that the majority of the employees, or a large number of them were not getting more than that?

Mr. JOBE. I said that throughout the South, and in a vast number of rural communities and small towns, they get less than 40 cents.

Senator TUNNELL. Less than 40 cents. In other words, with the 40-hour week, they get less than $16?

Mr. JOBE. No. My answer to your question had to do with the minimum of 40 cents. They make much more than that, because they work much longer hours than 40 hours a week. They work as much as 80 hours a week.

Senator TUNNELL. But on the basis of 40 hours a week, they are working 2 weeks, according to that, in one; but on the basis of a 40-hour week, they are making less than $16.

Mr. JOBE. If they are working 40 hours a week, that is correct.

Senator TUNNELL. Now, is there any difference between the large manufacturer of ice and the small one? That is, is there any difference in the cost of production?

Mr. JOBE. The larger the company operating in the larger cities—their costs are greater than in the small company operating in the smaller towns.

Senator TUNNELL. And manufacturing on a wholesale basis does not lower the cost of production?

Mr. JOBE. No, sir.

Senator TUNNELL. Do they manufacture it pretty largely in cans?

Mr. JOBE. Yes, sir, that is the predominantly accepted method today of manufacturing ice.

Senator TUNNELL. Yes. Now, there are some chemicals necessary, are there not?

Mr. JOBE. Well, you use salt for the brine, but the ice itself is crystal clear and chemically pure. There is no chemical in the ice.

Senator TUNNELL. Do you use ammonia.

Mr. JOBE. The ammonia is the refrigerant.

Senator TUNNELL. That is the refrigerant; yes. Is that a great item of expense?

Mr. JOBE. Well, it is a cost item.

Senator TUNNELL. It is a cost item.

Mr. JOBE. I am not in a position to tell you exactly what percentage it is.

Senator ELLENDER. You can use it over and over?

Mr. JOBE. It is used continuously and it has to be replenished every so often, but not too frequently.

Senator SMITH. Did you say in your testimony what the percentage of labor cost is?

Mr. JOBE. Forty-two.

Senator TUNNELL. What was your question? What percentage of what?

Senator SMITH. What percentage of the total cost was the labor item. I did not get in here in time to hear the first part of his testimony.

Mr. JOBE. Forty-two percent.

Senator ELLENDER. Do you know how many people would be affected by this bill?

Mr. JOBE. I stated in my testimony that there were approximately 2,200 separate plants, or establishments.

Senator ELLENDER. Well, how many people would that represent?

Mr. JOBE. The total industry employs approximately 250,000 people.

Senator ELLENDER. Now, as to those factories that sell interstate, is it not true that they must also pay the wages provided under this bill, if they sell locally and deliver locally?

Mr. JOBE. Only the ice—the difficulty, Senator, comes in keeping them separate. The act says that any man having to do with the production, handling, or accounting of goods made for commerce is covered by the act. The difficulty in our industry is to separate our employees as to those devoting their entire attention to interstate business as compared to those doing intrastate business and interchangeably where they are doing both.

A man may work half a day doing car icing and spend the afternoon delivering domestic ice.

Senator ELLENDER. But the whole thing is put under it, is it?

Mr. JOBE. That is correct.

Senator ELLENDER. The point I had in mind is:

Suppose you had two factories, two plants in a town of, say, 10,000, and one is engaged in interstate, and the other one in intrastate business.

Mr. JOBE. Yes.

Senator ELLENDER. As I understand the law, the factory that is engaged in interstate business must not only pay the fixed wage for the ice shipped out of the State, but also for the ice that is delivered from house to house within that area, within the town.

Mr. JOBE. No; if he can separate it. The only ice that is covered is the ice that goes into interstate commerce.

Senator ELLENDER. Well that should not be very difficult to separate should it?

Mr. JOBE. Yes; it is. A man works 2 hours in the morning icing a car and he might spend the next couple of hours delivering domestic ice locally and go back in the afternoon and ice another car that they just got notice, 15 minutes in advance, was coming in.

Senator ELLENDER. Well, what about the percentage of ice that is sold in interstate?

Mr. JOBE. Well, we estimate that on an average it varies from a fraction of 1 percent. A company may ice only a dozen cars in the whole year, railroad cars I am talking about, just a fraction of 1 percent of their total business, whereas another company might be devoted exclusively to cars. Then, you have the plants all between.

The general average, as we estimate it, would be around 7 or 8 percent of the total industry.

Senator ELLENDER. Well, I am a little confused. That is why I am asking these questions.

Is it your interpretation of the bill that although a factory sells both interstate and intrastate, that it is under the act only as to the part of the ice that is sold interstate?

Mr. JOBE. The act is based on a workweek. If a man working during that week engages in the production of ice for interstate, he is covered.

Senator ELLENDER. That is what I was saying, it covers the whole operation?

Mr. JOBE. That is right.

Senator ELLENDER. So that if he manufactures ice and sells it locally only, he is not concerned by the act?

Mr. JOBE. Yes.

Senator ELLENDER. That is all.

Senator TUNNELL. Then, from what you say, the ice industry, as a whole, is paying to the great majority of its employees less than the present minimum wage law requires?

Mr. JOBE. We have no definite statistics, Senator, as to what percentage that is. We know that through the South, we will say in the small towns and rural communities, they are prevailing wages or else they couldn't get the employees to work.

Senator TUNNELL. I don't understand your statement as to the South. So many witnesses refer to the South, and yet, this morning, we had an uncontradicted statement that the State where the lowest wages were paid was Maine.

Senator ELLENDER. I guess the South is so warm that it has most of the ice manufacturing in the Nation, Senator.

Mr. JOBE. I happen to come from the South, and I know that you can live cheaper there than in the North. Forty cents in a small town in Alabama is equivalent to $1.50 in Washington.

Senator TUNNELL. I would like to get that from somebody who works on this 40-cent rate. I would like to hear some of these people express themselves about that. We have already had some testimony from the South about inability to get the necessities of life.

Senator ELLENDER. I would like to say something off the record.

(Discussion was had outside the record.)

Senator TUNNELL. All right. I have no further questions.

Senator ELLENDER. That is all.

Senator SMITH. That is all.

Senator TUNNELL. I have a statement here from Reid Robinson, the president of the International Union of Mine, Mill and Smelter Workers, CIO, which will be inserted in the record.

(The statement referred to appears in the appendix.)

Senator TUNNELL. There will be no hearing tomorrow because of another engagement that Senator Ellender and I have.

Mr. KRAMER. I have a witness for tomorrow from New York.

Senator TUNNELL. You can notify him of the postponement.

The hearing is adjourned until 10 o'clock Friday morning.

(Whereupon, at 3 p. m., an adjournment was taken until 10 a. m., Friday, October 12, 1945.)

AMENDMENT OF THE FAIR LABOR STANDARDS ACT

FRIDAY, OCTOBER 12, 1945

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON EDUCATION AND LABOR,
Washington, D. C.

The subcommittee met, pursuant to adjournment, at 10 a. m., in room 424–B, Senate Office Building, Senator James M. Tunnell presiding.

Present: Senators Tunnell, Ellender, and Smith.

Also present: Charles Kramer, consultant to the committee.

Senator TUNNELL. Mr. Fraser, are you ready to proceed?

Mr. FRASER. Yes, sir.

TESTIMONY OF SAMUEL FRASER, SECRETARY, INTERNATIONAL APPLE ASSOCIATION

Senator TUNNELL. Will you give the reporter your full name?

Mr. FRASER. Samuel Fraser, International Apple Association, Rochester, N. Y. I am secretary of the association. My training is in farming, and I have been a farmer all my life.

Senator TUNNELL. From where? Where do you farm?

Mr. FRASER. Geneseo, N. Y.

Senator ELLENDER. What size farm have you, Mr. Fraser?

Mr. Fraser. Two hundred and forty acres.

Senator ELLENDER. What do you grow?

Mr. FRASER. Mixed farming. Fruit, cattle, general farming, I grow 80 acres of fruit—30 acres of cherries, 30 acres of apples, and some other fruits. I have been in farming as a laborer, or working a farm or owning one for the last 57 years.

I have seen the ups and downs of farming.

I realize this is a broad subject with many facets. I can bring you only one view, and I would like to develop that view as I see it. That, of course, is subject to someone else's interpretation as well as mine.

I meant to bring this morning, and I am now trying to secure a bulletin issued by the Department of Agriculture on what peace can mean to the farmers. I will see that all members of the committee are handed a copy of this bulletin as soon as they are available. It was issued July 1945 as Miscellaneous Publication 570. I insert in my brief table 1 of this publication as my table 1.

Of all things today, I think food is the most important and the production of food in the world today is 3 percent less than it was in the years 1935–39. That means that per capita we are 10 percent below the dietary of those years. That means that 1 day in 10 we

don't eat, or 5 weeks in 50 we don't eat, on the same basis we ate in 1935.

Senator TUNNELL. You don't want to try it that way, do you?

Mr. FRASER. That is what we are doing today.

The United States, and the Americas, have been particularly favored. We did not have the war wrecking production of food.

What I want to bring out is that whenever we are in war we have destruction of the things which provide for the individual economy, and we sacrifice that to the attainment of the war effort. We always pay for those diversions. We never get away from paying for those orgies, or delusions into which men drop when they go to war. They are inevitably costly.

The production of food in the world is one vital item for peace—in some war zones food has been unobtainable at any price—it is one of the most important problems that can come before this country at this time, and I would like to dwell for a few moments on some of the prospects of the increases in cost of production and depression of the prices producers may receive.

The Department of Agriculture release, Miscellaneous Publication No. 570, carries a table which I think is enlightening, because it seeks to present to agriculture possible changes it may expect to meet.

The publication shows that the total United States labor force, the average for 1935–39, was 53.8 millions, in 1943 62.6 millions.

With full employment in prospect, if that continues, we expect to be able to employ 60 million, or we would have 60 million to keep in employment say up until 1950.

Senator TUNNELL. Why do you say that?

Mr. FRASER. That is the statement of the Department of Agriculture.

Senator TUNNELL. What is wrong with them after 1950? Why take 1950?

Mr. FRASER. They are taking a forecast more or less up to 1950, and I want to show the possibilities which they show to us, which we must be prepared to meet as farmers, and if we are prepared to meet these circumstances and the forecast has any basis—and I take it we recognize that the sun shines and it doesn't shine, and we have summer and winter, and we have high tide and low tide, and tides in the affairs of men are equally subject to repetition as circumstances arise—they are showing what we must be prepared to adjust to.

For example, in the case of full employment, it continued, we would have a national income of $150,000,000,000, but, supposing there is only intermediate employment, which means 7,000,000 unemployed—and 7,000,000 unemployed will probably come by January—then they indicate that the national income will be expected to drop to $105,000,000,000.

Now, the effect on the farmer will be to drop the parity ratio of prices received versus prices paid to 89 as against an average of 1935–39, of 84.

Also, if we get a serious depression as we had in 1932, and have 17 million unemployed, then the parity ratio may be expected to drop to 62, and the farm population would have 30 cents a day national income, on the average, per capita.

The proposal of intermediate employment means we would have 58 cents a day per capita for the people living on farms available for the total payment of all things. (See table 3 p. 456.)

The relationship of the farmer as shown in the table III is that, under those circumstances, the man in the city and those not on the farm may have about four times the income of the man who is on the farm, so you would have something like $2.30 per capita per day which is about the same amount as the years 1919–29 for the people not on the farm.

With that purchasing power in prospect, any attempt to try and keep the present rate of prices, labor, or any other thing, is not attainable, and I think nothing but a realistic view of the situation should be taken at this time, and we should adjust to the possibilities with which we may be confronted.

And the only way we can see to do so is to allow the operation of the free economic play of the prices, labor, and other things. That is the only way, because with this possibility you don't know what is going to happen.

Senator TUNNELL. Do you believe they ought to reduce wages?

Mr. FRASER. You can't help yourself if you can't employ them at a profit.

Senator TUNNELL. Then, what would an apple bring?

Mr. FRASER. It might bring the prices shown in table II, in which table I have given you apple prices for 70 years, covering New York wholesale prices for 6 leading varieties. In the decade, 1919–29, the per capita national income average $1.67 per day and a bushel of apples on the average sold for Baldwin, $1.62; R. I. Greenings, $1.75; Spy, $1.93; McIntosh, $2.35.

Senator TUNNELL. I pay 5 cents apiece for pretty small ones.

Mr. FRASER. We have the shortest crop in history at the present moment, and in the eastern part of the United States if we processed as many apples as we did last year, there would not be one fresh apple on sale.

The western New York crop is 2 percent of full production, and it emphasizes a point which I would like to develop.

Senator TUNNELL. Was that destroyed by one cold spell?

Mr. FRASER. By continuous cold weather during the time of bloom, and we are subject to those circumstances all the time. Also we never know what price we are going to get and no price you could give us would ever pay for the cost of production of this crop in the Eastern States.

The Pacific coast is in better condition. California has an exceptionally good crop. So that the supply is, on the whole, the shortest crop in years, with very small supplies east of the Mississippi.

I am answering the question as you raised it, and just to show you why you are paying for apples.

Next, the costs which are now incurred in the growing and packing and marketing, are on the highest wage scale that we have ever had in the United States.

(See table 3, p. 456. Per capita national income, $3.61 per day in 1944, against previous high of $2.38 in 1929, and costs in growing and handling apples carry these increases.)

Senator TUNNELL. What sort of crop did you have last year?

Mr. FRASER. Last year, we had not a high crop, but an average crop in the United States.

Senator TUNNELL. They were pretty high-priced then?

Mr. FRASER. Well, sir, you require 520 hours of labor to grow and pack an acre of apples in the State of Washington, 240 hours will go

in up to harvest; 280 hours are required to harvest and pack. That means about 1.2 hours of labor in a box of apples, based on a 10-year record covering millions of boxes.

Senator TUNNELL. Does that depend on the size of the crop at all?

Mr. FRASER. No.

Senator TUNNELL. You will have 280 hours to harvest?

Mr. FRASER. The labor up to harvest is constant. The trees must be cared for crop or no crop.

Senator TUNNELL. I see. Will you have the 280 hours for harvesting apples this year?

Mr. FRASER. In some districts.

Senator TUNNELL. But on an average—you are not talking about where there is a heavy crop?

Mr. FRASER. Let me finish Washington, please.

Senator TUNNELL. All right. I hope you can.

Mr. FRASER. They have a normal crop, about 400 bushels to an acre, and they have that set of figures on which they are operating, 280 hours of labor, or 1.2 hours of labor per box of apples, at 80 cents an hour. They have $1 of labor right there in that box.

In 1914, the labor relationship to cost of production was about 38 percent. Today the amount of labor in production is 56 percent.

We are on a basis of rising costs of labor, because all of our work with apples is on a hand-labor-basis. We cannot do mechanized production as we can with rice where we can broadcast and flood, and then put a combine in and do it mechanically, or, as we might do with peanuts or other crops.

The fruit and vegetable industry is in a critical condition if you start to arbitrarily fix the rates, and you cannot possibly fix the price which they are going to receive.

Now, in New York, the common charge for labor in growing an acre of apples is 140 hours of which 50 hours is up to harvest, 37 for harvesting, 37 for packing and 14 for the hauling and other incidentals of getting it on the car.

It takes as many hours to harvest as it does to pick.

This proposal is to split that job right there and put the packing under the wage scales provided in this bill. The picking will be going on at the same time, and of necessity, you must pay at least the same wage, and the picking and the packing and the movement to market constitutes over 66 percent of the total labor cost of growing of apples in a State like New York.

What are we going to do when you kite that cost? We are going to sell, in all probability at from $1.60 to $2.30 a box delivered New York market when conditions drop to the 1919–29 level. These are the prices received in New York during that period.

To us it is unthinkable and impossible to fix a wage scale when the returns are floating.

(See table 3.)

Senator TUNNELL. Do you think you can fix any wage scale that will fit the period from 1929 to 1933?

Mr. FRASER. No; I don't think you will fix any wage scale. I think the whole thing is a fallacy.

Senator TUNNELL. Do you believe in fixing the wage scale at such a point that it will fit the conditions from 1929 to 1933?

Mr. FRASER. No; because you don't know you can give us 1929. You may have 1932, and at that time the agricultural people got an

income of 21 cents a day, and if this forecast is carried through and we get the 17,000,000 unemployment, we will go back to, say, with Government payments, 26 cents a day for all the farm population in the United States, from 26 to 30 cents, perhaps less.

And you can't stop it when it is an economic adjustment.

If we act in accord with economic law, we will succeed in legislation. If we violate it, we simply can't force it, and I think you are confronted with an unenforceable set of conditions, as far as we are concerned, in agriculture.

You may think it can be applied in other lines. I still think that is impossible, but I am only arguing for agriculture at this time, and the general relationship of agriculture in the economic adjustment which is inevitable.

We recognize that in 1929, the factory workers got about $11,000,000,000, and agriculture got 11 billion of cash sales.

In 1932 the factory workers got about $5,000,000,000 and agriculture got about $5,000,000,000 for cash sales.

Unless the worker has the money, the grower cannot get it, so we want a good wage scale, but we want it under economic law and adjustment thereunder because we have to operate under economic law and the adjustment. We want full opportunity for economic law to carry industrial and other wages up to the highest plane. It is to the advantage of agriculture.

I believe if you will recast your approach on this situation, with that end in mind, and look at the bill from that angle, and leave all the opportunities for economic law to make the adjustments, we may get somewhere.

But I cannot see a forced wage scale being made to operate on our commodities.

Senator SMITH. Are you referring to the entire wage scale, or are you talking about the minimum wage?

Mr. FRASER. Whenever you set a minimum wage, sir, that is used by the union as something they must beat. Otherwise, there is no justification for having the union.

And they seek to interpret the minimum wage scale, and change it into something which is just a basis.

Now, then, in your job classification which this proposes, the Department of Labor has already devised 29,000 classifications of jobs, in which they are going to fit this so-called 50,000,000 workers. That in itself is going to be a splendid opening for jobs at Government expense, and it will pyramid Government employment.

And Government expense has been pyramiding right straight along, straight through the years. That is the one thing that has advanced so far.

Senator TUNNELL. The one thing?

Mr. FRASER. Certainly, production for civilian use has declined for the last several years.

Senator TUNNELL. Why limit it to civilian use? Don't you think the soldiers are entitled to be fed?

Mr. FRASER. Certainly they have to be fed.

Senator TUNNELL. Why do you compare it to civilian use instead of total production?

Mr. FRASER. I split it because the figures are given that way in the Department of Agriculture data, and various other statistics.

The Government has been handling the purchasing of these other commodities and the Government in the market has been the one factor in putting the high——

Senator TUNNELL. You said that Government expenses are the only thing that have gone up. That is not my information or my experience. I would like for you to explain what you mean by that.

Mr. FRASER. I mean that the increase in the expenditures due to war have gained in the last 4 years faster and greater than the gain for civilian use——

Senator TUNNELL. But you said Government expense was the one thing that had gone up.

Mr. FRASER. Certainly, because the Government has been handling the war situation.

Senator TUNNELL. Haven't wages gone up?

Mr. FRASER. Yes, sir; because the best market in the world is the United States Government in the market buying the goods on a war inflated market.

Senator TUNNELL. Hasn't the price of living gone up?

Mr. FRASER. The price of living has gone up with the increase in wages, because wages register as costs.

Senator TUNNELL. Then why do you say Government expense is the only thing that has gone up?

Mr. FRASER. In the listings of national income, the portion devoted to Government is the one that is outstanding in the increase in recent years.

Senator TUNNELL. Because of the war?

Mr. FRASER. Because of the war, certainly. That is an essential thing.

I am not arguing about that increase because liberty is worth fighting for. It is priceless. I am not doing anything but pointing out that is what has happened, but I want it recognized that it is not going to continue. What we have seen developing in the last 4 years is no criterion to tie to.

If you will look at my table II, you will see just what it has done.

Senator SMITH. Is this in your testimony?

Mr. FRASER. Yes, if you will just turn to table 2 at the end, you will see there that instead of as in 1919–29, somewhere around $600 average annual income per person, we have gone up to $1,117 in 1944. Instead of having an average income of $1.67 per day for the United States, we have an income of $3.06. (Table 2 appears on p. 454.)

And, of course, labor would like to stabilize on such a basis.

And when you have a high average income inevitably prices rise because the income is in the cost of the goods. Wages register all the time.

The point I am raising is that we are likely, according to the forecast, to drop back to this $600 bracket, and the Secretary of Agriculture is trying to point out that that is what we must be prepared to adjust to right quickly, and we saw a decline in the national income of over a billion dollars in August of this year and with our world shortage of food we witness the price of food declining every day.

The Government is stepping out of upholding the market and we must expect that the loss of such a buyer will register.

Under a scale of declining prices to try and stabilize a wage scale at a point which was brought about by the Government staying in

when the Government is going out is unattainable, furthermore this proposal is to not only try to hold at peak but force an increase.

We may not be going back, according to table I to this $1.67, we may go back for at least a time to the $320 of 1932. That is what we get to with 17,000,000 unemployed, and if that happens, then there is no way to stop the financial adjustment because the best economists can figure is $57,500,000,000 of national income, and that is going to mean about 26 cents a day to the "persons on farms" and that is not a high standard.

Senator TUNNELL. What was it in 1932?

Mr. FRASER. On table III we have broken down the "farm" and the "nonfarm" income per person per day.

If you turn to 1932, the yearly income of persons not on farms was $442. But the yearly income that same year for the people in agriculture per person on farms was $75. Certainly a yearly income of $75 is not going to make anybody enthusiastic about their year's income.

Senator SMITH. Isn't that the cash income? It doesn't take into account the living and what the man raises on the farm, does it?

Mr. FRASER. It takes into account the living derived from the farm rent and everything, according to the figures furnished by the Department of Agriculture. It is all in there, on the operation of the farm, the average return for the farmer was a minus. And the point we are bringing to you, gentlemen, is that the 58 cents daily income "persons on farms" which is shown for the 1919–29 period is inevitable when we have 7,000,000 unemployed, and that is what we have to anticipate.

And remember, the farmer sells at wholesale and buys at retail, and you are putting that group of people into a strait-jacket.

Senator TUNNELL. That is what every other producer does, isn't it?

Mr. FRASER. What?

Senator TUNNELL. He sells at wholesale and buys at retail?

Mr. FRASER. It depends. That is, he might be equipped to merchandise himself.

Senator ELLENDER. Such producers as those can regulate production and the farmer can't.

Mr. FRASER. He can't turn the spigot off. I can't break up my rotation. I don't know when I will reap, or when the turn will come.

Like in 1925, when Europe went into a terrible position and we had a good return in 1925, and it was a Godsend that we had 800,000,000 bushels of wheat to give to Europe because it tended to stabilize. I think Lord Kelvin was right. If you can express a thing in a figure you have got something. So we try to give it to you in a figure and show you that in 1944 the people not on the farm had a national income, the average per person, of $3.61, and the man on the farm had $1.39.

Now, then, that relationship—I don't want to inject parity in here—but the parity relationship which was based on 1910–14 was $1.33 against $0.37, or 3.59 to 1.

Professor Warren of Cornell started these figures on which parity was based, and he was a student of mine when I was there, and they were never meant to be used as a basis for fixing prices. They were what we could gather at that time showing the relationship at that time.

To bring them out as a basis on which you could set prices was never in our dream when we began to gather that data.

I know, because I was very much interested in the subject at that time. But they are the basis for this relationship of the yearly income and we have, under present circumstances, gone up from an average of $1.33 to $3.61, for that portion of the population "not on farms" which I don't believe we can maintain in our world position which we are going to have to adjust to.

If we don't win this peace, if we are not able to lead in the adjustments of the world, if we can't keep up with our exports because we are loaded with high costs, I don't see a very good outlook for the future. If we pyramid the costs, and 35 to 55 percent, varying with the crop, of our farm costs are labor, and we split the packing and all other items in preparing for market, and put these under a card index or classification, or what not, and a minimum wage scale above 75 cents on hour, as this bill provides, I see little possibility of keeping our exports up.

Senator TUNNELL. Do you think the help on the farm should pay the difference between cost of production in America and China, for instance?

Mr. FRASER. Oh, no. The point is, if we can in a free economy keep our goods moving abroad because we have made certain adjustments, we are entitled to that without being handicapped.

Senator TUNNELL. You know what they do with cotton farming?

Mr. FRASER. I know we put $50,000,000 into Brazil to help build up their cotton production.

Senator TUNNELL. And we put 4 cents a pound in all foreign production, didn't we?

Mr. FRASER. It has not worked. All we did was to drop the price of India's cotton, the 10,000,000 bales which were on hand. They reduced the price 3 cents a pound, when we put on 4 cents subsidy, which our taxpayers furnish.

Senator TUNNELL. Why do you say it does not work?

Mr. FRASER. Because India's cotton sold for 3 cents a pound less than ours, which shut us further out of our exports.

And Britain has taken out spindles made to handle United States cotton and installed spindles to handle Brazil cotton because they are working with the assurance that they can then undersell our manufacturers by 3 or 4 cents a pound, plus the cost of transportation.

Senator TUNNELL. What is your suggestion as to the situation as regards production in America, as compared with the foreign countries?

Mr. FRASER. I think we will adjust on one basis or two bases in our present position. The man who can produce for the local market and distribute to that local market such commodities as milk and small fruits, and those things, will survive.

The man who, because of our natural advantages, can meet any world price even on a free-trade basis, and I say "even"—due to our natural conditions, will survive, and, as we progress in our adjustment to that end we will take our chance, if we have a free market, and are not tied.

For instance, we have reduced the number of apple trees under the conditions forced on us, from about 200,000,000 to 70,000,000.

Senator TUNNELL. Why was that? Lack of help?

Mr. FRASER. That was, in many cases, a shift from points where they were not economically grown to points where they could be economically grown under conditions met in the period 1929–40. Loss of export markets, reduction in prices due to loss of buying power, and so forth. See table II for the price decline which forced these adjustments.

For instance, each apple variety has a heat requirement which determines whether it will mature in 60, 90, or 120, or 160 days from time of bloom.

We have charted the isotherms, mapped our soils, charted the varieties which are suitable to those different locations, and we are trying to locate each variety where it will do its best, and we are putting the work in the hands of men who will make the trees produce, and in that way we will get increased production without increased cost—by the utilization of our intelligence.

Senator TUNNELL. As I understand your answer, the reduction from 200,000,000 trees to 70,000,000 trees is a squeezing out of those who can't grow apples economically.

Mr. FRASER. That is right. That is inevitable; that is proper. We think those adjustments are right.

And I feel the same way about a job. I don't think anybody is entitled to a job. All I ever hoped for is the opportunity for one. I am just thinking of myself now. If once you get the opportunity to get a job, it is up to you to keep it.

Now, then, as to job classifications, the Department of Labor has issued a book of 1,287 pages in small type listing and describing 29,000 jobs, of which 7,000 are codified; for instance there is a "weed remover," a man who stands at the table when the spinach runs by after washing and he takes a weed out, and that is the only thing he can do. He is skilled, his wage will be over 75 cents and hour. Such classification is not going to be economical for our packing plants. The Labor Department have defined these 29,000 jobs carefully and indicate the bounds of the job, and they are going to classify all labor all the way up. At present the book is under extensive revision. I hope to file a copy. I expect it shortly.

When you come to a classification of 29,000 jobs for 53,000,000 workers, and put a minimum wage scale on each of them, it is such an imponderable job, and so worthless in its effort, that you had better let the men go to work instead of putting barriers of that character in the way.

If we are going to compete with the world, that is one thing, but if we are thinking we can live out of the world as an entity in ourselves, we will have wars galore. We will have to adjust on a world basis from now on. The world is small.

Senator TUNNELL. Do you believe in the present standard of wages at all?

Mr. FRASER. I believe in the upturn of the wage scale which has grown, due to the effort and intelligence and brains of America, and if you will check the physical volume of production, you will find we have gone up about 1.74 percent a year since 1834 up to 1900, and then came a time when we slowed down more or less, and we dropped to a factor of 0.64 per year and with it all wages advanced. I believe in the advance with the increase in production.

When we go into war, we curtail the physical volume of production for civilian use because our efforts go to war.

In the case of food, our production index did not keep up with the index of all commodities. We dropped down to a minus from 1919.

Senator TUNNELL. I ask you again: Do you believe in the present law with reference to wages?

Mr. FRASER. The Fair Labor Standards Act?

Senator TUNNELL. Yes.

Mr. FRASER. Well, sir, I wanted a different bill when we worked on it, and we had two bills, if you remember, and they went to a conference, and the committee worked during that hot June, and I stayed outside the door, and I would talk to them at night, and ask, "What did you do," and the chairman would try to explain, and we couldn't always understand.

It seems to me I am not alone in not being able to understand, for some of the administrators couldn't understand either.

Senator TUNNELL. I ask you again: Do you believe in the present standard of wages?

Mr. FRASER. The present standard of wages?

Senator TUNNELL. Legal standard.

Senator ELLENDER. The present wage and hour law.

Mr. FRASER. Forty cents an hour?

Senator TUNNELL. Yes.

Mr. FRASER. I would leave that alone because it is there. I would let that stand. I would not try to change it.

Senator TUNNELL. That is not interfering now, according to your theory?

Mr. FRASER. Well, if you put this bill through, it won't be in.

Senator TUNNELL. But if we don't put this bill through—do you think it is interfering with the farmer?

Mr. FRASER. No; because you have left agriculture out to a greater degree than you now propose.

Senator TUNNELL. Then, if a 40-cent rate for the farmer would be put into the present bill, would you think it was still an impossibility?

Mr. FRASER. Yes, sir; it is impossible.

Senator TUNNELL. The farmer could not stand even a 40-cent rate?

Mr. FRASER. No; many of them cannot, because today you have parts of the United States which are not getting 40 cents for certain types of labor. The average farm wage, without board, 1944, was $3.93 per day. The range by groups of States is $2.53 to $7.36. (See Farm Labor, U. S. Department of Agriculture, January 12, 1945.) The point is: why should you handicap labor from getting something? And it means the employer who does not pay that minimum amount is going to jail and will be fined $10,000 if he doesn't pay it.

Senator TUNNELL. If he does employ them and doesn't pay it.

Mr. FRASER. If he does employ them, and does not pay it, and I would like to do this: I would like to put all the bureaus under a court review and if you will allow an amendment to this present one which we fought for in 1938, a court review section—I don't see why a bureau chief, or any other American, should not be under law.

Senator TUNNELL. You speak of being here and working for your ideas in 1938. What is the difference between the argument you now put up and the argument you put up then?

Mr. FRASER. The fundamental soundness is the same. The factors have been changed—the principles have not changed. Economic law is just the same.

We got exemptions for agriculture which you now don't propose to allow.

Senator TUNNELL. I guess you did your work pretty well then.

Mr. FRASER. I don't think so. I am never satisfied with what I do. I believe that we should have a proper court review.

For instance, the classification of weed remover, a man handling spinach—and I will define that a "weed is a plant out of place"—supposing he is codified and classified and he is to be there when the spinach run is coming over the belt, and he isn't there and somebody else removes a weed and then his job is taken and the employer is fined $10,000 for violation and so on, or there is a basis for a strike, and so forth.

This is the point: That definition is now made. It is in print. If a protest is not filed with the court within 60 days after the order is given you are barred from court action or relief.

It is not an American standard to have a bureau or an employee of a bureau beyond the law in a matter of this nature.

I would support H. R. 1203 in that respect. You must maintain law if we are going to live in this Republic, and if we violate economic law we are going to die.

Senator TUNNELL. We are going to die, anyhow, aren't we?

Mr. FRASER. Well, there is no use dying before our time.

This is the unfortunate thing, sir. We have spent $500,000,000,000 and the other side spent $500,000,000,000, in order to kill 3 percent of the world's population in 5 years.

Visualize what an effort it is to shift 3 percent. It has taken this and the catastrophe that is going to endure for the next 30 years to move 3 percent out of existence in that manner.

People talk glibly of 3 percent as though it were a bagatelle. Three percent reduction in the production of the world's food means per capita 10 percent per person.

And the same thing in the wage scale. Take the proposal of the oil people that they be allowed 15 percent upturn in wages, and then because in the economic structure labor is 33 percent of the factor of cost, 5 percent should be added to the price of oil, thinking thereby they will restore to the producer the same amount of money.

You lose sight of the fact that as you increase the price you find very much more sales resistance, very much more tendency on the part of the user who is working on a 1½-percent or 2-percent net profit to find a substitute, so that at the increased price we do not develop the same flow, the same velocity of movement of oil.

Furthermore, as you increase the labor cost 15 percent in the manufactures of the United States labor is about 23 to 25 percent of production cost, and raw products 37 percent—as you increase the labor and transportation and all other things, you pyramid the costs on the raw products and when you determine that the man who is paying these, the employer is to get the same dollar profit—no more—then his dollars to buy his raw products have less purchasing power.

You have gone on a never-ending chase system which is simply impossible.

Senator TUNNELL. How much did you say it costs you an acre with a normal crop on your farm to grow apples?

Mr. FRASER. My fixed cost up to harvest is usually $80.

Senator TUNNELL. You said $130, didn't you?

Mr. FRASER. My fixed cost to harvest.

Senator TUNNELL. I mean all together.

Mr. FRASER. Well, my fixed cost up to harvest is perhaps 50 percent of my cost.

Senator TUNNELL. That is about $160; is that right?

Mr. FRASER. Wait a minute. The labor cost to harvesting is one-third of labor.

Senator TUNNELL. I want your total cost.

Mr. FRASER. With a fairly good crop of 250 bushels——

Senator TUNNELL. You said something about 400 bushels.

Mr. FRASER. In the State of Washington.

Senator TUNNELL. You don't grow as many?

Mr. FRASER. The factor of production in the East of the United States is not the same as in the irrigated areas. The irrigated area can't live if they don't do 400 bushels per acre, the East may live at 200.

Senator TUNNELL. Normally, then, your apples cost you about 60 cents a bushel?

Mr. FRASER. Without packing, yes.

Senator TUNNELL. Then, when you pack them, what does that cost?

Mr. FRASER. Today it is costing us 25 cents for the labor and 30 cents for the package and 5 cents for marking and putting into storage, another 60 cents.

Senator TUNNELL. What was the balance of that 80 cents? You said 80 cents from the time they were picked to the time they were marketed? Is that right?

Mr. FRASER. Not 80 cents.

Senator TUNNELL. You said 80 cents is what it costs you——

Mr. FRASER. Eighty dollars an acre. That, I said was a fixed cost whether I had a crop or not. This year I have no crop.

Senator TUNNELL. But you have your costs just the same?

Mr. FRASER. I have my costs just the same. We got the Treasury to allow us, when we have no crop, to carry our costs over if we made a loss, into the next year, because it is essential. We would be cheated out of our whole capital investment if we didn't, in a hurry.

Senator TUNNELL. I was trying to get what your cost of a bushel of apples was.

Mr. FRASER. Our costs will vary with the amount we get in a crop. We might have a big crop next year because the trees have been resting.

If we get 400 bushels or 500 bushels, with the present wage scale, we might have a cost of $1 to harvest, or $1.50, depending on the package.

And we anticipate that next year, instead of selling for $4, we will sell for $2. I expect we will be back to the $2 market.

To kite our costs to a minimum of 70 or 75 cents means with a 40-hour week, we will have to pay time and a half on 20 hours, because we work 60 hours a week, so the increase in wage of 50 percent means an increase in labor cost of 75 percent.

Senator TUNNELL. Even if they go to $2 you will still make a profit of 50 cents a bushel?

Mr. FRASER. I hope so, so I can pay for this year's costs, which I have lost.

Senator TUNNELL. That is about $125 an acre for that year?

Mr. FRASER. If we don't do that 1 year, we are out of luck.

Senator TUNNELL. That will be with apples at half-price?

Mr. FRASER. That will be full price for what we are apt to get.

Senator TUNNELL. You say they may drop from $4, to $2?

Mr. FRASER. I think so.

Senator TUNNELL. Then we will get more apples to eat.

Mr. FRASER. That is why the price will be down.

Senator TUNNELL. And we will eat more.

Mr. FRASER. And we hope you will.

Senator ELLENDER. At the cost of the farmer.

Mr. FRASER. Oh, certainly.

Senator TUNNELL. But you will still be making $125 an acre?

Mr. FRASER. We may have $125 to pay for the loss we took this year. I hope we do.

Senator TUNNELL. That will be $6,000 on 48 acres of apples.

Mr. FRASER. Well, we don't figure our profits until we see them.

Senator TUNNELL. But you are figuring losses before you get them.

Mr. FRASER. I am going to show $5,000 loss on it this year. It is a reality.

Senator TUNNELL. I should think you would if you don't have any apples.

Mr. FRASER. I should have 10,000 bushels. I spent 3 hours picking 2 bushels, so I will have two bushels.

But many of my friends will have none.

One of the orchards 72 years in the family of a friend—never had such a situation. This year they don't have enough for a pie.

Senator TUNNELL. I think that is pretty general. It is with us anyway.

Mr. FRASER. I have gone over some of the things which I would like to emphasize, Mr. Chairman.

Senator TUNNELL. You and I together have taken up pretty nearly an hour. Maybe it is my fault as much as yours.

Mr. FRASER. I am here to answer your questions, because I want to show you the reasonableness of our position.

Senator TUNNELL. I think you have made a good witness.

Mr. FRASER. We feel that fixing wages is fixing profits, and we don't believe that it is reasonable—to attempt to fix profits, because immediately you fix profits, you decide whether a man stays in business or not.

Senator TUNNELL. What wages do you pay now?

Mr. FRASER. Fifty cents an hour for ordinary help, men or women, and in the case of men on the farm I give them that, and a house, and wood, and what they get from the farm, telephone and heat.

Senator ELLENDER. As to those who don't live on the farm, do they get anything other than the 50 cents per hour?

Mr. FRASER. Sometimes. They sometimes take potatoes home, or a quart of milk.

Senator SMITH. You give them their midday meal when they are working there?

Mr. FRASER. We don't. Most of them work in the neighborhood where they live, but that wage is not typical of say the State of Washington. The typical wage scale there is about 80 cents, varying from 66 cents for packing, to 90 cents, because they have keen competition with shipyards and various things.

In addition, they are on a high-cost scale in getting their goods to market, because they have 80 cents a box rail charge movement to New York, including the protective service.

So when you see $3 a sale in New York, and these producers have $2.30 cost on each and every box, and you add 80 cents for movement to market, that is $3.10 to $3.20, without a dime for the return on investment. With present costs it takes 1943 prices to keep out of the red.

Senator TUNNELL. You would make too much if you had fine crops and fine prices every year. You would buy up the neighborhood.

Mr. FRASER. What good prices would do is to so stimulate production that you would be sure to have apples and plenty for the next decade.

Senator TUNNELL. Wouldn't it affect your profits if it got that way?

Mr. FRASER. We can't put an apple orchard into production under 10 years.

Senator TUNNELL. That is a long while. That is a strong deterrent for a man.

Mr. FRASER. I started planting apples, and I had to work and borrow and connive to get money to keep the trees growing. I started with nothing, and I worked hard. Then I grew one orchard. There are not enough trees available now to markedly increase acreage. I grow trees in a nursery. The trees are not available. The seed is not available, and we are just beginning to plant.

It takes 2 years to grow seedlings. Another year in the nursery to bud and grow the tree, and another 10 years more after planting in the orchard, to have profitable bearing, so you can't have big apple production in the United States for 12 years. It takes 2 years for the tree to make an apple, 1 year to make the fruit bud, the next year the flower and fruit, and in some varieties, which are biennial due to this, it means 15 sales in a 30-year period, if no crop is lost.

Senator TUNNELL. How long since you started? You said you started on nothing. How long ago was that?

Mr. FRASER. I came here with $42 in my pocket in 1900. Up to that time I had worked on a farm. I had never been paid over $5 a week.

Senator TUNNELL. That was in the old country?

Mr. FRASER. Yes.

Senator ELLENDER. Where was that? Where did you come from?

Mr. FRASER. I was born in England. My father was here in the War Between the States. He was in the United States Engineers and was President Lincoln's bodyguard at Fort Stedman. Later he was buying apples in this country in 1870, and 1871. I came over, and I stayed. Later I was at Cornell University. I went there teaching and in research.

Senator TUNNELL. How long have you been farming?

Mr. FRASER. Since I was 12 I have been working.

Senator TUNNELL. How long since you began farming?

Mr. FRASER. Since I was 12—fifty-some years ago.

Senator TUNNELL. You were not farming at Cornell, were you?

Mr. FRASER. I was running the university farm all the time I was there.

Senator TUNNELL. How long have you been running your own farm?

Mr. FRASER. Forty years, but I was operating farms for others prior to that.

Senator TUNNELL. You have a pretty nice plant, from what you say.

Mr. FRASER. I think, gentlemen, we have got to recognize the factor of wages in costs. They run all through.

If you get to the point where the marginal operator and the man just starting into business finds rising costs on his commodities, he is much more apt to try and get a job, and what we need today is the encouragement of the small man to go to work if we are ever going to build up and get anywhere.

Senator ELLENDER. Have you anything else to say, Mr. Fraser?

Mr. FRASER. I don't know whether I should go into the statement any further. It covers many of these things in a different way.

Senator ELLENDER. Does it cover what you have been talking about?

Mr. FRASER. Yes. The things I would like to emphasize are the amendments we desire.

We have, according to the last statement, probably some 50,000,000 jobs which will be classified.

The Department of Labor puts the farmers at 6,000,000 and the people employed by the farmer at 2,000,000, making 8,000,000, and they show 14,000,000 that come under the wage scale, more or less, because part of the agricultural owners may operate for a number of weeks at a canning or other plant. Actually, the number in agriculture is some 10,000,000 and there are many in the armed forces who have come back.

That leaves some 50,000,000 that may come under the wage scale.

I have indicated the proposed classification and how the Department of Labor is ready with the classification on 29,000 jobs on which they are going to classify the labor with the wage scale which is going to apply to it.

This book entitled "Definition of Titles of Classified Occupations," is prepared by the Job Analysis and Information Section of the United States Department of Labor. [Book handed to Senator Tunnell.]

There are 1,287 pages and 29,000 jobs classified, of which 7,000 are coded. It is going to be an interminable job for somebody, and the Government is going to pay that cost through the Department of Labor.

I don't know whether we are ready to embark on any such enterprise.

Senator ELLENDER. Mr. Fraser, isn't it true that these advisory committees provided for in the bill have the right to classify jobs in various industries, and they will also have something to say about the per-hour rate, based on what Congress fixes in this bill?

Mr. FRASER. But the industry committee can be fired by the Administrator if it doesn't suit him. He can get out of the industry committee whatever he wants, because he can put another committee in until he gets what he does want.

Senator ELLENDER. What effect would that have on the right of labor to bargain collectively?

Mr. FRASER. I have not thought that through, but there will not be much work for the labor unions if the Government is going to tell the worker where he is to go and the pay.

Senator ELLENDER. That is the point I wanted to raise.

Mr. FRASER. I have not thought through to what the outcome will be, but I can see in all of these cases the taking away from the individual of the right to accomplish his own work. I want to concede

that liberty is the right to think wrong and the right to act wrong, so long as it is not in conflict with the public economy, or the individual right. And I want to concede the right to labor to make some natural mistakes which, if they are left in a national economy can be rectified.

But when you write in a law that the Administrator cannot be brought to law on the reasonableness, then he can be as arbitrary for labor as he can for the employer, and I see danger in a policy of this type.

That is why I move to strike out that clause.

Senator SMITH. You mean that under the machinery that this law now provides, the Administrator technically can fix all wages because he controls the machinery?

Mr. FRASER. Certainly.

Senator SMITH. Is your request to strike that out of the bill entirely?

Mr. FRASER. Certainly. That is new. I would strike out section 2 (b), all of paragraph (2), lines 16 to 18.

Senator SMITH. Where do you recommend that? I want to mark that in my copy.

Mr. FRASER. On page 26, under "Amendments."

Senator ELLENDER. Do you discuss or criticize all of the amendments to the bill?

Mr. FRASER. Yes, sir.

Page 26, section 2 (b), lines 16 to 18. With that, of course, you will have to strike out sections 6 and 8, which are the mechanics of implementing section 2 (b), because if you were going to strike the purpose of that clause out, certainly with it would go the mechanics carried in sections 6 and 8.

Senator ELLENDER. Mr. Fraser, let me ask you this:

Suppose we were to leave all of the provisions of the wage and hour law as they now are, with the exception of the rate of pay, raising it from 40 to 50 cents, what objection if any would you then have to the bill?

Mr. FRASER. The objection would not be so violent if at the same time you make sure that the agricultural exemptions remain, or you clarify the area-of-production amendment as we indicate. Then I have no reason to say anything. I would think I would let labor come in of itself and make its own plea.

I want to make clear that I am presenting one view, and I hope I am reasonable. I am looking at it from the general economy, and the group for which I am working.

Senator TUNNELL. You would not object strenuously if we eliminate your line?

Mr. FRASER. I could not if you give the agricultural exemption because I think you would be taking a reasonable position. But I do think this definition of unskilled labor, if you leave agriculture under the law, will mean that there is no unskilled labor, for as long as a man has any training in doing the work, he is skilled, and even a weed remover would be in a skilled occupation. It is not 75 cents an hour; it is something more. You are not fixing 75 cents an hour.

To meet these provisions means to shift or attempt to shift a wage structure that I don't think any economy will maintain.

If it is put in the hands of one man with no court review over what he does, he can be arbitrary and capricious.

I believe in maintaining this free for economy——

Senator TUNNELL. For whom?

Mr. FRASER. For the economic adjustment to register.

Senator TUNNELL. You said you believed in keeping it free. I wondered if you had any particular class of people you want to make it free for.

Mr. FRASER. I said I want to maintain it free for a man to have the right to think wrong, so long as he does not do anything detrimental to the domestic economy, or infringe on the rights of another. I want to leave it free for him to make a mistake.

Senator TUNNELL. I believe he will.

Mr. FRASER. Newton Baker, at the 1924 convention made a strong plea for the League of Nations, and some gentleman of this body opposed him on the ground that it was not good policy at that time, and we look at things from a policy angle, but we know now he was right in principle, and it is the principle I would like to stand for, and I would like to stand for the principle that the administrator, the agents, and all should come under proper court review, and that we should not be tied to 60 days after an order is issued, when we don't know what is in it, or how it is going to work, as this act now provides.

Now, you have opened the bill for amendment, and we might as well get what we fought for from 1935 to 1938, and didn't get.

Senator TUNNELL. You opposed the whole thing then didn't you?

Mr. FRASER. No; I was trying to make it workable.

Senator TUNNELL. You opposed it as to agriculture, didn't you?

Mr. FRASER. I told them it was economically sound to leave it out.

Senator TUNNELL. You think it would be economically sound to leave everything out, don't you?

Mr. FRASER. It probably would.

Senator SMITH. I understand if you strike out these paragraphs on the bottom of page 26, to which you refer, which have to do with job classifications, and readjustment, of all wages, you would not feel so badly about our going along with the bill and fixing a minimum wage at whatever figure the economy would stand.

Mr. FRASER. I think you would be making an advance if you throw out that classification.

These sections that I have emphasized, section 2 (b), paragraph (2), and section 3, paragraph marked (n) and (o), on page 3, and then with these, you will need to strike out the language in section 8, which makes it enforceable——

Senator SMITH. I am getting at this: These sections which you are striking out have to do with the fixing of wages other than the minimum wage. You want to throw them all out?

Mr. FRASER. I would take them out.

Senator SMITH. And you would feel, as suggested by previous questions that unless you take those out, the collective bargaining power of labor will be drastically curtailed because there will be nothing left to bargain for?

Mr. FRASER. I think it is jeopardized to a degree where you would make it possible for that official to really put those men out of their freedom to act.

Senator SMITH. I gather it is your judgment that the working man is much better off when determining his wages by the collective bargaining principle which we all believe in?

Mr. FRASER. Yes, sir; that is the freedom I want.

Senator SMITH. And if he makes a mistake, that is his liberty?

Mr. FRASER. That is right.

Let me illustrate: When Stimson in 1931 asked us to help put out the fire in Manchuria, the British at the same time sent the Lytton Commission which put kerosene on the blaze. The public seemed to regard the $300,000,000 which we paid to Britain for rubber and tin as the problem of England, not ours.

When the conflagration became greater, and our own house was threatened, Stimson was brought in and made Secretary of War in order to try and put out the blaze.

A group of people will make a mistake like that, but they will rectify it in time.

Economic law always exacts the penalty from the violator. I think in this case the Congress will make a mistake economically, and it will rebound to their discredit, rather than to their honor.

Senator SMITH. I am very grateful to your, Mr. Fraser. I think you have made a very fine exposition of your philosophy.

Mr. FRASER. I don't want us to make an error. This 75 cents is going into effect when the tailspin starts, and it is going to magnify it more and more.

Senator SMITH. You don't favor a progressive increase year by year? If you start at 50 cents, you don't say to make it 55 next year and then 60?

Mr. FRASER. I would leave it free for labor to do its own adjusting, and I don't want sweatshop labor.

Senator ELLENDER. That was the purpose of the original act of 1938, to prevent sweatshop practices, but this goes far beyond. As a matter of fact, it is the most far-reaching piece of legislation I have considered since I have been in Congress.

Mr. FRASER. That is the reason I am here, but I do think if you keep the present law and accept our amendment on area of production and provide that these costs which a farmer maintains collectively—for instance, a group of men may not have washing facilities, which cost $5,000, so a group bunch together and have their washing and packing done, and immediately they are under this law, and I think all the costs borne by the fruit and vegetable packer, in preparing his commodity for market should be regarded as agricultural labor.

Senator ELLENDER. It is regarded as agricultural labor if the farmer himself does it on his own crop.

Mr. FRASER. But it is not economic today to so meet the food and drug laws and the marking laws for many producers.

We have built up such a mass of requirements on these commodities that the individual, unless he is a large operator, cannot begin to meet the requirements and costs, and so they bunch together. The costs are all paid by the grower and they are becoming an increasing amount and a charge against his commodity.

Senator Tunnell. At what level do you call wages sweatshop wages.

Mr. FRASER. I would rather leave that to the situation.

Senator TUNNELL. You expressed yourself as being opposed to sweatshop wages. As a matter of fact, it seems to me you are opposed to all standards of wages that are fixed by Government.

Mr. FRASER. A wage requirement for a man in New York City, and a wage requirement for a laborer at a country point, is not the same, for him to have an equal opportunity to live.

I would regard something which does not give the individual opportunity for the enjoyment of reasonable living standards as undesirable.

Senator TUNNELL. Do you think there are such situations now?

Mr. FRASER. Undoubtedly there are.

Senator TUNNELL. How would you reach them?

Mr. FRASER. Publicity, to a large degree, and allowing labor to exercise its bargaining power.

Senator TUNNELL. It has that right now, hasn't it?

Mr. FRASER. It has that.

Senator TUNNELL. And that has not cured it.

Mr. FRASER. You can't overcome these things overnight. They are a factor of life.

We have done a lot in our progression. We have moved a long way.

Let me illustrate what we have done on living conditions.

In 1900, the average expectancy of life of a white male child was 48.2 years. Today it is about 65. In 40 years we moved up 15½ years due to our advance in living conditions.

Senator TUNNELL. But what disturbs me is that they say you don't live to be any older.

Mr. FRASER. Well, you do.

Senator TUNNELL. No; that is the other fellow.

Mr. FRASER. Take India, where you have starvation conditions, and the average expectancy of life of a male child is 27.

Senator ELLENDER. Today?

Mr. FRASER. Today, so I am not ready to say that we have not moved our standard of living up.

Senator SMITH. We know we have.

Mr. FRASER. We know we have.

Senator TUNNELL. It is principally with the children, isn't it?

Mr. FRASER. Oh, no.

Senator TUNNELL. Oh, yes. No question about that.

Mr. FRASER. You take Dublin's statement—and he is probably the best authority we have—and you have a lot more old folks cluttering the wheels of time and we are forced to specialize on old-age diseases.

Senator TUNNELL. And you have a good many more young folks in the world than you had before.

Mr. FRASER. And we need them.

Senator TUNNELL. The population has increased in 200 years from 800,000,000 to over 2,000,000,000, and it is largely an increase in the number of children who live.

Mr. FRASER. Still we are keeping the old folks.

Senator TUNNELL. They tell me Methuselah lived over 900 years, but I can't reach it.

Senator ELLENDER. Time was not being measured in years when Methuselah lived. It must have been measured by the rapidity at which tasks were accomplished.

Mr. FRASER. You are very youthful in approach, no matter what the years may be.

Senator TUNNELL. Thank you very much.

Mr. FRASER. I now have my table No. 1. May I file it now, please?

Senator TUNNELL. That may be done, and I think it would be well to insert at the same time your complete written statement.

(Table 1 referred to is as follows:)

TABLE 1.—*Employment, prices, and income, United States, average 1935–39, 1943, and estimates for 1950 under assumed conditions*

Item	Unit or base	Average 1935–39	1943	1950 [1]		
				Full employment	Intermediate employment	Serious depression
Total labor force	Million	53.8	62.6	60.0	60.0	60.0
Armed forces	do	.3	9.1	2.0	2.0	2.0
Total unemployment	do	10.2	1.1	2.0	7.0	17.0
Total civilian employment	do	43.3	52.4	56.0	51.0	41.0
Total agricultural employment	do	9.3	8.3	8.0	8.5	9.0
Total nonagricultural employment	do	34.0	44.1	48.0	42.5	32.0
Gross national product	Billion dollars	81.9	187.8	188.0	130.0	76.5
National income	do	65.4	149.4	150.0	105.0	57.5
Wholesale prices, all commodities, index	1926	81.0	103.0	103.0	87.0	66.0
Cash income from farm marketings	Billion dollars	8.0	19.2	17.0	12.5	6.5
Net income of farm operators	do	4.2	11.4	9.3	6.5	3.0
Prices received by farmers, index	August 1909–July 1914	107.0	193.0	165.0	125.0	75.0
Prices paid, interest, and taxes, index	do	128.0	162.0	165.0	140.0	120.0
Parity ratio (prices received vs. prices paid)	do	64.0	119.0	100.0	89.0	62.9
Food consumption, per capita, index	1935–39	100.0	106.0	118.0	110.0	100.0
Agricultural production, index	do	100.0	129.0	[2] 135.0	[2] 125.0	[2] 115.0

[1] The number of employed or unemployed is not the only factor that distinguishes any one set of conditions from the other 2 assumed for 1950. The general price level and productivity per worker change also. The full employment estimates assume a minimum frictional unemployment of 2,000,000 persons, continuation of trends in productivity per worker, and a general price level equivalent to that of 1943, with prices received by farmers adjusted to their usual relation with the general price level during 1921–41. The intermediate situation assumes per capita income and prices generally at about the level of 1941. Serious depressions assumes an income level somewhat above 1932, but below 1935–39 and prices generally about equal to the average of 1932 and 1933, but since both the labor force and productivity per worker are increasing, unemployment under this situation would be even greater than in 1932 and 1933. Population in 1950 is estimated at 144,000,000. All three estimates assume 2,000,000 workers in the armed forces.

[2] Production consumers would buy (and farm families would use) at the prices assumed.

(The complete statement of Mr. Samuel Fraser is as follows:)

STATEMENT PRESENTED BY SAMUEL FRASER, SECRETARY, INTERNATIONAL APPLE ASSOCIATION, ROCHESTER, N. Y., WITH REGARD TO THE POSITION OF FRESH FRUITS AND VEGETABLES IN OUR ECONOMY

Representation

The International Apple Association is a nonprofit membership organization of growers, shippers, and distributors. Its membership is located in all the important producing sections and distributing markets of the United States. It is composed of the leading apple and pear growers and shipping organizations, individual shippers and firms, apple and pear cooperative associations, wholesale dealers, distributors, exporters, and our members interested in other lines of our industry. In addition, its membership extends to many foreign countries, including Canada, the United Kingdom, continental Europe, South America, and Australasia. The association is representative of the apple and pear industries of the United States.

The International Apple Association is now in its fifty-second year.

In approaching this problem, I appreciate that it possesses many facets, and it is my hope to present certain aspects illustrative of the possible and probable effects of this bill, if enacted, upon the matter of food and the food supply.

FOOD IS THE MOST IMPORTANT THING IN THE WORLD

Without food, wages and money have neither worth nor use.

Food is the foundation of our national health, wealth, and happiness. It is one thing that none of us can do without. Today the world needs food, and it must be cheap, if people are to share it and have it abundantly; and, in addition, the producers—the farmers, of whom I am one—must make a profit on its production, if we are to live, to continue in the business of production, and to buy any of the things which are so often heralded as essential in and for the American standard of living.

FRUITS AND VEGETABLES ARE PROTECTIVE FOODS AND HAVE VALUES MORE THAN AS A FOOD

Some foods have greater value than others. Fresh fruits and vegetables are spoken of by dietitians as protective foods, because they have a role in the activities of our body other than that of merely supplying heat and energy, which they also furnish. They carry into the body chemicals which have the power to neutralize body poisons and so maintain an increased and higher standard of health and body activity.

Because I am a grower of apples and other fruits, and because of my contact with the apple and pear industries, I will use certain features of the apple, its production and handling, to illustrate certain points.

The pectin in the apple is a powerful detoxicating agent. It is used in the wound paste furnished and used so extensively during the war, and its effect has been so marvelous that we are again forcefully reminded that some of the articles we eat are more than a food.

Pulped apple has long been recognized in Europe and here as having power to destroy the poisons thrown into the body when attacked by such diseases as dysentery, certain types of pneumonia, etc. In the case of injection of pulped apple into a rabbit along with a lethal injection of diphtheria germs, the apple pulp destroys the germs, and the animal shows no ill effect.

Thousands of babies dying with intestinal malnutrition have been saved by the use of dried apple powder fed in the milk.

The old saying that an apple a day keeps the doctor away is well founded.

The eating of applesauce with pork is sound, because the apple speeds up the digestion of the pork in the alimentary canal, just as it speeds up the digestion of milk when fed to a baby, and we have a comfortable feeling of a good meal and no indigestion; and in the case of the baby, it shows the value of its diet in the gains it makes.

FRUITS AND VEGETABLES INCREASE HEALTH, VIGOR, AND LENGTHEN LIFE

The addition of fruits and vegetables to the American diet during the years of this century have made this country what it is. The use of fresh fruits and vegetables has gained fourfold in 50 years, and in that same time the expectancy of life of a male child (white) has increased one-third—15½ years—or from 48.2 years, the prospective life in 1900, to 64.5 years in 1943. The prospective life of a male child in India today is less than 27 years. Famine, the lack of adequate and proper diet, reduced the population of Ireland from 10 millions in 1750 to about 4½ millions today. Abundance or lack of food determines the progress or decline of nations; and we, as a people, are one of the best illustrations of a good dietary. How has it been achieved?

Shall we retain our position? The hope of reward, the profit motive, brought us to this world-leading position. Shall we lightly discard it?

INTENTIONAL SECOND EXPOSURE

(Table 1 referred to is as follows:)

TABLE 1.—*Employment, prices, and income, United States, average 1935–39, 1943, and estimates for 1950 under assumed conditions*

Item	Unit or base	Average 1935–39	1943	1950 [1]		
				Full employment	Intermediate employment	Serious depression
Total labor force	Million	53.8	62.6	60.0	60.0	60.0
Armed forces	do	.3	9.1	2.0	2.0	2.0
Total unemployment	do	10.2	1.1	2.0	7.0	17.0
Total civilian employment.	do	43.3	52.4	56.0	51.0	41.0
Total agricultural employment.	do	9.3	8.3	8.0	8.5	9.0
Total nonagricultural employment.	do	34.0	44.1	48.0	42.5	32.0
Gross national product.	Billion dollars.	81.9	187.8	188.0	130.0	76.5
National income	do	65.4	149.4	150.0	105.0	57.5
Wholesale prices, all commodities, index.	1926	81.0	103.0	103.0	87.0	66.0
Cash income from farm marketings.	Billion dollars.	8.0	19.2	17.0	12.5	6.5
Net income of farm operators.	do	4.2	11.4	9.3	6.5	3.0
Prices received by farmers, index.	August 1909–July 1914.	107.0	193.0	165.0	125.0	75.0
Prices paid, interest, and taxes, index.	do	128.0	162.0	165.0	140.0	120.0
Parity ratio (prices received vs. prices paid).	do	64.0	119.0	100.0	89.0	62.9
Food consumption, per capita, index.	1935–39	100.0	106.0	118.0	110.0	100.0
Agricultural production, index.	do	100.0	129.0	[2] 135.0	[2] 125.0	[2] 115.0

[1] The number of employed or unemployed is not the only factor that distinguishes any one set of conditions from the other 2 assumed for 1950. The general price level and productivity per worker change also. The full employment estimates assume a minimum frictional unemployment of 2,000,000 persons, continuation of trends in productivity per worker, and a general price level equivalent to that of 1943, with prices received by farmers adjusted to their usual relation with the general price level during 1921–41. The intermediate situation assumes per capita income and prices generally at about the level of 1941. Serious depressions assumes an income level somewhat above 1932, but below 1935–39 and prices generally about equal to the average of 1932 and 1933, but since both the labor force and productivity per worker are increasing, unemployment under this situation would be even greater than in 1932 and 1933. Population in 1950 is estimated at 144,000,000. All three estimates assume 2,000,000 workers in the armed forces.

[2] Production consumers would buy (and farm families would use) at the prices assumed.

(The complete statement of Mr. Samuel Fraser is as follows:)

STATEMENT PRESENTED BY SAMUEL FRASER, SECRETARY, INTERNATIONAL APPLE ASSOCIATION, ROCHESTER, N. Y., WITH REGARD TO THE POSITION OF FRESH FRUITS AND VEGETABLES IN OUR ECONOMY

Representation

The International Apple Association is a nonprofit membership organization of growers, shippers, and distributors. Its membership is located in all the important producing sections and distributing markets of the United States. It is composed of the leading apple and pear growers and shipping organizations, individual shippers and firms, apple and pear cooperative associations, wholesale dealers, distributors, exporters, and our members interested in other lines of our industry. In addition, its membership extends to many foreign countries, including Canada, the United Kingdom, continental Europe, South America, and Australasia. The association is representative of the apple and pear industries of the United States.

The International Apple Association is now in its fifty-second year.

In approaching this problem, I appreciate that it possesses many facets, and it is my hope to present certain aspects illustrative of the possible and probable effects of this bill, if enacted, upon the matter of food and the food supply.

FOOD IS THE MOST IMPORTANT THING IN THE WORLD

Without food, wages and money have neither worth nor use.

Food is the foundation of our national health, wealth, and happiness. It is one thing that none of us can do without. Today the world needs food, and it must be cheap, if people are to share it and have it abundantly; and, in addition, the producers—the farmers, of whom I am one—must make a profit on its production, if we are to live, to continue in the business of production, and to buy any of the things which are so often heralded as essential in and for the American standard of living.

FRUITS AND VEGETABLES ARE PROTECTIVE FOODS AND HAVE VALUES MORE THAN AS A FOOD

Some foods have greater value than others. Fresh fruits and vegetables are spoken of by dietitians as protective foods, because they have a role in the activities of our body other than that of merely supplying heat and energy, which they also furnish. They carry into the body chemicals which have the power to neutralize body poisons and so maintain an increased and higher standard of health and body activity.

Because I am a grower of apples and other fruits, and because of my contact with the apple and pear industries, I will use certain features of the apple, its production and handling, to illustrate certain points.

The pectin in the apple is a powerful detoxicating agent. It is used in the wound paste furnished and used so extensively during the war, and its effect has been so marvelous that we are again forcefully reminded that some of the articles we eat are more than a food.

Pulped apple has long been recognized in Europe and here as having power to destroy the poisons thrown into the body when attacked by such diseases as dysentery, certain types of pneumonia, etc. In the case of injection of pulped apple into a rabbit along with a lethal injection of diphtheria germs, the apple pulp destroys the germs, and the animal shows no ill effect.

Thousands of babies dying with intestinal malnutrition have been saved by the use of dried apple powder fed in the milk.

The old saying that an apple a day keeps the doctor away is well founded.

The eating of applesauce with pork is sound, because the apple speeds up the digestion of the pork in the alimentary canal, just as it speeds up the digestion of milk when fed to a baby, and we have a comfortable feeling of a good meal and no indigestion; and in the case of the baby, it shows the value of its diet in the gains it makes.

FRUITS AND VEGETABLES INCREASE HEALTH, VIGOR, AND LENGTHEN LIFE

The addition of fruits and vegetables to the American diet during the years of this century have made this country what it is. The use of fresh fruits and vegetables has gained fourfold in 50 years, and in that same time the expectancy of life of a male child (white) has increased one-third—15½ years—or from 48.2 years, the prospective life in 1900, to 64.5 years in 1943. The prospective life of a male child in India today is less than 27 years. Famine, the lack of adequate and proper diet, reduced the population of Ireland from 10 millions in 1750 to about 4½ millions today. Abundance or lack of food determines the progress or decline of nations; and we, as a people, are one of the best illustrations of a good dietary. How has it been achieved?

Shall we retain our position? The hope of reward, the profit motive, brought us to this world-leading position. Shall we lightly discard it?

78595—45——29

HAND LABOR ESSENTIAL FOR FRUITS AND VEGETABLE PRODUCTION AND HANDLING

Mechanized production has made headway in the production of certain crops, as in the production of rice, sown broadcast, flooded, and harvested by a combine. Attempts are made to use mechanical pickers for cotton, and the end is not yet.

In the case of apples, pears, citrus fruits, berries, we have not been able to produce a mechanical harvester suitable for taking these fruits from the tree or plant, and the harvesting continues to be performed by hand. The fruits may be easily bruised and ruined if roughly handled. This is also true of vegetables, to a lesser or greater degree. It is true when preparing them for market and packing. A large amount of manual labor is essential. Furthermore, the time in which a crop is fit for harvest is limited. The time for picking peaches may be 1, 2, or 3 days; it may be 5 or 7 days for certain apples or pears. The number of people who may be available at a country point may be limited, and the time in which there is opportunity to save the crop is short; the way out is to work an essential number of hours to save the food.

It takes about as much help to prepare apples for market as to harvest them; and if shipments are to be made daily as they are harvested, the work crew is doubled. Naturally, the same rate of wages must be paid for harvesting as for packing, or vice versa, if both are to progress.

This bill proposes to split these operations for wage standards. No fixed wage need be paid for harvesting, but fixed wages of 65, 70 or 75 cents an hour must be paid for packing, with not less than time and a half for each and every hour worked in a week in excess of 40 hours, save for the 14 weeks' seasonal exemption—of which more later.

When the weather is not favorable, as frequently is the case—there is a wet day, and it is planned for—then all help may harvest, and later all of it be used to assist in packing.

It may be too wet to pick in a morning, and all may work packing, and then later all go out to pick. This is the economical use of the available labor.

PREPARATION FOR MARKET

Before an apple can be packed, it may have to be washed to remove spray residue and bring it into conformity with the regulations issued by the Food and Drug Administrator. It must be packed in a container properly stamped as to its volume to meet the provisions imposed by the Bureau of Standards.

The apples must be graded and sized, wrapped, and packed to meet the requirements of the State or Federal standards of the United States Department of Agriculture. The containers must be properly filled to meet the requirements of "fill of container" under the Food, Drug, and Cosmetic Act. The containers, their filling, the preparation of the commodity for market, the packing, and sizing are all under laws with serious penalties for infractions or failures to perform. The sale of the commodity after it is prepared for sale is handled under the standard terms of contract; and the buyer and/or seller, other than the grower, handling the apples in interstate commerce must have a Federal license and is subject to the provisions of the Perishable Agricultural Commodities Act.

We have regulations galore, and now it is proposed to add more, and all the costs incurred in meeting these requirements must be paid by the grower; they are taken out of the sales returns.

The real income of the Nation is in the goods produced and services rendered, not in the dollars price put on labor.

INEVITABLE ADJUSTMENTS

We appreciate that we are faced with a reduction in the take-home weekly wage, due to the loss of overtime in the case of many workers.

Employers are losing the best market in history—the United States Government buying in a war-inflated market. This is no standard to tie to.

We are told that if we can boost prices at will, we can increase wages, and then we will soon have postwar inflation and the inevitable collapse; and the higher we go, the greater the fall. Real wages would drop; a few might gain, most would lose.

Moulton and Schlotterbeck, of the Brookings Institution, in their recent study entitled "Should Price Control Be Retained?" conclude:

"Beyond the setting of initial prices for products whose manufacture was suspended during the war, the continuation of price control is impracticable.

"War experience in this and other countries has demonstrated that the control of wage rates, the most important element in costs, is indispensable to price stabilization."

If we embark on a policy of minimum wages, are we prepared to fix minimum prices for commodities produced? We cannot have one without the other.

The soft-coal industry is a case in point. We have fixed prices for product and labor, and we are in chaos. Is this our goal? The end of the policy proposed will be all working for the Government and all fed from a very much curtailed supply, nothing like that we now have.

The policy was tried here 300 years ago, and 90 percent of those in the experiment died of starvation in a decade and in a land of plenty such as we have.

The position of the soft-coal industry today further emphasizes that the end result of this policy is a fiasco.

Supplies of bituminous coal are now so short that at a time when reconversion should be under active progression, very limited quantities are available; in fact, supplies are so short for the next few months that industries and districts dependent on this fuel must curtail activities; and the only way to achieve the business activity which will justify the retention of high wages is free enterprise and not governmental management, as illustrated in this coal field.

Premier Lloyd George, in his successful campaign for reelection, following World War I, in his advice to labor, stated:

"You cannot have improved wages and improved conditions of labor all round unless you manage to increase production. * * * There is one condition for the success of all efforts to increase the output of this country—confidence. * * * You must give confidence to all classes, confidence to those who have brains, to those who have capital, and to those with hearts and hands to work. I say to labor, you shall have justice; you shall have fair treatment, a fair share of the amenities of life, and your children shall have equal opportunities with the children of the rich. To capital I say: You shall not be plundered or penalized; do your duty by those who work for you, and the future is free for all the enterprise or audacity you can give us. * * * And when the whole nation sees that wealth lies in production, that production can be enormously increased, with higher wages and shorter hours, and when the classes feel confidence in each other, and trust each other, there will be abundance to requite the toil and to gladden the hearts of all. We can change the whole face of existence."

Our present standard of living has been achieved by a long history of free enterprise, not by State planning or control.

FACTORY WAGES AND FARM SALES

In 1929 factory wages were about $11,000,000,000. Farm sales were about $11,000,000,000.

In 1932 factory wages were about $5,000,000,000. Farm sales were about $5,000,000,000.

Incidentally, most farm sales are made at wholesale prices, farm purchases at retail prices.

If the worker does not have the money, the farmer cannot get it.

The farmer is concerned with the wage problem. He desires a good wage scale in effect. We want it. We are not opposed to high wages. The best incentive to an increased wage is the profit in the business. The profit motive has made us.

In World War I New York factory wages rose 70 percent from 1917 to 1920.

In World War II they rose 70 percent from 1939 to 1943.

The 1921 depression brought about 11-percent reduction in average weekly wages in 1922.

The present attempt of labor to retain the same pay for less hours will work out to about 11 percent. The aim of labor is to seek in some way to avoid meeting an inevitable adjustment which is coming on all of us.

Following World War I some 3,630 strikes involved more than 4,000,000 workers, and the protracted idleness in industry wasted the accumulated savings of labor which had been counted on to furnish a market.

Shall we now repeat and so use the $100,000,000,000 said to be on hand?

To meet the situation this time, labor proposes that when an essential striking 20,000 throw 200,000 out of employment, this latter group of unemployed shall be maintained from the public purse at $25 a week for 26 weeks, reserving the union funds exclusively for the 20,000 out on strike. This would not dissipate union funds so rapidly.

National Income

The national per capita income shows a trend. There are plenty of tables showing the actual rise in wages through the years with regard to specific industries. No country shows so marked an increase in dollar wages and in the volume of physical production. The two rise and fall according to circumstances.

In 1850 the daily per capita income was 26 cents; in 1870 it was 48 cents. Following World War I, the decade 1919–29, it was $1.67; in 1944 it was $3.06. Many would like to stabilize at this figure. (See table II.)

In the 4 years 1929 to 1932, the United States per capita income declined over 50 percent. Will this repeat?

Since 1932 the policy of the United States has been to increase the per capita annual income by a policy of mortgaging our estate and our future. This policy antedates the war period; war accentuated it.

Between 1932 and 1941, per capita income rose from $320 a year to $696, or from 88 cents a day to $1.90, or 117.5 percent, on a program of deficit spending which has now gone on for over 12 years.

Some thought we might halt the upward trend in 1941, but the plans to halt were not effective, and 1942 shows an increase to $862, or an increase over 1941 of 23.8 percent.

By 1944 the annual per capita income rose to $1,117, or an increase over 1942 of 29.6 percent and an increase over 1941 of 60.5 percent, and today, 1945, with the income flattening out under the readjustment, we find that each and every one of us owes an average debt of approximately $2,000, or double our prospective annual take-home pay, and the collateral for the debt is some badly damaged property and people. I am not raising the question as to whether that which we fought for was not worth all we paid. It was; liberty is priceless. The policy was introduced prior to war.

The debt is a reality, and we are a practical people. It may be three times our annual take-home pay, and it is now proposed that by kiting the pay roll regardless of economic law, we will somehow manage to live with the indebtedness for our period of time on earth.

Is this the height of achievement of our statesmanship? Is it not time to follow the advice at the railroad crossing, "Stop, look, and listen"? or ecomonic law, which no man ever breaks, but which when violated always breaks the violator, will catch up with us, and we will inevitably pay for each and every violation.

We have demonstrated that an abundant supply of money reduces the value per unit. We made money abundant, and its unit value has declined. Articles in short supply called for more money to buy them. In other words, prices of commodities rose.

If this is sound logic, then the way to reduce prices of goods is to increase the supply.

The way to reduce the cost of living, if that is so desirable, is to make it easy to produce the needed commodities. Costs, which include wages, must be in adjustment to sale prices, if production is to be maintained, much less stimulated. Will the enactment of this legislation stimulate production of goods? We believe it will not.

The measure to apply against each and every proposal is, Does it violate economic law? If so, reject it. Does it agree with economic law? If so, apply it, and you will be called statesmen, because it will succeed.

Newton D. Baker, in his long-to-be-remembered plea for the League of Nations plank at the 1924 Democratic National Convention, was advised by certain members of this body that the policy of the League was unpopular. His indignant reply was: "My God men! You are talking about expediency; I am discussing a principle." The decision you make now is on "all fours" with that. His vision was sound. We now know.

Procrastination with regard to making an inevitable turn round is truly a thief of time. We cannot go another 12 years on the same policy as the past without ghastly penalties.

FIXING WAGES IS FIXING PROFITS AND IS ECONOMICALLY UNSOUND

This policy is particularly inapplicable to fruits and vegetables.

Wages inextricably determine costs of production and prices.

We cannot have wage increases without price increases. President Truman's Executive order of August 18, while sounding like a good formula, is economically unworkable. His proposal was to allow wage increases which did not necessitate price increases.

The only way to handle so complex a problem is by allowing a free market economy to register.

An increase in wages, unless accompanied by an increase in productivity, means an increase in cost.

Increased costs must either be passed on by price increases or absorbed out of profits.

Giving a governmental agency the power to fix profits is an arbitrary power and carries with it the power to settle whether the firm or industry shall live, grow, or die.

The proposal in the oil industry is to grant 15-percent increase in wages and 5-percent increase in the price of oil to compensate on the basis that labor cost represents one-third of production cost. This 5-percent increase in price will never meet the increased cost resulting from 15-percent mark-up in wages. The whole reasoning in matters of this nature is fallacious, because so many vital factors are not brought into view and the public is not informed.

Let us point out one or two factors which we deem necessitate consideration:

1. Will the price increase not affect the volume of sales? We know that at some point sales resistance will be felt and substitutes will compete.

2. The oil workers are among the highest paid in industry, and if they get the increase in wages it will be the incentive for all to follow the lead.

3. The 15-percent increase will cause a rise in price in raw materials, transportation, and supply costs, which in manufactures are about 37 percent of all production costs. This would lead to continual additional increase in oil prices beyond the original 5 percent.

4. Producers under the proposal would receive the same dollar margin of profit as before, but this dollar will buy less and less as prices rise.

5. Rising costs forced by unsound legislation, unworkable because in conflict with economic law, will cause small producers and marginal operators to drop out and try to secure salaried jobs on somebody else's pay roll.

6. The whole proposal will discourage business expansion and bring unemployment.

This not only greatly concerns agriculture as we have shown but is of concern to all.

Meanwhile the whole trend seems to be to avoid taking the one essential step, to wit, the return to a free market economy as expeditiously as possible which we request.

Controls were adopted for war reasons. Price control was one. It has no place in peace. The present attempt to increase wages and at the same time control or reduce prices would lead one to believe there is something lacking in clarity of vision, for if carried through there is nothing but increasing economic disruption.

As President Roosevelt emphasized in his last address which he did not live to give, "We have learned, and paid an awful price to learn, that living and working together can be done in one way only—under law."

We ask the question: Have we learned? Law means economic law, universal and natural law, which no man violates with impunity.

So far as fresh fruits and vegetables are concerned we know that costs are not considered in determining the price at which they are sold. They are perishable. If not sold promptly they may be lost. They are not coal or oil or bricks. They are living things which die. They have a life.

The demands and supply of the particular fruit or vegetable plus the supply of competitive items, of which there are several hundred, enter into the determination of the price the consumer will pay. We cannot pass costs on.

All these proposals have no place in the handling of fruits and vegetables at any stage.

The retailer is now exempt from the law, the producer is exempt to the extent of the definition of agriculture, which carries limitations. All service agencies between these two ends, such as the services of handling, preparation for market, packing, storing, etc., all paid for by the farmer, when performed by a group of farmers collectively, or by a hired agency, under this proposed legislation, are not exempt, save for one minor exemption. These charges are paid by the farmer and should carry the farm exemption because they are agriculture. The crop has no value until placed in the hands of the consumer in fit condition to use.

The United States Department of Agriculture, Bureau of Agricultural Economics, have worked out the division of the national income by farm groups and nonfarm groups. It is shown in table III.

For the years 1910–14, the so-called base for parity, the daily income of persons "on farms" averaged 37 cents, that of persons "not on farms" $1.33. The parity

relation which it is sought to establish as a proper basis is that when the person "on the farm" gets $1, the person "not on the farm" should have $3.59. Items used by the farmer, from the farm, rent, etc., are all included in the dollar income shown.

For the decade 1919–29 the "on farm" group received 58 cents per day; those "not on farms" received $2.20, a relationship of $1 to $3.79. Government payments to agriculture came in during 1933 and, with these payments added, persons "on farms" in 1933 received an average of 26 cents a day; those "not on farms" received $1.14. For each dollar the person "on the farm" received, the person "not on the farm" received $4.38.

In 1944, with Government payments, those "on farms" received $1.46 per day, while those "not on farms" received $3.61, a relationship of 1 to 2.47. Now it is proposed that those receiving $1.46 a day shall out of their funds pay an additional sum of money to the other group to raise their standard of living or divide the present $1.46 in some other way among their own group.

Agriculture is an essential minority in the United States. We regard it as statesmanship that the majority safeguard the well being of an essential minority.

The Volume of Physical Production, Especially of Food

War checks, when it does not stop, our production for industrial use.

We recognize the upward trend of the volume of physical production and the rise of wages with it. The total basic production (all commodities) per capita rose from 1839–1914 at a progressive change of 1.73 points upward per capita per year. In the same period production of food and feed failed to keep up any such increase, from 1839–1900 the gain was 0.86 points per capita per year. Then came a marked change and the period 1901–14 shows a decline in food and feed of 0.2 point per capita per year. In 1915–19 (war) the decline was 1.82 points. For 1920–29 it was 1.05 points

Taking the near view—from 1915–29—the progressive change for all commodities was 0.64 point upward per capita per year, while in that period food and feed crops declined 0.29 point per capita per year when adjusted for the change in farm motor power from horses and mules to gas. The actual decline was 0.86 point. It is true that total production showed an increase but on a per capita basis the decline was one we cannot neglect. The way we met it is known, viz, by importing food, and after the experience of the war years, 1939–45, we can see the serious position in which England found herself when dependent on imported food to keep herself going.

The data for the war years is not available other than tentatively; weather was favorable; the curtailment of people on farms and mechanization turned the scale and the per capita production of food was reversed from a minus to a plus and for the 5 years 1940–45 the index shows an upturn. The trend for all commodities is not available.

Economic Advances in Apple Production

The activities in the life of plants are being studied. The same laws govern in plants as in the activities of man. Natural laws control. Among the advances made in production is the ascertaining of the isotherm to which varieties of apples are adapted and the charting of same. The isotherm is based on the normal available heat units in the growing season. It is not a constant, but there are normals.

The plant is a water-cooled motor driven by heat, just the same as the body of a man. Each variety has its particular heat requirement essential for it to mature its fruit. Some mature in 90, 120, or 160 days after bloom. If the heat units essential are not available, then a variety may fail to mature and its production is not commercial where this happens too often. Planting in a proper location is one way of increasing yields without increasing costs. This is but one illustration to show a trend. In the hands of men who know how to make the tree work, the average production per tree has been increasing in recent years. Weather governs. If not favorable, there may be no crop. This is the case today over much of the Central and Eastern States, in which the crop is one of the shortest on record—the smallest in many years.

Relation of Price of Apples to Per Capita Income

In table II, we show the relationship of the average per capita income to the price of certain varieties of apples for the period of 70 years.

Short crops and heavy yields register. Large supplies of competitive crops also effect prices. Housewives are discriminating buyers and they set the price.

The grower does not know what a crop is worth until it is placed on the market. Costs of production do not enter the mind of the public when they determine the price they will pay.

The commodities we are considering are perishable. If not sold quickly, they may return nothing, they become unsalable. We have referred to the soft coal position, where costs and prices are supposed to work in relationship. A ton of coal may be sold today or in 90 or 120 or more days. This is not true of fresh fruits and vegetables. In comparing coal and apples, we are not comparing likes. Fresh fruits and vegetables need, and in previous legislation have received, consideration, not always adequate to their needs, but the proposal now to abandon even the consideration formerly given is a step in the wrong direction for the best interest of our national economy.

That people will pay more for one variety than another is seen. Take the 5-year averages 1926–30, Baldwin, $1.51 per bushel; R. I. Greening, $1.63; Spy, $1.85; McIntosh, $2.13; Delicious, western box, $3.02; Winesap, $2.59; all being wholesale prices at New York City with an average daily per capita income of $1.76.

An early relationship was that 2 days' income was exchangeable for a bushel of apples, using New York prices. At times it has taken 1½ days and at other times 1 day's income, which illustrates the swing. A bushel of apples per capita is somewhat in excess of the present average annual consumption in all forms.

New York market prices in recent years have been no better and often have been lower than f. o. b. prices. The competitive position of other crops comes into operation. This but proves the point made that prices are fixed by the buyer—the demand and supply. Increased costs in production, preparation for market, freight to market, or selling are paid by the grower. These cannot be passed on to the consumer.

Because of this fact agricultural labor has been left out of all attempts to fix a minimum wage. Also costs borne by the producer in preparing his product for market and in marketing received consideration. These are paid by the grower. We urge the retention of this approach and, if this bill is to be considered, we ask the insertion of amendments safeguarding all of these activities, on the ground that it is sound legislation to so handle these problems.

The Factor of Wages in Costs

Manufacturers show that in their costs the wages represent about 25 percent of their production values. Raw materials take a higher percentage, averaging about 37 percent. Using census year data, the percentage taken for wages was 23.2 percent in the years 1933, 1935, 1939. It was 27.5 percent in 1923. Using the census years from 1919–39, the high was 18 percent over the 3 low years. The low period of 1933 shows the toll taken from wages by the depression.

WENATCHEE, WASH., APPLES

In the case of certain groups of apple orchards in this important producing district, labor costs in 1914 were 38 percent of production costs, materials 22 percent, fixed costs 40 percent.

In 1943 labor costs in the same area constituted 56 percent of all production costs.

The records of cost studies for 1939 to 1943 show:

	1939	1940	1941	1942	1943
Growing and harvesting, per box	$0.50	$0.50	$0.86	$1.00	$1.36
Above costs adjusted for average yield	.52	.52	.68	.93	1.325
Labor costs, per box	.26	.26	.40	.57	.89
Packing cost, per box	.375	.375	.475	.60	.69
Storage cost, per box	.115	.115	.135	.16	.18
Total cost preparing box apples for market	1.11	1.11	1.39	1.79	2.32
Hours of labor, per box, including harvesting	1.00	1.00	1.08	1.12	1.19

In 1939 many groups report average sale price for the season of $1.055 per box. Costs shown are $1.11. Yield affects cost per box.

Packing labor cost.—A test run made at Yakima, Wash., the first week of October 1945 for this record shows: 14,805 packed boxes of Delicious and Jonathan required 4,791 hours of labor for packing, or 324 hours per 1,000 boxes. Average hourly rate for 102 employees in test was 79.1 cents. Winesap or other

smaller apples will increase costs 5 to 10 percent. The labor cost is 26 cents and to this must be added the box, wraps, etc., to get total cost of packing.

Storage labor cost.—The boxes after packing must be labeled, held in storage and loaded for shipment. Total cost is 23 cents, of which 13 cents is for labor.

LABOR COSTS IN NEW YORK, APPLES

Labor costs based on many studies show an average, for 1918–23, of 37.4 percent of all production costs. In 1927 they show 37.6 percent.

Hours per acre and yield per acre are lower than in Washington and there is no irrigation practiced.

Average hours to grow, pick, pack, and haul per acre, on 129 farms, for 30 years, orchards located on the best apple soil in western New York, show 140 hours per acre labor charge.

	Hours	Percentage	
Growing to harvest	50	35.8	
Harvesting	38	27.1	64.2
Packing	38	27.1	
Hauling and miscellaneous	14	10.0	
Total	140	100.0	

If wages for packing are fixed, it affects 64.2 percent of the labor involved in production definitely, for harvesters will have to be paid the same rate as packers.

With the record of prices at which apples are sold at wholesale in New York before us, with a present freight charge from Washington State to New York with protective service of 80 cents per box, and selling charges at present fixed by OPA, it is obvious that producers and all concerned, including consumers, must appreciate that no policy of fixed wages can be put on this industry at this time, and that the only way to handle it is to provide for complete exemption of all price fixing of labor for the handling, grading, packing, preparing for market, storing, loading on cars, or delivery to market of fresh fruits and vegetables. We place the amendment to section 13 later.

THE 7 (C) AND 7 (B) (3) SEASONAL EXEMPTIONS

Both of these give 14 weeks and are essential. Congress so found them.

The proposed bill retains the 7 (b) (3) seasonal exemption.

The 7 (c) paragraph is stricken. It must be reinstated.

For example.—At present a packing plant servicing growers receives a succession of fruits to be packed for growers because they are not equipped to properly prepare for market or other reasons.

Some of these are paying 50 cents an hour and work 60 hours a week.

The account now shows 60 hours at 50 cents equals $30. If 75 cents is made mandatory, it does not mean an increase of 50 percent, but of 75 percent on a 60-hour week. The first 40 hours are at 75 cents an hour, or $30, the next 20 hours are at time and one-half, or $1.12½ an hour, or a total of $22.50, and the pay for the 60 hours totals $52.50, or an average per hour of 87.4 cents an hour.

If the packing time and harvest-time average 45 minutes to the box of apples, then the cost is 37½ cents in one case and almost 66 cents in the latter. The difference in this one item is 28½ cents a box, and with a yield of 400 boxes to the acre it means $114 an acre.

In most years this is a very high profit and in many years it will not be attained.

Half of the United States crop of apples is usually grown east of the Mississippi, sometimes 60 percent is so located. Yields may average 150 or 200 bushels to the acre. The gross returns may be made on sales at $1 to $2 per bushel. The number of minutes per bushel for packing and harvesting may remain about the same and, under such conditions and with prices commonly met with, a forced increase of 28½ cents in labor for one item becomes arbitrary. Those conversant with the situation realize at once the folly of legislation proposing such a policy.

EXPORTS

The apple is the leading export fruit. In 1930 and prior years, in excess of 20,000,000 bushels were exported, or 20 percent of the amount sold in fresh fruit channels. This has a marked stabilizing effect on the domestic market and the greater base in production provides an ample domestic supply in short-crop years. Export markets are competitive. Arbitrarily pyramiding costs may offset or destroy any other natural advantages we may have. Preparing for export, packing for export, handling for export are all essentials. Varieties and certain producing areas have advantages in the export market because of favorable factors as soils, climate, temperature, etc. Handicapping this phase of the industry may have serious consequences. Fixing United States costs by law, when competing producing areas in other countries are left free, is, to say the least, unwise and should not be attempted. Canada, Australia, New Zealand, South Africa, Argentina, Chile, Europe at one time or another compete with us for markets.

IMPORTS

Shortages in food supplies may be met by imports and increasing quantities of food are being imported. All foods are competitive to a degree in their demand on the consumer's dollar. Competing fruits brought from low-cost producing areas may depress the domestic price of all fruits, and the more we stimulate the supplying of our markets by products of other lands, the keener the competition may be. Duties on most fruits entering the United States are low. Many other countries maintain relatively high duties on our fruits, in some cases prohibitive. Consideration of the effect of increasing costs on our fruits is of paramount importance.

COMMENTS ON S. 1349

We desire to make the following comments on the bill S. 1349.

Section 2 is amended by paragraph (b) (2) "to provide for the maintenance of reasonable wage differentials between interrelated job classifications in such industries."

We can visualize the army of jobs which this will create in the Labor Department, once the possibilities have been properly refined. With some 60,000,000 or even 50,000,000 workers to be classified by jobs and their particular job and the wage which is to apply to each, and with our knowledge of the procedure and the interminable provisions of the hearings, and one could with fairness say absolute waste of time, energy, and effort, we can conceive of no more fertile field for political jobs than this job classification of labor and wages.

It will never be done; in fact, if it follows the historic procedure, it will never be in anything but a maze of uncertainty and harassment to all who attempt to meet the requirements, and we forecast a continuing and continuous series of cases going to court to determine the points which will arise. Of all means devised for burdening commerce and those attempting to engage therein we believe this is the concept supreme to date.

It is the manifestation of labor's attempt to use the Government to force a percentage of unfit onto the pay roll at what they deem a living wage.

The policy of grading labor and fixing the price which must be paid, or the employer must go to jail or be fined $10,000, is so fantastic as to be unbelievable and the surprise is that it should be even considered.

This whole proposal and the amendment to section 8 making it effective should be stricken, if the bill is to be considered.

With every reason for employers being given some assurance that their efforts at this time will receive support and consideration from both labor and Government, the possibility of a suit for an infraction of one of the classifications set up and that such suit may be brought by any former employee or agent on behalf of another, any time in 5 years and for liquidating damages in addition, plus costs, means that insurance must be set up to handle such cases. Certainly 1 year is ample for the statute of limitations and in which to hold a pay-roll record open to determine the hours worked, the overtime and amount paid, and we would so provide.

If it is contemplated that the litigation in determining the classifications and pay may need to go to the Supreme Court and the 5 years is provided for this purpose, then there is the more reason for dropping the whole bill now, for we can conceive of no better way to burden commerce and the free flow of goods in commerce than to create these mazes of uncertainty. These proposals lack the merit of reason, they are unreasonable. They do not belong in America. Let me personally ask each one here whether, with this set-up, you will find yourself encouraged to resume business and, further, if we do not quickly resume business activity, the tail spin of 1932, revocation of debts and vast unemployment is the only alternative. Deficit spending with our present indebtedness is recognized by you gentlemen as impossible unless taxes can be raised to meet such expenditures.

Section 8 covers the industry committees and their activities.

The industry committees investigate, hear witnesses, receive evidence, classify employees, subdivide industry employees into groups, and determine suitable minimum wage scales, etc.

1. Provide the unskilled job classifications in each industry.
2. Provide for the maintenance of reasonable wage differentials between interrelated job classifications.

(NOTE.—A never-ending performance.)

3. Recommend the minimum rate or rates of wages to be paid.

(NOTE.—Whatever rates are provided, these will become minimum wages, because the unions in order to justify their existence, will have to secure higher wages than those set out.)

4. The committee investigates conditions, receives such evidence as may be necessary or appropriate.

(NOTE.—The committee settles this question as to what is appropriate to receive and there is no court review of its actions, if not made within 60 days after the order is filed and then court review is limited to questions of law.)

5. The committee recommends the highest minimum wage rate for the industry and for its subdivisions, with not over 75 cents maximum per hour for unskilled labor.

(NOTE.—Unskilled labor is defined in sec. 3 (o) as "labor which does not require previous training or experience." Under this definition very little labor will be found to be unskilled.)

6. The committee determines the minimum wage rate for each subdivision.
7. The Administrator holds a hearing based on the recommendations of the industry committee. He may approve or disapprove the recommendations.
8. The Administrator issues the orders fixing the job classifications and minimum wage scale applicable thereto.

Because we have, while engaged in war, built up a wage scale much higher than was previously attained, it is not reasonable to write such a wage into law as minimum. We do not believe that a minimum of 75 cents an hour can be maintained unless coupled with it, is marked devaluation of the currency. If this is in contemplation, we would like it developed.

COURT REVIEW

If action is not taken by any person who deems himself aggrieved, in proper court, within 60 days after the order is issued, the order is final.

Court review is limited to questions of law. We believe it advisable to revise section 10 to provide adequate court review of all proceedings under this act and to that end would amend section 10.

AMENDMENTS

Insert in section 13 (a) following proposed paragraph 5 or as a new paragraph in the present law:

"(6) Any individual employed in an establishment, if he is engaged in cleaning, grading, packing, drying, peeling, shelling, or otherwise preparing for market, precooling, refrigerating or storing of seasonal or perishable fruits or vegetables, or handling or transportation in connection with or incidental to such operations; (a) if he performs those operations on fresh fruits or vegetables all of which come from farms in that producing area, without regard to State lines, in which the establishment where he is employed is located, and where such commodities are, according to historical practice, normally or necessarily prepared for market. This exemption shall not apply to terminal or consumer markets where the products have been sent for distribution for consumption."

Amend by striking out the following:

Section 2 (b), all of paragraph (2), lines 16–18.
Section 3 (n), job classification, etc., lines 3 to 5, page 3.
Section 3 (o), unskilled job classification, etc., lines 6 to 8, page 3.
Section 6, all of the section.
Section 8, all of the section.

Section 16 (b), line 11, amend the words "five years" to read "one year" and the sentence to read "Action to recover such liability may be maintained at any time within one year from the accrual of such liability," etc.

Section 10, court review, amend paragraph "(a)"—

By striking out the first sentence and substituting for it the following: "Any person adversely affected by any agency action shall be entitled to judicial review thereof in any court of competent jurisdiction, by filing in such court, within a reasonable time after notification of such agency action, a written petition praying that the action be modified or set aside in whole or in part."

By striking out the fourth sentence, beginning "The review by the court * * *" and substituting for it the following: "Every final agency action, or agency action for which there is no other adequate remedy in any court, shall be subject to judicial review. Any preliminary, procedural, or intermediate agency action or ruling not directly reviewable shall be subject to review upon the review of the final agency action. Any agency action shall be final for the purposes of this section notwithstanding that no petition for review, rehearing, reconsideration, reopening, or declaratory order has been presented to or determined by the agency."

By striking out the word "final" in the last sentence, so that it will read: "The judgment and decree of the court shall be subject to review, etc."

Add after paragraph "(b)" the following new paragraphs:

"(c) Form and venue of action: The form of proceeding for judicial review shall be any special statutory review proceeding relevant to the subject matter in any court specified by statute or, in the absence or inadequacy thereof, any applicable form of legal action (including actions for declaratory judgments or writs of injunction or habeas corpus) in any court of competent jurisdiction. Any party adversely affected or threatened to be so affected may, through declaratory judgment procedure after resort to any adequate agency relief provided by rule or statute, secure a judicial declaration of rights respecting the validity or application of any agency action. Agency action shall be subject to judicial review in civil or criminal proceedings for judicial enforcement except to the extent that prior, adequate, and exclusive opportunity for such review is provided by statute.

"(d) Interim relief: Pending judicial review any agency is authorized, where it finds that justice so requires, to postpone the effective date of any action taken by it. Upon such conditions as may be required and to the extent necessary to preserve status or rights, afford an opportunity for judicial review of any question of law or prevent irreparable injury, every reviewing court and every court to which a case may be taken on appeal from or upon application for certiorari or other writ to a reviewing court is authorized to issue all necessary and appropriate process to postpone the effective date of any agency action or temporarily grant or extend relief denied or withheld."

"(e) Scope of review: So far as necessary to decision and where presented the reviewing court shall decide all relevant questions of law, interpret constitutional and statutory provisions, and determine the meaning or applicability of the terms of any agency action. It shall (A) direct or compel agency action unlawfully withheld or unreasonably delayed and (B) hold unlawful and set aside agency action found (1) arbitrary, capricious, or otherwise not in accordance with law: (2) contrary to constitutional right, power, privilege, or immunity; (3) in excess of statutory jurisdiction, authority, or limitations. or short of statutory right; (4) without due observance of procedure required by law; (5) unsupported by competent, material, and substantial evidence upon the whole agency record as reviewed by the court in any case subject to the requirements of sections 7 and 8; or (6) unwarranted by the facts to the extent that the facts in any case are subject to trial de novo by the reviewing court. The relevant facts shall be tried and determined de novo by the original court of review in all cases in which adjudications are not required by statute to be made upon agency hearing."

It will be necessary then to amend section 3 of the Fair Labor Standards Act, definitions, to include the following:

"Person and party: 'Person' includes individuals, partnerships, corporations, associations, or public or private organizations of any character other than agencies. 'Party' includes any person or agency participating, or properly seeking and entitled to participate, in any agency proceeding or in proceedings for judicial review of any agency action."

"Rule and rule making: 'Rule' means the whole or any part of any agency statement of general applicability designed to implement, interpret, or prescribe law or policy or to describe the organization, procedure, or practice requirements of any agency. 'Rule making' means agency process for the formulation, amendment, or repeal of a rule.

"Order and adjudication: 'Order' means the whole or any part of the final disposition of judgment (whether or not affirmative, negative, or declaratory in form) of any agency, and 'adjudication' means its process, in a particular instance other than rule making but including licensing.

"Agency action: For the purposes of section 10, 'agency action' includes the whole or part of every agency rule, order, license, sanction, relief, or the equivalent or denial thereof and including in each case the supporting procedures, findings conclusions, and reasons required by law."

TABLE 1.—*Employment, prices, and income, United States, average 1935–39, 1943, and estimates for 1950 under assumed conditions*

Item	Unit or base	Average 1935–39	1943	1950 [1]		
				Full employment	Intermediate employment	Serious depression
Total labor force	Million	53.8	62.6	60.0	60.0	60.0
Armed forces	do	.3	9.1	2.0	2.0	2.0
Total unemployment	do	10.2	1.1	2.0	7.0	17.0
Total civilian employment	do	43.3	52.4	56.0	51.0	41.0
Total agricultural employment	do	9.3	8.3	8.0	8.5	9.0
Total nonagricultural employment	do	34.0	44.1	48.0	42.5	32.0
Gross national product	Billion dollars	81.9	187.8	188.0	130.0	76.5
National income	do	65.4	149.4	150.0	105.0	57.5
Wholesale prices, all commodities, index	1926	81.0	103.0	103.0	87.0	66.0
Cash income from farm marketings	Billion dollars	8.0	19.2	17.0	12.5	6.5
Net income of farm operators	do	4.2	11.4	9.3	6.5	3.0
Prices received by farmers, index	August 1909–July 1914	107.0	193.0	165.0	125.0	75.0
Prices paid, interest and taxes, index	do	128.0	162.0	165.0	140.0	120.0
Parity ratio (prices received vs. prices paid).	do	84.0	119.0	100.0	89.0	62.0
Food consumption, per capita, index	1935–39	100.0	106.0	118.0	110.0	100.0
Agricultural production, index	1935–39	100.0	129.0	[2] 135.0	[2] 125.0	[2] 115.0

[1] The number of employed or unemployed is not the only factor that distinguishes any one set of conditions from the other two assumed for 1950. The general price level and productivity per worker change also. The full employment estimates assume a minimum frictional unemployment of 2,000,000 persons continuation of trends in productivity per worker, and a general price level equivalent to that of 1943, with prices received by farmers adjusted to their usual relation with the general price level during 1921–41. The intermediate situation assumes per capita income and prices generally at about the level of 1941. Serious depression assumes an income level somewhat above 1932, but below 1935–39 and prices generally about equal to the average of 1932 and 1933, but since both the labor force and productivity per worker are increasing, unemployment under this situation would be even greater than in 1932 and 1933. Population in 1950 is estimated at 144,000,000. All three estimates assume 2,000,000 workers in the armed forces.

[2] Production consumers would buy (and farm families would use) at the prices assumed.

All farm work	20,454	21,132	21,168	21,182	103.3	103.5	103.6

[1] Equivalent man-hours are in terms of the time required by average adult males to perform various farm tasks. Since many women, children, and older workers accomplish less in an hour than an average adult male, actual hours of work on many enterprises are in excess of those shown in this table.
[2] Preliminary.
[3] Includes the total labor requirements for all livestock enterprises, except for horses and mules.
[4] This kind of work, amounting to about 15 percent of the work needed for farming, includes labor spent on fencing, repairs to buildings, machinery and equipment, farm woods, pastures, general land maintenance, farm business and other miscellaneous work. Some of this work probably has been postponed during wartime because of the scarcity of labor.

Senator TUNNELL. Mr. Fraser, we thank you very much for your testimony. I think you have made a good witness, although I have not agreed with a great deal of what you have said.

Senator ELLENDER. I think you have made an excellent witness, Mr. Fraser, and your testimony will be of much help to all of us.

Senator TUNNELL. Mr. Charles Holman.

TESTIMONY OF CHARLES W. HOLMAN, SECRETARY, NATIONAL COOPERATIVE MILK PRODUCERS FEDERATION

Senator TUNNELL. Will you give the reporter your name and position?

Mr. HOLMAN. Charles W. Holman, secretary, National Cooperative Milk Producers, Federation, 1731 Eye Street NW, Washington, D. C.

Mr. Chairman, with your permission, since my testimony is relatively short, and rather technical, I would like to read my statement.

Senator TUNNELL. That is all right.

Mr. HOLMAN. Our organization now consists of 74 farmer-owned and farmer-controlled dairy cooperations and several hundred submember groups. The farm families who are the member-owners of these cooperations number more than 350,000 and reside in 46 States. We have approximately 800 dairy plants owned by either the member or submember groups.

I am instructed by the board of directors of the federation, meeting in Washington, D. C., September 25 and 26, to seek certain changes in S. 1349 introduced by Senator Pepper, of Florida. This bill is intended to amend the Fair Labor Standards Act, otherwise known as the wage and hour law.

The bill makes five major changes in the existing law, as follows:

1. Establishes a minimum wage for unskilled labor of 65 cents per hour for the first year after the enactment of the amendment, 70 cents per hour for the second year, and 75 cents per hour thereafter.

2. Grants to the Wage and Hour Division what is substantially the right to set, without hearings, the hourly rate to be paid to skilled workers;

3. Removes from the bill the so-called first processing exemption, whereby a dairy plant engaged in the first processing of milk, whey, skimmed milk or cream into dairy products, was exempted from overtime provision;

4. Removes from the statute the so-called "area of production" exemption whereby any individual employed within the area of production—as defined by the Wage and Hour Administrator—that is in the present law—in processing agricultural products, was not subject to the minimum wage provision, or the maximum hour provision, which requires the payment of time and one-half after 40 hours in any one week;

5. Puts into the present law a statute of limitations permitting an employee to sue for back wages—when an employer is found to be under the act—at any time within 5 years from the time such wages became first due.

(1) Although our producers supplying creameries are among the lowest income groups within the food industry, we have no direct recommendation to make concerning the proposed minimum wage scale in Senator Pepper's bill provided incomes of dairy farmers are not reduced below their present levels. We recognize that there are agricultural groups engaged in processing agricultural products which would find it a sacrificial act to be required to pay the new wage scale; also that in such communities these minimum rates would throw out of gear wage relationships with respect to occupations not directly related to interstate commerce. This dislocation would also apply to the competitive position in which dairy farmers would be placed with regard to the rates of labor on their own farms and the rates of labor paid in the various dairy and other plants located in rural communities.

(2) We object to the power given in the bill to the Wage-Hour Division to make adjustments of wages for the skilled employees. We do not believe that officials of Government are either equipped, or can equip themselves, to determine what rates of wages should be paid to such employees without regard to the price returns on commodities processed, and particularly without regard to the effect upon the income of farmers owning and operating, cooperatively, plants whose skilled employees are thus placed within the new jurisdictional power.

Delegation by the Congress of such power to the Wage-Hour Administrator abrogates the theory on which the original act was based, namely, the protection of minimum standards of wages for those in the lowest income brackets employed in handling products in interstate commerce. The new theory would give a Government administrator power to regulate and fix a minimum for all incomes—that is, all wage incomes—without even the procedure of a public hearing. It makes the will or the whim of the Administrator supreme wage law.

(3) We believe that two important sections of the Fair Labor Standards Act of 1938, omitted by the Pepper Bill, should be restored to the basic law in language which will make their operations practicable. I refer now to the sections dealing with the so-called area of production and first processing.

I will deal with these sections separately and offer for consideration of the committee amendments designed to make them administratively feasible.

I wish to deal first with section 7 (c) of the act, which provides exemption from the overtime provisions for those plants manufacturing dairy products when they are engaged in the first processing. I offer a proposed amendment designed to clarify the exemption which Congress intended such plants to have.

On page 5, after line 14, add subsection (c) to read as follows:

(c) In the case of an employer engaged in the first processing of milk, whey, skimmed milk, or cream into dairy products, provided, that the addition of any necessary ingredients or the transportation of such milk, whey, skimmed milk, or cream in any form between several plants of the employer shall not be deemed an interruption of first processing, or in the ginning and compressing of cotton, or in the processing of cottonseed or in the processing of sugar beets, sugar cane, or maple sap into sugar (but not refined sugar) or into syrup, the provisions of subsection (a) shall not apply to any employees in any such place of employment; and in the case of an employer engaged in the first processing of, or in canning or packing perishable or seasonal fresh fruits, or vegetables or in the first processing, within the area of production (as defined by the Administrator), of any agricultural or horticultural commodity during seasonal operations, or in handling, slaughtering or dressing poultry or livestock, the provisions of subsection (a) during a period or periods of not more than 14 workweeks in the aggregate in any calendar year, shall not apply to his employees in any place of employment where he is so engaged.

Senator SMITH. Could you give us briefly the philosophy of this amendment, so we can get a little exposition of that?

Mr. HOLMAN. The philosophy of the amendment lies, primarily in the confusion which will occur within the dairy industry, and I am applying it largely to the dairy industry now, where plants may be located in strictly rural communities, and other plants may be located in large cities.

Yet both plants may have to sell on the same market at competitive prices.

That is really the nub of the reason for asking for the restoration of the language, aside from the reasons I propose to give to the committee in my short brief here.

In that connection, there is some new language inserted into the proposed amendment as compared with the original 7 (c).

The new language follows the words "dairy products" in the second line, and is as follows:

Provided, that the addition of any necessary ingredients or the transportation of such milk, whey, skimmed milk, or cream in any form between several plants of the employer shall not be deemed an interruption of first processing.

We have had a great deal of difficulty in our dealings with the Wage and Hour Division over their tendency to try to narrow down the scope of operations of a given employee in a given plant.

For example, let us take in the making of so simple a product as sweetened condensed skimmed milk.

Here is a man who will be hauling a 200-pound sack of sugar on a truck right on up to another point where that sugar is to go into a hopper, and then goes down into the hot well. The man who is stirring the hot well has, in times past, been defined as not engaged in first

78595—45——30

processing, whereas the man hauling the sugar has been defined as engaged in it.

Likewise the engineer and fireman who must keep the power going to do this operation have been defined as not being in the first processing, but only the persons who are handling the milk, and that process is interrupted since the stirrer was eliminated.

A fact of fundamental importance affecting the ability of dairy manufacturers to operate within a 40-hour week is the extreme perishability of milk and cream. Milk is and must be delivered from the farm to the factories every day. Milk must be processed each day as it is received and the processing must be completed in order to protect the quality of the milk and to clear the processing facilities for the next day's supply. Without prompt and continuous processing the product may be unsafe for human use and great waste result.

Senator SMITH. Might I interrupt to ask a question about a local situation in my State of New Jersey? We have a milk producer there, Walker Gordon, whom you probably know.

They have the rotolactors.

Now, if a man milks a cow by hand, that is a farm classification, and if he milks the cow by the rotolactor, it is an industrial classification.

Mr. HOLMAN. In that particular instance, the Walker Gordon people largely with the assistance of our organization, came before a committee and ask that this matter be investigated; the thing looked so foul to us.

The final agreement forced upon the Walker Gordon people by means of a primary and secondary part of their milk going largely to hospitals and children, did exclude the operations on the rotolactor.

But another clause says that the union will not attempt to unionize all of the farm help until after the dealers and the help in New York City enter into a joint agreement whereby the right of the union to organize farm labor is recognized.

Senator SMITH. I was trying to raise the issue about this paragraph which you have suggested here, so far as the minimum wage is concerned. Would it put a man working on a rotolactor on the same wage base as a man milking a cow, assuming you are working in the same areas of production?

Mr. HOLMAN. That would depend upon whether the final determination of that operation results in the rotolactor milker being declared an agricultural laborer, in which case he would be exempt under the terms of the bill as proposed by the committee.

Senator SMITH. I think it is interesting—an interesting sidelight of the complications involved in this legislation.

Mr. HOLMAN. As Mr. Fraser said, 29,000 skilled classifications are involved.

It is also of fundamental importance that the daily supply of milk delivered to dairy manufacturing plants varies widely from the low production season to the high production season.

Dairy farms in the United States produce 50 percent more milk in June than in November. The amount of milk delivered to plants varies even more widely than the amount produced.

Condenseries, for example, get a total of 75 percent more milk in June than in November. Part of this variation is a result of the fact that some producers actually cease delivering milk in the low production months. Condenseries buy milk from 19 percent more producers in June than in November.

The extreme seasonal variation in the output of dairy plants is reflected in production figures from the Department of Agriculture. There is 92 percent more creamery butter made in June than in November. Production of evaporated milk increases 142 percent and production of American cheese increases 149 percent in the same period. Ice-cream production is 218 percent higher in the peak than during the months of low production.

These figures indicate the amount of variation in the labor load in dairy manufacturing plants. To take care of the increased production, butter plants in 1939 hired 10 percent more workers who worked 3 percent more hours per week. In 1944 under changed conditions butter plants hired 21 percent more workers and lengthened the workweek 3 percent. Evaporated- and condensed-milk plants hired 15 percent more workers during the peak months than during the low months of 1939. Data on weekly hours of employment are not available for this industry for 1939. In 1944 employment increased 28 percent from the low month and the workweek was lengthened 8 percent. In the ice-cream industry in 1939, 37 percent more workers were employed per week and the workweek was increased 6 percent. In 1944, 35 percent more production workers were employed at the peak and the workweek was lengthened 4 percent.

Senator TUNNELL. Isn't what you are speaking of largely because of the fact that the cows are fresh at that time?

Mr. HOLMAN. Yes, sir; we have tried, particularly in the fluid-milk business, to reorganize the cows' habits and have succeeded in doing so to some extent, but not entirely.

Here is a table which represents in tabular form the figures I have just given to the committee. It is as follows:

Seasonal variation in employment and hours of work per worker, selected industries, 1939 and 1944

[Peak month as percent of low month [1]]

Industry	Year	Employment	Hours worked per week per employee
Butter	1939	110	103
	1944	121	103
Condensed and evaporated milk	1939	115	[2]
	1944	128	108
Ice cream	1939	137	106
	1944	135	104
All food industries	1939	134	105
	1944	116	98.5

[1] For butter and condensed- and evaporated-milk industries the peak month is June, the low month November. For ice cream the peak month is July, the low month January. Peak employment in food industries as a whole comes in September, the low month being February.
[2] Not available.

Source: Based on data from the U. S. Bureau of Labor Statistics.

The workweek in the butter industry in 1944 averaged 47.6 hours or 0.9 hours more than in 1939. The workweek in the condensed and evaporated milk industry averaged 49.8 hours in 1944, but comparable data are lacking for 1939. The workweek for the ice-cream industry was 46.5 hours in 1944 and 46.2 hours in 1939.

May I interpolate here by saying that during the war period there was a rather regular control over the amount of milk that could be used in various dairy products with considerable emphasis upon increasing the supply of fluid milk available to be consumed in bottles, and that may account in part for the fact that ice cream which was perhaps the most rigidly controlled, and butter which lost to the condenseries, and cream factories, owing to Government policy, did not have any higher wages than I am now quoting.

In tabular form the annual averages of hours worked per week per employee, selected industries, 1939 and 1944, show as:

Industry	Hours worked per week	
	1939	1944
Butter	46.7	47.6
Condensed and evaporated milk	(1)	49.8
Ice cream	46.2	46.5
All food industries	40.3	45.4

[1] Not available.

Source: U. S. Bureau of Labor Statistics.

For comparison with the above figures on employment and weekly hours, the following average figures for all food industries combined may be considered:

The number employed at the month of peak employment was 34 percent higher than at the low month in 1939 and 16 percent higher in 1944.

The work week was 5 percent longer in the peak month of 1939 than in the low month for total employment; but was 1.5 percent shorter in 1944. The average hours worked in all food industries was 45.4 hours in 1944, but only 40.3 hours in 1939.

In addition to the very large and significant seasonal variation in the quantity of milk to be processed by dairy manufacturing plants there is an occasional disruption of the work week because of conditions interfering with the regular delivery of milk. When bad weather or other causes resulted in delayed deliveries in the day the work day is lengthened. Employees must stay until all of the day's milk is received and processed. This lengthening of the work day is not offset by shorter hours later in the week.

Most of these plants run a 7-day week in order to milk the cows. They have to be milked and we have no farm storage of the milk. It has to go to the plants.

Therefore, conditions beyond control of the employer frequently cause the workweek to exceed the maximum of 40 hours. This is particularly true in the winter months.

The dairy industry requires skilled workers for nearly all operations. The necessary skill and scientific training of laboratory workers of course is unquestioned. But similar exacting skills are required of all workers including those employed in such tasks as cleaning up the plant.

That is ordinarily considered to be unskilled labor, but it requires a person especially trained in that work to clean up a dairy plant so that it is sanitary after the plant is cleaned.

The need for skilled workers precludes indiscriminate seasonal hiring and firing of production employees. It is for this reason that the dairy industries do not show variations in employment commensurate with the variations in the quantity of products handled.

A fifth factor affecting the ability of dairy plants to observe maximum hours for all employees is the integrated nature of all plant operations. All production employees of a dairy plant are equally indispensable to the production process. This is true of the man on the receiving platform, the man in the laboratory, the butter maker, the cheese maker, et cetera, the fireman in the boiler room, the electrician, and so on.

The electrician cannot just come there and do his work. He has to be there all day long while the plant is in operation.

Not only are these workers essential but it is essential that they work concurrent hours. Furnishing of steam for the clean-up process, the last operation of the day, is as esssential an operation as the furnishing of steam for the first production operation.

The next proposed amendment which I offer has to do with the revision of the language of section 13 (a) (10), commonly known as the "area of production" exemption. The exemption in this section applies to the described plants with respect both to minimum wages and maximum hours whether or not such plants are engaged in such processing.

Following your question, Senator Smith, the particular philosophy of this second amendment lies largely in the territory or location of the plant.

The definition of area of production which had been defined by the Administrator was thrown out by the United States Supreme Court on June 5, 1944. Since that time the Administrator has not promulgated a set definition of area of production under the act. The amendment which we offer would return the exemption of the law and would define area of production so far as milk and dairy products are concerned. The language of the proposed amendment follows:

On page 12, line 8, strike out the period and insert a semicolon and add subsection 11 to read as follows:

(11) To an individual employed within the area of production (as defined by the Administrator) engaged in handling, packing, storing, ginning, compressing, pasteurizing, drying, preparing in their raw or natural state, or canning of agricultural or horticultural commodities for market, or in making cheese or butter or other dairy products: *Provided*—

and this is important—

That in the case of milk and dairy products, employees shall be deemed employed within the area of production if they are employed (1) in a receiving plant engaged in receiving, cooling, and shipping milk or cream, provided at least 95 per centum of the volume of the supply of milk or cream for such plant during the preceding calendar year was received from farms located within the same county as the receiving plant or in contiguous counties; or (2) in the case of employees employed in a manufacturing plant engaged in the manufacture of dairy products, provided at least 75 per centum of the volume of supply of milk or dairy products of such plant during the preceding calendar year was received (a) from farms located within the same county as the manufacturing plant or in contiguous counties, or (b) from receiving plants or other manufacturing plants so engaged, located within a radius of seventy-five miles of the manufacturing plant where the employees are employed. In determining the volume of dairy products, the milk equivalent thereof shall be the basis of determination.

These suggestions were made as a result of contact with our people in almost every part of the United States. We checked the routes,

we checked the radius, and we are confident that this definition for dairy products will work, and we suspect that it will pass the Supreme Court because the language is very clearly defined, and if Congress should act upon it the Administrator will not be in the position of trying to define what "area of production" is, and very few people in the wage-hour industry are familiar with these particular definitions.

Dairy manufacturing industries, by and large, are industries of small towns. Milk processing must take place close to the farm because of the perishable nature of milk, and because of its great bulk which makes long hauls costly.

The location of dairy industries in small towns gives access to laborers whose cost of living is the lowest in the country. It is for this reason that conformance with a minimum wage standard would work an undue hardship on plants located in an "area of production." The minimum wage designed to give equal standards of living to urban and rural workers would necessarily be less for the latter than for the former.

A further problem in establishing minimum wages is the proximity of the dairy plants to the farms, the largest economic area of self-employment in the Nation. Agriculture cannot afford the proposed scale of minimum wages for its employees, even at wartime prices. Many farmers would prefer to work for the minimum industrial wage if the opportunity were afforded. They might even prefer to become self-employed as operators of small creameries or cheese factories and accept a labor return less than the wage which they would be compelled by minimum-wage regulations to pay to such hired help as would be required. The absurdity of a smaller return for a proprietor than for his helper is apparent. Such conditions could be avoided by providing for the "area of production" exemption.

That the above contrast between self-employed and hired workers in the dairy industry is not unrealistic is shown by census data on the average size of butter and cheese establishments. Creameries in 1939 employed an average of only five workers per establishment. Cheese plants employed only one and nine-tenths wage earners per establishment. A study of Wisconsin creameries showed that nearly half of the creameries were less than one-fourth the size of the larger creameries. These would be one- and two-man plants. They handled one-seventh of the total milk received by creameries. Small creameries, being willing and able to operate at a lower labor cost than those who would be required to pay minimum wages, would tend to increase in numbers. These creameries, however, are generally inefficient by over-all standards.

Hence a shift of butter production to such plants would inevitably mean less money returned to producers for milk and cream. The situation with respect to cheese factories is even more acute with 98 percent of the Wisconsin plants handling less than 5,000,000 pounds of milk annually and only two-tenths of 1 percent handling more than 10,000,000 pounds. Where the partnership is used even larger plants could legally escape the law.

The existence of such opportunities for honest evasion of minimum-wage regulations would work great hardships on the generally more efficient dairy plants engaged in processing the same commodities. Since dairy plants generally are located in an area of production conforming to our proposed definition, exemption of plants in such area would relieve this problem.

Because of the factors enumerated above—location of dairy plants in low-cost-of-living areas, proximity to population groups engaged in low-paid self-employment, and significant volume of self-employment—the average hourly earnings in the butter industry, for example, are the lowest of any of 13 food groups for which hourly earnings are reported by the Bureau of Labor Statisticis.

In 1944 production workers in the butter industry received annual earnings, average hourly, of 70.9 cents. The next lowest average hourly wage was in the confectionary industry, in which the average wage was 72.3 cents. The average for all food industries was 84.9 cents, which exceeded earnings in the condensed- and evaporated-milk industry of 73.7 cents and in the ice-cream industry of 79.4 cents per hour, which exceeded the earnings in the canning and preserving industry by 2 cents per hour, but was 12.3 cents per hour below the average of all food industries. If wages of workers in the butter industry had been raised to the average level of all industries, which would have been substantially the effect of an applicable minimum-wage regulation at that time, the cost of processing butter would have been increased about 6½ percent.

Since butter already returns to producers the lowest average price per pound of butterfat of any of the dairy products, the effect of applying minimum-wage regulations would be to take money from the pockets of the lowest-income group of dairy farmers, either directly through lower price or indirectly through a curtailed market, or both.

It should be remembered, and I cannot emphasize this fact too highly, that income which farmer members of a cooperative receive comes from the prices which the cooperative is able to obtain for them. That is, the members. The greater the cost of operation, the lower the producer's income.

We contend that the statute of limitations in the bill should be reduced to 1 year. We feel that this gives all employees sufficient time in which to institute any suits necessary for the carrying out of the spirit of the act, and therefore recommend that on page 13, line 11, the word "five" be stricken and the word "one" be inserted.

I close by returning to the fundamental philosophy of minimum-wage legislation.

That philosophy is that the best interests of the Nation are served by bolstering the incomes of the lowest-income groups.

In selecting industrial workers for special consideration under this law, care must be taken to avoid undesirable impacts upon low-income groups which are not and cannot be protected by this law.

Agriculture as a whole has formed a large part of the lowest-income group in the Nation for 25 years.

We are now facing the prospect of drastic declines in agricultural income within the next year. It would be unfortunate to enact this legislation in such form as to reduce further agricultural incomes.

That closes my direct statement, sir.

Senator TUNNELL. As I understand, sir, you are not opposed to the theory of the wage-and-hour law.

Mr. HOLMAN. No, sir; we are not opposed to the theory.

We recognize that time changes and that some social legislation has to go on the statutes from time to time. We do think it should be safeguarded and we are in a position here where we would be hurt, and very drastically hurt, should the law, in its present form, be

passed without the reinclusion of the amendments in the form as we have suggested.

Senator ELLENDER. Mr. Holman, have you as yet been able to note any decrease in the price of dairy products since the war has ended?

Mr. HOLMAN. Yes, sir.

The beginning was just a week or two ago, when the Department of Agriculture lowered the price on dry skimmed milk 2 cents a pound. That is the equivalent of 20 cents a hundred pounds in terms of fluid milk going into New Orleans.

Senator ELLENDER. If there is no method by which we can maintain our present price structure, and this bill should go into effect as proposed, and without your amendments, how much would that increase the cost of producing dairy products? Can you give us an idea?

Mr. HOLMAN. It will have to be an off-hand thought here.

Our prices now for labor all the way from around 50 cents an hour up to as high as $1, and our wages for butter makers alone range from $176 to $200 a month.

At the present time in Minnesota, one of the great unions is attempting to organize all of our butter makers who normally are managers, as well as superintendents, of the plants, and who normally are on duty, like I work, all the days of their lives, because they have sense of responsibility, and the man in the community keeps an eye on the plant as long as he is awake and in the neighborhood.

If that butter maker at $176 is cut back to 40 hours, and then time and a half for all the work he has to put in, and you run that scale down the line, you would have a tremendous increase in the cost of production.

Senator ELLENDER. Do you think the industry can now absorb any portion of the costs proposed in this bill without hurting the producers of dairy products?

Mr. HOLMAN. Only the very minimum wage provision. They cannot absorb the provision for skilled workers.

There are some industries we know that could not get along on the new proposed wages. We could get along.

Our position is not that we are advocating, but we will go along with the group in agriculture that is most hurt by the minimum wage. That is our position. We support that group.

If it is cotton, or whatever it may be, or sugar, or something else, we will support it.

If it is a large and comprehensive group, what they can stand, will be our position.

Senator ELLENDER. They would be in the same fix as you are in, and unless they get prices to pay these additional wages their business would simply go by the wayside?

Mr. HOLMAN. They would be in a worse fix for this reason: Let us assume that butter has to take additional raps, and it probably may. Butter has already gone through an evolution whereby much of the butter formerly made from separated cream is now being made from whole milk that is moved into the creamery and there separated and used for whatever may be the best purpose.

If the butter industry cannot afford to pay the wages, those plants will transform into fluid milk plants, or some other kinds of plants that can pay and stand the wages.

We know that is a very different position from some industries that cannot convert like we can.

But damage would be experienced both by the people and the communities that had to shut up the dairy plants and move the milk another 200 miles to some other place in order to be handled—that is, shut up the butter plants or shut up the thousand little cheese factories which have been institutions of the neighborhoods for nearly 100 years, and turning that product into the great plants located miles and miles away.

Senator ELLENDER. Now, Mr. Holman, if these wages should go into effect as written in the bill, without exceptions, has technology in the production of milk products advanced so that you could reduce your cost of production by savings on labor?

That is, by doing the same work with less labor by using mechanization to save on the cost of production?

Mr. HOLMAN. Well, technology has advanced to the point where at the present time our very large combination dairy plants are able to operate comparatively cheaper than the more primitive plants, but following your question through as to how much can the large plant stand in the way of additional increased costs, that is problematical.

If the plant is owned by private capital they would probably go ahead and take it out of the price they pay the farmer.

Senator ELLENDER. The point I want to emphasize is simply this:

If wages are so high that industries can't stand the increase, they would be prone to use machinery to do the work that would otherwise be done by man, and thereby cause unemployment. Isn't that inevitable?

Mr. HOLMAN. It is like asking how many men does it take to handle a Gray-Hensen or one of the other types of dryers.

We have dryers ranging from small ones, 15 feet square, up to as long as this particular room, and it does not appear to take much more labor to handle the large one than the little one.

Senator ELLENDER. And the output of the large one is probably several times that of the small one?

Mr. HOLMAN. The economic evolution would be forcing the dairy plant out of the hands of the small community and small capital, and would force the creation of great combination plants which would require millions of dollars of capital behind them and the industrialization at the expense of labor itself as well as the community.

Senator ELLENDER. That is the point I have been trying to emphasize, and I think that would apply to the dairy industry and would also apply to small industries, and other industries, as well.

Mr. HOLMAN. It could apply to other industries much more easily.

For instance, I am told that rayon and nylon can now be put on the spindles and you go away and leave them and they don't break, whereas, you and I know what has to be done with the spindles in a textile mill.

As a boy I worked in a cotton mill.

Senator TUNNELL. The same argument applies as between a wheelbarrow and an automobile; doesn't it?

Mr. HOLMES. I think so. Line production is the logical end for many industries.

Senator SMITH. Mr. Holman, I gather from your testimony and that of other agricultural witnesses——

Mr. HOLMAN. I am the farmer's hired man, sir.

Senator SMITH. You are really more concerned with the maximum-hour provisions than the actual minimum-wage provision.

Mr. HOLMAN. Definitely, sir.

Senator SMITH. Agriculture is affected definitely by the maximum hour, if overtime means time and a half.

Mr. HOLMAN. But agriculture is also affected by the minimum-wage provisions applicable to plants in the area of production.

Here is a plant in Mankato, Minn., or Green Lake, Wis., where my wife's mother lives, 500 inhabitants, and a creamery there.

Suppose that creamery has to pay 50 or 60 cents an hour for its lowest labor. All the labor on the farms will be affected by it and you can't hold a laborer on the farm.

Senator SMITH. You are only making that argument for the area you are speaking of?

Mr. HOLMAN. That is correct.

Senator SMITH. You don't make it Nation-wide for all industry?

Mr. HOLMAN. That is right.

Senator TUNNELL. We thank you very much for your testimony, Mr. Holman.

We will adjourn at this time until 2:30 .

(Whereupon, at 12 noon, the hearing was recessed until 2:30 p. m. of the same day.)

AFTERNOON SESSION

Senator TUNNELL. Mr. Parmelee.

TESTIMONY OF JULIUS H. PARMELEE, DIRECTOR, BUREAU OF RAILWAY ECONOMICS, ASSOCIATION OF AMERICAN RAILROADS

Senator TUNNELL. Mr. Parmelee, I believe you represent the railroads?

Mr. PARMELEE. Yes, sir.

Senator TUNNELL. Are you any relation to the fellow that formed the transfer company?

Mr. PARMELEE. No, Senator; not that I know of. If I were I probably would have more money.

Senator TUNNELL. It is the same name.

Mr. PARMELEE. Yes, sir.

Mr. Chairman, I am director of the bureau of railway economics of the Association of American Railroads. That association, as the committee doubtless knows, represents practically all of the larger or trunk-line railroads of the United States.

It had been our hope, Mr. Chairman, to have representatives of railroads in different parts of the country appear before the committee because the railroads in different sections have somewhat different problems.

However, in deference to the desire of the committee to speed up the program, it was determined that I should be the only witness for the railroad industry.

Senator ELLENDER. Who determined that?

Mr. PARMELEE. We did ourselves.

Senator ELLENDER. What was the basis of it?

Mr. PARMELEE. The principal basis was that we understood you wanted to conclude the hearings as rapidly as possible.

So I will undertake to speak for the industry as a whole.

Let me make one further explanation. As I have stated, our association represents, for the most part, the trunk-line railroads, the larger railroads. We do represent virtually all of them. There are in addition several hundred short lines, so-called, little railroads which are important in their respective communities and localities, but which do not bulk very large in the industry as a whole.

I do not speak for those railroads. I am not sure whether they will appear on their own behalf or not. But whatever we say in opposition to the bill as drawn I feel quite sure that they would be even stronger in their opposition and would have even stronger reasons for their position.

However, I do not speak for them this afternoon.

Senator SMITH. Mr. Parmelee, will you file for the record the railroads for whom you are speaking?

(See exhibit A, p. 498.)

Mr. PARMELEE. We can do that, yes, Senator. It is a rather long list.

Senator SMITH. It is the big lines, like the New York Central and the Pennsylvania and the B. & O.?

Mr. PARMELEE. Yes, sir.

Senator ELLENDER. Will you tell us in your statement the approximate number of persons employed by these railroads?

Mr. PARMELEE. Yes, sir.

Senator ELLENDER. Or that would be affected by this bill.

Mr. PARMELEE. I shall do so, Senator, in the course of this statement. And I shall be glad to file a list of the railroads for whom I speak with the committee. It will include about 150 railroad names.

Senator ELLENDER. If you are speaking for them it will be a very important piece of information.

Mr. PARMELEE. I will furnish it for the record.

Senator TUNNELL. Yes, I think you should.

You may proceed, Mr. Parmelee.

Mr. PARMELEE. I appear here, on behalf of the railroads, to oppose the enactment of S. 1349. Before outlining the serious effect such enactment would have on the railroads of the United States, I call attention to certain general considerations which, it seems to us, clearly mark the bill as contrary to the public interest. I will list these considerations briefly, and will then enlarge upon them to the extent that available time will permit.

First, the bill proposes a radical increase in the minimum wage rate, which, as I will endeavor to show, will fall with unequal force on different sections and different industries.

Second, the bill is not so much a minimum wage proposal as it is a proposal to institute, by statutory enactment, a general and Nation-wide increase in the whole industrial wage structure.

Third, the bill is distinctly inflationary in character, and its passage will not only not be beneficial to labor, but will be to the disadvantage of the workers, as well as to all other citizens.

Fourth, this is not the time, during the period of war-to-peace reconversion, to institute so drastic and sudden a change in the general

wage structure. To enact the bill at this crucial period in our economic history would lead almost certainly to unemployment rather than increased employment; and would tend to stimulate a reduction, rather than an increase, in aggregate purchasing power.

These four points will now be considered in somewhat greater detail.

1. Increased wage structure: S. 1349 provides that a wage of 65 cents per hour shall become the statutory minimum, immediately upon enactment. This would be an increase of 25 cents per hour, or 62½ percent, over the statutory minimum of 40 cents that became effective a year ago under the provisions of the Fair Labor Standards Act of 1938.

It is true that in some industries, and in some sections of the United States, actual minimum wages now in effect are greater than 40 cents. This is true also of the railroad industry, where the minimum at the present time, so far as the larger railroads are concerned, is 57 cents per hour, as I shall later outline to the committee.

Nevertheless, any radical increase of this kind, put into effect at a single step by legislative fiat, is bound to create dislocations in those industries and sections which are now on a minimum level of 40 cents or slightly more. Furthermore, it would have widely varying impacts on different industries and sections, insofar as they are now on different minimum levels.

The bill further provides that the proposed minimum shall be increased 5 cents per hour at the end of 1 year, and another 5 cents per hour at the end of 2 years. These increases might even be made at earlier dates. If the step from 40 to 65 cents is a radical change, to go from 40 to 75 cents in the short space of 2 years is even more radical. That would represent an increase of 87½ percent.

As I will point out to the committee, when I come to consider the effect of this bill on the railroad industry, S. 1349 would eliminate virtually all of the differences that now exist, both in minimum and higher levels of wage rates, as between the city and country, as between rural and semirural sections, and as between the several sections of the United States, North, South, East, and West. These differences, which have persisted for many years, and which have a considerable degree of sound economic and social logic behind them, are to be found in the railroad industry, and in many other industries throughout the country. At a later point I will present statistics showing that regional differences exist to a very marked degree in the agricultural industry, where the average monthly wage paid farm labor varies widely as between the several regions of the United States.

I shall point out later, Mr. Chairman, that the reason we mention the farm labor is because the lower rated classes of track labor on the railroads are largely competitive with the farm labor. They work in the same regions and are drawn from the same market.

Senator TUNNELL. Section men?

Mr. PARMELEE. Section men, yes, sir.

In brief, S. 1349 would disrupt many of the elements and relationships of the wage structure now in existence, would bear more heavily on some industries and sections than on others, and would completely wipe out the differences and distinctions in wage rates that have grown up, for one reason or another, over many years. It would, at one sweep, introduce confusing and upsetting elements into a situation which is already replete with complex economic and social questions.

2. The bill proposes a general wage increase: S. 1349 would amend sections 6 and 8 of the Fair Labor Standards Act of 1938 so as to provide that a reasonable wage differential shall be maintained between the minimum wage rates prescribed in the bill, and the wages of interrelated job classifications. This is a general provision, susceptible to a variety of interpretations. However, the intent of the bill is clear, which is to bring about a sharp increase in the minimum wage rates, at the bottom of the scale, and then to carry those wage increases up the scale, through the several wage steps and categories, until the top layer is reached. In other words, a given increase at the bottom would be applied, more or less evenly, to all wage groups.

The underlying purpose, in other words, is not only to bring about a radical increase in the minimum wage scale, but to put into effect, at one stroke and by legislative means, a general and Nation-wide increase in wages.

Regardless of the merits of such a proposal, it is so sweeping in character that it should not be approved without giving the matter much more study than has been or can be devoted to it by Congress at this time. In fact, it is a question whether the matter should be handled as a legislative problem at all, or whether it is not rather an administrative and quasi-judicial question to be delegated for determination by expert boards set up specifically for that purpose.

In any case, we think that Congress should be most cautious about putting into effect such sweeping and large increases in the wage structure as a whole, such as are here proposed, without giving the matter much more comprehensive consideration than has thus far been devoted to it.

3. The bill is inflationary: Proponents of S. 1349 have laid considerable emphasis on the contention that enactment of the bill would help to increase what is generally called mass purchasing power. I take issue with that contention. The bill might, it is true, put additional dollars into the pockets of some workers. At the same time, however, it would most certainly tend to increase commodity prices, and to that extent would prevent purchasing power from being increased, and might even lead to a reduction in purchasing power.

Senator SMITH. That suggests that we couldn't continue price control if that went into effect; is that correct?

Mr. PARMELEE. Absolutely, Senator. I think price control would be absolutely wrecked by the passage of this bill and the effects that would flow from it. That is due to the modifications that would be made in the upper wage brackets as a result of the bill.

Purchasing power is not merely a matter of dollars. It is a measure of what dollars will buy. For example, if wages are increased 25 percent, but at the same time prices go up 35 percent, the number of wage dollars will increase but their purchasing power will decrease. This fundamental point is highly significant, and should be kept in mind in any consideration of wage rates and aggregate pay rolls. In this connection, I commend to you the suggestion made by Mr. L. M. Walling, the Wage and Hour Administrator, in his discussion of this bill before your committee on October 4, to the effect that Congress consult the price-control authorities, with respect to the effect of the proposed minimum wage on prices, before taking action. The effect on prices should be considered, of course, not only with respect to the proposed minimum, but also with respect to the effect of subsequent increases in the higher wage brackets.

As a general rule, wages per unit should not be permitted to outrun production per unit. In other words, if a man increases his output per hour, his wages per hour might be correspondingly increased without affecting prices, other things being equal. However, if his wages are increased at a greater rate than his productive capacity increases, he has more money to spend in relation to the number of units that are produced, and the resulting demand tends to outrun the supply. Such a condition leads directly to inflation, and I have no hesitancy in saying that S. 1349 would be a distinct inflationary step.

Senator SMITH. You don't think then that by increasing the pay of the workers you get more production?

Mr. PARMELEE. Increasing so quickly, Senator. I say later on in the statement that these processes are rather slow. By the slow process of economic evolution and adjustment I think wages can go up, have gone up, and should be brought up.

Senator SMITH. I am glad you bring that out. I think timing is very important. But it has been pointed out that people living under substandard wage conditions aren't as effective workers as people having reasonable living standards and relief from the anxiety and cares at home.

Mr. PARMELEE. That is very true, Senator. I agree with that position fully.

Senator TUNNELL. What position did your organization take on the 40-cent minimum?

Mr. PARMELEE. So far as I know we didn't appear, Mr. Chairman. I had nothing to do with it myself, in any case.

Senator TUNNELL. Were you employed by the same people at that time?

Mr. PARMELEE. I was; yes, sir.

Senator TUNNELL. What was your work then?

Mr. PARMELEE. I was in the same line as at the present time. However, I am engaged sometimes in wage cases and sometimes in rate cases and sometimes in congressional hearings and I don't always appear in these cases.

Senator SMITH. Of course, under our Interstate Commerce Commission set-up the railroads wouldn't suffer from the standpoint of the double squeeze we talk about, because if there were higher wages it would be reflected in their rates; they would get a higher rate allowance.

Mr. PARMELEE. Yes. I mention that in a moment. We are in a rather peculiar position in that the railroad wage bill is rather high relatively in comparison to other industries. We are, of course, restricted as to the prices we can charge, so that we have that double squeeze both ways, and the railroads suffer very quickly as a result of any large increase in wages.

Senator SMITH. You might be forced to request a rate increase, in case this wage raise made it necessary for you to have a rate increase to take care of your total costs.

Mr. PARMELEE. I would be very much afraid of that. I don't want to bring that in as a statement of actual probable facts because we don't know what would happen but it is certainly one of the considerations we have to take into account.

Senator SMITH. Certainly the Interstate Commerce Commission, or any public utility commission, in figuring the rates to the public, has to consider what the wages are, as a part of the cost, before it can determine what the rate shall be. Is that not so?

Mr. PARMELEE. No question about that, Senator.

Senator SMITH. I am not trying to relate this all to the railroad and public utility industries but in those cases the rates to the public are fixed.

Mr. PARMELEE. There is no question about that, Senator. We had that exact experience in the latter part of December 1941. Railroad employees received quite a large wage increase and Pearl Harbor came in at that point, as the committee will recall, and it became necessary for the railroads to go to the Interstate Commerce Commission immediately and ask for increased rates. The Commission expedited the matter and gave them those increased rates within a few weeks.

Senator ELLENDER. Mr. Parmelee, can you tell us what percentage of the railroad cost is represented by labor?

Mr. PARMELEE. Yes, sir. Generally speaking two-thirds of the revenues of the railroads are expended for so-called operaitng costs and two-thirds of the operating costs are represented by labor costs, which means that about 40 percent of the total revenues go to labor directly. That is a somewhat higher average than applies in a good many industries.

Senator SMITH. Generally speaking, Mr. Parmelee, isn't it true that your wage structure has been developed through collective bargaining?

Mr. PARMELEE. Very much so, Senator and, as you know, we have a special legislative and administrative set-up for that specific purpose.

Senator SMITH. Yes.

Mr. PARMELEE. In the long run, it would not be to the benefit of the workers to so increase wages as to bring about increased prices. Such a policy merely tantalizes the workers into thinking that they are betering their economic status, whereas they are actually losing, rather than gaining ground. To lead them into such a position would not redound in the long run to the benefit of labor, of management, of the Congress, or of the public.

4. This is the wrong time: Aside from the fundamental merits or demerits of the proposals contained in S. 1349, I emphasize to the committee that this is the wrong time to effect any such radical measures.

We have just ended two major wars. Both of them collapsed on short notice, and within 3 months of each other. The task of readjustment and reconversion which confronts this country, as a result, is much more serious and much more complex than had been anticipated.

What we need now is not fundamental and sweeping changes in wages, hours, and other elements in the productive process, but to make the transition from war to peace as smoothly and quickly as possible.

Fundamental economic changes of the kind here proposed might possibly be carried out over a period of years, step by step, without upsetting the equilibrium between production and distribution, supply and demand, wages rates and prices. To make such a step all at once would be unwise at any time. To make it at this particular time, during a period of readjustment and reconversion, would be, in my opinion, the height of economic and social unwisdom. Industry must absorb the many war production workers who are being released

from their wartime jobs, and at the same time must be prepared to make a place for millions of returning veterans, whose claims on the economy should be met as quickly and fully as practicable. These tasks, of absorbing millions of workers of the two classes I have mentioned, difficult as they are, should not be made more difficult by the passage of such a measure as this.

Another result of the bill, at a time when employers are struggling with the necessity of fitting higher wages into a pattern of stabilized prices for their products, would be to drive those same employers to mechanization of their plants and their methods. Machines would take the place of men, because the cost of operating machines can be determined rather accurately in advance, and the cost of machine production can be calculated. Further mechanization, both in the railroad industry and in manufacturing generally, would lead to what is known as technological unemployment, which would benefit neither the workers themselves, nor their employers, nor the public in general.

In brief, we are wholly sympathetic with the desire of Congress, and of labor and management, to maintain employment in the United States at the highest possible levels, both in this difficult transition period of reconversion, and in the longer postwar period that lies ahead of us. Anything that would interfere with the program of building peacetime employment up to the highest attainable levels should be looked upon with great reserve. S. 1349 would definitely provide such an interference with the orderly process of attaining a satisfactory postwar employment situation.

Senator SMITH. You think this might close down a number of industries because of the squeeze?

Mr. PARMELEE. Yes. It certainly would apply to the railroad industry. Mechanization of the railroad industry offers one way out of the burden of higher wages, which we do not like to contemplate, but that has been true in the past and it is also a possibility in the future, and it is certainly one of the things to consider in connection with sudden large increases in wages.

Senator SMITH. I am glad to note that you emphasize the importance of maximum employment at this time in the reconversion period.

Mr. PARMELEE. Yes.

Senator SMITH. Of course, I think you would probably agree that the standard of living has got to be consistent with a solid economic foundation.

Mr. PARMELEE. I think so, Senator. May I add this comment. It has always seemed to me that minimum wages, so far as they are put into effect by legislative action, should be placed at a rather low level. By that I do not mean that I want to see sweatshop wages, or anything of that sort, but so far as legislative action is concerned I think they should be placed as low as may be necessary to keep people on something more than a subsistence level of living and wages generally should be above that point.

The normal economic process of collective bargaining, competition, and other things ought to enter in and raise the wages to whatever whatever point may be advisable and possible, but by the process of free enterprise and competition and fair play and not necessarily by legislative fiat.

I want to make myself very clear on that point.

Senator SMITH. You probably would favor the lowest possible prices of things produced as well as railroad transportation so that all the population could get the benefit of the spread of low prices?

Mr. PARMELEE. Absolutely, Senator Smith.

I proceed now to a consideration of some of the effects enactment of S. 1349 would have on the railroad industry, on its ability to maintain employment, and on its postwar traffic and revenue prospects.

You will agree, I am sure, that railroads occupy an important place, both in the national economy and in the transportation field. You will also agree that it is in the public interest that the rail industry should be in postwar position to serve the public adequately and at the lowest possible rates, at the same time supplying to railroad labor the greatest possible number of regular job opportunities.

Minimum wage paid rail track labor: I consider first the existing minimum wage on the railroads. In that industry, for the railways for whom I speak, the present minimum wage, generally speaking, is 57 cents per hour. This rate has been in effect, by mediated agreement, since December 27, 1943.

Mr. Chairman, I have handed to each member of the committee a series of seven tables numbered from 1 to 7. I would like to comment on each of those tables, if I may, briefly, as I go along, and I shall refer to them by number, if I may.

Senator ELLENDER. They will be placed in the record at the point at which they are referred.

Mr. PARMELEE. Thank you.

Senator ELLENDER. In connection with your testimony.

Mr. PARMELEE. Thank you.

Table 1, which I now present to the committee, shows the trend in the minimum wage paid by railways of class I as of various dates since the passage of the Fair Labor Standards Act of 1938.

TABLE 1.—*Minimum wage rate since passage of Fair Labor Standards Act in 1938: Railways of class I in the United States*

	Minimum rate per hour (cents)	Minimum straight-time earnings for 204 hours per month
Fair Labor Standards Act:		
Oct. 24, 1938	25	$51.00
Oct. 24, 1939	30	61.20
Mar. 1, 1941	36	73.44
Mediated settlements:		
Dec. 1, 1941	46	93.84
Dec. 27, 1943	57	116.28

Under the terms of that act, the minimum wage became 25 cents per hour on October 24, 1938, 30 cents per hour on October 24, 1939, and 36 cents per hour on March 1, 1941. This rate of 36 cents was recommended by an industry committee and applied to trunk-line railroads, while the minimum, effective March 1, 1941, for the so-called short-line railroads was 33 cents per hour.

In other words, the short-line railroads were given a rate 3 cents less than the trunk-line railroads, and in that very action recognition was given to the fact that most of the short-line railroads operate in

country or rural sections away from the large cities, and that costs of living and other standards are somewhat different on those lines than on the trunk lines.

Senator SMITH. Wasn't that progressive rise due to the Fair Labor Standards Act?

Mr. PARMELEE. Yes, sir.

Senator SMITH. The act did stimulate that rise.

Mr. PARMELEE. All of these steps took place under the terms of the act, Senator.

By mediated settlement, the minimum wage rate became 46 cents on December 1, 1941, and, as already stated, rose to 57 cents, effective December 27, 1943.

Senator ELLENDER. Mr. Parmelee, what effect did these mediated settlements have upon the railroad rates?

Mr. PARMELEE. As a result of the 1941 increase, there was an increase in freight and passenger rates. The freight rate increase, however, has been taken off by order of the Interstate Commerce Commission and is no longer in effect. It has been suspended. The passenger increases are still in effect.

Senator ELLENDER. How about when it was increased in December 1943, to 57 cents?

Mr. PARMELEE. There has been no increase in rates since this time.

Senator ELLENDER. You mean 1941 or 1943?

Mr. PARMELEE. Since 1943. That has been partly due to the fact that because of the war the railroads have had all of the business they could handle and they didn't have to worry a great deal about their expenses. However, as I will point out, we are facing a different situation at the present time.

Senator TUNNELL. On October 24, 1938, the minimum wage was 25 cents?

Mr. PARMELEE. Under the terms of the Fair Labor Standards Act; yes, sir.

Senator TUNNELL. And on December 27, 1943, by mediated settlement, the minimum rate was 57 cents.

Mr. PARMELEE. Yes, sir.

Senator TUNNELL. Or a rise of the difference between 25 cents and 57 cents, between October 24, 1938, and December 27, 1943.

Mr. PARMELEE. Yes, sir.

Senator TUNNELL. Or 32 cents in 5 years.

Mr. PARMELEE. Yes, sir.

Senator TUNNELL. You say you are paying 57 cents now and if you should within 3 years raise the standard to 75 cents you would be raising it 18 cents, wouldn't you?

Mr. PARMELEE. As far as the minimum wage is concerned; yes, sir.

Senator TUNNELL. Well, then, it is only about 6 cents per year.

Mr. PARMELEE. Let me call your attention, Senator Tunnell, to the fact that of this increase in the last 6 years that you speak of, 21 cents was obtained by mediation and collective bargaining and not by law.

Senator TUNNELL. I am talking about the ability to pay.

Senator SMITH. You mean the rate of increase.

Senator TUNNELL. Yes, the rate of increase and the length of time that it took to go up 32 cents.

Mr. PARMELEE. On the basis of a 25½ work-day month, a railway employee receiving no more than the minimum rate of 57 cents per

hour would earn a straight time wage of $116.28 per month, as shown in table 1. This is in contrast with minimum straight time monthly earnings of $51 per month in 1938. Thus the minimum rate of pay has already more than doubled minimum earnings in the railroad industry since the first such rate was prescribed by the Fair Labor Standards Act of 1938. It has, in fact, increased 128 percent.

That, however, applies only at the minimum. I want to make that very clear. And I am going to also be very emphatic to you about all the increases which would take place above the minimum, all the way up the scale, if the minimum wages that are here proposed should be made effective.

Number of railway employees now receiving less than 65, 70, or 75 cents per hour: As of October 1942 my office made a special study as to the number of railway employees receiving various wage rates. During that month railways of class I in the United States had a total of 1,472,434 workers in their pay roll.

You asked me, Senator Ellender, about the number of railroad employees involved. They number almost exactly the same today as in October 1942.

Reclassifying those workers according to the present wage scale, the following results are obtained. If the minimum wage in the railroad industry is raised to 65 cents per hour, the increase would directly affect 255,813 employees of railways of class I. If the minimum is raised to 70 cents per hour, 426,295 employees would be directly affected, and at a minimum rate of 75 cents, 475,000 employees would be directly affected.

Table 2, which I now submit to the committee, shows the approximate number of employees of railways of class I receiving less than 65, 70, and 75 cents per hour, based on the number in service in October 1942.

(Table 2 is as follows:)

TABLE 2.—*Employees receiving less than 75 cents per hour: Railways of class I in the United States*

	Number	Annual cost to establish minimum of—		
		65 cents	70 cents	75 cents
Receiving less than—				
65 cents	256,000	$34,200,000		
70 cents	426,000		$75,800,000	
75 cents	475,000			$127,200,000

Mr. PARMELEE. Based on the average number of hours of service rendered in October 1942 it would cost the railroads not less than $34,200,000 per year if the minimum rate were set at 65 cents per hour, would cost not less than $75,800,000 per year if the minimum rate became 70 cents per hour, and would cost not less than $127,200,000 per year at a minimum rate of 75 cents per hour.

Senator ELLENDER. That is only the minimum rate. You don't take into consideration the effect that the bill would have by the raising of the rates in the upper brackets?

Mr. PARMELEE. That is it exactly, and that is why, in the next paragraph, I point out that that would be just the starter. How many

millions of dollars would be involved no one could say, but we know it would be several times the amount involved at the minimum.

I say "not less than" $127,200,000 per annum, because any increase in the present minimum rate would, under the terms of the proposed amendment to section 8, unquestionably be followed by a great deal of pressure, on the part of other employee groups than those affected, to maintain the spread or differential between classes of employees in various job classifications. I will discuss this feature later in my statement.

Farm labor: The Fair Labor Standards Act of 1938 specifically exempts farm labor from its provisions, and the same is true of S. 1349.

As the largest proportion of railway track workers live and work in rural communities, many of them are recruited in rural areas, and many of them come from the farms. The farmers, therefore, are in direct competition with the railways for labor. As a matter of fact, some men work on railroad track maintenance part of each year and do farm work for the balance of the year.

My table 3 shows the average wage paid to farm labor, without board, as reported by the U. S. Department of Agriculture for the month of July 1945. For the country as a whole farm labor receives an average of $99 per month. In the East South Central region the average wage paid to farm labor, without board, was $53.50 per month during July 1945; in the South Atlantic region it was $59.40 per month; in the West South Central region $80.10 per month; and in the East North Central region $100 per month.

(Table 3 is as follows:)

TABLE 3.—*Average wage rates paid to farm labor (without board), month of July 1945*

Region:	*Per month without board*
East South Central	$53. 50
South Atlantic	59. 40
West South Central	80. 10
East North Central	100. 00
Middle Atlantic	110. 00
West North Central	115. 00
New England	126. 00
Mountain	143. 00
Pacific	182. 00
Average United States	$99

Source: U. S. Department of Agriculture—Crops and Markets—July 1945, p. 129.

Mr. PARMELEE. I have already shown that the present effective minimum wage for railway track labor—57 cents an hour—produces a straight-time monthly earning of $116.28. This railway minimum rate is effective in all regions of the United States. It is effective in the East South Central region, where it is now more than twice as great as the average wage rates of farm labor in that territory. Furthermore, the railroad minimum is much higher than the average wage rates of farm labor in the South Atlantic, West South Central, and East North Central regions. It is higher than the average farm rate in the Middle Atlantic region and is higher than the average for the whole United States by 18 percent. It should be noted, also, that the minimum wage for railroad labor is calculated on the basis of an 8-hour day for 25½ days per month, which represents a smaller

amount of service time than usually applies in the case of farm labor.

This table suggests two comments: First, there is a wide variation in farm wage rates between the several sections of the United States, ranging from a minimum of $53.50 per month to a maximum of $182 per month, the maximum being more than three times as high as the minimum. This raises the question as to why such wide differences are to be found in a major industry such as agriculture, and whether it is wise to legislate uniformly high scales of pay, applied on a Nation-wide basis, in such other industries as manufacturing and the railroads. Second, inasmuch as farm labor and railroad track labor are to a certain degree competitive, why make it more difficult for farmers in some regions to get and keep an adequate supply of labor by increasing the already large margin between the wages they are paying and those the railroads are required to pay?

In the State of Delaware, Senator Tunnell's State, the average wage of farm labor, according to the statement I have here, was $92 last July.

Senator TUNNELL. It says on the table "Middle Atlantic States, $110."

Mr. PARMELEE. That was the average for that section of the United States as a whole.

Senator TUNNELL. I see.

Mr. PARMELEE. In the State of Vermont, represented by Senator Aiken, it was $110. And in your State, Senator Ellender, it was $56.

Senator SMITH. Showing the difference between Vermont and Louisiana.

Senator ELLENDER. But you don't grow sugarcane and cotton up there.

Mr. PARMELEE. The message transmitted by the President to the Congress on September 6, 1945, recommended

> that Congress amend the Fair Labor Standards Act by substantially increasing the minimum wage specified therein to a level which will eliminate substandards of living.

The recommendation of the President did not indicate to what level he believes the minimum wage rate should be raised.

Senator TUNNELL. Let me say, in reference to what you said about Delaware; I am interested in farming myself, and in Delaware I don't know of a single person that has a farm laborer or can get one.

Mr. PARMELEE. At any rate?

Sentor TUNNELL. At any rate.

Senator SMITH. That is the position we are in in New Jersey. All the farmers there are asking for farm labor. They want to know why we can't get the men out of the Army so that they will come back and get the crop out.

Senator TUNNELL. That is right.

Mr. PARMELEE. On that same date—September 6—the Economics Branch of the Wage and Hour Division, United States Labor Department, issued a study, without specific recommendations, indicating the advisability of some increase in the present statutory minimum wage rate of 40 cents per hour. That study was entitled "Summary of Statistical Materials Bearing on Proposals for Revising the Minimum Wage Provisions of the Fair Labor Standards Act."

The Labor Department's study, among other things, pointed out the following, on page 1:

> By June 1945, the Bureau of Labor Statistics index of the cost of living in large cities had increased 29 percent over the 1935–39 level, so that (as measured by the index) an average of 51.6 cents an hour would be required—with the same number of hours worked per week—to obtain the same living standard of living that the Congress envisaged for a 40-cent per hour level. Actually somewhat more would be required (abut 55 cents an hour) because of (*a*) a small downward bias of the BLS index and (*b*) the relatively much greater rise in food and low-priced clothing costs, items which form a relatively greater part of the budget of low-wage families.

Senator SMITH. Are we to imply from your quotation that you might approve a 55-cent figure as a starter?

Mr. PARMELEE. I wouldn't go that far, Senator. I would say that a 55-cent rate would not hurt the railroads, but any increase in the minimum wage which might affect the railroads might also be translated into higher wages in the upper brackets. The railroads could not honestly complain of 55 cents because they are above the 55-cent level now. If you ask my opinion as an economist, however, entirely apart from any representation of the railroad industry, I would not put the rate higher than 50 cents at the present time, leaving for the future, further steps to be taken.

Senator SMITH. Do you advocate legislating now for the future to provide for successive raises of 5 cents a year?

Mr. PARMELEE. I think it would be extremely dangerous, especially at this time, immediately after the war and not knowing what the next few years are going to bring. I think it would be great mistake to legislate anything by steps for the future. I think the Congress can take this question up at anytime it chooses to do so, and can put a moderate increase in, and then reconsider the matter as conditions warrant.

Senator TUNNELL. All legislation being for the future, don't you think it would be a good thing for Congress to go home, under your theory?

Mr. PARMELEE. No, Senator, I do not think so. I think on the contrary that is the very reason that the Congress should stay and meet existing conditions.

Senator TUNNELL. From day to day?

Mr. PARMELEE. Suppose you put in a fairly large increase in the minimum wage at this time and certain step-ups for the next 5 years, and at the end of 5 years prices go down very materially. We don't know whether they will go up or down. You would have put in those minimum wages and you would be caught. You would have assumed, 5 years back, that prices were going to go up or remain stable, and instead of that they go down. In other words, these conditions have to be met as they develop.

Senator ELLENDER. Mr. Parmelee, don't you think that it would be to the advantage of labor as a whole to try and maintain the basic increases in wage rates per hour that it has obtained during the war and let it go at that for some time?

Mr. PARMELEE. If it is possible to do so and maintain production and employment; yes, sir.

Senator ELLENDER. The quotation that you have just read states, as I understand it, and as it has been interpreted by several witnesses, the 55-cent rate is about the rate per hour that the existing price structure could bear.

Mr. PARMELEE. It puts the wage on about the same living level that 40 cents was in the prewar period.

Senator ELLENDER. Yes; and that is considering, of course, the increased cost of living in that period.

Mr. PARMELEE. That is right.

Senator ELLENDER. Now, to raise it higher than that, to as much as 65 cents to 75 cents in 3 years, as the bill provides, it goes without saying that it would certainly do violence to the present price structure, and industry would be obliged to increase prices so as to meet this increased cost of production.

Mr. PARMELEE. You might very easily have to do so; yes, sir.

Let me again emphasize that there is a difference, in my opinion, in what you legislate as wages and what an industry, in an agreement between it and its employees, regards as proper wages that that industry can afford.

Senator TUNNELL. Which draws the more money out of the bank, 65 cents agreed on or 65 cents legislated?

Mr. PARMELEE. There is not a bit of difference, so far as the money in your hand is concerned. There may be a great difference in the impact on the whole of industry and on the whole people.

Senator SMITH. And the buying power of the dollar.

Mr. PARMELEE. Yes, sir.

Senator TUNNELL. I can see how you can imagine such a thing but I haven't heard from your testimony why you think so.

Mr. PARMELEE. I think so, because I do not think we can foresee the future. I don't think any of us will venture to say what the future is going to bring, whether prices are going to go up or down.

Senator TUNNELL. And you resolve all of those things against labor?

Mr. PARMELEE. Not at all, Senator. All I am suggesting is that Congress should go rather slowly and step by step and meet conditions as they arise. You are in session here practically all the time. You can modify these statutes anytime you see fit. It is far better to meet the situation as it arises than to make a long step-up now, and then realize later that it might have been too long.

Senator TUNNELL. Is that consistent with your theory that if we legislate now that it precludes future amendment?

Mr. PARMELEE. I think the committee would agree with me, Mr. Chairman, that it is very easy to raise these rates but would be extremely difficult to lower them at some other date.

Senator TUNNELL. I think it would be.

Senator SMITH. The chairman has suggested that you were resolving the points against labor. Of course, I would disagree with that, because it seems to me that labor is interested first in jobs and secondly in prices.

Anything that may tend to affect either one of those things in the long run is going to cause the worker to suffer. Great inflation or great unemployment would be disastrous to our whole program to raise the standard of living of our people.

Mr. PARMELEE. I think you are right. That is why I think it is wise to make haste slowly, particularly at this time.

Senator TUNNELL. If I agreed with you gentlemen, I should favor reducing wages as much as possible to get this ideal condition.

Mr. PARMELEE. If prices went down at the same time, perhaps we would all be just as well off.

Senator TUNNELL. Yes. I say, if I believed what you gentlemen do, that is what I would favor.

Mr. PARMELEE. Do you know that prices are going to go down?

Senator TUNNELL. No; but neither do you.

Senator SMITH. I want to better the living conditions of the worker. We have got to consider the effect on production and what it costs people to buy things and to give them a satisfactory standard of living. They have to have good clothing, food, and shelter. If prices go skyrocketing they cannot possibly raise the standard of living.

Senator TUNNELL. You and the witness are resolving all of those points against labor.

Senator SMITH. No. I am not arguing for a low wage. I am saying that those things have to be considered as well as the dollar wage. I haven't come to a conclusion as to what the right figure is. I am definitely in favor of a minimum wage. I am in favor of making it as high as we can.

Mr. PARMELEE. I do not think we should take this long step until we know better what the future will bring forth.

Senator TUNNELL. How will we ever know what the future will bring forth? We are not fortune tellers who can look into the future.

Mr. PARMELEE. I think, Mr. Chairman, that wage rates should be settled to a large extent by agreement, collective bargaining, by the various economic processes which we have under existing enterprise. It seems to me that we ought to leave the matter to be determined by the usual economic processes. If they don't go fast enough, Congress can step in and assist the procedure, but not by a long step into the future when the future is extremely uncertain.

Senator TUNNELL. Don't you think it will always be uncertain?

Mr. PARMELEE. Yes; but particularly at this time, I would not recommend a long or radical step.

Senator TUNNELL. From the 25 cents in 1938 to what you are now paying is a 32-cent raise.

Mr. PARMELEE. That is right.

Senator TUNNELL. In 5 years.

Mr. PARMELEE. We have been through a great war and a great many things have gone more rapidly than under normal conditions, but that is no reason why we should continue this process into this transitional period.

Senator ELLENDER. Let me pose this question: If, during the war, with full employment and the Government purchasing 50 percent of our agricultural and industrial production, Government agencies didn't see fit to raise the minimum to more than 55 cents an hour, how can Congress fix it at 65 cents to 75 cents in 3 years?

Mr. PARMELEE. That is a good point. I did not intend to mention it, but I have been sitting in War Manpower Commission meetings as one of the management representatives. We have had this question before us over and over again and, as you point out, the War Labor Board never did put in an order for even a 50-cent minimum throughout the country. They did get at it in a round-about way by making it a regulation, through the War Manpower Commission, that if a man was getting less than 50 cents, and he wanted to go to another job where he could get 50 cents, he could get his statement of availability and go. It was simply a condition where a man could get 50 cents if he could get a job.

Senator ELLENDER. What was the reason for not suggesting more than 50 cents?

Mr. PARMELEE. The rule was put into effect by the War Labor Board. The War Manpower Commission carried out the regulation. They were the ones who controlled the movement of labor from one industry to another or from one job to another. I can't give you the reasons why the War Labor Board took the position they did. That was a time when labor was in tremendous demand. If there was any excuse to go up to 65 or 75 cents minimum, that was the time.

Senator ELLENDER. As one witness testified, as I recall, if the minimum was raised greater than 55 cents per hour, it would have affected the rates in the upper brackets and with that it would have been necessary to amend the entire price structure.

Mr. PARMELEE. Yes.

Senator ELLENDER. And that would have been inflationary, as he put it.

Mr. PARMELEE. Yes.

Senator ELLENDER. Would that have occurred?

Mr. PARMELEE. Yes; I think so.

The Wage Stabilization Division of the National War Labor Board has prepared a table showing the distribution of nonagricultural employees in the United States according to straight-time wage rates as of January 1944. This table appears at page 34 of the Labor Department study to which I have referred, and is summarized in my table 4, which I now present to the committee. It shows that of 27,688,000 nonagricultural employees in the country, 6,029,000, or 21.7 percent, received less than 50 cents per hour in January 1944, and 9,504,000, or 34.3 percent, received less than 60 cents per hour.

(Table No. 4 is as follows:)

TABLE 4.—*Estimated frequency distribution of nonagricultural employees by straight-time wage rates as of January 1944*

Hourly rate	Number	Percent	
		Simple	Cumulative
Under 20 cents	96,000	0.3	0.3
20 cents and under 30 cents	696,000	2.5	2.8
30 cents and under 40 cents	2,211,000	8.0	10.8
40 cents and under 50 cents	3,026,000	10.9	21.7
50 cents and under 60 cents	3,475,000	12.6	34.3
60 cents and under 70 cents	2,900,000	10.5	44.8
70 cents and under 80 cents	2,635,000	9.5	54.3
80 cents and under 90 cents	2,914,000	10.5	64.8
90 cents and under $1	2,388,000	8.6	73.4
$1 and under $1.10	2,310,000	8.3	81.7
$1.10 and under $1.20	1,559,000	5.6	87.3
$1.20 and under $1.30	1,241,000	4.5	91.8

Source: Summary of Statistical Materials Bearing on Proposals for Revising the Minimum Wage Provisions of the Fair Labor Standards Act, U. S. Department of Labor, September 1945.

Mr. PARMELEE. Manufacturing employees, of course, comprise the largest single group of all nonagricultural workers. The Department of Labor has estimated that, in the summer of 1945, 3 percent of all manufacturing employees received a straight-time rate of pay under 50 cents an hour; 9 percent were under 55 cents; 13 percent were under 60 cents; 20 percent were under 65 cents. This distribution is shown in my table 5.

(Table No. 5 is as follows:)

TABLE 5.—*Distribution of manufacturing wage earners in the summer of 1945*

Straight-time hourly rate	Number	Percent	
		Simple	Cumulative
40 cents and under 50 cents [1]	330,000	3	3
50 cents and under 55 cents	740,000	6	9
55 cents and under 60 cents	490,000	4	13
60 cents and under 65 cents	800,000	7	20
65 cents and under 70 cents	600,000	5	25
70 cents and under 80 cents	1,400,000	12	37
80 cents and under 90 cents	1,460,000	12	49
90 cents and under $1	1,450,000	12	61
$1 and under $1.10	1,230,000	10	71
$1.10 and under $1.20	1,010,000	8	79
$1.20 and under $1.30	920,000	7	86
$1.30 and under $1.40	620,000	5	91
$1.40 and under $1.50	410,000	3	94
$1.50 and under $1.60	280,000	2	96
$1.60 and over	460,000	4	100
Total	12,200,000	100	

[1] Includes a few workers receiving less than 40 cents an hour.

Source: Summary of statistical materials bearing on proposals for revising the minimum wage provisions of the Fair Labor Standards Act, U. S. Department of Labor, September 1945.

Mr. PARMELEE. By major industry groups, the Labor Department study, which I have already cited, showed that 58 percent of the workers in the tobacco industry received less than 65 cents per hour. The number of workers receiving less than 65 cents in other manufacturing industries is shown by my table 6.

(Table 6 is as follows:)

TABLE 6.—*Proportion of the workers in various industries receiving less than 65 cents an hour*

Industry group:	*Percent earning less than 65 cents an hour*
All manufacturing	20
Tobacco	58
Lumber and timber	54
Textiles	47
Apparel	38
Furniture	37
Leather	30
Paper	30
Food	28
Stone, clay, and glass	27
Electrical equipment	22

Nonferrous metal	8
Iron and steel	7
Machinery	4
Transportation equipment	less than .5

Source: Summary of statistical materials bearing on proposals for revising the minimum wage provisions of the Fair Labor Standards Act, U. S. Department of Labor, September 1945.

Mr. PARMELEE. That is shown not so much in number as percentage; the percentage of total number of employees in the respective industries who were receiving less than 65 cents.

The conclusion seems clear that wages are necessarily higher in some regions of the country than in other regions, and in some industries than in others, due to their respective locations and conditions. It follows that a minimum wage rate greatly in excess of the present statutory minimum of 40 cents an hour should not be legislated for the country as a whole and indiscriminately for all industries.

Senator SMITH. That leaves a little leeway to increase beyond 40. You could bring it up to 50, as you said before.

Mr. PARMELEE. Yes. When I refer to a 50-cent rate, I am not speaking for the railroads. I was indicating my own personal view in the matter. The attitude of the industry is that they are opposed to the provisions of S. 1349 as it stands today.

Avoidance of technological unemployment: Section 8 of the Fair Labor Standards Act of 1938 contained a definite provision designed to avoid technological unemployment. Section 8 of the bill here under consideration recognizes that increases in rates of pay may substantially curtail employment; that increases in pay should be subordinated to maintenance of employment; that an upward adjustment of the minimum wage should not be at the expense of the workers.

We will shortly be confronted with a sizable number of unemployed. It has been estimated that we may expect unemployment to reach a peak of from 8 to 10 million by March 1946.

Senator TUNNELL. Is it estimated that that will be of long standing?

Mr. PARMELEE. That is an estimate of the War Manpower Commission——

Senator TUNNELL. Is it estimated that that will be of long standing?

Mr. PARMELEE. I was going to say, Senator, that is an estimate of the War Manpower Commission * * *. They report to our committee every 2 or 3 weeks when we meet—so far as I know, they haven't made any estimate beyond March.

Senator TUNNELL. Isn't it your understanding that they believe that to be a temporary condition in the reconversion period?

Mr. PARMELEE. That is their hope. That is the hope of all of us, of course.

Senator TUNNELL. Yes.

Mr. PARMELEE. The effect on maintenance of employment of fixing a substantial increase in pay by statute, as here proposed, should be given serious consideration. It was given such consideration by the Industry Committee that, in 1940, they recommended a minimum wage of 36 cents for the railroad industry. Elaborate testimony was submitted to that committee by the railroads, showing that increased wages in the railroad industry have always resulted in increased use of power machines and tools, thus leading to technological unemployment. The committee was so impressed by this showing that they set the minimum at 36, rather than 40, cents per hour.

No one doubts the fact that as wage rates advance, technology comes into play more rapidly than otherwise. Surely, with the employment problems now ahead of us, we can join in the hope that this Nation will maintain a high volume of private production, at the highest

levels of employment. Any substantial increase in the wage structure will tend to defeat such a program, by stimulating the introduction of labor-saving devices, and by thus creating technological unemployment.

Proposed amendment to section 8: Readjustments above the minimum.

S. 1349 proposes that section 8 of the Fair Labor Standards Act be amended as follows:

> The industry committee shall further define such reasonable job classifications within such industry or subdivision thereof and shall recommend minimum wage rates for such job classifications (other than unskilled job classifications) at such levels as it determines to be necessary for the purpose of maintaining reasonable wage differentials between the minimum wage recommended by it for unskilled job classifications and the wage rates for interrelated job classifications in such industry or subdivision thereof.

As I said earlier, that is a very unclear sort of statement and it is subject to a variety of interpretations, but there it is; that is what it is in the bill at the present time.

This proposed amendment places this bill—S. 1349—in the category of a general-wage-increase bill.

Table 5, which I have already submitted to the committee, showed the distribution of wage earners in manufacturing industries by hourly wage rates, in the summer of 1945. What effect would this proposed amendment to section 8 have on those employees? Of course, no one can tell with certainty, but table 5 shows that of the 12,200,000 wage earners in manufacturing industries, 6,940,000 workers received between 60 cents and $1.10 per hour, and that those workers were rather evenly distributed over rate intervals of 10 cents per hour. Thus, 1,400,000 workers received from 60 to 70 cents; another 1,400,000 received from 70 to 80 cents; another 1,460,000 received from 80 to 90 cents; another 1,450,000 received from 90 cents to $1; and another 1,230,000 received from $1 to $1.10 per hour.

It is reasonable to anticipate that if the minimum wage rate is increased to as much as 65, 70, or 75 cents an hour, other employee groups will demand a similar increase in pay so as to maintain what they consider a reasonable differential.

We have a similar situation existing in the railway industry. My table 2, which I discussed earlier in my statement, showed the number of railway employees receiving less than 75 cents an hour. I now submit table 7, which shows the number of railway employees, exclusive of train and engine service forces, by rate ranges from 75 cents to $1 per hour.

(Table 7 is as follows:)

TABLE 7.—*Railway employees, by rate ranges, receiving 75 cents to $1 per hour: Class I railways in the United States (excluding train and engine forces)*

Hourly rate	*Number*
75 cents but less than 76 cents	11, 791
76 cents but less than 77 cents	12, 275
77 cents but less than 78 cents	21, 868
78 cents but less than 79 cents	23, 314
79 cents but less than 80 cents	24, 846
80 cents but less than 81 cents	16, 605
81 cents but less than 82 cents	34, 813
82 cents but less than 83 cents	27, 753
83 cents but less than 84 cents	21, 646
84 cents but less than 85 cents	14, 721
85 cents but less than 86 cents	14, 184
86 cents but less than 87 cents	14, 566
87 cents but less than 88 cents	15, 760
88 cents but less than 89 cents	12, 793
89 cents but less than 90 cents	14, 056
90 cents but less than 91 cents	11, 586
91 cents but less than 92 cents	11, 898
92 cents but less than 93 cents	13, 064
93 cents but less than 94 cents	8, 145
94 cents but less than 95 cents	12, 191
95 cents but less than 96 cents	11, 437
96 cents but less than 97 cents	11, 512
97 cents but less than 98 cents	28, 925
98 cents but less than 99 cents	25, 147
99 cents but less than $1	16, 560
Total	431, 456

TABLE 7.—*Railway employees, by rate ranges, receiving 75 cents to $1 per hour: Class I railways in the United States (excluding train and engine forces)*—Con.

Mr. PARMELEE. The committee will notice in looking at table 7, the last column, showing the number of men receiving the several rates of pay from 75 cents up to a dollar, that the numbers are fairly evenly distributed. It is to be expected, I think if the minimum wage is increased, that all of these differentials, even these penny differentials between different groups of railroad employees, would have to be maintained. At least labor would put the pressure on management, to do that. The amount of money involved is incalculable.

Senator TUNNELL. Could you tell us in what classes those were?

Mr. PARMELEE. It was quite general all the way down the line, in the train and engine forces, in the maintenance of equipment and maintenance of way, and all the way down the line.

Senator TUNNELL. I have noticed that the railroad rights-of-way have grown up in grass and weeds, even on much used railroads, and I was wondering whether it was because you couldn't get the section hands.

Mr. PARMELEE. That has been true in the past 2 or 3 years in particular; yes, sir.

Senator ELLENDER. Has there been any increase in the employment of railroad workers during the war?

Mr. PARMELEE. Yes; we have gone up from about a million to almost a million and a half during the last 3 or 4 years.

Senator ELLENDER. I thought you could not obtain more labor?

Mr. PARMELEE. Well, we got those men. We could have used a great many more, Senator.

Senator ELLENDER. Have you the figures available to show what the number was when the war started and then the increase during the war?

Mr. PARMELEE. Yes, sir. This is a reference to what the Interstate Commerce Commission calls railroads of class I. Those are the so-called million-dollar railroads, each of whom takes in a million dollars or more per year in revenues. But that represents about 95 percent of the whole railroad industry, so that it is representative.

Senator ELLENDER. Yes.

Mr. PARMELEE. The number of employees on railroads of class I in 1938 was 939,000; in 1939, it was 988,000, still less than a million; in 1940, it was 1,027,000; in 1941, it went up to 1,140,000; in 1942 it was 1,271,000; in 1943, 1,350,000, and in 1944, 1,414,000, and this year we

have been up above 1,450,000. I can't give you the exact figure for this year but it has been in the neighborhood of 1,450,000. So there has been an increase of almost a half a million since 1939.

Senator TUNNELL. The difference between what you employed in the First World War and the 1,450,000, the decrease was generally in what classes of workmen?

Mr. PARMELEE. You mean where has the decrease occurred?

Senator TUNNELL. Yes.

Mr. PARMELEE. I think it has been quite general.

Senator TUNNELL. Due to increased mechanization, such as better track and more powerful engines, did that have anything to do with it?

Mr. PARMELEE. Almost everything to do with it, Senator. That is the very point I am trying to make here. I am going to make it in just a minute, if I may, and that is that because of the greatly increased wage rates which have been paid, the railroads have been driven to mechanization and they have been obliged to reduce their forces as a result.

Senator TUNNELL. You used to have a 90-pound rail?

Mr. PARMELEE. It ran from 60 to 90 pounds.

Senator TUNNELL. What have you now?

Mr. PARMELEE. The average is well over 90 now. We go up to 130 and 150 pounds.

Senator ELLENDER. I do not want to anticipate your statement, but would you be able to tell us how much additional freight was hauled by employing 1,346,859 in contrast to 1,829,000 during World War I?

Mr. PARMELEE. I am going to tell you in a minute.

Senator ELLENDER. Very well.

Mr. PARMELEE. To what extent will increased wages affect employment in the railway industry? As I have already stated, wage increases in the railroad industries have in the past stimulated reductions in the total amount of employment in that industry. A brief reference to past experience will support this statement. The average employment on railroads of class I during 3 years of the First World War, 1917 to 1919, was 1,829,291. During the first 3 years of our participation in the Second World War, 1942 to 1944, average railroad employment was 1,346,859. There was thus a reduction of 482,432 persons, or 26.4 percent, in railroad employment between those two war periods. By contrast, however, the railroads in this war handled a much greater volume of traffic than in the last war, total ton-miles for 1942 to 1944 being 81 percent greater than in 1917 to 1919, and total passenger-miles being 90 percent greater. A part of this showing of much greater traffic handled with fewer employees was due, of course, to other factors than technological improvements. I won't say it was all due to technological improvements, but a very large part of it was. A considerable part of it, was unquestionably due to the fact that as railroad wages increased between the two wars, the railroads were forced to install improved facilities, more powerful engines and machinery, and modernized processes so as to escape the heavy wage payments that would otherwise be required. A substantial increase in railroad wages at this time, especially if forced upon the railroads at a single step, would have the effect of stimulating further resort to mechanization, which would mean less railroad employment and smaller pay rolls, and would be of little benefit to the economy as a whole.

Senator ELLENDER. Of course, you agree that the railroads are not the exception, that would apply to all industrial business?

Mr. PARMELEE. I think that is true generally. That is the generally accepted view with respect to industry as a whole. I think it is particularly true in the railroad industry, however.

The Bureau of Transport Economics and Statistics of the Interstate Commerce Commission estimated in December 1944 that the freight traffic of the railways in the postwar years 1947 to 1949 might approximate 480,000,000,000 ton-miles annually. This is a decrease of about 35 percent under the level of 1944. As to passenger traffic, they estimated a decline of nearly 60 percent under 1944.

On the basis of present freight and passenger rates, these traffic estimates would produce a gross revenue of about $6,000,000,000 per year, less than two-thirds of what was earned in 1944. Such a gross revenue would support not more than 1,000,000 jobs, on the basis of current rates of pay. If wage rates are generally increased, as this bill contemplates, the railroad-job opportunities would be even further reduced.

Senator SMITH. That assumes you could not get an advance in rates from the Interstate Commerce Commission based on these increased rates?

Mr. PARMELEE. Yes, sir; that is assuming the present scale of rates. If we could get a 25-percent increase in the freight rate, we might be able to employ more men.

In 1944, railways of class I in the United States reported an average of 1,414,000 jobs. If the prospective employment level is 1,000,000 jobs, then more than 400,000 workers employed in 1944 must be let out.

In addition, these railways have more than 300,000 men in the armed forces. Even if it be assumed that not more than three-quarters of the railroad employees who have entered the service will return to their former employment, such a situation would require about 225,000 additional lay-offs.

We have in the industry about 60,000 over-age workers eligible for full retirement. If these men now retire, the number to be otherwise laid off would be accordingly reduced. Total lay-offs would be 400,000 plus 225,000, less 60,000, or 565,000.

Thus on the assumed prospective traffic level for the postwar years 1947–49, there is a very real possibility that a total of 565,000 railroad employees now working will be laid off. To the extent that wage rates increase above the present all-time peak, the industry would find it necessary to further curtail employment.

Curtailment of employment is something that no railroad manager wishes to contemplate. Men are more essential to the operation of a railroad than they are in many other industries. This is particularly the case, because wages in the railway industry constitute 60 percent of total operating expenses.

Conclusion: I believe that the increases in minimum rates of pay proposed in this bill—S.1349—would bring about such an addition to industrial pay rolls that the principal burden of the increased wage bill would fall upon men who lose their jobs, or men out of work trying to get jobs. Therefore, the burden would be shifted onto the Nation, and onto local communities, because of the increase in the number of unemployed.

Generally increased wages would add to the annual earnings of the men who continued to be employed. Even as to them, however,

increased pay might so hasten the inflationary process that their purchasing power would be actually reduced.

The Labor Department study I have already cited said, page 11:

> If the Government is successful in preventing further substantial price rises until such time as producers are fully able to direct their energies toward supplying individual consumer wants, and if the Government is prepared to take action to prevent a postwar collapse, it seems probable that the general level of prices and the cost of living will not change markedly from current figures. If a change should take place, it would appear more likely that an increase rather than a decrease will occur in the immediate postwar period.

In other words, the Labor Department is fearful of further price increases. Such a trend would be assured, and quickened, by a general and inflationary increase in wages at this time. In the railroad industry it might well result in higher transportation rates, which would be passed along to the general public, including the workers themselves.

Wage and Hour Administrator Walling, whom I have already quoted, said to you on October 4:

> A minimum wage as high as 75 cents raises a number of serious questions with respect to prices, effect on employment, productivity, profits, and so forth, for individual industries and for the various branches thereof, concerning which adequate information is not now available to furnish an over-all judgment for all industries and for the country as a whole.

Senator TUNNELL. Did he advocate a higher wage rate?

Mr. PARMELEE. My understanding is, Mr. Chairman, although I didn't hear his statement in full, my understanding is that he was generally in favor of the bill, but he certainly put in a word of caution as to whether you should go that far. That was the implication I got from his statement.

Senator ELLENDER. I think in part of his testimony, or the testimony of some official from the Labor Department, it was plain that this problem had not been thought through. I think Mr. Hinrichs was the one who testified on that. He built a beautiful picture as to what would occur to the average worker if he got $1,500 to $1,900 annually. That would be fine. I would not mind it if we could bring them all up, but what becomes of the ones in other groups? He hadn't thought that through.

Mr. PARMELEE. I presume that is what Mr. Walling had in mind.

Senator ELLENDER. Yes.

Mr. PARMELEE. I was impressed by Mr. Walling's statement, because he is, after all, the Wage and Hour Administrator, and he would be the man to whom the administration of this particular act would go, and he would be responsible for it, if it were enacted, and it seemed to me his views were ones to which the Congress might well give notice.

Mr. John W. Snyder, Director of the Office of War Mobilization and Reconversion, submitted the fourth quarterly report of that Office to Congress on September 30, 1945, in which he said of the minimum wage:

> Our ultimate goal should be to provide a minimum wage which will give all American workers a chance to buy a fair share of what we can produce.

He then added:

> This cannot be done in one step; it will call for gradual progress over a period of years.

These are sound observations, and I urge them on the committee. To raise the currently established minimum wage of 40 cents at one step to such high levels as proposed in this bill might react disastrously to the whole economy, on labor, on industry, and on the general public.

For the reasons I have briefly outlined to you, the railways for whom I speak are opposed to this legislation.

Senator TUNNELL. Tell me this: Why do you, and others who testify along the same line and from the same standpoint, insist on basing your comparison on 40 cents rather than on what you are actually paying?

Mr. PARMELEE. It is because, in my opinion, Mr. Chairman, those who have spoken in favor of the bill have almost entirely overlooked, or at least omitted to mention, what you might call the corollary effects of the bill. In other words, the effects on the higher wage brackets of the setting of the minimum wage at the rates mentioned in the bill. To my mind, that is more important and more significant and would weigh with much greater effect on the railroad industry than the mere minimum wage itself.

Senator TUNNELL. But here is your sentence:

> To raise the currently established minimum wage of 40 cents at one step to such high levels * * *.

That isn't what you are paying as a minimum wage. You have just told us you are paying 57 cents.

Mr. PARMELEE. That is true as to the rates mentioned in the bill, which, together with the other things to follow, would create, in my opinion, the situation I have described.

Senator ELLENDER. Do you mean the legal rate or the current rate? Which do you mean?

Senator TUNNELL. He says, "currently established minimum wage of 40 cents."

Mr. PARMELEE. "At one step to such high levels," and, if I may I will add a clause there, "together with the resulting effect on the higher-wage brackets would," and so on. I should have said that, because that is what I had in mind.

Senator TUNNELL. Don't you think those who are receiving more than 57 cents have also had their raises, so that it is in proportion to the 57 cents rather than in proprotion to the 40 cents?

Mr. PARMELEE. No; that has not been true in the last two wage increases we have had in the railroad industry in 1941 and 1943. In both cases the lower-paid employees got higher amounts of money, more money in terms of cents per hour.

In other words, it was distinctly recognized that they were of the lower-wage scales, and they got a greater increase.

Senator TUNNELL. If that rate of 65 up to 75 cents should be established, the lower-wage men would not receive a greater proportion than the upper ones.

Mr. PARMELEE. That would depend entirely upon the pressure that was brought to bear on the employers, as to which no one can make a prediction. I know that the pressure would be extremely strong, because of past experience.

Senator TUNNELL. But taking your 40- and 75-cent rates, your argument is on the basis that the established minimum wage is 40 cents, when you have told us that you are paying 57 cents.

Mr. PARMELEE. That is right.

78595—45——32

Senator TUNNELL. That is, it is more than the 40 cents.

Mr. PARMELEE. That is right.

Senator TUNNELL. And that is established just as firmly as if it were established by law; that is established by your own arrangements.

Mr. PARMELEE. That is right; yes.

Senator TUNNELL. So that it is not a raise from 40 to 65 cents, it is a raise from 57 to 65 cents.

Mr. PARMELEE. So far as the railroad industry is concerned that is true, but we do not like to see the increases in wages in other industries that might increase the prices that the railroads would have to pay for their supplies. So far as the railroad industry is concerned, the increase in the minimum would be at once an increase per hour from 57 to 65 cents, and it would then go up another 5 cents and another 5 cents, and those comparatively small steps would cumulatively cost the railroads $127,000,000 a year. On top of that, however, Mr. Chairman, would be the tremendous added costs of the increases made in upper wage brackets. How far that would go no one knows, but it would be hundreds of millions of dollars if that were carried up as, of course, labor would want to do.

Senator ELLENDER. Mr. Parmelee, you say it would be difficult to state. I am wondering if you could give us some figures, for the record, to show what effect the fixing of the rates designated in table 1 from 25 cents to 36 cents from 1938 to 1941 had on those in the higher brackets? It strikes me that we would have a very good example there if you could give us that; and then if you could also give us the effect on the higher brackets when you mediated the wages on December 1 from 36 to 46 cents and on December 27 from 46 to 57 cents. You have been speculating as to what would occur in the future. It may be that you can give us specific testimony as to what effect the raising of these minimum wages had on the higher brackets.

Mr. PARMELEE. I will be glad to do what I can on that. We haven't information for the past quite as accurate as we have for the present time.

(See exhibit B, p. 502.)

Senator ELLENDER. Would you be good enough to let us have such as you can gather. You can send it to the clerk and we can put it in the record in connection with your testimony.

Mr. PARMELEE. I will be glad to answer your questions to the best of my ability. May I send it to you, Mr. Chairman?

Senator TUNNELL. Yes; although I think you have told us that it was something that no human being could estimate.

Mr. PARMELEE. For the future.

Senator TUNNELL. Yes.

Senator ELLENDER. That is on this bill.

Mr. PARMELEE. On this bill.

Senator ELLENDER. One more question. In table 2 you stated that 260,000 employees received less than 65 cents and 426,000 less than 70 cents. The question is: Are the 260,000 included in the 426,000?

Mr. PARMELEE. Yes, they are cumulative figures.

Senator ELLENDER. They are cumulative figures. Thank you. That is all.

Senator TUNNELL. Your profits before taxes have been enormous during the war period, haven't they?

Mr. PARMELEE. It would depend on what you mean by "enormous," Mr. Chairman. We talk about the profits as net earnings after taxes rather than before.

Senator TUNNELL. But if you had paid more wages it would not have left quite so much for taxes?

Mr. PARMELEE. That is true. During the war the excess profits tax has been heavy. The Government, in effect, would have paid those wages by reason of the fact that it would have received less taxes. I think it is much better for the Government to receive those excess taxes, because it has helped to pay for the war.

Senator TUNNELL. The only thing was, you could not during the greater part of the war make reservations for repairs and upkeep. You could not get the material then, and you could not save it.

Mr. PARMELEE. Yes; and the railroads would have been in a much better position to give jobs to employees from now on, during this transition period; if that had been done.

Senator TUNNELL. I want to ask you this: Don't you think, notwithstanding that perhaps you have not studied that side of it, that there is a need for considering what an employee has to have in view of changed prices?

Mr. PARMELEE. I go back, Mr. Chairman, to my statement previously made to the committee, that I think any floor put under wages should be a moderate floor, and that does not mean that I would want everybody to be at that floor, but it should protect against what has been called sweatshop wages, substandard living conditions, and so on. I hope we are going to have enough common sense in this country to raise the wages considerably above that floor as a general thing, but I would like to see that left to private enterprise and to management and to labor to work out among themselves and not have the Government step in and put it into effect in a single sweep.

Senator TUNNELL. We had a man here the other day who told us he made as high as a million dollars a year, and he told about the various raises in wages, and we asked him why he raised wages and he said because he had to. Do you think that if people raise wages entirely because they have to, you can trust that law you mention to govern for millions of people who are not organized?

Mr. PARMELEE. I would certainly put the floor in, and you have that floor now, and you are considering a possible raising of the floor to protect these very people you speak of.

Senator TUNNELL. Do you think it should be raised? I will put it that way.

Mr. PARMELEE. I am not authorized by my principals to answer that question, Mr. Chairman.

Senator TUNNELL. All right. I will not press it.

Senator ELLENDER. Speaking as an individual, I think you gave it as your opinion that it would be all right to raise the minimum to 50 cents.

Mr. PARMELEE. I certainly would not go over 50 cents.

Senator TUNNELL. Event though your railroads are paying 57, you would not go above 50?

Mr. PARMELEE. Yes, I am speaking there as to the general economy, of course.

Senator TUNNELL. Now, then, the rise to 57 cents, for instance, you think would injure other lines of industry?

Mr. PARMELEE. It might, yes. I cannot speak, of course, so authoritatively or so intelligently for other industry; at least, I know a little more about the railroad industry.

Senator TUNNELL. We were told the other day that the lowest wages in some lines were in the State of Maine. There are sections where industry is not paying a living wage; isn't that right?

Mr. PARMELEE. Well, that is a pretty general question, Mr. Chairman, I don't know.

Senator TUNNELL. I thought I would make it sectional; but you don't know that.

Mr. PARMELEE. I don't know.

Senator TUNNELL. All right. Now, there was another thought which you mentioned that I wanted to comment on. You said that wages could not be paid higher than a person was able to produce. That he would have to produce as much as he receives. That seems like a sound, a pretty sound, economic principle. How about the fellow who has a family and can't get that much in the section of the country where he lives; what are you going to do with him?

Mr. PARMELEE. Do you think he is not getting as much as he thinks he is worth?

Senator TUNNELL. I am not saying how much he is worth.

Mr. PARMELEE. You are getting into a philosophical question there, Mr. Chairman, that is hard to analyze without going into a long discussion. In other words, it gets down to a question of whether a man who is working—and we are all supposed to be working and producing enough to justify our existence—whether a man should produce as much as he receives. I think, generally speaking, he should produce more than he receives.

Senator TUNNELL. There should be a profit?

Mr. PARMELEE. There ought to be a margin there.

Senator TUNNELL. I think so.

Mr. PARMELEE. There also has always been in the world, and I suppose there will always be, a certain margin of persons who are in that class; for one reason or another, they don't produce as much as they receive, and so society takes care of them in one form or another.

Senator TUNNELL. There has been testimony before this committee that people just could not live on a wage of, for instance, 40 cents an hour, or $26 a week.

Senator SMITH. That was at the 65-cent rate.

Senator TUNNELL. Yes.

Senator SMITH. From which was deducted taxes, social security, and so on.

Senator TUNNELL. Yes. There are many families who have to live on that wage. Don't you think that they have certain rights which must be considered?

Mr. PARMELEE. They certainly have problems to which society must give attention. There is no question about that, Senator. You are posing one of the most difficult questions of all time. I dislike myself to see Government, by legislation, however, settle these economic questions. If the Government is willing to step in and if it is in a position to step in and make up by grants, or appropriations, the difference between what it considers to be a standard wage and what industry can afford to pay, well and good; that is up to the Government.

Senator TUNNELL. But don't you think there are millions of people that do need help?

Mr. PARMELEE. Society must get together and solve that question in some way; there is no question about that.

Senator TUNNELL. I don't believe it applies to your industry. I don't mean that. I think the railroads have paid pretty good wages in comparison with other lines of activity. But there are lines of activity in this country where people are not receiving anything like a living wage. Don't you think that is a territory for a minimum wage, as well as what you have spoken of?

Mr. PARMELEE. I think Congress in its wisdom—if they decide that 40 cents is too low at the present time, and in view of present living costs, and so forth, might well consider an adjustment in that, but I still think that an adjustment of 25 cents, putting 25 cents onto 40 cents, is too far to go at one time.

Senator SMITH. Though it is not any more than the advance has been per year for the last 5 years. That is under war conditions, of course, Mr. Chairman. That is the thing that troubles me with your argument on that. That advance is an abnormal advance.

Senator TUNNELL. My associates here do not have the same view of the future, apparently, that I do.

Do you think that business is going to improve in the next 5 years and that we are going to have a period of abnormal activity?

Mr. PARMELEE. We hope so, Senator. I should be very much disappointed if we didn't.

Senator SMITH. I certainly feel that way. I think we are going to have the greatest prosperity we have ever had.

Senator TUNNELL. Yes.

Senator ELLENDER. But not as much as we had during the war with the Government purchasing about 50 percent of our industrial and agricultural production.

Senator SMITH. We have no assurance of it.

Senator ELLENDER. Of course not. Of course, if you want to produce for Europe and for Asia, and just make a present of our products to our neighbors across the seas, you can keep the wheels turning for a long time. I don't think we ought to venture any further with them except on a strictly business basis.

Senator TUNNELL. The Senator is getting off into international affairs.

Senator ELLENDER. That is what kept us prosperous during the war. I don't know how many billions of dollars of goods were sent across the oceans, and I, for one, am through sending goods on an I O U basis. I want some business sense mixed in with future transactions.

Senator TUNNELL. Now, then, Mr. Parmelee, there was one other thought that I wanted to mention to you. I thought, from your testimony, that you took the position that technology injures the laborer. Would you care to see the country go back to the horse-and-buggy days?

Mr. PARMELEE. Not at all, Mr. Chairman. I think it is largely a question of timing. It is a question of how fast you go and how much time you have to adjust yourself to conditions as they develop. You can't put your machines in too quickly, because you will throw too many people out of employment. In my opinion, you can't

raise wages too rapidly, because that, in itself, will bring this tremendous increase in technology and that, in turn, will have its effects. But you can take it step by step in the normal application of developments.

Senator TUNNELL. But your idea is that the rise now should not be above what you are now paying?

Mr. PARMELEE. Well, we are opposed, as the railroad industry, to any increase, particularly above the 57 cents. I think personally that it would be a mistake for the economy to go as high as 55 cents. That is my personal view.

Senator TUNNELL. Although it would not affect your industry directly?

Mr. PARMELEE. Not directly, but indirectly it would.

Senator TUNNELL. And if it affected other industries, of course, it would affect your work. If the industries could not afford to produce the things that you haul you would not have the same amount of income.

Mr. PARMELEE. Very true. It would affect the volume of our traffic.

Senator SMITH. I think the witness is trying to say there that there is a point beyond which we cannot go if we are to avoid an inflation.

Mr. PARMELEE. That is right.

Senator SMITH. You think we might move up to 50 cents without bringing on inflation, but your feeling is that if we go to 55 we ought to study it very carefully so as not to precipitate an inflation, which we all want to avoid.

Mr. PARMELEE. Yes.

Senator TUNNELL. In the meantime you are willing for these people that are living on starvation wages to go on living that way without the protection of law?

Mr. PARMELEE. The use of the term "starvation wages," leads to a lot of discussion, Senator, in which I would rather not indulge at this time. I say that with all due deference. I have tried to make our position clear. I think we have to go rather slowly on all these things and adjust them as rapidly as possible.

Senator TUNNELL. Do you think $26 a week is too high a minimum wage?

Mr. PARMELEE. That all depends on circumstances, where a man lives, what kind of a standard of living he is used to, and a great many other things. I can't answer that question categorically.

Senator TUNNELL. Your answer implies that you think it is too small in many places.

Mr. PARMELEE. It might be in some places, yes; but that in itself does not justify uniform treatment.

Senator TUNNELL. I don't know what is going to happen to that fellow while what you envision as being sometime in the future arrives. That is what bothers me.

Senator SMITH. May I make a suggestion there? I don't think that our Government or our people are going to permit anybody to starve. The whole question is whether we can load it on industry just at this moment when we are in the transition stage, or whether we want to do it some other way. We want to save private industry, and if we move too fast we may close up a lot of industries. It seems to me that the whole issue is whether we can do it gradually enough

to protect industry and get industry into full stride and then move into a gradual increase. I want to see the wage levels increased all the way through.

Mr. PARMELEE. The equilibrium must be maintained.

Senator TUNNELL. But the weakness in that argument, from my standpoint, is that you wait until the fellow dies before you decide that he ought to have been fed.

Senator SMITH. By all means we are going to take care of him. I feel just as strongly as you do about it. We are trying to solve a problem here, an economic problem of first magnitude to the country.

Senator TUNNELL. I am sure I do not know the answer.

Senator SMITH. I don't either; I am not dogmatic.

Senator ELLENDER. Mr. Parmelee, I presume that most of your rates, I mean wage rates, per hour rates, are fixed by mediation?

Mr. PARMELEE. Yes.

Senator ELLENDER. I mean, by collective bargaining.

Mr. PARMELEE. That is true. Under the terms of the Railway Labor Act all of the various processes are set up.

Senator ELLENDER. Now, is the hourly wage rate the same for the same class of employees all over the country?

Mr. PARMELEE. It varies with different areas of the country.

Senator ELLENDER. In what part of the country are the wages the highest, the per hour wage rate the highest?

Senator TUNNELL. He has tables showing the railroad rates.

Senator ELLENDER. I don't mean the railroad rates, I mean the rates per hour paid to labor.

Senator TUNNELL. That is what his tables show.

Senator ELLENDER. I didn't see that.

Mr. SOUBY. He didn't separate them territorially.

Senator TUNNELL. May we have your name?

Mr. SOUBY. My name is James M. Souby. I am associated with Dr. Parmelee.

Senator ELLENDER. I believe we had some witnesses who testified that the wage rates per hour for the same kind of work, say, in Georgia, were different than in New York. Is that true in railroad wage rates?

Mr. PARMELEE. In the case of certain groups of employees that is true.

Senator ELLENDER. Could your associate give us that?

What is your name?

Mr. MONROE. J. Elmer Monroe, assistant to Dr. Parmelee.

Generally speaking, our maintenance forces receive about 57 cents an hour in the South.

Senator ELLENDER. What is that, section men?

Mr. MONROE. Section men. In the North, the section men receive about 65 to 68 cents, in the northern part of the country.

Senator ELLENDER. How about the West?

Mr. MONROE. The West divides about the same way. The Southwest, 57 cents; and in the Northwest, 66 and 68 cents.

Senator SMITH. That is supposed to be based on a difference in living standards?

Mr. MONROE. They have grown up, with that factor being taken into consideration.

Senator ELLENDER. Have you any other wage differentials?

Mr. MONROE. There are differences on the same railroads in different sections. There are differences in the clerical forces. Generally speaking, the train and engine forces have a standard rate of pay with certain minor differences.

Senator ELLENDER. Let us take a railroad engineer working from New Orleans to Atlanta. Does he get the same pay as an engineer who works from Chicago to New York or to Detroit?

Mr. MONROE. Generally speaking, yes. He gets paid so much per mile.

Senator ELLENDER. Then, that difference in pay would be only as to those you have just mentioned?

Mr. MONROE. There might be others, but those are the principal classes.

Senator ELLENDER. How about shop workers?

Mr. MONROE. Generally speaking, craft workers get $1.04 and $1.05 an hour.

Senator ELLENDER. Irrespective of where located?

Mr. MONROE. I think that is right.

Senator TUNNELL. The table I was referring to was table 3, Farm labor.

Mr. PARMELEE. Senator, we could do that, we could work that out for recent years, by districts or by regions of the country. There are eight regions. We could work out the average wage per hour of several principal classes of employees.

(See exhibit C, p. 502.)

Senator ELLENDER. I think that would be interesting.

Senator TUNNELL. All right. Thank you.

(The exhibits referred to are as follows:)

EXHIBIT B

EFFECT OF WAGE CHANGES ON HIGHER WAGE BRACKETS IN THE RAILROAD INDUSTRY, 1939–43

Establishment of a minimum wage of 25 cents in the railroad industry in October 1938, and of 30 cents in October 1939, had no great effect upon the rates of pay for job classifications above those respective minimums, as there already existed at that time a substantial differential between the lower common labor rates and the skilled labor rates.

The mediated settlement of December 1, 1941, however, established a general minimum rate of 46 cents. The increase of 10 cents per hour (over the statutory rate of 36 cents) was effective for all job classifications from the minimum up to the highest rates, except that the train and engine service forces (who are among the higher paid classes) received 9½ cents per hour. Thus much the same increase was made in all rates, from the bottom up, and differentials were preserved, or very nearly preserved, at the insistence of the railroad labor organizations.

Much the same procedure was followed in 1943. The mediated settlement of December 27 of that year provided in increase of 11 cents in the minimum rate. All job classifications with hourly rates of 47 cents but less than 57 cents were increased 10 cents per hour; while all job classifications with hourly rates of 57 cents or more were increased 9 cents per hour. In this case, the differentials were slightly reduced by reason of the fact that the lower rated classes received slightly greater increases per hour. However, all wage groups involved received an increase closely paralleling that agreed upon for the lowest or minimum wage group.

EXHIBIT C.—*Average straight-time rate of pay per hour—Selected classes of railroad employees: Railways of class I in the United States, year 1944* [1]

	Average number of employees in United States	Region							
		New England	Great Lakes	Central Eastern	Southern	Pocahontas	Northwestern	Central Western	Southwestern
		Cents	*Cents*	*Cents*	*Cents*	*Cents*	*Cents*	*Cents*	*Cents*
Clerks (B and C)	118,124	86.3	88.5	91.5	86.7	87.9	87.0	91.2	87.1
Bridge and building carpenters	15,017	87.2	91.8	92.1	84.2	87.9	84.6	89.4	82.8

Skilled trades helpers	93,299	80.7	85.0	85.3	79.9	83.2	80.5	81.5	77.2
Coach cleaners	13,694	66.2	70.7	66.3	59.7	65.7	67.2	65.8	59.1
General laborers (shops)	26,495	64.7	67.9	67.5	59.5	63.6	64.9	62.6	58.9
Truckers	28,814	74.2	77.1	77.1	61.3	66.2	77.2	73.0	65.1

[1] The rates indicated are average straight-time rates and not minimum rates. They are stated in cents per hour.

Senator TUNNELL. Mr. Taylor.

TESTIMONY OF TYRE TAYLOR, GENERAL COUNSEL, SOUTHERN STATES INDUSTRIAL COUNCIL

Mr. TAYLOR. I appear on behalf of the Southern States Industrial Council, the headquarters of which are in the Stahlman Building, Nashville, Tenn. My address is 712 Jackson Place, Washington.

Established in 1933, the council's membership is comprised of business concerns in the 16 southern States from Maryland to Texas, and including West Virginia, Missouri, and Oklahoma. This membership includes all lines of manufacturing and processing, mining, transportation, and related industries and accounts for substantial employment throughout the area.

You already have in your report data on the effect of the proposed minima upon costs and prices in the case of three of the South's largest industries—cotton textiles, lumber, and tobacco. I shall not go into this except to offer for the record certain information which, in the case of cotton textiles, may serve to supplement the data already before you and, in the case of lumber, we have some estimates of what the proposed increases would do to the price of furniture.

Senator ELLENDER. I don't recall having any testimony from the lumber industry.

Senator TUNNELL. I don't think we have had any.

(A statement from the Southern Pine Industry appears in the Appendix.)

Mr. TAYLOR. Wasn't the table put in the record?

Senator ELLENDER. There may have been some data put into the record.

Mr. TAYLOR. The increase in costs which would result from 65 cents, 70 cents, and 75 cents. Didn't you put that in the record?

Senator ELLENDER. What I had in mind was that we did not have any witnesses. Of course, I think it is imperative that we do have some testimony from the lumber industry.

Mr. TAYLOR. I think this did go in [indicating document].

Senator ELLENDER. Yes, I remember putting that in myself. That was to show that an increase in wages would increase the cost of lumber.

Mr. TAYLOR. Except for this—and except for two recommendations in which we should like to join with the Cotton Textile Institute—we wish to confine ourselves to certain aspects of the problem which, so far as I know, have not been discussed and some, if not all of which, involve important considerations of public policy. For example, the effect of the proposed legislation upon small business.

Impact upon small business: The South of course has many large nationally and internationally known industrial establishments. However, as the House Committee on Small Business found after an exhaustive survey of the wartime problems of Southern industry in 1942–43, the overwhelming majority of our plants and companies are comparatively small. And suitably qualified—omitting, for example, financial concerns and some types of industry where the investment or volume of turn-over per worker is extremely high—the number of employees indicates the relative resources of a business enterprise.

We do not have comparative figures for any particular section of the country, but for the Nation as a whole we find that average earnings per job by size of firm are substantially larger for the big firms than the small ones. Thus for the period 1939–43, such averages for third quarter earnings were as follows:

I might say, gentlemen, that while that is something I have been convinced about in my own mind for a long time, and something about which I think the committee might take judicial notice, it is awfully difficult, or I found it so, to obtain any very satisfactory statistics for that. There seems to be a great dearth of data on this subject of earnings by size of a firm, not only for the country as a

whole but there is nothing so far as I have been able to find where it is broken down by regions.

On page 3 is a table. The source of these figures is the Bureau of Old Age and Survivors Insurance, and it was quoted in an article entitled "Industrial Concentration of Employment" in the April 1945 issue of Current Business by Donald W. Paden.

Now, this is a table of the average earnings per job, by size of firm, for the third quarters during the period 1939 to 1943.

As you will note, in the first column, which starts off with the average for all classes; that is, the smallest, the middle size, and the largest firm, it starts off with 54 cents an hour, and by 1943 it gets up to 87 cents. In the case of the smallest one it started off with 47 cents an hour and gets up to 69 cents. That is a percentage increase, an average increase, of 44.8 percent.

In the middle size group, 50 to 999 employees, it starts off in 1939 with 52 cents and gets up to 80 cents in 1943, or a 54-percent increase.

For the largest firms, those with a thousand or more employees, it starts off in 1939 with 63 cents, and by 1943 it got up to $1.02, or an increase of 63 percent.

Senator SMITH. Apparently none today are under 65 cents.

Mr. TAYLOR. These are average figures, Senator Smith.

Senator SMITH. I see. There might be some.

Mr. TAYLOR. Yes, sir.

(The table above referred to is as follows:)

Average earnings per job, by size of firm, third quarter, 1939–43 [1]

Year	Total, all size classes			Firms with—								
				1 to 49 employees			50 to 999 employees			1,000 or more employees		
	Quarterly	Weekly	Hourly	Quarterly	Weekly	Hourly	Quarterly	Weekly	Hourly	Quarterly	Weekly	Hourly
1939	$280	[2] $21.54	$0.54	$246	$18.92	$0.47	$271	$20.84	$0.52	$329	$25.30	$0.63
1940	284	21.85	.55	240	18.46	.46	273	21.00	.53	342	26.30	.66
1941	331	25.46	.64	247	19.00	.48	316	24.30	.61	429	33.00	.83
1942	403	31.00	.78	315	24.23	.61	379	29.15	.73	481	37.00	.93
1943	451	34.70	.87	357	27.46	.69	416	32.00	.80	528	40.61	1.02

[1] Source: Bureau of Old Age and Survivors Insurance, Social Security Board, quoted in article, Industrial Concentration of Employment, by Donald W. Paden, April 1945 issue of Current Business, published by Department of Commerce.
[2] 40-hour week.

Mr. TAYLOR. This table was constructed by dividing the quarterly earnings by 13 to get the weekly earnings and this by 40 to get the hourly earnings. Since the quarterly earnings included overtime, the straight-time hourly rates were undoubtedly lower than the table indicates. And in the case of the South, a further downward adjustment would be necessary to reflect existing wage differentials. Yet even so—and leaving these adjustments out of account—it will be noted that the average hourly wages paid by the smallest firms in 1943 were only 3.6 cents above the proposed statutory minimum and more than 6 cents less than the 75 cents to be established within 2 years.

The impact upon the middle group would be less, while the third group—the largest concerns—would feel it least of all.

I have here another chart which is unsuitable for introduction into the record, but it illustrates this next point here.

(The chart referred to was handed to Senator Tunnell.)

Mr. TAYLOR. This chart showing taxable wages by size of firm reflects another aspect of the same picture. Not only does the typical large firm pay higher wages than its smaller counterpart, but the rate of increase in recent years has been most rapid in the case of the large firms. Starting at 100 in 1939, wages paid by firms employing 1,000 or more workers had risen to 315 by the middle of 1943, while the comparable increase in the case of the middle group was about 168 and for the smallest concerns around 147.

In other words—and this is also indicated by the table previously referred to—the wage structure of small business has tended to remain relatively stationary during the war period and both before the war and now the wages paid are substantially lower than those paid by the larger concerns.

There is, of course, a reason for this and it is not that small business has any laws for low wages as such. It results, rather, from the facts, first, that the large concern can take advantage of the techniques of mass production; and, second, that the large concern is more likely to have the capital necessary to a high degree of mechanization and modernization. Both of these factors make for high productivity per man-hour, low unit costs, and hence provide the foundation for higher wages. Frequently the small manufacturer starts with second-hand machinery which has been discarded by the large operator as obsolete.

It is true that most of the concerns in the 1–49 employee category are not engaged in interstate commerce and hence are not covered by the Fair Labor Standards Act. In fact, local retailing is specifically exempted. However, all of these businesses must compete in the labor market with businesses which are covered and hence are affected indirectly. You had this story here the other day from the hotel people.

Another small business angle of this problem which seems worthy of consideration by the committee is its bearing upon the general goal of full employment. To a degree not generally recognized, we must rely upon small business—and particularly the distribution and service trades—for jobs during the years ahead. Since 1870, employment in agriculture has declined from 53.8 percent of total employment to 25.4 percent in 1940; while over the same period employment in manufacturing, mining, and construction has increased only from 22.6 percent of the total to 26.5 percent. On the other hand, employment in other fields—distribution, and so forth—has increased from 23.4 percent of the total in 1870 to 45.8 percent in 1940—or almost doubled.

Senator TUNNELL. What do you mean by those figures when you say "employment in agriculture has decline from 53.8 percent of total employment to 25.4 percent in 1940"? What do you mean by "total employment"?

Mr. TAYLOR. I mean the total of the gainfully employed, Senator.

Senator TUNNELL. You mean in the whole Nation?

Mr. TAYLOR. In the whole country. Here is a picture of what it looks like on a chart [indicating].

Senator ELLENDER. Many more were engaged in agriculture at that time than industry?

Mr. TAYLOR. That is correct, Senator.

Senator TUNNELL. You said that in 1870, 53.8 were engaged in agriculture and 22.6 in all other fields.

Mr. TAYLOR. Since 1870, employment in agriculture has declined from 53.8 percent of the total employment to 25.4 percent in 1940.

Senator TUNNELL. Then in 1940 there were only 77 percent altogether.

Senator ELLENDER. To put it another way, those now engaged in agriculture and those now engaged in manufacturing represent about the total that was employed, percentagewise, in 1870 in agriculture.

Mr. TAYLOR. By agriculture alone.

Senator ELLENDER. That is correct.

Senator TUNNELL. But you have in this same paragraph the statement:

> Since 1870, employment in agriculture has declined from 53.8 percent of total employment to 25.4—

and then down below you have this statement:

> On the other hand, employment in other fields—distribution, et cetera—has increased from 23.6 percent of the total in 1870 to 45.8 percent in 1940—or almost doubled.

Now, that is 53.8 percent in agriculture and 22.6 percent in other fields.

Mr. TAYLOR. 53.8 percent in agriculture in 1870, 22.6 percent in manufacturing.

Senator TUNNELL. Then you say "in other," and you mean outside of manufacturing and agriculture.

Mr. TAYLOR. Yes, primarily the distributing and servicing trades.

Projecting this trend to 1960, the percentage for agriculture would be 16.4 percent of the total; manufacturing, mining, and construction, 26.5 percent; and all other, 57.1 percent.

Now to bring this down to earth, my point is not only that the direct impact of the proposed minima would, generally speaking, be heaviest on precisely those concerns least able to pay them, but there might be an important indirect impact on full employment in that the corner grocery store, for example, might be compelled to change from full service to self-service. Furthermore, to the extent that the smaller firms may not be able to pay such increased labor costs and must close, the result is to encourage monopoly and the further centralization of production and distribution in the hands of the largest operators.

Impact upon the labor force: Another special impact of constantly rising labor costs unattended by commensurate increases in production which the committee may wish to weigh and consider is that upon the least skilled workers. As we all know, men and women possess varying skills and degrees of efficiency and this condition arises from a variety of causes. Some are naturally inept. Some are old. Some are handicapped.

Now it necessarily follows that the higher the statutory wage minimum, the more management must strive for efficiency. The result of this is that, as the minimum goes up, more and more of these less efficient workers become unemployable. There is a large question of public policy involved here, but, considering the present state of the Government's finances, one wonders whether the welfare of the Nation as a whole, including the workers themselves, would be well-

served by the creation of a large army of people who would have to go on the public relief rolls because the Government had made it unlawful for them to accept wages which industry can pay.

Experience under the Fair Labor Standards Act: Many of the witnesses who have appeared in support of this bill have referred to the dire predictions which accompanied the establishment of the existing 40-cent minimum and which dire predictions failed to materialize. They have offered our experience under this act as evidence of industry's ability to pay the proposed minima without substantially curtailing employment.

Of course this experience proves nothing of the kind for the reason that it has been confined to the period of an unprecedented wartime boom. The story is essentially the same for textiles, coal, iron and steel, lumber, shipbuilding, petroleum, tobacco, food, and every other industry producing things needed for war. However, since cotton textiles is the South's largest industry and its experience is so typical of the period since the first wage order went into effect, I should like to fill out the picture so ably presented by Dr. Murchison the other day by offering three exhibits for the record.

The first is a brief factual description of conditions in this industry during the years immediately preceding the outbreak of war in Europe with the German invasion of Poland on September 1, 1939. These are excerpts from a Bulletin 663 prepared by Mr. A. F. Hinrichs, the present Commissioner of Labor Statistics, in 1938.

(The document referred to is as follows:)

EXHIBIT I

In BLS Bulletin 663, Wages in Cotton Goods Manufacturing, issued in November 1938, Mr. Hinrichs says:

That the cotton textile industry—the largest group under the jurisdiction of this committee—"is operating under bitter pressure that retards new investment and tends to drive old investment out by the bankruptcy route," and that the annual return on textile investment for the period 1933 through the first half of 1936 averaged from 2.6 to 2.8 percent.

That, even during such a relatively prosperous period as the last half of 1933, nearly one-eighth of the textile investment was in mills that operated at a loss.

That "changing mill margins trace the changing fortunes of the industry quite closely" and that "the present margins appear to be close to the costs of the most efficient producers."

That "there is no exorbitant profit margin to indicate exploitation of consumers or workers."

That "the cotton-goods industry is highly competitive," assuring "that, within brief periods of time the benefits of technological advance are passed on to consumers or workers, or both."

That the peak of employment in the cotton-goods industry was reached in 1923, with 471,503 workers employed; that by June 1938 this number had decreased to 335,800; and that "the tendency toward curtailment of total employment opportunities in cotton goods persisted in spite of the sharp reduction of the hours of work accomplished under the NRA."

That the number of active cotton spindles in place decreased from about 38,000,000 for the United States in 1925 to about 26,000,000 as of November 1938, and that since 1935 the number of active spindles in place has been declining in the South.

That, despite the increase in population, there has been no expansion of the aggregate consumption of cotton over the past 15 years and that the per capita consumption declined from 27.9 pounds per person in 1920 to 24.2 pounds per person in 1930.

That "at least two-fifths of the spindles in place are nearly 30 years old and have been rendered obsolete, especially by the development of long-draft spinning

INTENTIONAL SECOND EXPOSURE

Mr. TAYLOR. That is correct, Senator.

Senator TUNNELL. You said that in 1870, 53.8 were engaged in agriculture and 22.6 in all other fields.

Mr. TAYLOR. Since 1870, employment in agriculture has declined from 53.8 percent of the total employment to 25.4 percent in 1940.

Senator TUNNELL. Then in 1940 there were only 77 percent altogether.

Senator ELLENDER. To put it another way, those now engaged in agriculture and those now engaged in manufacturing represent about the total that was employed, percentagewise, in 1870 in agriculture.

Mr. TAYLOR. By agriculture alone.

Senator ELLENDER. That is correct.

Senator TUNNELL. But you have in this same paragraph the statement:

> Since 1870, employment in agriculture has declined from 53.8 percent of total employment to 25.4—

and then down below you have this statement:

> On the other hand, employment in other fields—distribution, et cetera—has increased from 23.6 percent of the total in 1870 to 45.8 percent in 1940—or almost doubled.

Now, that is 53.8 percent in agriculture and 22.6 percent in other fields.

Mr. TAYLOR. 53.8 percent in agriculture in 1870, 22.6 percent in manufacturing.

Senator TUNNELL. Then you say "in other," and you mean outside of manufacturing and agriculture.

Mr. TAYLOR. Yes, primarily the distributing and servicing trades.

Projecting this trend to 1960, the percentage for agriculture would be 16.4 percent of the total; manufacturing, mining, and construction, 26.5 percent; and all other, 57.1 percent.

Now to bring this down to earth, my point is not only that the direct impact of the proposed minima would, generally speaking, be heaviest on precisely those concerns least able to pay them, but there might be an important indirect impact on full employment in that the corner grocery store, for example, might be compelled to change from full service to self-service. Furthermore, to the extent that the smaller firms may not be able to pay such increased labor costs and must close, the result is to encourage monopoly and the further centralization of production and distribution in the hands of the largest operators.

Impact upon the labor force: Another special impact of constantly rising labor costs unattended by commensurate increases in production which the committee may wish to weigh and consider is that upon the least skilled workers. As we all know, men and women possess varying skills and degrees of efficiency and this condition arises from a variety of causes. Some are naturally inept. Some are old. Some are handicapped.

Now it necessarily follows that the higher the statutory wage minimum, the more management must strive for efficiency. The result of this is that, as the minimum goes up, more and more of these less efficient workers become unemployable. There is a large question of public policy involved here, but, considering the present state of the Government's finances, one wonders whether the welfare of the Nation as a whole, including the workers themselves, would be well-

served by the creation of a large army of people who would have to go on the public relief rolls because the Government had made it unlawful for them to accept wages which industry can pay.

Experience under the Fair Labor Standards Act: Many of the witnesses who have appeared in support of this bill have referred to the dire predictions which accompanied the establishment of the existing 40-cent minimum and which dire predictions failed to materialize. They have offered our experience under this act as evidence of industry's ability to pay the proposed minima without substantially curtailing employment.

Of course this experience proves nothing of the kind for the reason that it has been confined to the period of an unprecedented wartime boom. The story is essentially the same for textiles, coal, iron and steel, lumber, shipbuilding, petroleum, tobacco, food, and every other industry producing things needed for war. However, since cotton textiles is the South's largest industry and its experience is so typical of the period since the first wage order went into effect, I should like to fill out the picture so ably presented by Dr. Murchison the other day by offering three exhibits for the record.

The first is a brief factual description of conditions in this industry during the years immediately preceding the outbreak of war in Europe with the German invasion of Poland on September 1, 1939. These are excerpts from a Bulletin 663 prepared by Mr. A. F. Hinrichs, the present Commissioner of Labor Statistics, in 1938.

(The document referred to is as follows:)

EXHIBIT I

In BLS Bulletin 663, Wages in Cotton Goods Manufacturing, issued in November 1938, Mr. Hinrichs says:

That the cotton textile industry—the largest group under the jurisdiction of this committee—"is operating under bitter pressure that retards new investment and tends to drive old investment out by the bankruptcy route," and that the annual return on textile investment for the period 1933 through the first half of 1936 averaged from 2.6 to 2.8 percent.

That, even during such a relatively prosperous period as the last half of 1933, nearly one-eighth of the textile investment was in mills that operated at a loss.

That "changing mill margins trace the changing fortunes of the industry quite closely" and that "the present margins appear to be close to the costs of the most efficient producers."

That "there is no exorbitant profit margin to indicate exploitation of consumers or workers."

That "the cotton-goods industry is highly competitive," assuring "that, within brief periods of time the benefits of technological advance are passed on to consumers or workers, or both."

That the peak of employment in the cotton-goods industry was reached in 1923, with 471,503 workers employed; that by June 1938 this number had decreased to 335,800; and that "the tendency toward curtailment of total employment opportunities in cotton goods persisted in spite of the sharp reduction of the hours of work accomplished under the NRA."

That the number of active cotton spindles in place decreased from about 38,000,000 for the United States in 1925 to about 26,000,000 as of November 1938, and that since 1935 the number of active spindles in place has been declining in the South.

That, despite the increase in population, there has been no expansion of the aggregate consumption of cotton over the past 15 years and that the per capita consumption declined from 27.9 pounds per person in 1920 to 24.2 pounds per person in 1930.

That "at least two-fifths of the spindles in place are nearly 30 years old and have been rendered obsolete, especially by the development of long-draft spinning

78595—45——33

in the past decade; that about half the looms are over 20 years old; that low-cost mills can raise wages more easily than high-cost mills; and that—

"It is important to remember that efficiency is a relative term; a mill that was efficient in 1920 will be relatively inefficient in 1938 if it has not modernized its equipment. Leadership in efficiency by a mill or a region can only be maintained as new investment is continuously made. With the general unattractiveness of the cotton textile industry to outside capital, this means essentially that efficiency is maintained through the reinvestment of adequate reserves for depreciation and that expansion must be from profits."

That southern cotton wages are low relative to northern cotton wages, but they are not low relative to prevailing wages in other southern industry and are substantially higher than farm income in that area.

That the average earnings per hour in the cotton-goods industry in August 1938 were 36.54 cents in the South, 44.58 cents in the North, and 38.35 cents for the United States as a whole.

That, as of August 1938, there were 69 mills in the South, employing 36,500 persons, paying average hourly wages of less than the proposed minimum, whereas there were only 3 such establishments in the North, employing less than 350 workers.

That, according to skill, and as of August 1938, the average hourly earnings of workers North and South were actually distributed as follows:

In the South, 44 percent of all workers and 91 percent of the unskilled were receiving less than the proposed minimum, whereas in the North, only 6.1 percent of the total and 5.2 percent of the unskilled were receiving less than 32½ cents.

That, as of August 1938, there were 476 mills in the South, employing more than 180,000 persons, paying average hourly wages of less than 40 cents (the average expected to result in the South from a 32½-cent minimum), whereas there were only 33 such establishments in the North, employing less than 8,000 persons.

That an overwhelming majority of southern mills and workers will be affected by the establishment of a 32½-cent minimum, whereas only a nominal number of northern mills will have to raise wages and these raises will be relatively insignificant in amount.

That the impact of a 32½-cent minimum upon southern mills is further enhanced by the lower productivity of labor in that area. "On the average the low-wage mills also have a low output per man-hour; the high-wage mills a higher output."

That the excess of wages paid in the North over wages paid in the South had declined from 12.1 cents in 1928 to 8 cents in 1938.

That "the essential problem (incident to raising wages) is one of the rate at which adjustments are made—a problem that arises out of the fact that a wage rate increase at the moment that it is made usually involves an increase of labor costs, while output per man-hour rises gradually."

That the NRA code provided for two minimum wages, the basic wage, usually referred to as the minimum wage, was 30 cents an hour in the South and 32½ cents in the North; that this wage applied to all employees except cleaners, outside laborers, and learners; that for these (cleaners, outside laborers, and learners) the minimum wage was 22½ cents in the South and 24¾ cents in the North; and that this system of two minimum wage standards was continued after the code and prevails in the South at the present time.

That "because of the existence of two minima in southern mills, it is quite possible that a general wage increase of as much as 5 cents might result from an absolute 30-cent minimum, even in mills averaging 37.5 to 42.5 cents."

That "the main problems (incident to the attainment of a 40-cent minimum) are problems of timing. It is one thing to say that consumers have benefited disproportionately by the technical advances of the last 10 years; it is another to deduce from this the conclusion that substantial increases of cost can be made immediately without some decrease of consumption. It is one thing to acknowledge that a certain number of obsolete mills are bound eventually to be displaced, unless they are modernized; it is another thing to decide that they should all be displaced immediately."

Mr. TAYLOR. The second is a series of brief excerpts from the New York Times of that period showing what happened to the demand for textile products as a result of the outbreak of war.

(The document referred to is as follows:)

EXHIBIT II

EXCERPTS FROM NEW YORK TIMES

[From New York Times, September 6, 1939]

PRICES UP SHARPLY ON PRIMARY GOODS

SALES OF COTTON GOODS BIGGEST IN YEARS

Spectacular price advances in many primary commodity and semifinished goods markets yesterday signaled the response of American business to Europe's new war. In the broadest activity in several years, commission merchants sold about 150,000,000 yards of gray goods at price one-eighth to three-eighths cents a yard higher than those quoted at the end of last week.

GRAY GOODS ACTIVITY WIDE

The buying of gray goods began with sheetings and narrow print cloths commonly used for the manufacture of bags. It quickly spread to drills, twills, other sheetings, other print cloths, osnaburgs, fine combed goods, and ducks. Sales of print cloths alone were estimated at 50,000,000 yards, and there were another 50,000,000 yards of sheetings sold. Activity in the other gray goods lines were at least heavy enough to bring the days total to 150,000,000 yards.

[From New York Times, September 7, 1939]

The most spectacular trading was again on cotton goods, which admittedly are war merchandise. Gray goods sales were estimated at more than 150,000,000 yards, bringing the total for the 2 days this week to over 300,000,000 yards.

[From New York Times, September 9, 1939]

COTTON-MILL RATE HOLDS WHEN TREND DIPS—WAR BOOMS CLOTHS—BUSINESS INDEX RISES

Cotton-mill activity was unchanged last week end, with a seasonal decline called for, the index advanced to 128.1 from 124.0. It was 115.8 for the week ended September 3, 1938.

In the sharpest activity in years, total sales of all cotton goods this week were estimated at more than 500,000,000 yards. Of this, about 450,000,000 yards were gray goods. Prices of gray goods advanced steadily, making net gains of ¾ to 1 cent a yard on the week. Finished goods advanced on a number of items, and others were withdrawn from sale. The items on which prices were moved up were bought freely.

[From New York Times, September 22, 1939]

GRAY GOODS HIGHER AND MORE ACTIVE

Broader activity and firmer prices in cotton gray goods, the third advance since the outbreak of the war on muslins and sheets, and a move to induce mills to waive their rights under contracts to pass on to buyers increases costs resulting from the recently ordered minimum wage were among the effects of the war boom in textiles yesterday. Yesterday's sales of print cloths were estimated at 20,000,000 yards.

Mr. TAYLOR. The third is a chart taken from a bulletin recently issued by the Department of Agriculture. This chart shows that from 1939 to 1943, cotton consumption (exclusive of linters) in the United States increased from 6½ million bales to 11,100,000.

(The chart referred to is as follows:)

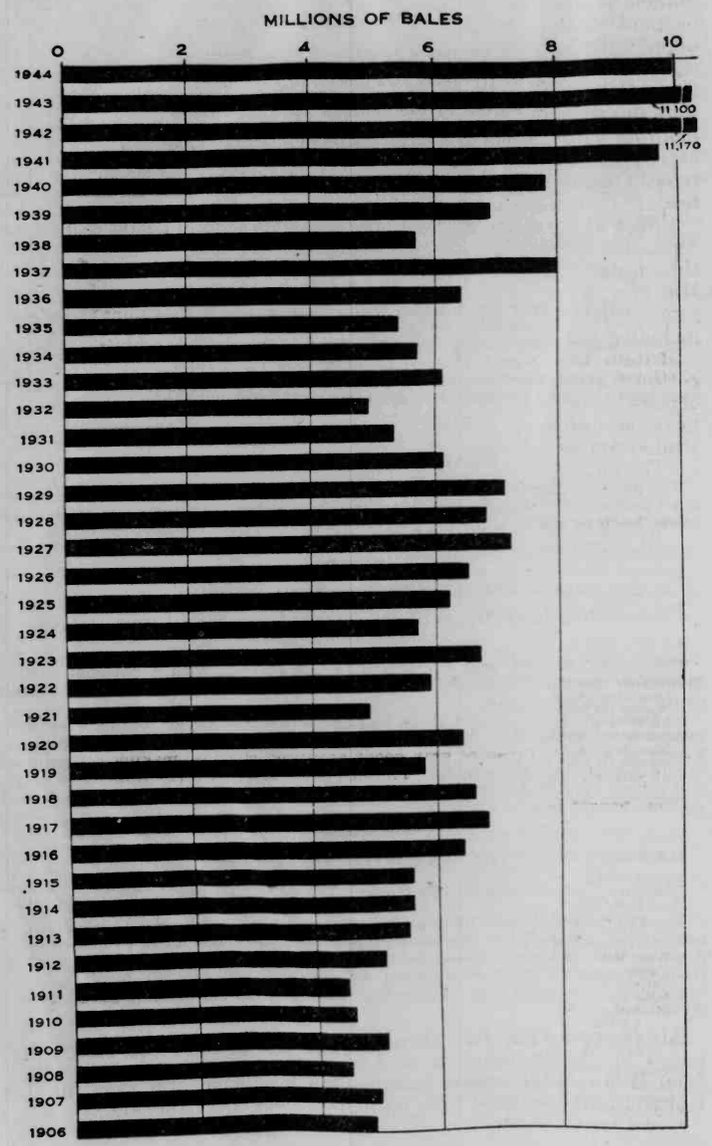

EXHIBIT III.—*Cotton consumption (exclusive of linters) in the United States, 1906 to 1944*

Mr. TAYLOR. All that the experience so far under the Fair Labor Standards Act proves is that the wages which have been paid could be paid—under conditions of demand for textile products totally unprecedented in the history of the industry. It would be about as reasonable to suppose that we shall be able to fully utilize our wartime fleet of merchant shipping in the peacetime trade as it is to assume that the wartime demand for textile and other war goods and commodities will continue at 1939–43 levels. And this suggests another aspect of the pending bill in which the South is vitally interested. I refer to the probable impact of the proposed minima upon our foreign trade.

Effect of higher production costs upon the South's foreign trade: Again I am going to use cotton textiles as an example, both because this in our largest industry and cotton is our most important crop. However, as already stated, the competitive picture is generally the same in the case of other southern products going into world markets, including particularly lumber and tobacco.

Britain has been our greatest competitor in world markets for cotton textiles and probably will continue to be while, of the "newcomers" in this field, Brazil appears to be making most headway. I have, accordingly, assembled certain data on production costs in the United States, Britain, and Brazil.

(The data referred to is as follows:)

UNITED STATES

Average hourly earnings:[1]	
All United States manufacturing, July 1945	$1.03
Cotton manufacturers, July 1945	.705

BRITAIN[2]

	Weekly	Hourly	Average hours worked
Average hourly earnings,[3] 16 industrial groups, first pay-week of July 1944:			
Men (21 years and over)	$25.08	$0.49	51.2
Women (18 years and over)	12.93	.29	44.6
All workers	19.44	.40	48.6
Average hourly earnings,[3] cotton textile industry, same period:			
Men (21 years and over)	20.44	.40	51.1
Women (18 years and over)	11.90	.25	47.6
All workers	14.09	.29	48.6

BRAZIL[4]

Minimum and maximum hourly rates[5] of pay for 18 companies in Sao Paulo, 1942–43:

Class of worker:	*Rate of pay per hour*
Laborer:	
Unskilled	5¼ to 7½ cents.
Semiskilled	5½ to 8½ cents.
Skilled	5½ to 14 cents.
Truck, skilled	6¾ to 12 cents.
Watchmen	5½ to 10½ cents.
Painters	6 to 15 cents.
Carpenters	6 to 12½ cents.
Joiners	7½ to 15 cents.
Mechanics:	
Adjustment	8 to 27½ cents.
Automobile	8 to 15 cents.
Assistant	5½ to 12½ cents.

[1] Source: Bureau of Labor Statistics.
[2] Pound=$4.04; 12 pence=1 shilling; 20 shillings=1 pound.
[3] Source: British Empire Unit, Bureau of Foreign and Domestic Commerce.
[4] 1 cruzeiro=5 cents.
[5] Source: American Republics Unit, Bureau of Foreign and Domestic Commerce.

BRAZIL—Continued

Minimum and maximum hourly rates of pay for 18 companies in Sao Paulo, 1942–43—Continued.

Class of worker—Continued.	*Rate of pao per hour*
Automobile solderers	7½ to 15 cents.
Welders	7 to 15 cents.
Electricians	8½ to 17½ cents.
Bricklayers	5 to 57 cents.
Assistant bricklayers	5½ to 10½ cents.
Blacksmiths	6½ to 15 cents.
Foremen	11 to 20 cents. [1]
Assistant foremen	8½ to 14 cents.
Gangers	5½ to 20 cents.

Employees (Brazilians) can be hired on the following basis:

Position:	*Per month*
Office manager or auditor	$100 to $125.
Bookkeepers	$40 to $75.
General clerks	$25 to $40.
Secretary-stenographers (English and Portuguese)	$90 to $120.
Stenographers (English and Portuguese)	$80 to $110.
Stenographers (Portuguese only)	$40 to $60.
Typists	$30 to $40.
File clerks	$30 to $40.
Telephone operators	$22.50 to $35.
Office boys	$15 to $25.

Brazil has a minimum-wage law. By Federal Government decrees of November 10, 1943 (Nos. 5997 and 5998), monthly minima were established for the federal district (lower rates were set in other sections) as follows:

For all adult workers, 360 cruzeiros, or $18.

For all industrial workers, 410 cruzeiros, or $20.50.

COST OF RAW COTTON

United States (United States cotton), August 10, 1945, 22.6 [1] cents per pound.
Britain (United States cotton), August 7, 1945, 20.9 [2] cents per pound.
Brazil (Brazilian cotton), August 10, 1945, 14.5 [3] cents per pound.

Mr. TAYLOR. These figures speak for themselves. The labor and material cost advantages of Brazilian cotton-textile mills are such that competent engineers tell us that the only way United States concerns can compete in the Latin American market is to build branch factories there and employ native labor.

The problem is of course not limited to exports. We do not know what the future tariff situation will be, but at least the possibility exists that our erstwhile and prospective competitors in foreign markets may give us a tussle right here at home. In any event, there must be a limit to the rise in production costs if we are not to price cotton textiles out of the market, both here and abroad.

Special note on furniture: Studies of the 65-cent minimum wage and its effect upon the costs of southern furniture manufacturers show that if the 65-cent minimum wage is put into effect and if all employees are increased as much as the minimum employees, it would increase the sales price of furniture about 14 percent. If all employees were increased percentagewise as much as the increase in the minimum, it would increase the prices of furniture about 20 percent.

The principal raw material used in the manufacture of furniture is hardwood lumber, which is produced in the South. We have called upon several large lumber mills to tell us how much lumber prices would be increased if a 65-cent minimum wage were made effective. We find that some of the lumber mills are paying a minimum wage of 50 cents an hour and others are paying minimum wages ranging anywhere from 40 to 50 cents. Accordingly, the estimates on the increased costs vary. However, several of the more prominent lumber

[1] There is a subsidy of 4 cents per pound on cotton exported from the United States.
[2] Converted from 12.45 pence. This is a British Government-controlled price.
[3] Price at Sao Paulo.

manufacturers tell us that the increase would vary anywhere from 20 to 30 percent in the present prices. Inasmuch as lumber represents about one-fourth of the sales price of furniture, this means that the furniture manufacturer would have to pass on the increase in his prices ranging from 5 to 7½ percent to cover the increased lumber cost. This means that the total increase in furniture prices covering furniture wages and lumber wages alone would be about 25 percent.

Conclusions and recommendations: Various other questions might be raised bearing upon the economic feasibility of the proposed minimum wage rates at this time. For example, it has been found—notably in Sweden—that the higher you raise the statutory minimum, the more the differentials between different job classifications tend to disappear. Obviously this presents social and economic issues of the highest importance.

To be sure, the bill contains a provision—Section 8—authorizing and requiring the fixing of minimum wage rates for interrelated job classifications above the absolute minimum, but, while such a requirement might obviate the difficulty to which I have just referred, it would create others far more serious. I question whether the public—or even industry—as yet appreciates the far-reaching and even revolutionary implications of this part of the bill. It in effect provides for Government wage fixing at all levels and for all industry. And it could be operated successfully only if accompanied by the rigid control of prices—all of which adds up to further and drastic regimentation, not only of the employers but of the workers. For these reasons, and also because this proposal completely distorts and perverts the original and legitimate objective and function of minimum wage legislation, we earnestly hope you will reject it.

We should also like to join with the Cotton Textile Institute—and for the reasons stated by Mr. Murchison—in urging the elimination of section 16 (b), which permits an employee to institute legal proceedings for unpaid wages and overtime compensation, and an additional equal amount as liquidated damages, at any time within 5 years of the accrual of such liability.

So far as I know, all are agreed as to the desirability of a higher standard of living for all our people and especially those in the lowest income brackets. There is a serious question, however, as to whether these increases, if granted, would not prove illusory. In the case of all the commodities and products with which we are familiar, any increase in production costs would have to be accompanied by a commensurate upward adjustment of ceiling prices.

Furthermore, the direct impact of increases in labor costs upon the cost of living is not the only one. Industrial labor competes with farm labor and both tend to rise or fall together. We do not know how long the farmers can continue to pay even the existing wage rates in the absence of an increase in prices, or subsidy, or both, but the forces with which the committee is dealing are clearly inflationary.

The main point I would make in conclusion, however, is the fact that, as the record now stands—and as Senator Ellender recently remarked—it contains no sufficient evidence that industry can pay the proposed minima, plus the necessary adjustments in the upper brackets, without substantially curtailing employment. True, Mr. Hinrichs refers to the increased and increasing productivity per man-hour. But as he himself pointed out upon another occasion—and I

refer you to Bulletin 663, BLS, page 54—such productivity increases gradually, while the costs attributable to a wage adjustment such as that here involved is sudden.

In view of the foregoing, we respectfully urge that the committee wait until reconversion gets under way and we can better appraise what conditions are going to be like before approving this or any similar legislation.

I thank you.

Senator TUNNELL. Thank you very much.

We will recess, subject to call.

(Whereupon, at 5:15 p. m., the subcommittee adjourned, subject to call.)

AMENDMENT OF THE FAIR LABOR STANDARDS ACT

TUESDAY, OCTOBER 16, 1945

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON EDUCATION AND LABOR,
Washington, D. C.

The subcommittee met, pursuant to notice, at 10 a. m., in room 424–B, Senate Office Building, Senator James M. Tunnell presiding.

Present: Senators Tunnell, Ellender, and Smith.

Also present: Senator Morse; Charles Kramer, consultant to the committee.

Senator TUNNELL. The committee will please come to order.

Mr. Linder.

TESTIMONY OF TOM LINDER, COMMISSIONER OF AGRICULTURE, STATE OF GEORGIA

Mr. LINDER. My name is Tom Linder, and I am commissioner of agriculture for the State of Georgia.

The National Association of Commissioners, Secretaries and Directors of Agriculture is a nonprofit membership organization comprising the commissioners, secretaries, and directors of agriculture of the 48 States.

The constitutional and statutory duties of the members of the National Association, in addition to a general supervision of agricultural crop yields and the processing and marketing of agricultural productions, have largely to do with financial, social and other economic benefits which can be effected in behalf of farmers, planters, processors, and agricultural industries within their respective States.

I am a member of the National Association and am in close contact with the activities of that organization. I am appearing before you as commissioner of agriculture of the State of Georgia but, by reason of my contact with the National Association, will say that am confident that the views which I am expressing here are in accordance with those of the other 47 members.

The rights of labor are the same whether that labor is an organized group or an unorganized group.

The rights of labor are the same whether that labor consists of physical effort, mental effort, or a combination of both.

There is no difference under our constitution between the rights of different labor groups. What appears to be a difference in their rights is simply a difference in their ability to enforce their rights.

Indeed, it is very easy to confuse the rights under the Constitution of a group with their power to enforce their demands.

Every American is supposed to subscribe to the oath of allegiance to the flag of the United States.

I pledge allegiance to the flag of the United States of America and to the Republic for which it stands, one Nation indivisible with liberty and justice for all.

This does not say justice for any particular group. It does not say justice for those who are organized strongly enough to enforce their rights. It does not limit justice to those who labor in any particular field of industry. It does not limit justice to those who contribute to the Nation's economic welfare in any particular manner but it provides justice for all.

I also want to make it perfectly clear that we are not opposed to that portion of labor that is organized; on the other hand, we are their friends. We stand ready at all times to go to bat to see that they are not denied full justice in every way under our national economic set-up.

I also wish to make it clear that I am not appearing in any sense in opposition to labor and its demands at this time.

I believe without going into any discussion of the merits or demerits of what has already been done, that our Nation is faced today with an economic condition that makes it vitally necessary for all labor to receive high wages in terms of money.

I believe it is equally necessary, from the standpoint of the Nation's welfare, for all white-collar workers, professional people, school teachers, and so forth, to receive high salaries in terms of money.

Likewise, I believe it is most essential for all farm crops to bring high prices in terms of money.

This necessity is brought about by reason of tremendous national debts and other public debts which will prove a crushing load on the taxpayers unless very high incomes are to be had, together with a very large national income which will make it possible to refinance and carry this tremendous load of debt until it can be reduced and a sufficient part of it retired to leave only a manageable balance.

I have, I hope, made it perfectly clear that we are not antagonistic to any other groups. I would like to proceed to demonstrate to the members of this committee just where the American farmers now stand in the over-all picture of our American economy.

From governmental sources I have prepared certain tables of figures, which will demonstrate in a very concise way the picture of the farmer's present condition. I believe that unless this picture is materially changed, that a tremendous economic upheaval in this country, and perhaps world-wide, is inevitable.

Since this hearing is concerned with industrial wages, I shall make comparison between the farmers' condition and industrial labor.

Let us go back to the years that the Democratic administrations have chosen as the base years. Let us assume that during these years the farmer was on an equality with business and industry. Let us compare his prices during that period with factory workers' pay during that same period; then, let's compare the price that the farmer gets for his crops today with factory wages today and see just how the farmer has fared for the last 35 years.

If farm prices today bore the same relation to factory workers' wages that they did during the base period, then the farmer today would be getting the following prices for basic farm products and crops:

For cotton, he would receive 52.20 cents per pound.

For corn, he would be receiving $3.30 per bushel.

His wheat would be bringing $4.45 per bushel.

Hogs in Chicago would be 38 cents per pound.

The average price of beef cattle in Chicago would be 39½ cents per pound.

HOW MUCH OF A FARMER'S CROP SHOULD PAY FOR AN HOUR OF FACTORY LABOR?

All figures used here are from United States Government statistics, authority for which I will cite at the close of this statement.

During the 5-year period of 1911–15, the average wage of factory workers was 21.73 cents per hour. During the year 1944 the average factory wage was $1.01½ per hour. This is an increase of about 500 percent.

From 1911–15 to 1944 the net change in the price of the farmer's 5 basic commodities was as follows:

	1911–15	1944
Cotton (cents per pound)	10.44	20.51
Corn (cents per bushel)	66.10	112.00
Wheat (cents per bushel)	89.00	141.00
Hogs (cents per pound)	7.60	13.20
Beef cattle (cents per pound)	7.89	10.74

The following table shows the increase from 1911–15 to 1944 of the number of pounds of these five basic commodities required to pay for 1 hour of factory labor:

	1911–15	1944
	Pounds	*Pounds*
Cotton	2.08	4.95
Corn	18.40	50.75
Wheat	14.70	43.20
Hogs	2.80	7.70
Beef cattle	2.70	9.40

Further on in this statement I will submit tabulations which show how this change came about during the years.

For the benefit of any who might wish to make a party issue out of these facts, I would like to call attention of this committee to the fact that for either political party to try to make a party issue out of these facts would simply be a case of the "pot calling the kettle black."

According to these governmental statistics the national administration in 1926–30 made the following increases in the number of pounds of each of these five basic commodities that were required to pay for 1 hour of factory labor as compared to the period 1911–15:

	1911–15	1926–30
	Pounds	*Pounds*
Cotton	2.08	3.61
Corn	18.40	40.30
Wheat	14.70	32.90
Hogs	2.80	5.40
Beef cattle	2.70	4.70

The next table shows the increase in the number of pounds of these five basic commodities that were required to pay for 1 hour of

factory labor during the period of 1936–40 as compared with the period of 1926–30:

	1926–30	1936–40
	Pounds	*Pounds*
Cotton	3.61	6.48
Corn	40.30	57.90
Wheat	32.90	49.00
Hogs	5.40	7.80
Beef cattle	4.70	6.30

In passing, I would like to call the committee's attention to the period 1931–35 which was partly Republican and partly Democratic.

Let us compare this period 1931–35 to the base period 1911–15.

The following table will show the number of pounds of each of these five basic commodities required to pay for 1 hour of factory labor during these two periods:

	1911–15	1931–35
	Pounds	*Pounds*
Cotton	2.08	5.46
Corn	18.40	57.50
Wheat	14.70	51.08
Hogs	2.80	8.90
Beef cattle	2.70	6.70

LABOR LAWS MUST BE BUILT UPON THE SAME BASIS AS ALL OTHER LAWS IN A DEMOCRATIC SOCIETY—EQUALITY OF ALL BEFORE THE LAW

There is no difference in the principle of enacting laws to guarantee labor a minimum wage and a law to guarantee the farmer a minimum price for his crop in line and on an equality with such labor wage.

In fact the price which the farmer receives is the farmer's wage for his labor.

There is no difference in the principle involved. There is, of course, a marked difference in the position of the two groups. One group is in position to demand. The other group can only ask for justice at your hands.

One of the remarkable signs of the times is the fact that some of the labor leaders today are demanding higher wages for their own organized groups and are at the same time demanding lower wages for the farmer—the unorganized group.

There is a persistent and insistent demand, largely Government-inspired, to force the American farmer to accept wages on the same basis as is now paid in other countries of the world.

They propose to force the farmer to accept low world standard wages by forcing him to sell his crops in competition with and at world prices.

The very basis and foundation of our national economic policy is symbolized by the Smoot-Hawley Tariff Act of 1930.

The reason that I say the Smoot-Hawley Tariff Act symbolizes the basic thinking of America is because it was passed by the Republican administration and has been kept in force by the Democratic administration since March 1933, more than 12 years.

The very foundation rock is protection of American producers and American labor against cheap wages and cheap commodities in the world market.

Suppose that the farmers of America were strongly organized as a group. Suppose that such a farm organization should demand very high prices for farm products in the United States. Suppose that such farm organizations at the same time demanded a cut in industrial wages to the world level.

If this were the case, I presume that almost everyone would say that the farmers making such demands were unfair and unreasonable to the other working people of the country.

Is it not obvious to every person that it is equally unfair and unreasonable to expect the farmer in the United States to labor for a wage that is in line with the world level?

The American farmers cannot produce at world prices or even at the present United States prices of farm products and maintain decent American living standards.

THE AMERICAN MARKET FOR THE AMERICAN PRODUCER

We have never had a substantial surplus of farm products in the United States in the last 25 years.

What we called surpluses were imported.

Over a period of the last 15 years we have consumed the equivalent of 35,000,000 bales of cotton more than we have produced.

Had it not been for imports of rayon, jute, wool, cotton, and cotton and wool manufactures and semimanufactures, America would have consumed every bale of cotton produced even if there had never been any crop control.

From 1931 to 1941, according to Government figures, we imported the equivalent of 33,000,000 bales of cotton and cotton substitutes.

They tell us that farm mechanization will reduce the cost to the farmer of his crops.

Modern improvements and mechanization in cotton mills have not reduced the cost of a yard of cloth.

Modern improvements and mechanization in garment factories have not reduced the price of garments.

Modern improvements and mechanization have not reduced the cost of transportation or of communication.

Is it reasonable to suppose that modern improvements and mechanization will reduce the per unit cost of farm products? I say it is not to be expected.

While I represent a State in the old Cotton Belt the figures that I have presented make out a case equally well for other farm sections.

Cotton is not the problem alone of the South, it is equally the problem of the balance of the country.

In the South lies the natural market for tremendous amounts of industrial goods.

In the South lies the potential for the production of vast quantities of meat, dairy products, poultry, eggs, fruits, and vegetables.

Every time that a cotton farmer is forced to abandon cotton it means additional production of corn, wheat, meat, and so forth, to compete with the farming States of the West and the Middle West.

Every time a cotton farmer is forced to abandon cotton it means a decreased supply of food, feed, and fiber for the national economy.

Whatever you do, be fair.

Whatever you do be fair with regard to industrial wages. Be fair to the farmer. Be fair to the unorganized groups. Be fair to yourselves and be fair to America. Feed us all out of the same spoon.

Now, all the figures that I have referred to here were taken from or based on the Statistical Abstract of the United States of 1943; Crops and Markets of the United States Department of Agriculture, July 1945; and Information Relating to Cotton Problems issued by the United States Department of Agriculture, November 1944.

Now, in conclusion, it is impossible for Congress to increase the sum total wages of industrial labor unless at the same time a corresponding increase is made in farm prices. The reason for this is that the total of the Nation's factory pay roll does not and cannot very far exceed the sum total of the cash income of the farmers. This statement is fully proven by the official records of the United States Government year by year.

If the hourly pay of factory workers is increased without at the same time increasing the farm income, it simply means there will be fewer jobs for factory workers. A smaller number of factory workers will receive increased wages. The balance of the factory workers will be without any job at all.

The records of history show that neither a republic nor a democracy can long endure where private ownership of property does not exist. This is true because in a republic or a democracy the voters themselves are the ultimate government. Where private property does not vest in the voters, it is only natural and it is inevitable that the voters will exercise their ultimate prerogative and take charge of all property in the name of the government. This is not only proven on the pages of history but it is being proven in current affairs today. We have but to look at England, France, Russia, and many other nations even today to see the vital truth of this statement.

The farmers of this Nation constitute the great bulwark of protection to private property of every kind and description in this Nation. Without a strong and prosperous agriculture and without a large aggregation of landowning farmers, no man could feel that his investment and capital were safe, whether they consisted of cash and intangibles, whether they consisted of factories and railroads, whether they consisted of land and houses, or whether they consisted of any other form of capitalism.

The sum total of all wages, salaries, and profits is limited by the national income. The national income is limited by the farm income. The national income is seven times the farm income, it cannot be very much more and is never much less.

The truth of this natural economic law is strongly recognized by the United States Steel Corp. and the Tennessee Coal, Iron & Railroad Co. in the current October issue of the Manufacturers Record. I invite your attention to this direct and unequivocal statement by one of the largest business organizations in this country to the fact that the farm income controls the national income.

Now, I would like to add to this observation, and that is we know, as a matter of history, that private property is a basis, and is a necessary basis for all republican and all democratic governments, and wherever private property has ceased to exist, the democratic or the republican form of government has falled and a dictator has taken its place.

Now, we are not dependent upon the pages of history to see that happening today, we only have to look at England, France, Russia, Poland, and a great many other nations, to see that whenever a large aggregation of landowners and property-owing voters is eliminated and your population becomes one-sided, on the side of non-property owners, that private ownership of property is immediately doomed, because the voters themselves are the ultimate government in a republic or in a democracy, and as soon as they become property owners they seek to take over all property in the name of the government, which they imagine will benefit their own condition.

I believe, Mr. Chairman, that that is substantially what I had in mind to say.

I do not know if you have any questions.

Senator SMITH. I have some.

Do I gather, Mr. Linder, from your statement where you say you approve of high wages and high prices for farm products, that you advocate what you might call a mild inflation. Is that your thought?

Mr. LINDER. I would answer that in this way: I think we would first have to admit that we already have inflation. I think that this large debt has been created under inflation and I think it can only be retired under inflationary conditions.

Senator SMITH. Then you would look forward to a general price rise all along the line?

Mr. LINDER. Yes, sir.

Senator SMITH. I assume you, along with the rest of us, would not want to see a runaway inflation, but you do approve a general rise in prices.

Mr. LINDER. No; I think it must be maintained at least as high as the conditions under which it was created. I think that the only way to pay this debt is to pay it on wage and price levels at least as high as those existing at the time the debt was created.

Senator SMITH. You mean the war price level?

Mr. LINDER. Yes.

Senator SMITH. Now, let me ask you another question, Mr. Linder.

In figuring your returns to farmers, do these figures include allowances for the cost of living that the farmer gets in owning his own home or raising his own food? The general statistics you gave as to the relationship of the wage of the worker to what the farmer gets for his crops, do you charge the farmer with a reasonable rental for his home and the food he gets from raising his own food?

Mr. LINDER. Well, no.

What I did there I took simply the number of pounds of these basic commodities that were required to pay for 1 hour of factory labor at these different periods.

Senator ELLENDER. That is if the farmer had to pay the same price for field work?

Mr. LINDER. It did not make any difference what price the farmer paid, as far as the figures were concerned. We simply took so many pounds of corn in one period for an hour of labor, and then in another period we took so many pounds of corn or cotton, for an hour of labor.

Senator SMITH. That is related to prices, of course. What I am getting at, did you figure what the farmer was getting? Did you charge him for the rental of his house, or for raising his own food?

Mr. LINDER. No, sir.

I figured how many pounds of corn he would have to sell at the market price to pay for 1 hour of labor in the factory.

Senator ELLENDER. If he employed the labor on the farm?

Mr. LINDER. It has nothing to do with labor on the farm. This is factory labor, because when the farmer buys a plow, a machine, or some other thing, whatever he buys he is buying factory labor and he is paying this price for it.

I figured how many pounds of his own product it cost to pay for that cost per hour of factory labor.

Senator TUNNELL. You are simply comparing the price of labor with the price of farm products?

Mr. LINDER. Yes.

Senator SMITH. What would be your theory of bringing about the right relationship, whatever you might think that would be?

Do you favor Government subsidies?

Mr. LINDER. No, sir; I am opposed to Government subsidies.

In my own opinion, this country has reached a condition where it has got to be saved by strong methods. I do not know of any reason why, if you can go out here and say that the price of hauling a ton of freight from Washington to Atlanta shall be a certain price, or the price of talking on the telephone from Washington to Atlanta shall be a certain price, or that the price of labor shall not be less than 60 cents an hour, I do not know of any reason why you should not say with equal clarity that the minimum price of a pound of cotton shall not be less than a certain figure, or the minimum shall not be less than a certain figure for a bushel of corn.

I do not think it is necessary to have all these Government loans and credit control to do that. You do not undertake to say how many boxcars a railroad shall have or how many it shall not have in order to say the freight rate shall be a certain price; you simply provide a freight rate, and if the railroad has more boxcars than it needs, it simply lets some of them sit on the sidetrack. If you put a minimum price on a farm crop and the farmer had more than that to sell, I do not know of any reason why he should not let the balance of it sit on the sidetrack and wait until the market can consume it.

Senator SMITH. What do you do in case of perishables?

Mr. LINDER. Perishables take care of themselves. In about a week they would be gone.

Senator SMITH. Would the farmer take that loss then?

Mr. LINDER. The Government is doing nothing about that now.

Senator SMITH. I do not quite get your theory.

How are you going to peg your prices?

Mr. LINDER. Just like you do the railroad freight rate; you just simply make a law that a man cannot haul it for less than that amount, and you do not let the railroad haul it for less than that.

If you say a buyer cannot pay less than a certain price for a farm product, you are just doing what you are doing in the other instances.

Senator SMITH. Suppose he will not pay it?

Mr. LINDER. Suppose a man will not pay the freight rate, he just lets the watermelons lie in the field and rot.

I might say in that connection that the American market will consume every pound and every bushel of farm products if you shut out these imports.

Senator SMITH. I am interested in that. The next question is along that line.

Don't you think if we should raise the living standards of all our people by having general wage increases, that there would be a far greater demand for farm products than where people are living just on subsistence levels?

Mr. LINDER. Yes.

Senator SMITH. I have seen figures showing wherever you had high standards of living people bought more foodstuffs than where they just had a margin standard of living.

I have seen figures to indicate where they had high standards of living, there was a rise in consumption of foodstuffs right here at home.

Mr. LINDER. In that connection, I would like to ask permission, as soon as I get them over here—I am having some photostats made now—I would like to have some charts become a part of this record, showing that the over-all factory pay roll is limited by your farm income.

In other words, on account of the national economic law it is impossible for Congress to raise the over-all amount of money that factory workers will receive unless farm income is raised at the same time and to the same extent.

If you raise the per hour wage without providing money to pay the wage, it means that a number of those now employed will get higher wages but a number of those now employed will simply go out of employment and be without any job at all; because the total number of dollars that will be available for the pay roll for factory workers will still be limited by the farm income.

Also, the national income which regulates everybody's profit and everybody's salaries and everybody's wages, is limited to seven times the farm income.

I would like to call the attention of the committee to this fact, which I think is very significant, that the United States Steel Corp. and the Tennessee Coal, Iron & Railroad Co. in this month's issue of the Manufacturers Record, of which I will give you a photostatic copy a little later, came out and endorsed the idea, and said that according to their own investigation that is true.

I assume that when as big a business as the United States Steel Corp. is willing to come out in public print and take a position like that, it at least would be sufficient to prompt an investigation of your body into that fact, that your cash farm income multiplied by seven is necessarily your national income, and that the amount of your farm income is the limit of your factory pay roll; and whether your factory pay roll or your wages are higher or lower will simply determine the number of jobs available and will not increase the over-all pay roll, the sum total of the pay roll.

Senator TUNNELL. Senator Ellender?

Senator ELLENDER. Mr. Linder, industrial wages have increased considerably during the war. What effect did that have on the rise of farm labor costs?

Mr. LINDER. Well, it has increased in my State the cost of farm labor on an average of about a dollar to about $3 a day.

Senator ELLENDER. Do you have any idea whether or not if the pending bill is passed, it will have the tendency of increasing the hourly wage beyond that which prevailed during the war?

78595—45——34

Mr. LINDER. It will do two things, Senator. It will increase the wage that the farmer will have to pay and it will also increase the number of people, laborers, who will be available on the farm, provided, of course, they can get jobs in some of these high-price industrial plants.

Senator ELLENDER. It is your belief, then, if this bill passes it will have the tendency of further increasing the price of farm labor?

Mr. LINDER. Yes; I think it will.

Senator ELLENDER. That is all.

Senator TUNNELL. Thank you, Mr. Linder.

(Charts submitted by Mr. Linder were unsuitable for reproduction and are filed with the record of the hearings.)

Senator TUNNELL. Is Harry Bridges in the room?

TESTIMONY OF HARRY BRIDGES, PRESIDENT, INTERNATIONAL LONGSHOREMEN'S AND WAREHOUSEMEN'S UNION

Senator TUNNELL. Give your name and your position.

Mr. BRIDGES. Harry Bridges, president of the International Longshoremen's and Warehousemen's Union, affiliated with the CIO.

Senator TUNNELL. All right, you may proceed in your own way.

Mr. BRIDGES. Gentlemen, previous witnesses from labor; that is, A. F. of L. and CIO, have testified eloquently and persuasively as to the human reasons why we must move as a nation to abolish the worst aspects of poverty in the United States. Your committee has heard a succession of rank and file witnesses tell the pathetic story of their struggles to live on less than a subsistence wage. Their story has been told in the moving accounts of men and women from the sweat factories, mills, and shops that still spread over our country. There is nothing that I feel need be added to their living, first-hand accounts.

There are human reasons why we must pass this bill to increase minimum wages first to 65 cents an hour and then to 75 cents. These reasons, taken from the day-to-day experience of workers whose daily lot is the most extreme form of exploitation, should weigh heavily in your deliberations on this bill. I know that you have listened to them with sympathy and the desire to do the thing that is in your power to alleviate their lot.

With your permission, I would like to let the human side of the case for this bill rest with the rank-and-file witnesses from American industry who have appeared before your committee. I would like to address myself now more to the cold economics of substandard wages—and of the wage issue as a whole—in my testimony before you. I do this not in any desire to overlook the human issues involved, but rather to supplement them as well as I can with the economic experience of the men and women in the industries covered by the International Longshoremen's and Warehousemen's Union, which I have the honor to represent.

I appear here as the representative of 65,000 members of the International Longshoremen's and Warehousemen's Union, a union representing men and women in the continental United States, Hawaii, and Puerto Rico. Our union voices not only the needs of our own members, but the needs and aspirations of the average American everywhere—including the men who fought to give all working people everywhere a chance at a decent and a secure life.

The objectives of this bill before the Congress now were long ago the objectives of our union. Our union organized, struck, and struggled for the purposes of this bill before wage-and-hour legislation was ever conceived by the Congress. Many years ago, we fought through many bitter strikes. We were shot, clubbed, and gassed because we asked for a shorter workweek and system of hiring that afforded greater work opportunity for the individual worker. We were fighting for jobs and job rights. We fought for these issues as we could not have fought for wages. We won because these rights were so vital they could not be surrendered. In their simplest terms they represented the right to work and the right to a decent family and community life.

Because we have gone through this experience and have a perspective of better than 10 years, I believe our experience is of some value to you. My union fought for and apparently won the 6-hour day for west coast longshoremen in 1934. It still appears in our contract. And yet over the years we have lost it. Longshoremen on the Pacific coast do not have a 6-hour day. They have an 8-hour day with 2 hours' work guaranteed them at time and a half. We fought for the right to work 6 hours and go home. We found we were forced to use our union's economic and political strength to fight for overtime. Less men working, more hours worked. We ended with 9 hours' pay for 8 hours' work at a correspondingly lower hourly rate.

Longshoremen, I should explain, on the west coast, are one division of our union, and they comprise about one-third of our membership. They work in the general distributing industries, waterfront terminals, warehouses handling cold storage, other forms of food, as well as the ordinary public warehouses.

In other words, the general warehousing industry as a whole.

Most of our membership in that part of the industry is closer to tidewater and terminals, rivers, lakes, and sea, you might say.

Senator TUNNELL. I sort of associated the word "longshoremen" with those who load and unload ships. Is that right?

Mr. BRIDGES. Well, generally that is the accepted term, but as the maritime industry changes, and it is changing rapidly, a longshoreman really changes into a freight handler.

Part of his time he can be working at actual longshore work, meaning the actual loading of goods on and off a vessel, and part of his time, mostly now through the development of machinery, technological devices, he is working at other types of work, unloading cars either by better physical labor or by machinery, working in a warehouse, working around docks and terminals.

By the way, industry is progressing; the old term of a longshoreman does not truly describe what the work is or what the individual does. Of course that has been true throughout all the years of the maritime industry.

Originally a longshoreman was what the name implies. He was someone that roamed along the shore looking for work on an old sailing ship when it came into port. Generally the crews of the ships used to do the work and the longshoreman was a roustabout, picking up a job here and there mostly when the members of the crew were drunk, and were not available, and I am sorry to say it happens even now.

Senator TUNNELL. Do they still do that?

Mr. BRIDGES. Yes; now and again I see a seaman get drunk.

We attempted through a well-organized union, some 10 years ago to do in essence what this bill seeks to do, to reduce the hours of work and at the same time to give working people mainly a decent and normal way of life.

We went into a big strike in 1934, and we had written into the contract that came out of that strike, as the result of a decision by an arbitration board, a 6-hour day.

That 6-hour day is still in our contract. It was our purpose at that time to have a 6-hour working day, meaning the men would work 6 hours and go home. It was hard work, and although their wages might not be as much as if they had worked overtime, we thought that the gains of a short working day at hard work, and some time at home, counterbalanced what extra money might be made through working overtime.

However, that is not the way it worked out. The longshoremen at the present time on the Pacific coast do not have the 6-hour day, they have the 8-hour day, with 2 hours of work guaranteed them at time and a half.

We fought for the right to work 6 hours and go home. We were forced to use our union's economic and political strength to fight for overtime—in other words, less men working with more hours of work. What we ended up with was, in effect, a provision in our contract guaranteeing our men 8 hours if work was there, with 6 hours of it paid at a straight hourly rate and the other 2 hours at time and a half.

Senator ELLENDER. What is the hourly rate now and what was it then?

Mr. BRIDGES. At the present time, it is $1.10 per hour, and at that time it was 85 cents an hour.

Senator ELLENDER. That is back in 1934?

Mr. BRIDGES. Back in 1934; yes, sir.

Senator ELLENDER. What position did your organization take with respect to the present wage-and-hour law when it was being considered by Congress?

Mr. BRIDGES. Of course, we supported it.

Senator ELLENDER. Did any of your members appear before the Education and Labor Committee in support of it?

Mr. BRIDGES. Not directly. I think we were represented by our affiliated groups. Our union did not, itself, appear.

Senator ELLENDER. How would this bill affect your organization?

Mr. BRIDGES. Well, in terms of wages, that is the 65 cents an hour, it would only affect a very small number of the workers organized in our union.

Senator ELLENDER. What effect would it have in upping the present hourly rates that are being received by your membership?

Mr. BRIDGES. It would not have a great effect. That is, if what you mean is those members in our union who are getting less than 65 cents an hour now, as to how many of them would be affected, not a large amount, but some of them would.

Senator ELLENDER. What percentage, do you know?

Mr. BRIDGES. Offhand I could not say. It would be purely a guess. But we have members right here in this city, members of our union working in warehouses where their wages probably average around 40 cents. It would affect them. It would mean a 25-cent-an-hour increase in wage.

Senator ELLENDER. When you say that hourly wages were 85 cents in 1934, you mean on the Pacific coast?

Mr. BRIDGES. I was confining this particular statement to one group of our workers, namely, the Pacific coast longshoremen.

Senator ELLENDER. Do you know what the rates were in other parts of the country?

Mr. BRIDGES. For the same work?

Senator ELLENDER. Yes; the same class of work.

Mr. BRIDGES. I cannot quite remember it. In some places it was higher, I think, or the same. I think in the North Atlantic ports of the United States the rate was either the same or 5 cents an hour more. In the South Atlantic ports, I think it was less, either 15 or 20 cents an hour less, and in the Gulf ports it was also less, either 5, 10, or 15 cents an hour less.

Senator ELLENDER. You mean less than 85 cents?

Mr. BRIDGES. Yes; I think it was something like 70 or 75 cents.

Senator ELLENDER. What do you mean when you say that some were receiving 40 cents?

Mr. BRIDGES. Well, I was talking about that part of our membership that at the present time receive 40 cents an hour. We have workers affiliated with our organization in the city of Washington here whose wage rates right now are 40 cents an hour.

Senator ELLENDER. They are not longshoremen, they are just members of the CIO group?

Mr. BRIDGES. They are members of our union and of course indirectly members of the CIO. They are warehousemen.

Senator ELLENDER. Warehousemen?

Mr. BRIDGES. Yes.

Senator ELLENDER. I see. The differential then between those members of the group, that is, the warehousemen, and the longshoremen is 60 some-odd cents?

Mr. BRIDGES. At the present time, it is 70 cents.

Senator ELLENDER. Seventy cents, all right. Now, if Congress should raise the minimum wage of the membership of your union that is now receiving 40 cents per hour to as much as 75 cents what, in your opinion, would be the effect in causing the raising of wages of those in the upper brackets?

Mr. BRIDGES. No effect at all, unless we adopted a wage policy that said that the men getting $1.10 or $1.15 an hour should get an increase because workers that are getting 40 cents an hour are getting an increase. We would try to take the lower brackets and get them to the $1.10 rate, instead of taking the $1.10 bracket and get them up higher.

Senator ELLENDER. Doesn't it usually follow that whenever a particular group in a union gets a raise in wages that others in the upper brackets succeed in having their wages raised?

Mr. BRIDGES. Not in our unions, Senator. It does not follow in our union; it might in some, but, in my experience, it generally does not follow in our union.

Senator ELLENDER. When you say your union, you mean the Pacific coast union, or do you mean the CIO or all of the unions affiliated with the CIO?

Mr. BRIDGES. In this case, I mean the organization that I am an official of, the International Longshoremen's and Warehousemen Union.

Senator ELLENDER. Yes.

Mr. BRIDGES. To go back, although we started and fought for a 6-hour day we finally ended up with actually an 8-hour working day with 9 hours' pay.

Senator TUNNELL. Well, you did get a 6-hour day on straight time.

Mr. BRIDGES. That is right. That is the point. We got a 6-hour day on straight time, but the straight time rate was so long that there was not sufficient money for the men to live on, and they were not only forced to work overtime, they were forced to fight for the right to work overtime. Fighting for the right to work overtime is really the same as the union, or any organization, fighting for, or this Senate committee thinking of passing, a law that will create unemployment. That was our experience.

This experience was an instructive one for us and we will not make the mistake a second time. We offer this experience to the committee, in the hope that through suitable legislation, workers may get what inevitably they will be forced to seek through strikes. We offer this experience to the committee because it affords a clear and concise illustration of a grave inadequacy in past wage and hour legislation and, I am sorry to say, in the proposed legislation which you are now considering. The simple fact is that the overtime penalties provided in the present act are totally inadequate and the proposed legislation does not cure that defect.

Now, overtime rates really reduce wages and they cause unemployment. In a nutshell, that has been our experience in dealing with this problem.

Senator TUNNELL. What do you mean by that? I don't understand you.

Mr. BRIDGES. Well, I posed the question in that way in the hopes you would ask me just that, Senator. It is just as I have told you. Generally, throughout American industry straight-time rates for workers are so low that the income must be added to in order that a decent living wage is made. The usual term for it is take-home wages. Now, what is happening in the Nation today and what is underlying all these strikes today is that the overtime has been taken away from the workers and therefore their wages, in effect, have been reduced. They are all asking the same thing in principle, and correctly so. They want the 48-hour or 52-hour take-home wages that they were earning during the war for 40 hours of work. Therefore, it reduces the number of hours they are required to work a week to make a living wage and they get a higher basic or higher straight-time rate. Our experience with workers is if they get something like that they do not want to work overtime. The only reason overtime is worked is not to benefit the worker in any way, it is extra exploitation of the worker solely in the interest of profit, in the interest of industry and to the detriment of the worker, and that is detrimental to all phases of the worker's life.

Senator TUNNELL. And they had to fight for what would be detrimental to them?

Mr. BRIDGES. That is exactly what has happened in the last few years. That is based on my judgment and experience in the labor movement. In effect, it is something that is probably being considered here. I do not know what testimony has been offered in this sense—as far as I know not a great deal—but the purpose of my statement is to point out to the committee that overtime rates after 40 hours

in the wage and hour law are for the purpose of discouraging overtime. It has not done that.

Senator ELLENDER. That came about, of course, because of the war and the shortage in the labor market, did it not?

Mr. BRIDGES. Well, I think the war situation is an exceptional one. Certainly, during the war we offered no opposition to the working of longer hours.

Senator ELLENDER. You would not say that the present wage and hour law has had a fair trial, would you?

Mr. BRIDGES. I think it has had enough trial for our purposes, that is, meaning "our purposes" in the sense that we can look it over now and see what weaknesses it has and what changes it needs; and I am merely trying to suggest some changes that I think will create employment and afford a better way of life for the majority of the workers.

Senator ELLENDER. What effect will the provision in the bill we are now considering have on unions when the advisory committees under the law can go into any industry and maintain reasonable wage differentials between interrelated job classifications?

Mr. BRIDGES. There is nothing wrong in the committees doing that. I do not quite get your question, sir.

Senator ELLENDER. Under the bill, as I understand it, not only is a minimum wage fixed, but the advisory committees created under the bill will have the right to classify all jobs in an industry and establish wage differentials as to each classification.

Mr. BRIDGES. That is correct. That is just another way of saying a minimum wage is set and that minimum wage is based, generally speaking, I would say on living costs. It is another way of saying this is the minimum amount that a worker should get, no matter what he does, it may be purely unskilled labor, because he needs that to live on, and it is darn little at that.

Senator ELLENDER. The bill goes further than that. If this bill goes through as written it will mean that if the wages are raised, let us say 40 percent, that same percentage can be carried on by the advisory committees into all groups in the higher brackets.

Mr. BRIDGES. Yes.

Senator ELLENDER. All upper brackets.

Mr. BRIDGES. That is right, but on a different basis. It can only be carried on by the advisory committee after taking into consideration the training and skill of the worker, the value of a worker to a particular industry or operation.

Senator ELLENDER. But you are doing that now by means of collective bargaining.

Mr. BRIDGES. That is correct.

Senator ELLENDER. It is going to be done by law if the bill under discussion is enacted by Congress.

Mr. BRIDGES. It means it will allow the law to give collective bargaining a little help. Sometimes it does and sometimes it doesn't. My experience with collective bargaining is it depends upon the discipline and strength of the union that is doing the bargaining. It is generally true if the union is strong enough to take care of itself and knows how to take care of itself, it does not need the law. If it uses the law it would use it when it wants it, and it uses it in a helpful and constructive fashion.

Senator ELLENDER. You do not fear the effects on unionism if a Government agency steps in and establishes wages in place of the unions?

Mr. BRIDGES. Not our union.

Senator ELLENDER. Not yours. Yours is the most powerful in the country.

Mr. BRIDGES. I would not say that.

Senator ELLENDER. Judging from past performance I would say it is, because you usually get what you go after or else——

Mr. BRIDGES. That has not been the experience of our union. I just tried to testify here that we did not get what we wanted; we got something entirely different.

Senator TUNNELL. This bill, if enacted into law, covers more than union labor, does it not?

Mr. BRIDGES. It does. It covers unorganized labor. That is an important aspect of this bill. It covers people who have no protection until the time they are organized, which time maybe is not too far off. They actually need the protection of a law like this, in order that we can create more work and along with that better living standards. The lack of a higher minimum wage in certain sections of the United States right now is throwing our west coast longshoremen and warehousemen out of business.

Senator ELLENDER. How?

Mr. BRIDGES. Well, 2 or 3 weeks ago, Senator, in San Francisco I was a cochairman of a panel on labor and management. There was a northern California conference or forum called by the San Francisco Chronicle, sponsored by it. It was divided into five panels: One on labor-management, one on development of urban relationships, one on the relationships of farmers to Government and industry and labor, and so forth.

Now, it so happened that in the panel that dealt with agriculture—and that was very representative of agriculture in northern California—Mr. Ray B. Weiser, of the California Farm Bureau, who reported for the panel, actually came out and said in the interest of the farmer of California, there had to be an increase of at least 50 percent in the minimum wage. Now I sat in the panel for a while and I heard the various employers of farm labor get up and state that large areas of California were given over to producing beans, black-eyed beans and other types of beans, and a great part of the market is in certain southern areas of the United States; and the problem is that the workers in the southern areas cannot buy enough beans because they haven't got enough money, and therefore the farmers in California cannot sell their beans, and we cannot load them on boxcars or on ships or barges, so our men are out of work.

Senator ELLENDER. I do not quite get that. How much more freight tonnage is a longshoreman able to handle now from what he did in the past, due to technological advances; do you know?

Mr. BRIDGES. No one knows that. We have been trying, and I have approached the Department of Labor, and Admiral Land of the War Shipping Administration to have a study made, to do a job of research in order to ascertain just that, and no facts like that are available. Some facts have been developed during the war, but I do not think there are any facts available in any industry to bring it down to fine detail.

Senator ELLENDER. How many more or less men were employed during the war to handle the huge cargoes that were shipped across the seas in contrast to the number employed before the war, do you know?

Mr. BRIDGES. Well, I can answer that question for the Pacific coast ports. They moved a tremendous volume of freight. I would say roughly about two and one-half times more.

Senator ELLENDER. With more men employed?

Mr. BRIDGES. That is right.

Senator ELLENDER. More men engaged today or during the war than were employed before the war?

Mr. BRIDGES. That is right. That does not say that the volume of freight was not over two and a half times as great. It was much greater.

Senator ELLENDER. That is what I am getting at.

What is the difference in the volume of freight handled during the war and the volume handled before the war, do you know?

Mr. BRIDGES. I do not know, sir. A lot of the figures on that, after all, are confidential. They can be gotten, I believe, but much of it is military and naval information. I know the increase was tremendous. I know for one period out of the port of San Francisco alone, for about 4 months, more freight moved through the port of San Francisco than all of the other ports of the United States put together.

Senator ELLENDER. Well, have the loading and unloading facilities on the west coast been improved during the war?

Mr. BRIDGES. Very little.

Senator ELLENDER. So that technological advancement has not made much progress during the war.

Mr. BRIDGES. That is right.

Senator ELLENDER. Would you say that it would require the same number of men to handle the same amount of freight before the war as would be needed after the war?

Mr. BRIDGES. Well, no. I think the number that will be required after the war to handle the same amount of freight as was handled before the war will be less, because there have been certain improvements. For example, there have been certain improvements in ships.

Senator ELLENDER. That is what I was attempting to develop. In other words, there have been such technological improvements during the war that more freight will be handled from now on with less people than was the case before the war?

Mr. BRIDGES. That is absolutely true. We have got a long way to go, because improvement in technological devices and other facilities have barely gotten started. There will be tremendous improvement.

Senator ELLENDER. What effects do high wages have on the development of technological improvements to save labor?

Mr. BRIDGES. Well, I turn it around. I say, what effect does technological improvement have on high wages?

Senator ELLENDER. Put it any way you want. You have had a lot of experience in that field.

Mr. BRIDGES. Well, technological improvements of course, cut wages and they reduce the size of the labor force.

Senator ELLENDER. They not only reduce the size of the labor force but the per unit cost to handle it is cheaper, is it not?

Mr. BRIDGES. That is true, definitely.

Senator ELLENDER. Don't you know that what causes this technological advance is the fact that employers are forced at times to pay higher wages than they are able to bear?

Mr. BRIDGES. No, I do not know that. I think it has gotten to be a rule if any employer can prove on the record that he lacks the ability to pay wages, that is taken into consideration by the people asking the higher wages.

Senator ELLENDER. Under this bill the employer does not have a chance to do that.

Mr. BRIDGES. This is a minimum-wage bill.

Senator ELLENDER. I know that.

Mr. BRIDGES. Thinking of a minimum wage in terms of a wage that barely produces or purchases the bare necessities of life—if an employer is going to say, "I want to stay in business at a price of not being able to pay workers what will give them the bare necessities of life," I do not believe such an employer should be in business.

Senator ELLENDER. You stated that some members of your union today are not getting more than 40 cents, and there must be some reason for it, and one reason for it must be that the employer cannot pay it.

Mr. BRIDGES. That is not the reason.

Senator ELLENDER. Otherwise, you would force him to pay at least the amount received by your membership for the same work on the Pacific coast.

Mr. BRIDGES. Not necessarily. We did not call a strike during the war.

Senator ELLENDER. However, that is the way by which you obtain your higher wages, generally speaking. I am sure that if you, as a leader of a labor union, could force employers in Washington or New Orleans who are now paying 40 cents to pay more, that you would force them to do so, would you not?

Mr. BRIDGES. That is not exactly what we are doing here, Senator.

Senator ELLENDER. No, no, there is a difference. You are coming here and asking Congress to do it by law. In other words, you are asking Congress to do by law what you have not been able to do by collective bargaining.

Mr. BRIDGES. I did not mean to put it that way.

Senator ELLENDER. That is what you are doing. That is exactly what you are doing.

I repeat, the reason why you have not been successful, to my way of thinking, and when I say "you," I mean the unions—and they include not only the CIO but the AFL—in raising wages higher than 40 to 45 cents or more is because the employers could not bear the traffic?

Mr. BRIDGES. That is not so, Senator, not in our experience. Let us not start at 40 cents. We have succeeded in raising these wages from about 25 cents to 40 cents, and we intend to go further. It is true I am here pointing out we would be very pleased to have a law that would raise wages from 45 to 65 cents.

Senator ELLENDER. Of course, you would.

Mr. BRIDGES. That does not at all mean we would cease trying to get it by collective bargaining.

Senator ELLENDER. I would, too, if it were economically feasible. But the point I am trying to make with you is this: You have today, in many unions, as you just indicated in your own group, men receiving 40 cents an hour.

Mr. BRIDGES. That is right.

Senator ELLENDER. Now, why is it that you have not gotten more for them?

Mr. BRIDGES. Well, that is a long story.

Senator ELLENDER. What was it due to?

Mr. BRIDGES. It is not because the employers could not pay, that I do know. Now, it might be due to the fact, Senator, that during this war we had a no-strike pledge, and throughout the entire history of the war from 1940 on there has not been one stoppage of work by our union. We at no time resorted to the use of that weapon, and we might not resort to it in the postwar, either.

Senator ELLENDER. Let us revert to a period before the war. You stated that before the war you had some of your employees receiving 85 cents per hour.

Mr. BRIDGES. That is right.

Senator ELLENDER. Then, you had, at other ports such as New Orleans, or maybe at Gulfport, Miss., or maybe here in Washington, some who were receiving less than 40 cents an hour.

Mr. BRIDGES. That is true.

Senator ELLENDER. Why did you not try to obtain an upping of the wages in those sections at the same hourly wages that you succeeded in obtaining on the Pacific coast?

Mr. BRIDGES. Well, we tried to get an increase in wages, but not the same heights.

Senator ELLENDER. Why?

Mr. BRIDGES. After all, the 85-cent rate was paid to a group of men who are engaged in an industry where a certain set of factors had to be figured in computing that rate. Another group of people might be working in another industry where a different approach has got to be made in fixing their wage rates. But all along the line we sought to increase the wages of the men in the union, particularly those in the low brackets. We spent much more time and energy in the union trying to bring up the wages from 25 to 30 and around 40 cents than the wages of $1.10.

Senator ELLENDER. Before the war you made attempts to up wages and you were not successful?

Mr. BRIDGES. That is not so.

Senator ELLENDER. How is that?

Mr. BRIDGES. That is not so. We are generally being successful in our attempts to up wages.

Senator ELLENDER. When I say "upping them" I mean on the same level as these paid to your best-paid groups, that is what I mean. In other words, you have a group of employees on the Pacific coast that receive, let us say for argument's sake, 75 cents.

Mr. BRIDGES. Yes.

Senator ELLENDER. That same group—that is, a group doing the identical class of work down south, in New Orleans, or Mobile—is receiving 60 cents.

Mr. BRIDGES. Yes.

Senator ELLENDER. Why did not you succeed in making both groups receive the same wages for the same class of work?

Mr. BRIDGES. Well, it would be very nice.

Senator ELLENDER. I say, why did not you make them both the same? Why isn't it possible—let me put it that way—to force employers of the South to pay the same rate of pay for the same class of work as employers of the west coast?

Mr. BRIDGES. Well, of course, I really do not know which group of workers you are talking about. If you talk about the 85-cent group, the reason we have not been able to do it is because we have not gotten it across to the minds of another union that does not seem to be making a great deal of headway.

Senator ELLENDER. They are not as powerful as you are.

Mr. BRIDGES. They are much more powerful, Senator.

Senator ELLENDER. The point I wanted to make is this, and I am sure you will concede it, that your union as well as other unions have been unable to obtain the same rate of pay for the same class of work all over the country; isn't that true?

Mr. BRIDGES. I think that is true. I think that is certainly true.

Senator ELLENDER. What is the difference, in the amount of wages that is paid per hour, for the same class of work, let us say, for New Orleans, in contrast to the west coast or New York or Savannah?

Mr. BRIDGES. I think the reason for it is——

Senator ELLENDER. I am not asking you for the reason. What is the difference; do you know?

Mr. BRIDGES. Between the hourly pay?

Senator ELLENDER. Between the hourly pay for the same kind of work.

Mr. BRIDGES. I do not know.

Senator ELLENDER. Well, it varies considerably, does it not?

Mr. BRIDGES. That would depend. It would depend upon the degree of union organization. In the categories of work I know about it is the same or more.

Senator ELLENDER. The point is, though, they vary a great deal, don't they?

Mr. BRIDGES. I say where workers are organized in New Orleans or other places down there, it is the same or more.

Senator ELLENDER. Have you any union affiliates in New Orleans?

Mr. BRIDGES. Yes.

Senator ELLENDER. Very well. Were the members of your unions in New Orleans paid the same rate per hour before the war for doing the same work as those on the California coast?

Mr. BRIDGES. No.

Senator ELLENDER. What was the difference?

Mr. BRIDGES. The difference was——

Senator ELLENDER. I mean in pay.

Mr. BRIDGES. I cannot recall. There was quite a difference.

Senator ELLENDER. I do know there is quite a lot of difference. I cannot give it to you percentagewise, but I do know it was considerable. Here is what you are proposing: You are advocating that we write into the law a formula that you have not been able to attain in the past; that is, fixing rates on the same basis all over the country.

Mr. BRIDGES. I think you might say that is true nationally of the minimum wage. We have workers in New Orleans organized, in our union today, getting more than the amount advocated in the minimum-wage law; that is, a raise from 40 to 65 cents.

Senator ELLENDER. If that happens the next step will be to have the advisory committees maintain reasonable wage differentials between interrelated job classifications. It simply means, in my opinion, that these advisory committees will fix wages in the upper brackets and give the same increase or percentage of increase in pay as is provided in the pending bill.

Mr. BRIDGES. That is true.

Senator ELLENDER. And you think that such a method will result in a healthy situation?

Mr. BRIDGES. Well, I am applying myself to certain other aspects of the legislation. But talking about a healthy situation, what that means to me, Senator, is that it will prevent an employer, for whatever reasons he may choose, to take all classifications of labor, skilled and highly skilled, and say, "I am only going to pay you so much," and that is the minimum amount.

Senator ELLENDER. That is already fixed by unions.

Mr. BRIDGES. Only if unions are organized in those particular areas and only if unions are allowed to operate by law in those particular areas.

Senator ELLENDER. And where they are organized it is going to affect them also, because these committees can step in and fix hourly wages according to a formula of their own choosing.

Mr. BRIDGES. That might be true.

Senator ELLENDER. Do you think that is all right.

Mr. BRIDGES. I see nothing wrong in taking any formula which is permissible under collective bargaining and applying it to the situation.

Senator ELLENDER. They determine it, and in doing so we are drifting away from collective bargaining.

You are advocating a law putting all employers in a strait-jacket whether they are able to pay or not. We have not been able to find out up to the moment what effect the upping of wages from 40 to 65 cents and up to 75 cents is going to have on industry. We haven't any positive evidence in the record. Yet you and others are advocating that the Congress pass a law without in any manner studying the effect that such a law will have on other industries, industries that produce the materials from which everything you are wearing is made.

Mr. BRIDGES. You are wrong. Before I came here I checked and consulted with farmers.

Senator ELLENDER. Where?

Mr. BRIDGES. In California.

Senator ELLENDER. Have you checked it with farmers in the South, in the East, and in the North?

Mr. BRIDGES. No. I can only give you the experience that I have. I know that these farmers at least advocated an increase in wages so that they can sell their products.

Senator ELLENDER. Yes.

Mr. BRIDGES. Now, I presume that is good legitimate business, and there is no question about what this law means. It does in effect what you say. It says to all employers in the United States that for any type of labor at all they cannot pay less than 65 cents an hour, because that is what it takes a person to live on. I am all for such a law. It is not only a good law, but it is necessary for not only labor that has to have enough to live on in the United States today, but it is necessary for full employment and it is necessary if business is going to make a profit.

Senator ELLENDER. How are you going to protect the millions of pensioners in this country who are receiving a fixed amount? We have a lot of Confederate veterans in the South receiving from $30 to $60 per month, and we have a lot of soldier boys receiving $110 as a maximum, I believe. We have millions of school teachers who receive a pittance in wages per month. They are unable to have their salaries raised because they get theirs out of taxes. We have millions of clerks working throughout the country in all the retail stores and wholesale stores, all of whom are not protected under the pending bill. I want you to tell me what will become of their standard of living if you up industrial wages so that it increases their cost of living, as you know it will, if this bill goes through?

Mr. BRIDGES. I do not agree it will increase the cost of living. As for pensioners, I am for more liberal pensions for veterans as well as our senior citizens, and for teachers and other professional people of that nature.

Senator ELLENDER. Industry does not provide for them. They have got to get it by way of taxation.

Mr. BRIDGES. You mean the teachers have got to get it from taxation?

Senator ELLENDER. The teachers do.

Mr. BRIDGES. I think if it is presented to the American people, if we went to some of the people——

Senator ELLENDER (interposing). When you say "we," whom do you mean?

Mr. BRIDGES. The people in the trade-unions.

Senator ELLENDER. I see. In getting yours you hold a stick over the head of your employer or quit and——

Mr. BRIDGES. No; we do not do that, Senator. We simply go to the people with what we believe is a fair argument. Here are the school teachers. They are responsible for a great deal of the training and discipline of our children. Now, a teacher cannot do a good job if all day long he or she is worried about where the next meal is coming from. So, it is a simple thing to say to parents of children, "Don't you think teachers, after all the training and the responsibilities they have, should be paid enough to live on, even if they get paid out of your taxes?"

Senator ELLENDER. But when you go before a State legislature you know what they do.

Mr. BRIDGES. That is not the real reason. I find out lots of times they do not trust the people in the State legislatures. They figure they are taxing them for this, but they are using the taxes for something else. If they were sure the taxes they paid were going to be used for these things, I do not think there would be any trouble.

Senator ELLENDER. Is this your considered judgment?

Have you made studies of the subject? When I say "studies," I do not mean such as you made in California. I think somebody testified here, Senator Tunnell, that the State of California had the highest standard of living of any State in the Union. All employers pay wages and salaries much higher than those in other States.

Mr. BRIDGES. That is because it is well organized, Senator.

Senator ELLENDER. Do you think so?

Mr. BRIDGES. I know so. Our studies tell us that. We get in no argument. The employers and farmers agree with us.

Senator TUNNELL. Isn't this your position, Mr. Bridges, that 65 cents is the minimum on which a person can rear a family?

Mr. BRIDGES. Yes; that is really it.

Senator TUNNELL. That is the minimum?

Mr. BRIDGES. Yes, and that is an awful struggle, and the family will not be reared in the true American sense, I would say.

Senator TUNNELL. And in obtaining that 65 cents, it is your position that you prefer a statute to a strike?

Mr. BRIDGES. That is right. That is exactly what my testimony is.

Senator MORSE. Are you not willing to admit, Mr. Bridges, that in some sections of the country the employers are still too strongly organized for the unions?

Mr. BRIDGES. Absolutely, Senator Morse; in an economic and political sense.

Senator MORSE. As I understand your theory, where you find that you are not in an equal bargaining position with the employers with the result that a wage below the standard of health and decency is paid, then it is an obligation of the Government to come to the aid of those workers?

Mr. BRIDGES. We believe so, in the interest of the Nation as a whole. That is exactly it.

Senator TUNNELL. Are there other questions?

Mr. BRIDGES. Well, I would like to be able to develop the other parts of this bill.

Senator TUNNELL. All right.

Mr. BRIDGES. Particularly on this question of the purpose of the overtime rate in the bill.

The avowed purpose of the penalty rate of time and one-half was to make overtime prohibitive in cost and to provide additional employment opportunities by confining the work week by individuals to 40 hours. The act simply did not achieve its purpose. By and large, it remained profitable to employ individuals for more than 40 hours per week and so long as there is profit to be made out of overtime work, the overtime penalty rate will fail to achieve its only legislative purpose. This leaves strikes as the answer.

The legislative approach to this problem, the wage and hour legislation attempts to eliminate overtime by laying down a certain penalty rate for working overtime, such as time and a half. If that fails in its purpose it only leaves one answer to the workers, and that is what they cannot get by legislation they are going to get by fighting, by strikes, and not strikes for wages, but strikes for work at a minimum straight-time rate, and not overtime. There is the point, and what I am saying here is that I hope that this type of legislation will receive consideration, because I believe the Congress, if it takes a position that the purpose of this bill was to prohibit overtime and not to encourage it——

Senator TUNNELL (interposing). You are saying something which no witness has said exactly, and I am glad to hear you speak of it.

You are drawing a distinction between an hourly rate pay and a total pay.

Mr. BRIDGES. That is right, total pay that must be gotten by working overtime and living an abnormal life.

We did quite a little research work on it, and we find it goes in every direction. There is a big problem in the United States now. It is called juvenile delinquency. That is a simple term.

Senator TUNNELL. I have heard of it.

Mr. BRIDGES. If we got into what causes juvenile delinquency we would find the biggest factor is the absence of the parents from home in the daytime and nighttime hours, and therefore they are unable to provide the proper care and training of the children. We know that.

A bill or legislation that not only does very little to stop the working of overtime but actually encourages it, contributes to the delinquency of these children.

Here we are talking about legislation that tends to encourage and support juvenile delinquency. Overtime work is one of the greatest contributing factors, or the shift work, working day and night, one of the greatest contributing factors to juvenile delinquency. Therefore, we can actually link the growth in juvenile delinquency to the desire of industry of the United States to get the most out of its capital by working 24 hours a day and working overtime. That is where we trace it back to.

What we are really suggesting is the abolishing of all overtime work in American industry by law.

Senator TUNNELL. Does not the payment of overtime imply a strain on the individual?

Mr. BRIDGES. It does not only imply it but it actually causes it, Senator.

If a man is on a job where there is precision work requiring concentration, or where it is hard physical work, at the end of 10 hours work, which is 8 hours straight time and 2 hours overtime, he is not doing his best job.

Senator TUNNELL. What is the excuse for paying time and a half unless you are paying somebody to do something that he is able to do?

Mr. BRIDGES. It so happens that despite losses of efficiency because of working long hours, there is still tremendous profit for industry in working overtime. Not only paying the time-and-a-half rate, but industry can pay double time today and make tremendous profit out of working people overtime.

Senator TUNNELL. Do you mean that generally?

Mr. BRIDGES. I mean that generally.

All the industries that we have looked into, as well as the Federal Government, have already gone into this question, and we have certain statistics.

I will quote some of them here.

The modern manufacturer has a large capital investment in his enterprise. It makes no money for him while it lies idle. All of the force of the profit motive presses for more complete utilization of his plant and his capital equipment, and therefore for the employment of his working force longer hours. Unless the overtime penalty is high enough to eliminate profit from overtime work this pressure will prove irresistible and the purposes of the act will be defeated.

In other words, if you eliminate overtime, shorten the hours of work, you will get the American people, particularly the workers, to live in a more normal way, not working nighttime when they should be sleeping, or working on Sundays, or long hours.

In 1941 the Bureau of Labor Statistics published a study, and I refer to Overtime Pay in Relation to Costs and Profits, Monthly Labor Review, July 1944, pages 9–17, which bears directly on this point and which should weigh heabily with you in your present deliberations. The study set out to learn what effect overtime pay had on profits. It used the official figures, of the Federal Trade Commission for 1939, a prewar year. It covered 260 corporations, with sales of over $11,000,000,000. It assumed that labor would be 20 percent less productive during overtime hours.

The conclusions are striking. Even with a 20-percent loss of efficiency, the earnings of these corporations would increase by more than $75,000,000 in this 1 year if hours were increased from 40 to 48 will full overtime at time and one-half. The report concludes:

> * * * the payment of overtime rates under the Fair Labor Standards Act is more than counterbalanced by the increased utilization of plant facilities and the absorption of fixed overhead expenses in a larger volume of production.

The opportunity to net a cool 75 million by employing workers during overtime at time-and-a-half rates is no great deterrent. It is a money incentive to work overtime, to spread unemployment, to lay the basis for future wars.

We must return to the original purpose of the overtime provisions of the Fair Labor Standards Act—the prevention of overtime—and ask ourselves the question: "Has it worked?" The answer clearly is that it has not worked and will not work until the penalties are made severe enough so that there are no longer any incentives for overtime work. I urge this committee to report a bill which will increase the overtime penalty to a minimum of double time.

Frankly, my union would really like to see your committee report a bill that would totally abolish overtime work throughout all American industry, making allowances, of course, for certain operations in industry that must continue day, night, and Sundays. My union, in one industry where large numbers of our members are employed—and that is the longshore industry—is now asking our employers to do by contract what has not been done by law—abolish overtime.

There is a second lesson to be drawn from the experience of the longshoremen with the 6-hour day supported only by a time-and-one-half penalty. As I have already said, the 6-hour day broke down and resulted in an 8-hour day with 9 hours' pay. Our own longshoremen contributed to that break-down. The wage rate was low, the take-home was miserably inadequate. The men themselves began to demand an opportunity to work overtime to increase their earnings. Although the remedy lay in an increase in the wage rate, the same pressure could be satisfied by increasing the overtime hours—and this is precisely how it was done.

In other words, here we had an example of a union in effect being forced to use its economic and political strength fighting for the right to work overtime, and working more overtime; or, in another sense, fighting against a decent and normal way of life for its members.

Senator MORSE. Mr. Chairman, although I am not a member of the committee, and I have to impose upon the committee, I think there is a corollary to this problem, and I would like to hear from Mr. Bridges on that.

Mr. Bridges, you were talking about eliminating overtime. You cannot ignore, it seems to me, the need in this country for maximum production. As I see it, we are not going to solve our debt problem, and we are not even going to solve our employment problem, unless we adopt policies that are going to produce the maximum of production, because the only way we can cope with the economic handicaps

78595—45——35

INTENTIONAL SECOND EXPOSURE

Senator TUNNELL. I have heard of it.

Mr. BRIDGES. If we got into what causes juvenile delinquency we would find the biggest factor is the absence of the parents from home in the daytime and nighttime hours, and therefore they are unable to provide the proper care and training of the children. We know that.

A bill or legislation that not only does very little to stop the working of overtime but actually encourages it, contributes to the delinquency of these children.

Here we are talking about legislation that tends to encourage and support juvenile delinquency. Overtime work is one of the greatest contributing factors, or the shift work, working day and night, one of the greatest contributing factors to juvenile delinquency. Therefore, we can actually link the growth in juvenile delinquency to the desire of industry of the United States to get the most out of its capital by working 24 hours a day and working overtime. That is where we trace it back to.

What we are really suggesting is the abolishing of all overtime work in American industry by law.

Senator TUNNELL. Does not the payment of overtime imply a strain on the individual?

Mr. BRIDGES. It does not only imply it but it actually causes it, Senator.

If a man is on a job where there is precision work requiring concentration, or where it is hard physical work, at the end of 10 hours work, which is 8 hours straight time and 2 hours overtime, he is not doing his best job.

Senator TUNNELL. What is the excuse for paying time and a half unless you are paying somebody to do something that he is able to do?

Mr. BRIDGES. It so happens that despite losses of efficiency because of working long hours, there is still tremendous profit for industry in working overtime. Not only paying the time-and-a-half rate, but industry can pay double time today and make tremendous profit out of working people overtime.

Senator TUNNELL. Do you mean that generally?

Mr. BRIDGES. I mean that generally.

All the industries that we have looked into, as well as the Federal Government, have already gone into this question, and we have certain statistics.

I will quote some of them here.

The modern manufacturer has a large capital investment in his enterprise. It makes no money for him while it lies idle. All of the force of the profit motive presses for more complete utilization of his plant and his capital equipment, and therefore for the employment of his working force longer hours. Unless the overtime penalty is high enough to eliminate profit from overtime work this pressure will prove irresistible and the purposes of the act will be defeated.

In other words, if you eliminate overtime, shorten the hours of work, you will get the American people, particularly the workers, to live in a more normal way, not working nighttime when they should be sleeping, or working on Sundays, or long hours.

In 1941 the Bureau of Labor Statistics published a study, and I refer to Overtime Pay in Relation to Costs and Profits, Monthly Labor Review, July 1944, pages 9–17, which bears directly on this point and which should weigh heabily with you in your present deliberations. The study set out to learn what effect overtime pay had on profits. It used the official figures, of the Federal Trade Commission for 1939, a prewar year. It covered 260 corporations, with sales of over $11,000,000,000. It assumed that labor would be 20 percent less productive during overtime hours.

The conclusions are striking. Even with a 20-percent loss of efficiency, the earnings of these corporations would increase by more than $75,000,000 in this 1 year if hours were increased from 40 to 48 will full overtime at time and one-half. The report concludes:

> * * * the payment of overtime rates under the Fair Labor Standards Act is more than counterbalanced by the increased utilization of plant facilities and the absorption of fixed overhead expenses in a larger volume of production.

The opportunity to net a cool 75 million by employing workers during overtime at time-and-a-half rates is no great deterrent. It is a money incentive to work overtime, to spread unemployment, to lay the basis for future wars.

We must return to the original purpose of the overtime provisions of the Fair Labor Standards Act—the prevention of overtime—and ask ourselves the question: "Has it worked?" The answer clearly is that it has not worked and will not work until the penalties are made severe enough so that there are no longer any incentives for overtime work. I urge this committee to report a bill which will increase the overtime penalty to a minimum of double time.

Frankly, my union would really like to see your committee report a bill that would totally abolish overtime work throughout all American industry, making allowances, of course, for certain operations in industry that must continue day, night, and Sundays. My union, in one industry where large numbers of our members are employed—and that is the longshore industry—is now asking our employers to do by contract what has not been done by law—abolish overtime.

There is a second lesson to be drawn from the experience of the longshoremen with the 6-hour day supported only by a time-and-one-half penalty. As I have already said, the 6-hour day broke down and resulted in an 8-hour day with 9 hours' pay. Our own longshoremen contributed to that break-down. The wage rate was low, the take-home was miserably inadequate. The men themselves began to demand an opportunity to work overtime to increase their earnings. Although the remedy lay in an increase in the wage rate, the same pressure could be satisfied by increasing the overtime hours—and this is precisely how it was done.

In other words, here we had an example of a union in effect being forced to use its economic and political strength fighting for the right to work overtime, and working more overtime; or, in another sense, fighting against a decent and normal way of life for its members.

Senator MORSE. Mr. Chairman, although I am not a member of the committee, and I have to impose upon the committee, I think there is a corollary to this problem, and I would like to hear from Mr. Bridges on that.

Mr. Bridges, you were talking about elininating overtime. You cannot ignore, it seems to me, the need in this country for maximum production. As I see it, we are not going to solve our debt problem, and we are not even going to solve our employment problem, unless we adopt policies that are going to produce the maximum of production, because the only way we can cope with the economic handicaps

78595—45——35

under which this Government is laboring today is by way of taxation, which means, of course, we are going to have to be willing to impose upon the American people the necessary taxes to protect the value of the worker's dollar, as well as everybody else's dollar.

Now if you are going to eliminate overtime and thereby reduce production, what do you have to say about increasing production by increasing the straight hours of work?

I think you know me well enough to know—we have had some sad experience from that standpoint with a decision or two—that I have no toleration for slow-downs, nor do I have any toleration for any union program that does not produce a fair day's work for a fair day's pay, because labor's interest is to be found in maximum production.

Let us assume this interesting hypothetical situation:

You eliminate overtime; what is going to happen to the production of our country so that out of that production we can meet the obligations of the Government?

Mr. BRIDGES. I think production not only must be maintained at present levels but it can be increased; and it can be increased even though the hours of work are reduced, by using more workers, and it can also be increased by a greater use of technological devices; there is no question about that.

In other words, instead of having groups of people work long hours, which means overtime, we can break it down.

I can give you a concrete example of what we are actually advocating for a group of employees on the Pacific coast water front.

Our present workweek is a 36-hour straight workweek. There is no way they can work our men more than 36 hours without paying them overtime at time and a half. We have offered that group of employers a 60-hour straight-time week, with an increase in the basic wage rate, but breaking the basic week down to two shifts of 30 hours, so no man would work more than 30 hours.

We already know, from what production figures we have gone into, that we will not only maintain the present rate of production without the introduction of labor-saving devices, but we will increase the present rate of production.

With a man working 6 hours a day the shifts are divided into two, a morning shift and an afternoon shift. We take the full spread of the daylight hours; one group will work the morning shift and will be off in the afternoon and will be home, we think, doing something useful; and the other group is off in the mornings and working in the afternoons; and therefore when a man knows he has only got to work 6 hours, he does not have to conserve his energy, as they do now.

When a man knows that he has to work a 20-hour shift—and some of them work 20 hours—he hits a certain pace, because he has got to save a certain amount of energy to last the 20 hours at hard work.

Well, they can turn loose here on a 6-hour shift, and they do.

We know, from what studies we have already made, that we can reduce the working hours at this rate and keep in the industry all the extra people that were in during the war; we will have enough room for them and for some 10,000,000 men in the armed forces that still have to be returned, and not only have the same amount of production but increase production and operate the industry so it is a more

profitable investment and a profitable enterprise. Our research studies show us that already.

The same general application can be made to all industry, not overlooking the fact, of course, that certain industries have to operate 24 hours a day.

Senator TUNNELL. If you eliminate all overtime, would you not remove that incentive to employ more people?

Mr. BRIDGES. No.

Senator TUNNELL. You would not?

Mr. BRIDGES. No; you would just get more work done in a shorter space of time with more people; you would get more production.

Certainly our idea is not to decrease production; it is to increase production.

It is not only to increase production, but it is to increase it by giving more people work, and therefore you will have more people able to buy what is produced; and that is not the situation today.

If we do not look ahead to see that the purchasing power of the United States is maintained, we will not have any production.

Senator TUNNELL. Let us see what you have here in the remainder of this paper, Mr. Bridges.

Mr. BRIDGES. The rest of it comes to really what Senator Morse was just asking me.

The longshore situation was not unique. In thousands of industrial establishments over the Nation wages are depressed by the use of the false and socially disruptive technique of overtime employment. The 48-, 54-, and 60-hour weeks have become the device by which low wages are maintained.

Particularly during this reconversion period is overtime being used by the employers of the Nation as a bargaining point. I know of many unions that have asked their employers for an increase in the rate of pay. The counterproposal was an offer to maintain the 48-hour week. A branch of my union, warehousemen, in San Jose, Calif., served very modest wage demands on their employers. They got back an offer to guarantee the warehousemen 48 hours' work each week. Hundreds of contracts today provide for guaranties of overtime work.

We in the trade-unions are not without fault. In the past we have bargained for overtime because our straight-time wages will not support us. But today we owe a very great responsibility to those who have fought for us on the battlefields and in the arsenals at home. We will not fight for overtime while they fight for jobs. We owe a responsibility to wives and children. We will not fight for more time away from home. This committee can help us, and those to whom we both owe the deepest obligation, by eliminating the profits from overtime and thereby take a big step toward eliminating overtime itself.

It follows from what I have said that there is the closest kind of relationship between wages and hours of work. If the wage is low, the demand will be for longer hours. The bill which the committee is now considering proposes a minimum wage of 75 cents to be realized 2 years after the passage of the bill. Presumably the bill intends that under all normal circumstances the workweek shall be confined to 40 hours. It proposes, therefore, a statutory guaranty of $30 per week.

I shall not add to the already conclusive testimony you have already had on the inadequacy of such a wage. I do want to spend a very few minutes on an inadequacy of theory as well as amount. The determination of minimum wages has been related to minimum family budgets and the cost of the bare essentials of food, clothing, and shelter. So it is argued in support of this bill that what could be purchased for 40 cents an hour in 1938 cannot be purchased for less than 60 cents an hour today. These are relevant and enormously important considerations. And yet, they leave out much that is important.

A dangerous tendency has grown up to base wage claims upon the cost of living. When the implications of this position are thoroughly understood by labor, it will be rejected and discredited. The cost of living is a better measure of the wages of slave labor than of free labor. Labor is not now content with its share of the national product and will not long continue to rest its case on fluctuations in the cost of living. Nor can the economy of the Nation as a whole afford such a wage theory. The major industrial event of our time is the enormous technological advance made by modern industry. To reflect this great increase in productivity, wage payments must move gradually but firmly from an hourly basis to a production basis. In no other way will the American worker be afforded a reasonable opportunity to share in the advances made. In no other way can we hope to keep closing the gap between America's capacity to produce and America's capacity to consume.

I want to cite just one example that will highlight this, and the reason for it is that we have run into it during the war.

In the Pacific theater of the war, one of the most important things to be done was to get the supplies shipped and keep them going. It was much harder than in the European theater, because most of the transports, supply ships, ammunition ships, had to call at many different points in the Pacific, and the material had to be stored in the ship in a certain way. It was like storing the shelves of a grocery store, with so much of each part of the material in a certain place.

Well, we tried to work, and did work, with the Government and private operators operating these various ships to get the supplies away, to increase productivity by making more use of the men we had at hand, because there was a manpower shortage, as well as trying to utilize more labor-saving machinery.

But we found one thing stopped us, particularly insofar as the men were concerned, and that was there was no incentive, outside of the patriotic incentive, which was mostly what kept them going to do their best.

To highlight the situation, I will give you an example:

One port was the most efficient port that was sending materials to the Pacific. Its main job was loading ships to supply the Pacific forces in midocean, Admiral Nimitz' and Admiral Halsey's forces. It was the most efficient port on the coast, where the average Liberty ship with 10,000 tons of cargo was turned around in 3 to 3½ days.

The basic wage was $1.10 an hour. The turn-around of the ship is the most important phase of the ship's operation, and in this case it was 3½ days to unload the ship and fill her with a full load and get her away to the fleet.

In San Francisco the average turn-around was six or six and a half days. The men were still getting the same basic rates, $1.10 an hour. There were varying differences between these ports.

In the Northwest it was between five and five and a half days, but between the slowest port, which happened to be San Francisco, and the fastest port, one port turned a Liberty ship around in three to three and a half days and the other in six to six and a half days, yet both groups of men were making the same amount of money.

Senator TUNNELL. Per hour?

Mr. BRIDGES. Per hour.

Senator ELLENDER. With the same number of men employed per ship?

Mr. BRIDGES. The comparison is identical. The same type of cargo, the same type of ships, and everything else the same.

Senator ELLENDER. With the same loading facilities?

Mr. BRIDGES. No; with better loading facilities in the other port and more machinery, which added, of course, greatly to the productivity; but the fact remains that the men in the fastest port said: "What do we get out of it? Despite the fact we turn the ship around in almost half the time that the other ports do, because we use less men for operation although we use machinery, we have the lowest number of men per operation; why don't we get something out of it? We should be paid for some of the increased productivity that has come about because of our skill and ingenuity on the job."

The reason there was no relationship between wages on the job was because the wages in the port doing the good job were fixed by the price of pork chops in New York or down in Florida or beans in Seattle, or some other place, something totally unrelated to the job they were doing, to the skills and training they put into their work.

What, in effect, I am saying here is that the minimum wage set in this bill of 65 cents an hour is a wage that is tied to the cost of living, by saying that anybody who works must have this wage because that is what it costs them to live.

But over and above that minimum wage we believe wages should slide over into the place where they are judged by productivity, productivity by a group of workers, not piece work, I want to make that clear, but productivity of the whole, and that each individual worker's wages are measured as a part of the over-all productivity of the group, taking into consideration his training, knowledge, and skills—in degrees of skills as between workers, over and above the minimum wage.

Therefore, I wanted to make this clear to the committee.

I do not ask the committee to adopt this theory as the basis for its minimum-wage recommendations. But I do ask that the bill be extended to provide that the Department of Labor shall immediately institute studies and maintain indexes of the productivity of labor in every significant American industry. When this is done we will have at least a basis in fact for reflecting in the wage scale of the American worker the great increase in industrial efficiency. Until we do, we shall have a wage theory without any significant relationship to the most significant economic fact of our time, the fact that we can have a world of plenty and of peace for all, pride in our work and determination to make every minute count on the job.

I have already discussed this with the Secretary of Labor. He agrees that such a study would be beneficial and should be made.

I want to make this last point: For the reasons I have stated, I ask this committee to recommend in this bill that the Department of Labor make a study of productivity in industry and the relationship of the worker's productivity with their wage scales, so that information will be available in the future and will be able to help out in discussions of this type.

Senator TUNNELL. Do you object to the wage being based on the cost of living if the fellow who is working is getting less than the cost of living—that is a pretty important argument, isn't it?

Mr. BRIDGES. Certainly.

The cost of living ties into the wage rate up to the minimum wage rate that we are talking about here.

Senator TUNNELL. That is right.

Mr. BRIDGES. Regardless of what he does, regardless of whether he goes on a job and is able to produce anything.

Senator TUNNELL. But if he gets more than the cost of living, then of course he would be above the standard?

Mr. BRIDGES. We say over the minimum the wages should be based on productivity, not carrying the cost-of-living rule any further.

Senator MORSE. Mr. Chairman, I think your point is very important.

It has been my experience to hear him argue for some wage theory based on something other than the cost-of-living theory. He certainly is entitled to change his wage theory if he wants to.

Here is the question I would like to direct his attention to. I am thinking about the function of the Government in our wage policies and the function of collective bargaining in our wage policies, and I would like to have him address himself to this question:

What is wrong with the theory of having Government take the position that it does have a social responsibility to its people by way of legislation to protect them against an economy that works an injustice in that the product of labor may result in wages less than the wage of health and decency, but over and above providing them with a wage that is adequate for health and decency, then the free flow of collective bargaining should take place between labor and management to the extent that wages may be increased above a wage of health and decency?

Mr. BRIDGES. I am all for that, and I think Government can lay out the rules of the game. That is one of the suggestions I made.

If there is a definite move of the Government toward the elimination of overtime for good, sufficient, and constructive reasons, I think that will make it difficult for employers in collective bargaining to reduce wages by arguing in terms of over-all or take-home wages.

They say, "It is true you are only getting 50 cents an hour, or 60 cents an hour, but at the end of the week after you work 50 hours at the straight time and overtime your average hourly rate is so much, and therefore you should get no wage increase."

That is what they are saying now.

If the Government lays down the rules of the game along the lines suggested, abolishing all overtime, then I am all for the free play of collective bargaining.

Senator TUNNELL. All right; thank you, Mr. Bridges.

I think you have given us a very interesting talk.

Mr. BRIDGES. Thank you.

(The brief submitted by Mr. Bridges appears in the appendix.)

Senator TUNNELL. The next witness I have on the list here is the Right Reverend Monsignor O'Grady.

TESTIMONY OF RT. REV. MSGR. JOHN O'GRADY, SECRETARY, NATIONAL CONFERENCE OF CATHOLIC CHARITIES

Senator TUNNELL. Just identify yourself for the record, please.

Monsignor O'GRADY. My name is Rt. Rev. John O'Grady.

I am secretary of the National Conference of Catholic Charities.

We made an arrangement yesterday with a representative of the committee that two people would appear on behalf of both the National Catholic Rural Life Conference and the Home Missions Council of America.

Monsignor Ligutti, from Des Moines, Iowa, will represent the National Catholic Rural Life Conference, and Mrs. Shotwell, the western representative of the Home Missions Council of North America, will appear on behalf of the various Protestant denominations in regard to this proposed extension of the Fair Labor Standards Act.

That is the agreement that these different organizations have reached among themselves, that these two people would speak for them.

Senator TUNNELL. You have finished your statement?

Monsignor O'GRADY. That is right.

Senator TUNNELL. Mrs. Shotwell.

TESTIMONY OF MRS. F. E. SHOTWELL, WESTERN AREA SUPERVISOR, HOME MISSIONS COUNCIL OF NORTH AMERICA

Mrs. SHOTWELL. I am representing the Home Missions Council of North America, which is an agency representing 23 national Protestant denominations.

We have been concerned, over a period of years, with work among agricultural migrants. The 25 years of experience which we have had in the field across the country has led us to believe that there are certain basic fundamental principles which need to be thought of and written into a law of this kind.

We have not only been concerned with the general welfare, the social, economic, and religious problems of agricultural migrants as such, but we have provided a field program, a Christian social service field program for thousands of agricultural migrants in 25 States in the Union.

I represent the total national migrant committee, although my field of work is in the 11 Western States.

We believe in and favor certain basic and fundamental principles, such as fair and just wages to maintain decent standards of living for agricultural migrants, including (1) continuity of employment, (2) the right to collective bargaining, and (3) the opportunity for a well-rounded development of individual personalities, as well as community life for the total group.

It has been our finding that agricultural migrants have not had the safeguards of employment which have been provided for industrial workers.

We believe a beginning has been made with the importation of the Mexican, Jamaican, and Bahamian workers through the contract arrangement of the governments involved, and it would be our hope

that our native agricultural migrants might also have extended to them these guaranties as a minimum requirement.

Senator ELLENDER. In other words, you want to include agricultural labor. That is what is would amount to, would it not?

Mrs. SHOTWELL. We would like to feel that the native migrants within this country were afforded the same guaranties that the imported Mexican, Bahamian, and Jamaican nationals have, which includes guaranties on housing, wages, and transportation.

Senator ELLENDER. The way by which that could be done would be to amend the bill we are considering by striking from it farm labor. Would it not lead to that?

Mrs. SHOTWELL. That agricultural migrants are farm labor?

Senator ELLENDER. Yes.

Mrs. SHOTWELL. But also the imported laborers?

Senator ELLENDER. Yes.

Mrs. SHOTWELL. We would like to report that there have been some improvements along the way in the basic attitude of folks toward these migrant laborers. We have some faulty national mentality against migrants. We call them okies or fruit tramps, or the Grapes of Wrath folks from California.

Secondly, we feel they should have better working and living conditions.

I am from that highly industrialized section in California and the Pacific Northwest, where, in California, we have absentee ownership in contrast to the Pacific Northwest with its family-size farms to some degree, and the thing which we wish to appeal to you on is, as a Protestant church agency representing 23 major denominations, we are concerned that living standards be raised for agricultural migrants.

Speaking on the bill, I would raise the question relative to child labor. It appears to us, in lines 8 and 9, page 8, and lines 17 and 19, page 12, that there is an exemption on child labor.

In other words, that child labor at adult wages is asked for, and in lines 18 to 20, on page 10, it states there shall not be oppressive child labor.

I think we need a little more clear-cut understanding of what oppressive child labor is.

Then the second question I think would be in lines 21 and 22, page 11.

What do we mean by "employee employed in agriculture"? It seems to us it gives no protection to agricultural migrants, but rather exempts them.

In lines 17 to 19, page 12, does that statement imply that children who work during the summer can work 20 hours a day at any pay?

Senator TUNNELL. Would not that be oppressive?

Mrs. SHOTWELL. We would say so.

Senator TUNNELL. There is a definition of "oppressive" in the original law.

Of course, this is an amendment to an existing law, you understand.

Senator ELLENDER. Here it is on page 2 of the act, Mr. Chairman. Public, No. 718, under section 3 (1):

> Oppressive child labor means a condition of employment under which, (1) any employee under the age of 16 years is employed by an employer other than a parent or a person standing in place of a parent employing his own child or a child in his custody under the age of 16 years in occupations other than manufacturing or mining; or (2) any employee between the age of 16 and 18 years who is employed by an employer in any occupation which the Chief of the Children's Bureau in the Department of Labor shall find and by order declare to be particularly hazardous for the employment of children between such ages, or detrimental to their health or well-being.

Mrs. SHOTWELL. May I ask what your interpretation is of section (c), between lines 17 and 21 on page 12, which states:

> The provisions of section 12 relating to child labor shall not apply with respect to any employee employed in agriculture while not legally required to attend school, or to any child employed as an actor in motion pictures or theatrical productions.

Senator TUNNELL. I did not understand your question.

Where are you reading from?

Mrs. SHOTWELL. Lines 17 to 20, on page 12.

Senator TUNNELL. If they are too young or not legally required to attend school, it would not apply.

Mrs. SHOTWELL. It does not apply, then, during the summer when they are on their vacations?

Senator TUNNELL. Not when they are not legally compelled to attend school.

Mrs. SHOTWELL. Then our question was whether or not that covered the situation or whether or not it actually allowed child labor?

Senator TUNNELL. Well, it would allow child labor to a certain extent, there is no doubt about that.

A child on the farm would be allowed to work when he was not compelled to attend school.

Mrs. SHOTWELL. But there is considerable difference between a child brought up on the farm, as I happen to have been, working on a farm, and a child of an agricultural migrant family who works in the crops.

We would like to register our objection, sir, to the possibility that it would actually promote child labor as it is written.

Senator TUNNELL. Yes; we will have to keep that in mind. I do not think it does.

Mrs. SHOTWELL. That is all. Thank you.

Senator TUNNELL. Do you have any questions, Senator?

Senator ELLENDER. No, sir.

TESTIMONY OF RT. REV. MSGR. L. G. LIGUTTI, EXECUTIVE SECRETARY, NATIONAL CATHOLIC RURAL LIFE CONFERENCE

Monsignor LIGUTTI. My name is Msgr. L. G. Ligutti. I am executive secretary of the National Catholic Rural Life Conference.

Our headquarters are located in Des Moines, and I am speaking in behalf of our conference.

It is an organization which seeks to foster economic, social, and spiritual welfare of American farmers, regardless of their color, creed, or their economic condition.

I want to present for the consideration of the gentlemen of the committee, and possibly for the record, a statement which was issued lately by a group of Catholics, Protestants, and Jews interested in rural life.

These ladies and gentlemen who signed the statement are all people belonging to religious organizations and to organizations that have for their specific end the welfare of rural people, and from these statements I want to merely point out to you gentlemen certain fundamental

principles and apply them, if at all possible, or have you consider their application to the law at stake at the present time.

One statement, found on the first page of this general statement, at the bottom of the first page, is headed: "Land use and human welfare," and I am quoting from the statement:

> Efficiency in land use is not to be judged merely by material production but by a balanced consideration of the spiritual, social, and material values that redound therefrom to person, family, and society.

If I may briefly explain that, it is not merely the amount of bushels we produce, or the kind of oranges or tomatoes or corn we produce, or healthy and sound hogs we produce to produce good ham or sausage, but the great, big important thing in agricultural production isthe development of the human being, of his family, and of society, not merely material production.

Hence we add another line, and that is:

> The land is not to be a source of benefit to a favored few and a means of servile labor to the many.

We consider that the land has been created by God for the good of all human beings, and whoever works, whether on the land or other natural resources, not only has the right to work and use the natural resources, but he also has the right to think that by the work and through the work his own personality will be developed and heightened to the highest possible achievement within the grasp of that human being, for his own good, for the good of his family, and for the good of society.

Now I want to make a statement also to this effect, that when we are considering the good of farmers we should consider the good of all farmers.

When I say "All," that means all the farm laborers. I do not mean only the man who owns 50,000, or 10,000 acres, or even the family-size farm, I mean if we are to work for the interest of farmers, for the good of the farming population of the United States, we have got to think of their boys and girls who work in a packing warehouse, or picking pears, or sorting this and that in the factories or in the field.

We have got to think of every human being employed there, because they are all human beings.

It has been too often the practice in the past to think, in thinking of the welfare of the farmer, merely of the man who owns the land, or the man who owns a small parcel of land, but it is very seldom that we think of the welfare of the man, woman, and child working on the land.

It is our contention that they are farmers, too.

I might say this, that is the case all over the world. Just because somebody does not own the land, just because he is a worker, his interest is not to be considered.

Senator ELLENDER. Father, in that connection, would you object to amending this bill to carry out your purpose?

Monsignor LIGUTTI. I will answer that by reading from the statement of declared principles on declared policies.

> We urge that wages and housing for the laborer on the small farms be decent and just.
>
> Extend social-security provisions, particularly health, old age, and survivors' insurance to farm people and other rural dwellers.

Senator ELLENDER. I think that will be carried out in some other bill, not in this bill.

This is supposed to be a minimum wage bill.

I understand there are several bills before Congress now to include farm labor in the benefits you referred to.

Monsignor LIGUTTI. Then, of course, we have some more labor which we consider as farm labor but which is really industrial labor, that is, in the sorting and packing plants, and so forth. That comes under the specifications of this bill, does it not?

Senator ELLENDER. Yes.

I think we excepted certain workers.

What would you suggest the committee do in respect to the bill that excludes farm labor from the wage and hour law?

Monsignor LIGUTTI. We think the farm laborer or any other laborer connected with the processing, sorting, and similar work should be included to get the benefit of higher wages or better housing conditions, or whatever benefit there might be—social security, old age and survivors' benefits, and so forth, just the same as any other labor.

Senator ELLENDER. How about the laborer who works behind the plow or who helps till the soil?

Monsignor LIGUTTI. Absolutely, unqualifiedly.

The fact is the labor behind the plow is more important than labor anywhere else in the world, and why should we put him out?

Senator ELLENDER. The bill excludes him.

You have not gone into the problem of what it would cost to produce raw cotton, if farmers paid a minimum wage to all labor of 75 cents an hour?

Monsignor LIGUTTI. Yes, I have, indeed.

I do not think any human being ought to be made to suffer for the sake of giving comfort to somebody else elsewhere.

Senator ELLENDER. I agree with you entirely.

Monsignor LIGUTTI. That is a fundamental principle.

Senator ELLENDER. That is a fundamental principle, and that is why I believe whenever you take care of one particular group, as this bill seeks to do, you disturb other groups.

It is my considered judgment that if we should pass the bill as written it is bound to increase the cost of living, there is no question about that.

I am thinking of the millions of school teachers who have a fixed salary and who are not protected here.

I am thinking of the millions of pensioners who have a fixed income, and who are not covered by the bill.

I am thinking of the millions on top of millions of people engaged all over the country in our distribution system—in the stores, the retail stores, and in the wholesale establishments—that will be affected because of a higher cost of living but who are not protected under the pending bill.

Monsignor LIGUTTI. Senator, I agree positively with you, that it ought to cover eveything, and it should cover farm labor, and it should cover the nearby processor.

Senator ELLENDER. In other words, you would want to lift them all up at the same time.

That is what you mean, isn't it?

Monsignor LIGUTTI. I would put them in the place where God intended them to be.

principles and apply them, if at all possible, or have you consider their application to the law at stake at the present time.

One statement, found on the first page of this general statement, at the bottom of the first page, is headed: "Land use and human welfare," and I am quoting from the statement:

> Efficiency in land use is not to be judged merely by material production but by a balanced consideration of the spiritual, social, and material values that redound therefrom to person, family, and society.

If I may briefly explain that, it is not merely the amount of bushels we produce, or the kind of oranges or tomatoes or corn we produce, or healthy and sound hogs we produce to produce good ham or sausage, but the great, big important thing in agricultural production isthe development of the human being, of his family, and of society, not merely material production.

Hence we add another line, and that is:

> The land is not to be a source of benefit to a favored few and a means of servile labor to the many.

We consider that the land has been created by God for the good of all human beings, and whoever works, whether on the land or other natural resources, not only has the right to work and use the natural resources, but he also has the right to think that by the work and through the work his own personality will be developed and heightened to the highest possible achievement within the grasp of that human being, for his own good, for the good of his family, and for the good of society.

Now I want to make a statement also to this effect, that when we are considering the good of farmers we should consider the good of all farmers.

When I say "All," that means all the farm laborers. I do not mean only the man who owns 50,000, or 10,000 acres, or even the family-size farm, I mean if we are to work for the interest of farmers, for the good of the farming population of the United States, we have got to think of their boys and girls who work in a packing warehouse, or picking pears, or sorting this and that in the factories or in the field.

We have got to think of every human being employed there, because they are all human beings.

It has been too often the practice in the past to think, in thinking of the welfare of the farmer, merely of the man who owns the land, or the man who owns a small parcel of land, but it is very seldom that we think of the welfare of the man, woman, and child working on the land.

It is our contention that they are farmers, too.

I might say this, that is the case all over the world. Just because somebody does not own the land, just because he is a worker, his interest is not to be considered.

Senator ELLENDER. Father, in that connection, would you object to amending this bill to carry out your purpose?

Monsignor LIGUTTI. I will answer that by reading from the statement of declared principles on declared policies.

> We urge that wages and housing for the laborer on the small farms be decent and just.
>
> Extend social-security provisions, particularly health, old age, and survivors' insurance to farm people and other rural dwellers.

Senator ELLENDER. I think that will be carried out in some other bill, not in this bill.

This is supposed to be a minimum wage bill.

I understand there are several bills before Congress now to include farm labor in the benefits you referred to.

Monsignor LIGUTTI. Then, of course, we have some more labor which we consider as farm labor but which is really industrial labor, that is, in the sorting and packing plants, and so forth. That comes under the specifications of this bill, does it not?

Senator ELLENDER. Yes.

I think we excepted certain workers.

What would you suggest the committee do in respect to the bill that excludes farm labor from the wage and hour law?

Monsignor LIGUTTI. We think the farm laborer or any other laborer connected with the processing, sorting, and similar work should be included to get the benefit of higher wages or better housing conditions, or whatever benefit there might be—social security, old age and survivors' benefits, and so forth, just the same as any other labor.

Senator ELLENDER. How about the laborer who works behind the plow or who helps till the soil?

Monsignor LIGUTTI. Absolutely, unqualifiedly.

The fact is the labor behind the plow is more important than labor anywhere else in the world, and why should we put him out?

Senator ELLENDER. The bill excludes him.

You have not gone into the problem of what it would cost to produce raw cotton, if farmers paid a minimum wage to all labor of 75 cents an hour?

Monsignor LIGUTTI. Yes, I have, indeed.

I do not think any human being ought to be made to suffer for the sake of giving comfort to somebody else elsewhere.

Senator ELLENDER. I agree with you entirely.

Monsignor LIGUTTI. That is a fundamental principle.

Senator ELLENDER. That is a fundamental principle, and that is why I believe whenever you take care of one particular group, as this bill seeks to do, you disturb other groups.

It is my considered judgment that if we should pass the bill as written it is bound to increase the cost of living, there is no question about that.

I am thinking of the millions of school teachers who have a fixed salary and who are not protected here.

I am thinking of the millions of pensioners who have a fixed income, and who are not covered by the bill.

I am thinking of the millions on top of millions of people engaged all over the country in our distribution system—in the stores, the retail stores, and in the wholesale establishments—that will be affected because of a higher cost of living but who are not protected under the pending bill.

Monsignor LIGUTTI. Senator, I agree positively with you, that it ought to cover eveything, and it should cover farm labor, and it should cover the nearby processor.

Senator ELLENDER. In other words, you would want to lift them all up at the same time.

That is what you mean, isn't it?

Monsignor LIGUTTI. I would put them in the place where God intended them to be.

In other words, I would not say some people ought to be kept down, and some people ought to be lifted up just because they happened to have pushed their way up in the world.

Senator TUNNELL. Let us put it the other way. Do you think they should be lifted up?

Monsignor LIGUTTI. I think justice to human beings demands that the proper standard of living should be possible for every human being who has been created by Almighty God.

Senator TUNNELL. Then you are not arguing against the bill, you are simply arguing for an amendment?

Monsignor LIGUTTI. Yes.

I am arguing in favor of the specific group which has always been left out under all circumstances. That is the thing that we have always argued for.

Senator TUNNELL. Yes.

Monsignor LIGUTTI. Particularly in the large scale industrialized farming. They are factories and yet they are left out. They are left out here and they are left out there, in the question of old-age benefits, the question of social security, the question of this, that, and the other thing, the farm worker is left out everywhere at all times.

Senator ELLENDER. What about your small one-horse farmer in Georgia or Louisiana? You have them by the hundreds. I know, because I have lived among them, and I know their problem.

Monsignor LIGUTTI. Yes.

Senator ELLENDER. In order to afford them the same rate of pay per hour as you are advocating for industrial labor here, why, they would have to probably sell their cotton for $1.25 a pound.

Do you think our economy could stand such a high price for cotton?

Monsignor LIGUTTI. It does not make any difference what our economy can stand. It is a question of what those human beings have had to stand in the huts and in shacks, and in the swamps of Louisiana and Mississippi, in the Delta.

I do not think in any part of the world any individual ought to benefit by the suffering of somebody else.

Senator TUNNELL. We have been given to believe that people live cheaper in those swamps. Is there anything to that?

Monsignor LIGUTTI. You can try it sometime, Senator, and see how it feels.

Senator ELLENDER. Of course you know, Father, they do not live in swamps.

They have a trade in swamps, like trapping, but they live on high land.

Monsignor LIGUTTI. I went through all the low places in Louisiana just 2 weeks ago, when it was raining, Senator.

Senator ELLENDER. Yes.

Monsignor LIGUTTI. And I suffered from the heat there as much as anyone could suffer.

Senator ELLENDER. I see.

Monsignor LIGUTTI. We are making an appeal for justice all the way around.

Senator ELLENDER. I am in full agreement with you.

Monsignor LIGUTTI. I am sure you would be, because that is the way they think in Louisiana, Senator.

Senator ELLENDER. I know that.

I would like to see that, but I have expressed some opposition to this bill because it takes care of one group at the expense of the others.

Monsignor LIGUTTI. Would you be willing then to put the extra groups in and then go along with it?

Senator ELLENDER. If there were a way to raise these various groups, school teachers, pensioners, and everybody else, I would go along with you, but I know it is not practical, I know we cannot do it.

Monsignor LIGUTTI. Now, now, now, Senator, any human problem can always be solved by human beings.

Senator ELLENDER. People have tried it for over 2,000 years and they have not succeded so far.

Monsignor LIGUTTI. We are getting quite a ways ahead compared to 2,000 years ago, and we should try to continue on rather than try to postpone and postpone.

I do think, first of all, we ought to admit the principle. That is primary.

Senator ELLENDER. Yes.

Monsignor LIGUTTI. Then the second thing is we ought to keep on going ahead even a little at a time.

I am perfectly sure you cannot change the world overnight, or in a minute, but we have to go in the right direction.

I am making the plea for the inclusion of agricultural laborers, for better living conditions, for a decent standard of living, better housing, better health facilities, and so forth.

You know about the health condition in the Lafayette Parish in Louisiana. I do not think I should buy a suit of clothes and pay less money at the expense of the people in the Lafayette Parish.

Senator ELLENDER. What would you do?

Monsignor LIGUTTI. I would sooner wear a fig leaf.

Senator ELLENDER. I mean, how would you raise them up?

Monsignor LIGUTTI. I say we have taken it for granted that they have got to work for so little.

Senator ELLENDER. How would you raise them up? That is one of the things we must fight for here.

The only way by which you could help the people in Lafayette Parish is raise the price of the crops they produce. Is that not right?

Monsignor LIGUTTI. That is one of the means.

There are other things, such as education within the State itself, and better conditions of living that can be effected right within the State itself.

Senator ELLENDER. Yes, but the thing that makes the horse go is what? The food he eats. The thing that makes the farmer go is the return he gets on the product he sells.

Monsignor LIGUTTI. Senator, practically all over Louisiana you can raise everything that a family needs.

And furthermore, there isn't any place in the world that is more productive than Louisiana, and the question is not using it for the proper purposes.

Then there is the question, of course, of giving to whoever raises anything for sale such a price that it will elevate him and make it possible for him to get the right kind of standard of living, the proper housing, proper facilities for raising a decent sort of family.

Senator ELLENDER. You take the cotton farmer in Lafayette, La., the parish you are talking about: He grows practically 60 percent of

his own living, but his staple crop is cotton or rice or sweetpotatoes or sugarcane; that is what he depends on.

Monsignor LIGUTTI. He could raise almost anything else he wants.

Senator ELLENDER. That may be. Some places you cannot profitably raise anything but sugarcane, such as in my parish, Terrebonne. Farmers tried to grow cotton in my own parish, but the stalks grew so tall that they had to use ladders to pick it and——

Monsignor LIGUTTI. Just like corn in Iowa.

Senator ELLENDER. Our country is so diversified that you cannot write out a formula that would be applicable to all of our people. In my own parish large land owners cannot ordinarily make money on any crop except sugarcane.

Monsignor LIGUTTI. How about potatoes?

Senator ELLENDER. Some can make it on Irish potatoes.

Monsignor LIGUTTI. You can make good money on sweetpotatoes in that neighborhood.

Senator ELLENDER. Yes; but the markets are choked up today with potatoes. Some time ago some of us got the Government to guarantee the purchase of potatoes to the tune of $6,000,000 in order to protect a few farmers, in order that they might receive a fair price for their potatoes.

Monsignor LIGUTTI. What is $6,000,000?

Senator ELLENDER. Nothing, but if we spend $6,000,000 here, $2,000,000 there, and $450,000,000 yonder, sometimes it adds to more than the taxpayers can bear.

Monsignor LIGUTTI. I am not questioning it at all. After all, that is the reason we have all the wise men in the Senate and all the economists to figure out a way whereby human beings can be given a decent existence.

Senator ELLENDER. You are a wise man. I wish you could suggest a formula that would have the effect of raising everybody upward and I would be with you. I do not mean now, Father, to build them all up to the same station at the same time. I do not mean that, but only to the extent necessary so as not to disturb the groups not covered by the pending bill.

Monsignor LIGUTTI. Now, listen. I read a book once upon a time, and I hear this expression very often: "Let us not disturb the present order," but, Senator, if the present order is disorder then it is not order. You see we say, "Well, this is the order under which we live, therefore let us not disturb it," but it is not order when some human beings are just down and out, when some poor children cannot go to school, and when some teachers, let us say in Louisiana, who have an AB degree, can only get $30 a month. That is not order; that is disorder.

I say it is the prime purpose, and a very important purpose, of most society and democratic government to see to it that steps be taken in the direction not merely of preserving the present disorder but to establish order, an order that will be a decent democratic order where every human being can have a decent chance for a decent existence.

Senator ELLENDER. Some say in south Louisiana "if a man cannot make a living he is either sick or lazy."

Monsignor LIGUTTI. If the farmers and people down there could have a decent wage, Louisiana could purchase Texas and many other States. You figure a way out, Senator.

Senator ELLENDER. I would not be in the Senate if I could, I would be too smart.

Monsignor LIGUTTI. Too smart?

Senator ELLENDER. Yes.

Monsignor LIGUTTI. Senators can do a lot of good; they have done a lot of good as well as a lot of bad.

Senator ELLENDER. We will reach our goal gradually, Father. Neither you nor anybody else, I do not believe, would be capable of drafting a bill that would take care of everybody. Every time we pass special legislation for certain groups we are bound to tread on the feet of other groups.

Monsignor LIGUTTI. Would you be in favor of giving social security to farm labor?

Senator ELLENDER. Yes.

Monsignor LIGUTTI. Old age and survivors' benefits?

Senator ELLENDER. Yes.

Monsignor LIGUTTI. You would be in favor of giving all those things. So we look upon you to fight for that, because I know what your constituents want down there and what is the right thing. Now, do whatever you can.

Senator ELLENDER. You are not a voter from Louisiana?

Monsignor LIGUTTI. I am not a voter, but I influence votes down there, Senator.

Senator ELLENDER. I see.

Monsignor LIGUTTI. Well, I want to thank you very much.

Senator TUNNELL. Thank you. We will recess until 3 o'clock.

(Whereupon, at 12:25 p. m., a recess was taken until 3 p. m. of the same day.)

AFTERNOON SESSION

The subcommittee reconvened at 3 p. m., following the recess, Senator Tunnell presiding.

Senator TUNNELL. Is Mr. McKenzie here?

Mr. MCKENZIE. Yes.

TESTIMONY OF HOWARD McKENZIE, VICE PRESIDENT, NATIONAL MARITIME UNION, CIO

Senator TUNNELL. Just give your name, if you will, and your position.

Mr. MCKENZIE. Howard McKenzie, vice president of the National Maritime Union, CIO.

Senator TUNNELL. Do you have a written statement, Mr. McKenzie?

Mr. MCKENZIE. Yes, sir.

Senator TUNNELL. How long is it?

Mr. MCKENZIE. I will not read it. I just want to make some comments on it, and I will file the brief with the committee. I am just going to get at the meat of some of the things; in other words, off the cuff.

Senator TUNNELL. Just proceed in your own way.

Mr. MCKENZIE. First of all, gentlemen, I would like to file this brief for the record. This is presented by the CIO Maritime Committee on behalf of the National Maritime Union of America, with

90,000 members, the Marine Cooks' and Stewards' Association of the Pacific, with 15,000 members, the Inland Boatmen's Union of the Pacific, with a membership of 3,000 on the inland waters of the Pacific coast, the American Communications Association, Marine Department, representing 5,000 members, Radio Operators aboard lake and ocean vessels, and the Marine Engineers Beneficial Association, representing 15,000 engineers on the rivers, lakes, and oceans.

(The statement referred to appears in the appendix.)

Senator ELLENDER. What is your connection with these unions?

Mr. MCKENZIE. I am vice president of the National Maritime Union and I am presenting the statement for the CIO Maritime Committee, which includes the unions I have just referred to.

As I say, I just want to touch on some of the highlights of this brief, and in sailor language tell you why we believe the seamen should be included in this act, and why we think we are entitled to 65 cents an hour and a 40-hour week.

In the first place, the seamen were not included specifically in the Fair Labor Standards Act, and the reason for it was this:

In 1937, the United States Maritime Commission made promises to the seamen that they would establish good working conditions, good wages, and good manning scales aboard ships. It was at that time that the question arose as to whether or not the seamen should be under the Fair Labor Standards Act. The question was raised at the time that there would be two agencies to administer minimum standards for seamen and that there might be a conflict between the Maritime Commission's jurisdiction and the agency administering the Fair Labor Standards Act. Our position was indefinite at that time for this reason. On the basis of the profuse promises of the Maritime Commission to take such good care of the seamen, and in view of the fact that as so-called wards of the Government we were to be afforded special treatment, the question was not pressed by the Maritime Union.

Senator ELLENDER. What led you to believe that by being under the Fair Labor Standards Act of 1938 you would remain under the jurisdiction of the Maritime Commission?

Mr. MCKENZIE. We had the belief at that time that the Maritime Commission might give us more than 40 cents an hour.

Senator ELLENDER. In other words, to be frank and candid, I presume that the rates fixed in the Fair Labor Standards Act were not very attractive to the Maritime Union; is that true?

Mr. MCKENZIE. Yes.

Senator ELLENDER. And that is the reason why you did not attempt to get in under that act?

Mr. MCKENZIE. On the basis of promises of Government officials, we thought we had protection.

Senator ELLENDER. And now you want to come under it because of the attractive rates—or at least the more attractive rates that have been suggested in the bill?

Mr. MCKENZIE. That is correct.

Now, following that situation, in 1937 the Maritime Commission did institute hearings throughout the country in various coastal cities to ascertain the actual wages, conditions, and so on, of seamen. They started a survey, and then it suddenly died a natural death. As a matter of fact, we have been pressing for the last 6 or 7 years for the United States Maritime Commission to do something about

this. Two weeks ago, when we put the pressure on, they refused flatly to consider the question of making a factual survey of the seamen's conditions.

Senator SMITH. What reason did they give for that?

Mr. MCKENZIE. They simply said—here is the reason for it—the United States Maritime Commission is a peacetime agency of the Government dealing with the merchant marine. During the war their operating functions were taken over by the War Shipping Administration, but in effect the Maritime Commission and the War Shipping Administration are twin sisters. It seems they are having a lot of confusion as to who is what, and what they intend to do, and so forth, and you just can't get head or tails out of the situation. First the Maritime Commission says it is the War Shipping Administration's responsibility, and vice versa, and neither will assume responsibility for doing something about it.

Senator SMITH. Would it not be a stronger position with your union to bargain collectively for your position than to complicate it with the Fair Labor Standards Act?

Mr. MCKENZIE. No, sir. We think we will get much better treatment under the Fair Labor Standards Act. The promises made by the Maritime Commission have never been kept. They have made these promises but have not delivered in the 7 years we have been attempting to get them to do so.

Senator SMITH. How can you handle the hours matter with a man on ship?

Mr. MCKENZIE. All of that is spelled out in the brief. It goes fully into that.

Senator SMITH. I will be glad to see the brief.

Senator ELLENDER. What would be your position with respect to the bill if Congress should decide to make the minimum 50 cents instead of 75 cents in 3 years?

Mr. MCKENZIE. That, of course, is a question of speculation. We are assuming Congress will make it 65 cents.

Senator ELLENDER. The speculation may be as much 50 cents as 75. Suppose Congress should decide that the minimum rate in this wage-hour bill should be 50 cents rather than as indicated in this bill, what would your position then be as to the bill?

Mr. MCKENZIE. That is a hypothetical question.

Senator ELLENDER. Yes; I am putting it that way just so I can find out what your position would be.

Mr. MCKENZIE. We would have to solve that question by the economic and political strength of the Maritime Union, and we would solve it in this way: We know from long experience that any time seamen are excluded from wages and working conditions which pertain to those engaged in shore-side industry, we always take a shellacking, and even if, as you say, that situation will arise 3 years from now, we will take our chances on it.

Senator SMITH. You could do that whether you came within the minimum wage law or not, and that is the point I made a minute ago, that you would be just as strong with the Maritime Commission, or stronger, than if you tried to come under a law that might not be adequate.

78595—45——36

Mr. McKENZIE. It may be that I am confused in what the committee is set up for, but I have assumed the committee is having a hearing on 65 cents and not 50 cents.

Senator ELLENDER. This committee can lay the bill aside if it sees fit. Everyone expects the committee will not do that, but the mere fact we are now considering a bill with a minimum of 65 cents an hour for the first year and 75 cents an hour for the third year, does not mean that the bill will come out of the committee as written. The minimum may be as low as 50 cents.

Now, what I am asking you is what position your union would take on the matter if Congress should decide to make it 50 cents and let it go at that; would you want to be in or out of the bill.

Mr. McKENZIE. In, for the simple reason that the shipowners, under those conditions, may want to cut the seaman's wage to even 25 cents.

Senator ELLENDER. You do not think employers would do that; do you?

Mr. McKENZIE. They might try it. They have tried it before. That is pretty well known.

Senator ELLENDER. What are your rates now?

Mr. McKENZIE. They are all in here.

Senator ELLENDER. They are all in your brief?

Mr. McKENZIE. Yes.

Senator ELLENDER. Then, I will not anticipate you.

Mr. McKENZIE. It may be, if I went over the whole question I would be able to answer specific questions a little better.

Senator ELLENDER. All right.

Mr. McKENZIE. In connection with the general background of seamen, let me say this:

Seamen, generally speaking, have been excluded from all legislation which has been beneficial to workers in shore-side industry, not only in rates of pay but unemployment insurance and other legislation which has been of real benefit to the majority of American shore-side workers. This was done on the presumption that seamen are not the same as shore-side workers, and due to the very bad conditions which obtained on ships in years gone by, and which still obtain to a limited extent, the employers fostered the illusion that seamen were an irresponsible lot. Today we have a situation where the seamen is a family man. He has the same responsibilities and expenses as a shore-side worker, and for that reason it is necessary that seamen be considered in the same status as people who work ashore for a living. There have been several studies made. Incidentally, the facts and figures concerning the maritime industry are limited, for the simple reason that we have not been able to get the Government to make the same type of survey in the maritime industry as has been made for shore-side industries. So, as a result, we have had to take whatever facts and figures that could be obtained through limited resources and draw a conclusion from them.

Senator ELLENDER. What kind of survey do you have in mind?

Mr. McKENZIE. I have in mind a survey to investigate whether the majority of American seamen today are married and have children and have family responsibilities, the same as shore-side workers.

Senator ELLENDER. Why could that not be easily obtained by you?

Mr. McKENZIE. We do have a survey here, but the trouble is that every time the union puts out a survey, the employers challenge it.

We want the Government to make it so that nobody can challenge it. The Government has not done it, although we have been asking for it for 7 years.

Senator ELLENDER. You want to use that survey as a basis for what?

Mr. McKENZIE. We want to use it to establish the fact that the old, worn-out tradition that seamen are some special breed of cats no longer obtains. We want to establish the fact that they are married and have family responsibility. Prior to the war the wage and hour conditions of seamen were so low that seamen could not get married, but with the advent of the war and the union, we have raised the wages. As a result the seamen got married.

Senator ELLENDER. As a matter of fact, you will concede that the reason for all of that is that a merchant marine to handle our trade has not been very successful in the past because of competition from England, Norway, Sweden, and other countries. The cost of subsidizing a merchant marine would be so great that it would be to the advantage of the manufacturers of this country and the shippers of products to depend on outside facilities to handle their trade, rather than to establish a merchant marine in this country; is that not true?

Mr. McKENZIE. That is a theory that is not substantiated by facts and figures. The Government figures prove that during the period that the seamen were paid the lowest possible wages, we had the smallest merchant marine, and that the American merchant marine has been the largest during periods when we paid the highest wages. The Government figures will establish that fact. It is simple arithmetic.

Senator ELLENDER. You do not mean to say that freight can be handled by utilizing American vessels as cheaply as it can be handled in English and Scandinavian bottoms do you?

Mr. McKENZIE. Well, the answer to that is that if you were to pay the American seamen the 65 cents an hour minimum and time and a half on a 40-hour week, you would only increase the operating cost of the industry approximately 3 percent. Of course, that will be denied by the economists employed by the shipping interests, but we are prepared to prove that. Secondly, we cannot hold to the theory that because Great Britain pays galley wages, we should sweat out the American seamen.

Senator ELLENDER. I am not arguing that point at all, but you do concede that in order for this country to maintain its own shipping facilities, it will be necessary to subsidize; that we would have to take money out of the Treasury in order to be able to maintain a fleet of ships?

Mr. McKENZIE. The Government subsidizes the shipowners, and subsidized them when they were only paying $25 a month for an able-bodied seaman. We think the Government lined the pockets of the shipowners when they did that, instead of it going to the seamen. We contend that subsidies given to the shipowners to maintain the so-called differential between foreign competition and American shipping costs, in order to keep the American shipowner in business, have been unfairly distributed, and that the shipowners, instead of allocating it to the seamen, have put it in their own pockets.

Senator ELLENDER. Whether it goes into the pockets of the seamen or the shipowners, the fact remains we cannot maintain a merchant marine unless a subsidy of some kind is paid by the Government.

Mr. McKENZIE. I am not prepared at this moment to go into the whole question of subsidies. Our facts and figures demonstrate, however, that steamship companies, even though they have not been subsidized, have made tremendous profits during the war and are still making them.

Senator ELLENDER. Let us forget about the war now; let us revert to normalcy.

Mr. McKENZIE. Before the war, it was true, too.

Senator ELLENDER. That ain't the way I heard it.

Mr. McKENZIE. I was on the negotiating committee for 8 years; we negotiated with the shipowners, and I know they broke out the crying towels every year, saying that they did not see how they could remain in business, but they are still in business.

Senator ELLENDER. That may be so on coastwise shipping. We have a lot of them that are doing well on coastwise shipping, but I am talking about foreign commerce, where we have conpetition from abroad.

Mr. McKENZIE. I do not quite get your point. Is the question that if you were to pass this bill and it applied to seamen, it would not be possible for ship owners to operate on a profitable basis due to foreign competition?

Senator ELLENDER. That is one of the conditions; yes. If we impose a 75-cent minimum at the end of 3 years and impose the 40-hour workweek minimum, my opinion is that insofar as foreign commerce is concerned we might have to increase the subsidies to maintain the ships, many times more than is now contemplated. It is my opinion although I may be wrong about it—as a matter of fact I discussed it with members of the Commerce Committee, and in fact with the chairman of the Commerce Committee some time ago, and as I understood him to say, it would be practically impossible under present conditions for the United States to encourage shipping; that is, maintain a large maritime business, unless the Government were ready to subsidize to a large extent. When I say "subsidize" I mean subsidize foreign commerce and not coastwise shipping. We can control that. I am talking about commerce between our country and Africa, Europe, Asia, South America, and the like; that is what I am talking about.

Mr. McKENZIE. I would like to point out again that the fact which we have demonstrate that for the shipowners to pay 65 cents an hour minimum and give us a 40-hour week, it will actually increase their operating costs approximately 3 percent.

Senator ELLENDER. How about 75 cents?

Mr. McKENZIE. That might make it 4 percent, or 4½ percent.

Now, there is another question that comes in here which we had before the War Labor Board and on which we had some argument from shipowners. They screamed that, due to foreign competition, they could not pay the outrageous wages asked for. We pointed out to the War Labor Board that the seamen were only a section of the workers that were involved in the operating costs of the maritime industry and that you have hundreds of thousands of longshoremen, checkers, stenographers in the offices, and so on down the line. If we follow the argument that because of foreign competition we have got to pay the seamen low wages, then, by that same token, the shipowners would argue we should cut the wages of everybody. That is our big beef. We say they should put the seamen on the same basis as shoreside workers. Why take a subsidy out of our sweat?

Senator ELLENDER. I do not think that should be done, but I am saying, if we are to have a large fleet of vessels under the American flag, that this bill would considerably increase the subsidies now in contemplation. You do not mean to say we will not be compelled to provide for subsidies, do you?

Mr. McKENZIE. I am not here to argue about subsidies, but I would have to have some very definite facts and figures on the profit made by some of these companies under subsidy before I would agree to subsidize further. There should be a factual review made of profits. We maintain that their profits make it possible for them to pay 65 cents an hour as a minimum and give us a 40-hour week.

Senator ELLENDER. Under war conditions I have no argument. A large percentage of English tonnage was sunk and also quite a bit of the Scandinavian. The point I am arguing does not apply during the war, when we had ships and cargoes that we could direct ourselves. There was no question that our ships were going to carry the freight. There was no competition. I am arguing about the postwar period when there will be open competition between us and countries like Great Britain, Norway, Sweden, Denmark, and other maritime nations. These countries will come head-on with our own business of merchant shipping flying the American flag. That is what I am talking about.

Mr. McKENZIE. I cannot answer your question the way you want for the simple reason, if I were to go on record saying that the ship owners ought to have certain subsidies in order to pay a few more pennies now, they would be down here and demanding that the taxpayers pay an exorbitant bill. I do say if the ship owners were required to pay 65 cents an hour and give a 40-hour week it would only increase their operating costs 3 percent, and if they need a subsidy for that, we will back them up.

Senator ELLENDER. For what time are you figuring; is it during the war?

Mr. McKENZIE. During the war, before the war, and right now.

Senator SMITH. Right on that point would not the establishment of the minimum wage above the present minimum tend to increase wages all the way through and increase the wage costs in the operation of all of these companies? You are not arguing whether we should or should not have a subsidy that is a matter of Government policy but you are trying to put your people on the same basis as other workers and I am sympathetic with that. But if you adopt the 65 cents an hour for your lowest-paid people, you will get that same movement all the way through all of the other classifications and your wage cost will then go higher than 3 or 4 percent; that wage cost will go way up and we have to consider the wisdom of the whole picture.

Mr. McKENZIE. Sixty-four percent of the men now employed in the maritime industry receive less than 65 cents an hour. As to the balance, there is a lot of variation. If there is the same rate aboard ship and ashore, the ship owner of necessity, irrespective of this bill, will have to make some adjustment for it. He has to do it.

Senator ELLENDER. Do not all of your unskilled labor groups belong to one of the unions and are they not all protected by collective bargaining?

Mr. McKENZIE. Yes.

Senator ELLENDER. None of them are outside of a union?

Mr. McKENZIE. That is right.

Senator SMITH. I am thinking particularly of the large number of people in this country who are not in unions and who are therefore not protected by the collective bargaining principle. But I think where you have collective bargaining, your best weapon is there, much better than any legislative wage.

Senator TUNNELL. You like strikes better?

Senator SMITH. No; I do not. What I am saying is, if we do it that way, there should not be any strikes.

Senator TUNNELL. That is the only weapon they have.

Senator SMITH. I think collective bargaining is a splendid weapon and if properly used there need be no strikes.

Mr. MCKENZIE. All of the strikes we have had on the water front since 1934 are based on the fact the seamen are insisting on the same treatment as workers in shore-side industry, and they are going to tie up these ships until this thing is recognized by this Government and the employers. If the employers will not recognize the collective bargaining principle, we will have to fight it out on the water front.

Senator SMITH. You think you will not get proper treatment from the Government, the Maritime Commission, and so you are asking us as the Congress to give it to you?

Mr. MCKENZIE. The shipowners have all of their stooges in the Maritime Commission.

Senator SMITH. That seems to be a debatable question.

Mr. MCKENZIE. The point is I have been through this mill for some years. In the maritime industry you will meet with the shipowners in New York. There are 39 steamship companies under one contract, and you discuss the question of wages and hours and conditions, and they say, "We cannot do anything about it because the War Shipping Administration and the United States Maritime Commission are involved, and therefore you should go down to Washington and see those people down there." Then we come to Washington and see the same shipowner in uniform, and he says, "Go back to New York and meet those guys up there." So at this point we cannot get either the Government or the shipowners to negotiate, as each claims the other should do the collective bargaining.

Senator SMITH. I am entirely sympathetic with you. There should be one authority you can deal with. But assuming you had the right kind of authority you would rather deal with that authority and bargain collectively than to have something passed by Congress that creates a situation in which there is no flexibility?

Mr. MCKENZIE. We think at this point, politically, we have more representation in Congress than we have in the Maritime Commission.

Senator SMITH. You are asking the Congress to line up against the Maritime Commission?

Mr. MCKENZIE. No; we say they should represent the workers as well as the employers, but we also say the Maritime Commission is an employer group; it is owned, controlled, and dominated by the shipowners' associations and there are no labor people on it.

Senator ELLENDER. Whenever the question of upping wages or fixing hours is concerned, with whom do you deal?

Mr. MCKENZIE. We deal with the employers.

Senator ELLENDER. Why is it necessary for you to go to the Commission?

Mr. MCKENZIE. Because the employers say that during the war and up to the present time they are not employers and they are not authorized to act on behalf of the Government to negotiate collective bargaining contracts.

Senator ELLENDER. How about before the war?

Mr. MCKENZIE. Before the war we met with the employers directly.

Senator ELLENDER. What happened then?

Mr. MCKENZIE. If they did not meet our demands, we tied the ships up.

Senator ELLENDER. To what extent were you able before the war to increase wages?

Mr. MCKENZIE. We increased our wages from $59 a month for an A. B., to $100 a month for an A. B. That is for the most typical seamen aboard ship; we increased it from $59 to $100.

Senator ELLENDER. And that is what it is now?

Mr. MCKENZIE. No; it is $145 now.

Senator ELLENDER. During the war it was raised?

Mr. MCKENZIE. Yes.

Senator ELLENDER. How did you accomplish that?

Mr. MCKENZIE. By political action.

Senator ELLENDER. Political action on whom?

Mr. MCKENZIE. Well, the dispute on the 55 cents an hour went down to the War Labor Board, and we threw a picket line around the War Shipping Administration throughout the entire Nation, telling the American people the War Shipping Administration was allowing a wage only of 34½ cents an hour, while we wanted 55 cents an hour. We got city governments to pass resolutions, and we had the whole country in an uproar on the whole situation. The American people said the seamen deserved more than 34 cents. If we had not told the people about it, we would still be whistling for it.

Senator ELLENDER. What does that mean per hour?

Mr. MCKENZIE. What the War Labor Board gave us—they fell 2 pennies short, allowing 53 cents, starting with ordinary seamen.

Senator ELLENDER. That is the lowest rate?

Mr. MCKENZIE. Yes.

Senator ELLENDER. What does the seaman get aside from hourly pay?

Mr. MCKENZIE. That is all he gets.

Senator ELLENDER. Does he have to pay his board?

Mr. MCKENZIE. No; he does not.

Senator ELLENDER. Who pays that?

Mr. MCKENZIE. The employer pays it.

Senator ELLENDER. What do you consider that is worth per hour?

Mr. MCKENZIE. Zero.

Senator ELLENDER. Now, you are not telling me that three meals a day and a place to sleep in, no matter how humble, is not worth anything.

Mr. MCKENZIE. If a man has a wife and three kids, it is of not benefit to him. Again we come back to the question whether a seaman has a right to maintain a home and family, and the fact he gets three meals aboard ship does not materially give him an increase.

Senator ELLENDER. That is because of the kind of employment he is engaged in.

Mr. MCKENZIE. That is right.

Senator ELLENDER. But it is certainly worth something for him to obtain his board and a place to sleep. What do you figure that is worth to a single man, how much a day or an hour is it worth?

Mr. McKENZIE. We go on the premise of the married man, since the majority of the seamen are married. You cannot pay one rate to a single man and another to a married man. In order to stop this kind of argument, we are trying to get our single seamen to get married, but quick, and to get the baby buggies going. We have the majority of them thinking that way now, and we will have the rest them shortly.

Senator TUNNELL. You say practically all of the seamen are unionized?

Mr. McKENZIE. About 90 percent.

Shall I continue on this?

Senator ELLENDER. I am sorry you won't answer my question.

Mr. McKENZIE. What is it?

Senator ELLENDER. I just asked what is it worth to a man living on a ship, per hour or per day, for the three meals he gets and other services while aboard ship.

Mr. McKENZIE. On some ships you have six men in a room. That is worth about 25 cents a day for a single man.

Senator ELLENDER. Twenty-five cents?

Mr. McKENZIE. Yes; two bits.

Senator ELLENDER. How about the eats?

Mr. McKENZIE. Well, if I were a single man and could not have my choice of the menu, I would not consider it worth very much. Unless I had the right to select my food, I would not consider it as being worth anything. Like most seamen, I am pretty particular.

Senator ELLENDER. Have you been to sea much?

Mr. McKENZIE. Yes; for quite a number of years, and that is why I am so thin.

Now, on the surveys conducted on those who are married and have dependents, the United Seamen's Service made a study and they established the fact that out of 100 men, only 20 had no dependents; the rest were married or had dependents. On the survey undertaken by the National Maritime Union, we took 70 people at random, and out of the 70 only 27 had no dependents, and the remaining 43 had from 1 to 6 dependents each.

On the west coast, the United States shipping commissioner at San Francisco states that approximately 80 percent of seamen sign over an allotment of a portion of their pay to dependents. This is in marked contrast to the years 1936 and 1937, when only 15 to 20 percent of seamen signed allotment papers, and of these the majority were in the licensed group, engineers and the higher-paid group.

All wartime studies understate the dependency status of seamen under normal conditions. During the war the merchant marine had to resort to recruiting men below the draft ages in order to meet the labor-force requirements.

In short, the seamen now are starting to claim their kids legally.

Now, in connection with the conditions aboard ship as against the question of board and room, we have a situation in the maritime industry where seamen are subjected to all kinds of rules and regulations. There are more laws and rules and regulations governing a seaman aboard ship than you have for a prisoner of war. The master of a ship is the lord of all he surveys. No matter which way a seaman moves, he is subject to extremely rigid discipline. He is away from his family; he does not have the social life other people have, and these are all great hardships. In addition he is subjected to all kinds

of changes in the weather, from the cold of the Arctic down to the heat of the Tropics. Also he is exposed to certain dangers, such as shipwreck, collision, and so on.

Senator SMITH. But he is free to accept the occupation and does not need to stay there if he does not like it. But I find a lot of them like the life. It is their way of life. I don't know whether you like the sea, but there must have been something that attracted you to it in spite of those handicaps and hardships which you mention.

Mr. McKENZIE. Frankly, I was pretty young when I first went to sea and the only reason I went was because I could not find a job ashore. I did not want to go until I started, and then I just kept on going. Like most seamen, many times I would say, "This is my last trip," but because I was always broke I would finally wind up by going back aboard a ship. If you had enough for a pint of whisky at the end of a 6 months' trip in those days, you were lucky.

Now, on the question of skill aboard ship, today the ships are highly mechanized and have intricate machinery both down below and on deck. A seaman on deck aboard ship has to be a technical, skilled man and know his job. That is becoming more and more so all the time. In this connection I would like to quote from Admiral Land. In a letter to Chairman Bland of the House Merchant Marine and Fisheries Committee, he stated as follows:

> Immemorially merchant seamen have been treated as "wards of the Government." This is not always to their liking, nor is it in keeping with their bravery and independence. It has, to be sure, resulted in the enjoyment of some historical rights, privileges, and benefits not available to other workingmen who can live at home and take their leisure daily at liberty. But it is fair to say generally that the industrial status of seamen is not in line with contemporary developments either here or abroad. Despite a hard and uncertain calling, they do not have, for example, the protection of unemployment insurance, workmen's compensation, group life insurance, pensions, or retirement plans.

I raise that point at this time because of the laws that govern seamen, passed by Congress, and the regulations of various Government agencies, and due to the fact that the Government at the present time actually owns and operates the merchant marine, and due to the fact also that even in normal so-called peacetime the Government has a large stake in the merchant marine, and we take the position the Government has a special responsibility to seamen.

I think, in connection with being wards of the Government, in one State they classify us just the same as people in the insane asylum. I do not recall just——

Senator ELLENDER. Which State is that?

Mr. McKENZIE. It is a Southern State. I think it is South Carolina.

Senator ELLENDER. That must have been an old law. It is not a recent law, is it?

Mr. McKENZIE. It is still on the books, though.

I might say it will be noted Admiral Land left out that we do not have an adequate minimum wage or the 40-hour week.

Now, I want to give the committee some idea of the skill of a seaman aboard ship. An able-bodied seaman has approximately the same type of work as a shore rigger in a shipyard, and for this a seaman now gets 61 cents an hour, a skilled, able-bodied seaman. A rigger doing the same work, tying the same kind of knots, gets $1.03 an hour. In the case——

Senator ELLENDER. That is in building a ship?

Mr. McKENZIE. Yes.

Senator ELLENDER. Or repairing?

Mr. McKENZIE. Yes.

We have examples which show graphically how the status of a seaman changes when he leaves the dock and goes aboard a ship. On the Pacific coast, the Pacific Coast Ship Owners Association have a contract with one of the maritime unions. These able-bodied seamen work in shore gangs, and while there they are painting the ship or overhauling the gear. For that they get $1.34 an hour, and when he ships out of that port he gets only 61 cents an hour for painting the same ship and doing the same type of work, and that is right in the same contract.

Now, on the question of hours worked, the workweek at sea is 56 hours, 7 days a week and 8 hours a day. In the old days they used to work 12 hours a day, and even at that time the shipowners claimed if they reduced the hours it would bankrupt them. Now it is down to 8 hours, that is, except in the stewards' department, where the working hours will run consistently as high as 63 without overtime pay. That is the workweek at sea. We take the position that seamen are entitled to a 40-hour week. Well, the question is how to apply it on board ship. If you pay shoreside workers time and a half for working over 40 hours a week, we say the same thing should apply in the case of seamen. The shipowners will argue they cannot tie the ship to a seaweed in the ocean, so why pay this time and a half. Our answer is that on board ship you could have a 40-hour week, or at least a 42-hour week. There used to be two watches on deck, 6 hours a watch, or 12 hours, but now it is down to a total of 8 hours. At the present time, by putting on approximately seven or eight extra men, seamen could have a 6-hour day, and 7 days a week, or a 42-hour week. This, they can do.

Senator ELLENDER. You say it would take only six more men?

Mr. McKENZIE. From 8 to 10 men.

Senator ELLENDER. How many does it take now to operate the average Liberty ship?

Mr. McKENZIE. About 28.

Senator ELLENDER. Has that been much of a decrease as compared to 10 years ago; I mean increase or decrease?

Senator TUNNELL. You did not have any Liberty ships then, did you?

Senator ELLENDER. We had Victory ships, or ships of that type.

Mr. McKENZIE. The first time a maximum-hour law for seamen was placed on the books, the La Follette Act, was in November 1916, and that applied only in the engine department. The stewards' department still does not have a maximum-hour law. It was not until 1937 they applied it to the deck department. There were steamship companies which worked their men 12 or 14 hours on deck. I worked those hours on board ship. As a matter of fact in those days we also had a situation where the shipowner would let you go aboard ship for 1 cent a month, and you worked in the ship for nothing.

Now, in connection with the 40-hour week we have an interesting comment to make on how that can work. I cannot find it in the copy here, so I will quote it just from memory.

There was a big argument in Australia in connection with the 44-hour week, and the Australian shipowners, just as the American shipowners, said it was not practicable, that it would bankrupt the industry, and so forth. A study was undertaken by the Australian Government, the Maritime Council of the Australian Government, in 1942, and they found it was possible and placed into effect a 44-hour week for Australian seamen. Right now, on Australian ships you have a 44-hour week. That is done, of course, by adding a few extra men to the crew. So it is possible.

Senator ELLENDER. What is their rate of pay per hour in contrast to ours, if you know?

Mr. McKENZIE. I don't know the exact figures, but the wages and hours and conditions on the Australian and New Zealand ships for seamen compare favorably with ours. It is a few dollars below, but the cost of living enters into the situation.

Senator ELLENDER. The cost of living?

Mr. McKENZIE. Yes. Compared to the shoreside industry, I would say that the wage and hour conditions of the Australian seamen compare very favorably, and perhaps even more so than shore-side industry.

Senator ELLENDER. But in respect to the conditions on board ship, how do they compare with ours?

Mr. McKENZIE. Conditions are better in some respects. They have a better clause in their collective-bargaining contracts.

Senator ELLENDER. Do they get more per hour or per month, or whatever the method of payment is?

Mr. McKENZIE. No.

Senator ELLENDER. Do they get as much?

Mr. McKENZIE. I don't know the exact figures, but they are a few dollars below our scale now.

Senator ELLENDER. I thought they were. I thought the British were, too.

Mr. McKENZIE. There is a situation dealing with the cost of living in Australia, a situation that we do not have. The Australian seamen have wages and hours and conditions that do compare with shoreside industries. We do not, in the American merchant marine, and still they survive against foreign competition.

Senator ELLENDER. But still they pay less than we do, insofar as work done aboard ship is concerned?

Mr. McKENZIE. They pay less to the shipyard worker and less to the congressmen, too, if you want to get down to cases.

Senator ELLENDER. Yes; and more for lawyers and judges?

Mr. McMcKENZIE. I don't know about that.

Senator ELLENDER. I am positive of that.

Mr. McKENZIE. Mr. Chairman, there are two more people who are going to testify, and I want to give them a chance to speak. One is from the Pacific Coast Firemen and the other from the Marine Cooks and Stewards.

Senator TUNNELL. I have only one name here, yourself.

Mr. McKENZIE. They just want to testify for only a few minutes. I think you can get it better from them than from me; that is, the feeling of the rank and file.

I wanted to say a few words on this subsistence question. In the first place, in our collective-bargaining contracts, the matter of board and room has never been an issue between the Maritime Union and the employers. It has been conceded in our collective-bargaining contracts between shipowners and the union that board and room is not a part of a seaman's wages. That issue was never raised by the

employers until this recent War Labor Board case. Until that time it was never raised as a point by employers, nor conceded as a p oint by the Maritime Union. Our wages are spelled out in collective-bargaining contracts and they make no provision for deduction for board and room.

The Wage and Hour Division of the Department of Labor, in Bulletin No. 3, stated that board, lodging, and other facilities which are primarily for the benefit and convenience of the employer will not be recognized or included in computing wages. The Treasury Department recognizes board and room aboard ship is not part of a seaman's wages and excludes it from taxation. The War Shipping Administration has held that in determining the amount of wages subject to withholding, there shall be included regular wages but not the value of lodging and subsistence. They recognize, for example, that a seaman cannot use the coffee aboard ship for his family, and cannot take a ham out of the icebox and bring it home to his family. The seaman has no choice but to accept the room and board supplied by the operator, and he does so because of the nature of his occupation, and he cannot do otherwise.

In our collective-bargaining contracts, where the shipowners do not provide board and room, they pay cash, $5.20 a day, to eat ashore, if it is not supplied aboard ship.

So, if you want to argue this board and room question, you will have to say the seaman should get $5.20——

Senator ELLENDER. I was not trying to argue, but only to get the facts.

Mr. MCKENZIE. These are the facts. If you take the arguments we have in our collective-bargaining contracts, that the shipowners claim it is part of the wages, then the shipowner is bound to give the seaman $5.20 a day.

Senator ELLENDER. Going back to the question of the minimum wage which you say is applicable to all seamen—and I take it that is throughout the country—the 55 cents, I understand that applies to all of them, no matter where located?

Mr. MCKENZIE. 53 cents; we got gypped out of 2 cents.

Senator ELLENDER. That applies in all parts of the country?

Mr. MCKENZIE. That is right.

Senator ELLENDER. Why were you not able to get it higher than that during the war?

Mr. MCKENZIE. Because we had a no-strike policy during the war. We have a perfect no-strike record during the war; not one ship was ever held up by the National Maritime Union or any organizations involved.

Senator ELLENDER. What was the minimum wage you were able to get by collective bargaining before the war?

Mr. MCKENZIE. In collective bargaining before the war, by applying the strike weapon, we forced the shipowners to pay $100 to an A. B., plus $80 a month, a so-called war bonus.

Senator ELLENDER. What is that on a per hour basis?

Mr. MCKENZIE. $180 divided by 240 is—76 cents an hour. That is the take-home pay we forced the shipowners to pay us prior to the war.

Senator ELLENDER. Why could you not maintain that during the war?

Mr. MCKENZIE. Because we had a no-strike policy and had to depend on the benevolence of the employer. Now the war is over.

Senator ELLENDER. Are we to understand that the men employed on ships were getting more before the war than during the war?

Mr. MCKENZIE. They were getting more money before the war in some cases than they are getting right now in terms of take-home pay, yes.

Senator ELLENDER. How was that?

Mr. MCKENZIE. We had $100 for an A. B., and by strike action we forced a $80 war bonus. They would not call it wages, but bonus. But that was our take-home pay. Now it is $145 for the same rating.

Senator ELLENDER. The same work?

Mr. MCKENZIE. Yes.

Senator ELLENDER. Did any portion of that $180 come from the Government by way of subsidy that you know of?

Mr. MCKENZIE. I suppose some of it did.

Senator ELLENDER. Why was it not——

Mr. MCKENZIE. About 20 outfits at that time made something like $30,000,000 clear profit on trips to the Red Sea.

Senator ELLENDER. That was during the war?

Mr. MCKENZIE. No; before the war.

Senator ELLENDER. Before we got into the war?

Mr. MCKENZIE. That is right, in 1941, I believe.

I think the best way to evaluate the board-and-room question is to put it on the basis that the United States Government does not consider that the expenses that you are given for board and room away from ship are part of salaries and wages. That applies to all Government employees, and we come in the same category.

I think that about winds up the question of 65 cents an hour and the 40-hour week. I would like to spend a few moments on the ability of the shipowners to pay, in terms of profit. I want to stress again the fact——

Senator ELLENDER. Before you go into that, have you anything in your brief to show how much more your lowest-paid seaman would receive if the rate of pay were fixed at 75 cents plus overtime, which you are now contending should be paid?

Mr. MCKENZIE. No.

Senator ELLENDER. It could be easily figured, I presume.

Mr. MCKENZIE. Oh, yes. It would be 65 times 40.

Senator ELLENDER. That is $26.

Mr. MCKENZIE. That is without overtime. At time and a half that would be roughly about $25 a month more; about $175.

Senator ELLENDER. At 75 cents it would amount to about $43——

Mr. MCKENZIE. It would amount to about $207 for able bodied seamen, that is, on board ship; $50 a week, roughly.

Now, in connection with the rates of pay per week, there is an item I overlooked here. In the Pittsburgh area, where we have a collective-bargaining contract, a deckhand on the Pittsburgh boats receives 78 cents an hour. The corporation out there takes the position that the men working on the boats for the company have a relationship to the steel workers ashore, and that is why they recognize the fact that there has to be a connection between what they pay people ashore and people aboard the boats. So the pay of a deckhand there is 78 cents an hour.

Senator ELLENDER. He does not go to sea, though?

Mr. McKENZIE. Oh, yes, he goes out a great deal. Those boats go in and out in a few hours. He does not have much time at home with his family.

Now, on the financial status of some of these employers, their ability to pay these few extra pennies, in the years 1940 through 1944, 12 subsidized shipping companies had a net profit before income tax of $190,000,000, and a net profit after income tax of $172,000,000.

Senator ELLENDER. Of what?

Mr. McKENZIE. $172,000,000 after taxes.

Senator ELLENDER. How many companies?

Mr. McKENZIE. Twelve subsidized shipping lines.

Senator ELLENDER. They did not pay much taxes, did they?

Mr. McKENZIE. They are getting most of it back now, I understand, on top of that.

In addition, these 12 companies in the 5 years between 1940 and 1944, deposited $231,000,000 in the tax-free capital reserve funds, and nearly $88,000,000 in the tax-free special reserve funds.

So the subsidized lines have been showing a substantial profit.

The coastwise lines from 1940 to 1943 made $91,000,000 profit before taxes and $45,000,000 after taxes.

The intercoastal lines made a profit of $75,000,000 before taxes and $33,000,000 after taxes.

Senator ELLENDER. Do you know what their investment was?

Mr. McKENZIE. Well, the coastwise lines, I know, had old, broken-down rust buckets in operation that had been operating for about 20 years. The life is supposed to be 20 years, and most of the coastwise boats are 20 years old or older. So, from that point of view of depreciation of capital, it is a real gravy train.

The unsubsidized foreign lines made a profit of $110,000,000 before taxes and $54,000,000 after taxes. In addition, the coastwise lines deposited $111,000,000 in the tax-free construction fund——

Senator ELLENDER. Do you have any idea what the subsidy would amount to?

Mr. McKENZIE. Frankly, I have been trying to find out for a number of years just how this thing works, but it takes a financial genius to find out. We have employed trained economists because we cannot tell how the shipowners' economists are trying to do. We are trying to see how it works out in terms of subsidy. I know it is plenty and that is all I do know.

Senator ELLENDER. You do not think Congress would appropriate money for subsidizing ships unless it was necessary, do you? In other words, a case would have to be made out, don't you think?

Mr. McKENZIE. Well, Congress might give the shipowners exorbitant subsidies based upon the plea of the shipowners that they cannot operate without a subsidy. Take, for example, the Black investigation, the seagoing Teapot Dome scandal; they got millions of dollars for carrying one letter or 1 pound of mail.

Senator TUNNELL. That was subsidizing mail.

Mr. McKENZIE. Yes; but it went to the shipowners on the theory they had to have that money to compete with foreign steamship lines.

Senator TUNNELL. The United States Government does subsidize them.

Mr. McKENZIE. That is true. As a matter of fact, a good many offshore companies have been heavily subsidized.

Senator TUNNELL. Does your associate wish to say something?

Mr. McKENZIE. Yes.

Senator TUNNELL. Give your name, please.

Mr. HADDOCK. Hoyt S. Haddock.

Senator TUNNELL. All right.

Mr. HADDOCK. It depends entirely upon the particular company and what its operations are. It is based upon the differential between cost of supplies and labor and cost of the vessel.

Senator TUNNELL. This whole problem as to subsidies would come up anyway, regardless of the wages.

Mr. McKENZIE. That is true. That came up in Congress when they paid $25 to an able-bodied seaman. In other words, when they paid the same wage to the American seaman as the British paid, and where the Norwegian and Swedish paid higher to their seamen than we did, they still came down here and said they could not compete with foreign lines.

Senator TUNNELL. We have about five times as much shipping as we had at the beginning of the war.

Mr. McKENZIE. That is right.

Senator TUNNELL. While Great Britain has about the same as it had at the beginning of the war; that is, she has built about what she has lost.

Mr. McKENZIE. I am not sure of the British figures.

Senator TUNNELL. I saw those figures some time ago.

Mr. McKENZIE. That is probably true.

Senator TUNNELL. But what to do with 54,000,000 tons of shipping is a problem for the whole United States.

Mr. McKENZIE. That is true.

Mr. HADDOCK. That will be before your body before very long. It is now before the Senate Commerce Committee and we hope our position will prevail there. We think we will have a good merchant marine if it does.

Senator TUNNELL. What is your thought on what will have to be done? The wages of men, the cost of equipment, the cost of food, and everything else, is greater in the United States than it is in many of the countries with whom we are in competition, or probably will be; what is your theory on how it can be met?

Mr. McKENZIE. That, of course, is an international question, but I think the first thing to be done is for the maritime nations to call a shipping conference and see that there is a proper allocation of trade routes, prevention of cutthroat rates, and so on, all over the world, and the tariff barriers so reduced that you have a free flow of commerce. We know that there is enough business throughout the world to keep our ships running for many years.

Senator TUNNELL. I think we registered our ships in Ecuador or Guatemala——

Mr. McKENZIE. Panama and Honduras. But after we put the pressure on and made them pay American wages, then they put them back under our flag. There were other cases where they registered ships to avoid paying certain taxes as called for by law, but that is a story all by itself.

Senator TUNNELL. It is bound to be a story, because we have too much shipping for domestic commerce.

Mr. McKENZIE. We have to depend on foreign commerce to keep our ships moving.

Senator TUNNELL. Either that or sell the ships.

Mr. McKENZIE. There is a contradiction there somewhere because if we sell them to somebody else, they would use them, and if they can use them, why not we?

Senator TUNNELL. Suppose you sell them to Great Britain or China, or some nation where the cost of operation would be less?

Mr. McKENZIE. Well, the answer to that is that we are going to find throughout the world that people all over are going to demand a higher living standard. That is what we fought this war for, and people in these countries are not forgetting it.

Senator TUNNELL. We will not get the Chinese living standard up much higher, will we?

Mr. McKENZIE. Sure we will.

Senator TUNNELL. Is their average wage not something like 30 cents a day?

Mr. McKENZIE. $80 a month for a Chinese seaman now.

Senator TUNNELL. Well, they don't have any ships now.

Mr. McKENZIE. Mr. Levine would like to make a statement.

Senator TUNNELL. Give your name, please.

Mr. LEVINE. Seth Levine.

Senator TUNNELL. All right.

Mr. LEVINE. During the war, Chinese seamen on British ships had their wages increased from $10 to $54 a month, which is comparable with the British standards. In fact, at the present time, and it will undoubtedly continue, all Chinese seamen on British ships are now on the same basis as the British themselves.

Senator TUNNELL. We were not asking about what the British paid to the Chinese.

Mr. LEVINE. I assure you they will force the Chinese merchant marine to pay the same if they get one.

Senator TUNNELL. Why did you say the wage rates were raised from $10?

Mr. LEVINE. Because Chinese coolies on British ships prior to the war were paid only $10 as compared to $54 for British seamen.

Senator TUNNELL. How much were they paid on the Chinese ships?

Mr. LEVINE. There was not any Chinese merchant marine.

Senator TUNNELL. At least, very little. I guess the Japs had about destroyed their merchant marine.

Mr. McKENZIE. The point in dealing with this question is that you have to understand, as borne out by Admiral Land's statement, that in all foreign nations the pay given merchant seamen in comparable to that paid shoreside industry, and it is not so in the case of the United States, and that is why we are hot.

Senator TUNNELL. Your statement of fact is that we are not paying in proportion to our economy, while the other nations are paying in proportion to what they are paying people on land?

Mr. McKENZIE. Absolutely. The seamen have benefits in some foreign countries that do not obtain here. They have lifetime pensions and what have you. An American seaman just goes in the trash heap.

Senator SMITH. To what extent does the Maritime Commission deal with the wage question?

Mr. McKENZIE. Well, at the present time, they are dealing with it in a fashion I do not like. For example, we are negotiating right now in collective bargaining, fighting for jobs, and we are trying to put on a proper manning scale, especially in the standards department,

and the Maritime Commission put out manning scales which are far below what we consider proper operation. The shipowners say: "We cannot bargain collectively on this issue because the Maritime Commission has set the following manning scale and we cannot go above that." So we see the Maritime Commission, and they say: "This is a manning scale which is a minimum and not a maximum and does not prevent the raising of that scale through collective bargaining." But the shipowners are obstinate on the basis it is a Government regulation, and they will not raise it above the scale set by the Maritime Commission. It happened recently that men refused to sail aboard those ships where the manning scale established by the Government was, we say, in violation of our collective-bargaining right. The War Labor Board told the shipowners that the question of the number of jobs aboard ship was to be negotiated between the union and the employer, so we finally settled that case once and for all. Then the Maritime Commission moved in, and they are acting as an intervener for the employers and are setting up these phony scales, and we may have to take strike action to force them up. The men won't sail the ships, and then the owners call a conference and throw a few "windies" about that it is going to cost. But there is a case in point, and they are doing nothing about it except to interfere at this point.

Senator TUNNELL. Are there any other questions? You say you have two other people who want to make statements?

Mr. McKENZIE. Yes; there are two people here. I would like to make one final comment on this whole situation, and that is that the maritime unions are fully aware of their economic and political power. We organized the seamen on the theory they were going to have the same rights as shoreside workers, and the basis and the background of all of the strikes you have had in the maritime industry for years past, after the last World War, from 1934 on, have been because of the refusal of the employers to recognize that seamen have the same rights as shoreside industry workers. We think it is about time the Government decided that question.

As you pointed out this morning, it is a question of statutes or strikes. This whole question is No. 1 in our postwar program, and we are going to mobilize all of our resources, economically and politically, to force the 65-cents-an-hour rate for the ships. In this respect we know we have prestige with the American people. We know something about political action and know the answers on strike strategy and tactics, and we are going to go all out on this question. We think it is the special responsibility of this committee to see we get proper treatment on this question, because otherwise you are going to have hell on the waterfront from here on in. If we are left out, then we are going to go after it the hard way. We think it is in the interest of our country that the Government step in and deal with these short-sighted employers and see that the seamen are given the same consideration as shoreside workers.

Senator ELLENDER. That is not a threat, but good advice?

Mr. McKENZIE. It is a statement of fact.

Senator ELLENDER. I predict, if that happens, then all ships will be tied up and someone else will get the business; because, as I said awhile ago, I have always understood that our own country could not establish a merchant marine and maintain it, because we could not compete with foreign shipping interests.

78595—45——37

INTENTIONAL SECOND EXPOSURE

Mr. McKENZIE. There is a contradiction there somewhere because if we sell them to somebody else, they would use them, and if they can use them, why not we?

Senator TUNNELL. Suppose you sell them to Great Britain or China, or some nation where the cost of operation would be less?

Mr. McKENZIE. Well, the answer to that is that we are going to find throughout the world that people all over are going to demand a higher living standard. That is what we fought this war for, and people in these countries are not forgetting it.

Senator TUNNELL. We will not get the Chinese living standard up much higher, will we?

Mr. McKENZIE. Sure we will.

Senator TUNNELL. Is their average wage not something like 30 cents a day?

Mr. McKENZIE. $80 a month for a Chinese seaman now.

Senator TUNNELL. Well, they don't have any ships now.

Mr. McKENZIE. Mr. Levine would like to make a statement.

Senator TUNNELL. Give your name, please.

Mr. LEVINE. Seth Levine.

Senator TUNNELL. All right.

Mr. LEVINE. During the war, Chinese seamen on British ships had their wages increased from $10 to $54 a month, which is comparable with the British standards. In fact, at the present time, and it will undoubtedly continue, all Chinese seamen on British ships are now on the same basis as the British themselves.

Senator TUNNELL. We were not asking about what the British paid to the Chinese.

Mr. LEVINE. I assure you they will force the Chinese merchant marine to pay the same if they get one.

Senator TUNNELL. Why did you say the wage rates were raised from $10?

Mr. LEVINE. Because Chinese coolies on British ships prior to the war were paid only $10 as compared to $54 for British seamen.

Senator TUNNELL. How much were they paid on the Chinese ships?

Mr. LEVINE. There was not any Chinese merchant marine.

Senator TUNNELL. At least, very little. I guess the Japs had about destroyed their merchant marine.

Mr. McKENZIE. The point in dealing with this question is that you have to understand, as borne out by Admiral Land's statement, that in all foreign nations the pay given merchant seamen in comparable to that paid shoreside industry, and it is not so in the case of the United States, and that is why we are hot.

Senator TUNNELL. Your statement of fact is that we are not paying in proportion to our economy, while the other nations are paying in proportion to what they are paying people on land?

Mr. McKENZIE. Absolutely. The seamen have benefits in some foreign countries that do not obtain here. They have lifetime pensions and what have you. An American seaman just goes in the trash heap.

Senator SMITH. To what extent does the Maritime Commission deal with the wage question?

Mr. McKENZIE. Well, at the present time, they are dealing with it in a fashion I do not like. For example, we are negotiating right now in collective bargaining, fighting for jobs, and we are trying to put on a proper manning scale, especially in the standards department,

and the Maritime Commission put out manning scales which are far below what we consider proper operation. The shipowners say: "We cannot bargain collectively on this issue because the Maritime Commission has set the following manning scale and we cannot go above that." So we see the Maritime Commission, and they say: "This is a manning scale which is a minimum and not a maximum and does not prevent the raising of that scale through collective bargaining." But the shipowners are obstinate on the basis it is a Government regulation, and they will not raise it above the scale set by the Maritime Commission. It happened recently that men refused to sail aboard those ships where the manning scale established by the Government was, we say, in violation of our collective-bargaining right. The War Labor Board told the shipowners that the question of the number of jobs aboard ship was to be negotiated between the union and the employer, so we finally settled that case once and for all. Then the Maritime Commission moved in, and they are acting as an intervener for the employers and are setting up these phony scales, and we may have to take strike action to force them up. The men won't sail the ships, and then the owners call a conference and throw a few "windies" about that it is going to cost. But there is a case in point, and they are doing nothing about it except to interfere at this point.

Senator TUNNELL. Are there any other questions? You say you have two other people who want to make statements?

Mr. McKENZIE. Yes; there are two people here. I would like to make one final comment on this whole situation, and that is that the maritime unions are fully aware of their economic and political power. We organized the seamen on the theory they were going to have the same rights as shoreside workers, and the basis and the background of all of the strikes you have had in the maritime industry for years past, after the last World War, from 1934 on, have been because of the refusal of the employers to recognize that seamen have the same rights as shoreside industry workers. We think it is about time the Government decided that question.

As you pointed out this morning, it is a question of statutes or strikes. This whole question is No. 1 in our postwar program, and we are going to mobilize all of our resources, economically and politically, to force the 65-cents-an-hour rate for the ships. In this respect we know we have prestige with the American people. We know something about political action and know the answers on strike strategy and tactics, and we are going to go all out on this question. We think it is the special responsibility of this committee to see we get proper treatment on this question, because otherwise you are going to have hell on the waterfront from here on in. If we are left out, then we are going to go after it the hard way. We think it is in the interest of our country that the Government step in and deal with these short-sighted employers and see that the seamen are given the same consideration as shoreside workers.

Senator ELLENDER. That is not a threat, but good advice?

Mr. McKENZIE. It is a statement of fact.

Senator ELLENDER. I predict, if that happens, then all ships will be tied up and someone else will get the business; because, as I said awhile ago, I have always understood that our own country could not establish a merchant marine and maintain it, because we could not compete with foreign shipping interests.

78595—45——37

Mr. McKENZIE. That is a fallacy.

Senator ELLENDER. That is what you say; but I just happen to know a little different, because I voted for some appropriations here since I have been in Congress, in order to help our merchant marine. What was that subsidy we voted for, Senator Tunnell, in respect to the building of ships——

Senator TUNNELL. I think that was before I came to the Senate.

Senator ELLENDER. They planned to build 50 ships a year and sell them back to the operators at a sum about equal to what the operators could get the ships for abroad. I do not recall how much that cost the Government, but it was several hundred million dollars. Now, if we create a merchant marine with a capacity of 54,000,000 tons that we now have and the Government is forced to pay to the operators of ships the difference in the hourly or monthly pay between what Great Britain and France and the Scandinavian countries pay and us, in order to get our share of trade, I imagine it would cost probably as much as $500,000,000 or maybe $1,000,000,000 a year in subsidies.

Senator TUNNELL. Our shipping is now approximately five times what it was at the beginning of the war.

Senator SMITH. I think, Senator Ellender, that is a problem we will have to face as a matter of national policy.

Senator ELLENDER. Yes; but it is not as easy as the witness states.

Senator SMITH. I think the witness makes a good case—that there is no reason why the seamen on the boats should have to hold back because of that problem. I think they are in a strong position when they say a fellow workman on a boat should be compensated the same as one on shore, even though international competition is involved. However, I do not think you should strike but should try to solve it. Congress has a terrible load to carry, and we must consider whether we should tax our people more; and you should not threaten to strike on the thing——

Mr. McKENZIE. You just should not have that gap between people on ship and on shore.

Senator SMITH. I am sympathetic with your viewpoint, but I do not think you should go that far.

Senator ELLENDER. I would like these gentlemen to organize themselves into a group and let the Government give them 50 or 60 ships and let them operate them and see how they will come out.

Mr. McKENZIE. We will take that on.

Senator ELLENDER. Why don't you do that? Why not organize?

Senator SMITH. That would be much easier than a subsidy.

Senator ELLENDER. We would say, "Here they are, gentlemen; operate them." We would much rather do that than appropriate $500,000,000 up to $1,000,000,000 a year.

Mr. McKENZIE. If I were sure we could get the subsidies as quick as the shipowners, we could make a profit.

Senator ELLENDER. But you say you can operate without a subsidy.

Mr. McKENZIE. I did not say we could. I said I would not commit myself for the record as to specifying which lines should be subsidized, because we do not have a break-down of the profits made by employers. In other words, we should not tax the taxpayer with subsidies if the shipowners are making money.

Senator ELLENDER. You are questioning the statement that they are; and my answer to you is simply this—that I do not believe Congress would appropriate the money unless a case could be made.

Senator SMITH. If the Congress thought they made a profit, we would not give them a subsidy. In the Scandinavian countries they have cooperatives, and I think maybe the cooperative principle might be tried.

Senator ELLENDER. I would turn them over to you; that is what I would do.

Mr. McKENZIE. I give up. I come down here for 65 cents an hour, and now you give me the ships.

Senator ELLENDER. A lot of folks say we should pass the bill as written, but they do not think about others who are affected. I asked a lady witness and a priest who desired to include all farm labor: "Shall we put everybody under the umbrella?" I would like to help everybody, but the question is how. That is the point. As I have stated on many occasions, it is not that I would not cherish the idea of helping you boys; that is not the point. But when you have in Louisiana, Mississippi, Iowa, and California the schoolteachers that take care of your children and educate them, and they cannot go out and strike——

Mr. HADDOCK. They do it.

Senator ELLENDER. I never heard of them striking. They are dependent solely upon the tax dollar collected within the State, county, or city for their stipend.

The other day somebody presented a statement that showed, in 1870, 54 percent of the wage earners of our country were farmers; while today 56 percent run industry and the farms and the rest are employed in distributing what the farmers and industry produce. They are not covered in this bill. When you consider all of those who work in stores in Washington and throughout the country who are not covered by this bill——

Mr. McKENZIE. Are making more than 65 cents an hour.

Senator ELLENDER. Oh, no. You do not know the facts.

Mr. McKENZIE. The point is this, Senator: If you do not pay the workers decent wages, how are they going to buy the products that the factories manufacture? Who is going to pay the tariff on putting cargo in these ships? It is a vicious circle; you have to start somewhere. You give us the dough, and we will spend it quick; we will put it in circulation.

Senator ELLENDER. But you are providing for yourself by law as against the other fellow who is not protected at all.

Mr. McKENZIE. We do not like strikes any more than anybody else. We know it means a lot of broken heads.

Senator ELLENDER. As I understand your last statement, it is, "Give us this law or else we strike."

Mr. McKENZIE. It is not quite that simple. I pointed out that as long as you have a gap between seamen and people ashore, you are going to have trouble on the water front, and nothing you or I say can change the situation.

Senator ELLENDER. What will happen is simply this: We are not going to have a merchant marine; that is what will happen. We never had any in the past to amount to anything, just because the operators flying the American flag could not compete with foreign

ship operators, and the only way by which they can compete is for our Government to pay a subsidy.

Now, to operate at full blast and give you boys on the sea the same advantages as exist for shore workers, you could not any more operate the merchant marine than I could make gold out of sand. It is not in the cards; you just cannot do it.

Mr. McKENZIE. If we say we are in favor of subsidies that will take up the slack, you will vote for the 65 cents?

Senator ELLENDER. Where will you get the money? Someone has to pay for that. You are putting yourself in a class where you want to make the other fellow pay. You are putting burdens on other people.

Mr. McKENZIE. We are happy to pay taxes if we can afford to pay them.

Senator ELLENDER. There is a big howl now to pass the present tax bill and get 10,000,000 men from under who are complaining because they pay taxes.

Mr. HADDOCK. Mr. Chairman, just to get away from the question of subsidies, I would like for our research consultant to say a few words on it. This is a very broad question, and we are not prepared to go into it fully. Mr. McKenzie made a basic recommendation in answering Senator Ellender with respect to an international conference on this subject.

Mr. LEVINE. I would like to wait until Senator Ellender returns, because he has some misinformation which I would like to correct.

Senator ELLENDER. You may correct it for the record but not for me.

Mr. LEVINE. This country does not subsidize any of its domestic shipping, and that is more than half of its merchant fleet——

Senator ELLENDER. What do you mean by domestic shipping?

Mr. LEVINE. All coastal and intercoastal shipping.

Senator ELLENDER. That is within the United States?

Mr. LEVINE. Within the United States itself.

Senator ELLENDER. That is where operators are not in competition with foreign shippers?

Mr. LEVINE. They have problems. The railroads compete with them, and we are out to get an over-all program to enable shipping to live.

Now, insofar as our foreign commerce is concerned, not more than half of our ships are subsidized.

Senator ELLENDER. Why is that; why aren't they?

Mr. LEVINE. Because what you are paying subsidies for under the Merchant Marine Act is more than competition with foreign countries; you are paying a subsidy for a man to operate on a specific trade route to build up American commerce and not for the operation of ships alone. You are paying for him to run a ship on the same sea route, whether there are cargoes or not, because you want the American flag to fly in that port and because you want to have an agent there to encourage business between that country and America. The companies which do not take that commitment to sail consistently between particular ports but are allowed to tramp around and have great flexibility do not receive subsidies. Many companies take the position it is more profitable for them not to take these special commitments, and therefore they do not receive subsidies.

In your home port of New Orleans I think you have the Mississippi Shipping Co., which happens to be a subsidized line, but you have more unsubsidized than subsidized lines in foreign commerce.

Senator ELLENDER. Those ply between New Orleans and Florida.

Mr. LEVINE. No; those ply between New Orleans and Great Britain, South America, and the entire world. We do not subsidize our shipping solely for the benefit of American seamen. In fact, I think they should get more of the subsidy than they are getting.

Now, some facts about the actual cost of subsidies. The actual cost to the Government is limited by the recapture provision. The shipowner is allowed 10 percent of the capital invested but over and above 10 percent they have to turn the money back. On these 12 subsidized lines in the period 1936 to 1942, when subsidized operations were discontinued, after recapture your total susbidy is only about $35,000,000.

Senator ELLENDER. For how many ships?

Mr. LEVINE. Something like 155 vessels.

Senator ELLENDER. For a period of what time?

Mr. LEVINE. 1937 through 1942. For those 5 years I believe it was about $35,000,000. These companies made very large profits. It may not be so profitable in the postwar period, but your subsidy is terribly exaggerated in terms of public impression. The money we have expended in subsidies has come back to the United States in terms of having trained manpower, new ships, and great shipyards to prepare for this war. The $35,000,000 you expended on subsidies between 1937 and 1942 is nothing in comparison with the $17,000,000,000 which you expended in building a fleet during the war. It is true that the maritime unions are in favor of properly regulated subsidies. The Japanese, with a $18 wage scale, pay subsidies. We need to have an international conference and arrange rate schedules, fairness of competition, and to bring working standards everywhere up to a decent minimum, and then we will get away from subsidies.

Senator TUNNELL. If we are to have time to hear the rest of your testimony Mr. McKenzie, we should hear your additional witnesses now. You said you wanted to put two witnesses on for a few minutes.

Mr. McKENZIE. Yes.

Senator TUNNELL. Will you give your name?

Mr. SMITH. William C. Smith.

Senator TUNNELL. And your position?

Mr. SMITH. Special representative of the Pacific Coast Marine Firemen, Oilers, Water Tenders, and Wipers' Association, Independent.

TESTIMONY OF WILLIAM C. SMITH, SPECIAL REPRESENTATIVE, PACIFIC COAST MARINE FIREMEN, OILERS, WATER TENDERS, AND WIPERS' ASSOCIATION, INDEPENDENT

Mr. SMITH. Mr. Chairman and gentlemen, there are several points here that I think could be clarified a little bit. One, in particular, refers to the character of the seamen. Since the war began, our income has increased due to the bonuses that we have had. As a result, we are able to get a nicer, cleaner group of men on those ships and it has actually turned out to be a more efficient group. Now

that the war has stopped, most of them want to go home to their families, because they find they cannot make enough money on ships We do not want to lose those fellows.

There was a time in the merchant marine when the money paid to them was not enough for a decent man to rent a hotel room and get himself cleaned up in between trips, and it is almost that way now. So this 65 cents an hour minimum wage has to go through for us. These men who have started out to sea during the war are not going to stand for that differential between their job and a comparable job ashore, and it will reduce the efficiency of the merchant marine, and after all we are primarily interested in the efficiency of it.

Now, I would like to say a few words about the problem on the rivers, all of the rivers in the Central States. They are working a 12-hour day, 7 days a week, 6 hours on and 6 hours off. You do not even get proper sleep in 6 hours. Out of those 6 hours off they have to wash their faces and hands or take a shower, and eat their meals and prepare themselves for bed and get up and eat again possibly, if it is a watch where they eat twice in the same period, and then go back to work again. Those men have recently received an increase in wages, but up until just recently they were getting paid as low as 18 cents an hour. Skilled men such as deckhands were getting 42 cents an hour and they just received an increase recently that gives them a bare 55 cents. I went down there after a job on one of those ships, and I went aboard. They have women mess girls and women waitresses on those ships, and they are the filthiest characters you have ever seen, the kind of people you would not want to handle food.

Senator ELLENDER. Where are those ships operated?

Mr. SMITH. On the Mississippi River, the Ohio River, the Illinois River, the Missouri River; the Inland Waterways Corporation operates some of them.

Senator ELLENDER. That is under Government control, is it not?

Mr. SMITH. Yes, sir. If I am informed correctly, the equipment is owned by the Government but operated by a private corporation. I am not sure of that but I believe that is the way the thing is handled down there.

The class of people you get on those jobs at those wages just knocks the whole thing in the head. I would not take the job after I saw the food handlers and the men I would have to be shipmates with. I have been a merchant seaman for 13 years now.

Senator SMITH. You are speaking of the morale of the whole seafaring class?

Mr. SMITH. Yes, sir. I believe, if we are given 65 cents, along with the rest of the shore-side industry, I believe we can get a finer personnel on those ships.

Senator SMITH. You want to be equalized with the shore-siders?

Mr. SMITH. Yes, sir.

Senator SMITH. Do you think you can maintain in the shipping business anything like the number that have been in there during the war?

Mr. SMITH. No; I do not think we can keep anything near that number. I do not think anywhere near that number will care to go to sea. Most of them are going to sea just because of the wartime emergency.

Senator SMITH. And because they got special pay for it?

Mr. SMITH. That is right. But on the other hand there are a lot of youngsters that are developing into wonderful men and are better equipped to handle the work than many we have had before. They are smart kids, but they work for less than men get ashore, and you cannot expect them to continue.

I work in the engine department, and I will cite a case in the engine department. A fireman or a water tender is a highly skilled man with the complex mechanical machinery we have in ships today. As a matter of fact, the machinery is getting more and more complex. So a fireman-water tender is getting just 65 cents an hour. A stationary engineer ashore who does comparable work will range from $1.03 to $1.20 an hour in most localities. I believe there are some places where they pay a little less, but as a general rule it is from $1.03 to $1.20 an hour.

You take a man that can go ashore and take a job at 33⅓ percent more in wages, he certainly is not going to want a job on a ship. It is an important job and one that necessarily has to have a good, steady, dependable man, as he is handling high-pressure boilers that could kill somebody and blow up half a town.

Senator TUNNELL. You think those on the water should have comparable wages with those on the land?

Mr. SMITH. That is right. I think the merchant seamen should be included in this minimum wage bill.

I think that is about all I have.

Senator TUNNELL. Any questions? [No response.]

Where is your other man?

Mr. MCKENZIE. Coming up.

Senator TUNNELL. Give your name.

TESTIMONY OF SCIPIO COLLINS, SPECIAL REPRESENTATIVE OF THE MARINE COOKS AND STEWARDS ASSOCIATION OF THE PACIFIC CIO

Mr. COLLINS. Scipio Collins.

Senator TUNNELL. What is your work?

Mr. COLLINS. I am a waiter aboard transports. My salary is $132 a month, with the recent increase. I have here to show you why I believe we should have an increase. This is my last take-home pay [exhibiting].

Senator TUNNELL. How much is that an hour?

Mr. COLLINS. 55 cents. I drew $284.14 for a 2 months' trip, and my rent alone is $60 a month. Prices have not come down with wages. During the war I was able to get along, with the bonuses, but now I find it difficult.

Senator TUNNELL. You mean where your family lives?

Mr. COLLINS. Yes. I feel as though we should be given this increase so we can maintain our home. I was not able to marry before the war, but I got married during the war.

Senator TUNNELL. Where is your home?

Mr. COLLINS. I am making my home in New York now.

Senator ELLENDER. How much were you getting before the war?

Mr. COLLINS. $55 a month.

Senator ELLENDER. What is the extra pay that the witness said seamen were getting, amounting to $80?

Mr. COLLINS. That was the war bonus.

Senator ELLENDER. Was that during the war?

Mr. COLLINS. Yes. It started right after we went into the war.

Senator ELLENDER. Then, when the witness testified a moment ago that the rate of pay before the war was different, he said it was plus the bonus, the bonus did not come into being until when the war started?

Mr. COLLINS. That is right.

Senator ELLENDER. I see.

Mr. COLLINS. Brother McKenzie has elaborated on everything I would like to say.

Senator SMITH. Are you a member of a union?

Mr. COLLINS. Yes; the Marine Cooks and Stewards of the Pacific Coast affiliated with the CIO.

Senator TUNNELL. Cooks and stewards?

Mr. COLLINS. Yes; we handle all of the food on ships.

Senator ELLENDER. How do they feed you on ships?

Mr. COLLINS. The best that can be expected.

Senator TUNNELL. "How do you feed the rest of them?" should be the question.

Senator ELLENDER. I believe the waiter takes care of himself; he looks mighty fat and in good health.

Mr. COLLINS. My wife has fattened me up since I have been home.

Senator ELLENDER. I see. I suspected you would have an answer for it.

Senator TUNNELL. I think that covers it.

Senator SMITH. I think so.

Mr. MCKENZIE. In connection with the statement I have made, you can check with the records of the War Shipping Administration——

Senator ELLENDER. The reason I asked the question again was because we had a witness who lived at Baltimore and he said that his per-month pay before the war was, I think, $65 or $70, and that he got a bonus during the war. Now, the question I asked awhile ago was, as I understood it, if you were getting that all along.

Mr. MCKENZIE. I negotiated those contracts, so I know they were there.

Senator ELLENDER. But they were given during the war?

Mr. MCKENZIE. Yes, and prior to the war, too.

Senator ELLENDER. I remember asking the question, and he said he did not want to lose his bonus.

Mr. MCKENZIE. That is right.

(The statement and data submitted by Mr. McKenzie are as appear in the appendix.)

Senator TUNNELL. The committee will adjourn until Thursday morning at 10 o'clock.

(Thereupon, at 4:45 p. m., an adjournment was taken until Thursday, October 18, 1945, at 10 a. m.)

AMENDMENT OF THE FAIR LABOR STANDARDS ACT

THURSDAY, OCTOBER 18, 1945

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON EDUCATION AND LABOR,
Washington, D. C.

The subcommittee met, pursuant to adjournment, at 10 a. m., in room 424–B, Senate Office Building, Senator James M. Tunnell presiding.

Present: Senators Tunnell, Ellender, and Smith.

Also present: Charles Kramer, consultant to the committee.

Senator ELLENDER. Mr. Chairman, for the record, I received this morning a statement in the form of a petition from the Louisiana Syrup Association, and I would like to have that incorporated in the record if and when it is printed.

Senator TUNNELL. All right.

Is Mr. Foreman here?

(No response.)

Senator TUNNELL. Is Mr. Mitchell here?

Mr. MITCHELL. Yes, sir.

Senator TUNNELL. All right, Mr. Mitchell, you are next in line.

TESTIMONY OF BROADUS MITCHELL, RESEARCH DIRECTOR, INTERNATIONAL LADIES' GARMENT WORKERS' UNION, NEW YORK, N. Y.

Senator TUNNELL. Will you give your full name and position?

Mr. MITCHELL. Broadus Mitchell. I am research director of the International Ladies' Garment Workers' Union, 1710 Broadway, New York.

Senator TUNNELL. All right. Now proceed in your own way.

Mr. MITCHELL. The committee will have heard a great many statistics for and against the proposal for raising the minimum wage under the Fair Labor Standards Act to 65 cents an hour. The International Ladies' Garment Workers' Union in favoring this legislation does not propose to burden you with a rehearsal of familiar figures. Instead, we may be of service to the committee by recalling a part of history which bears directly on the important question you are considering.

Far and away, the chief economic development of our time is the change from scarcity to abundance. The fear of starvation which plagued mankind for countless centuries has changed within the last generation or two to the fear of surplus. This tremendous increase in the efficiency of production demands a change in economic thought. The so-called economic laws which were appropriate when we had

meager output no longer apply when we have called science and discovery to our assistance. Yet our economic ideas written into the books and sanctioned by tradition are revised only reluctantly. We still have too largely a body of economic thought which was prompted by scarcity. We need to embrace modern economic principles which belong to an economy of surplus.

The committee will permit me to recall a major episode in the intellectual history of the last century. The English masters of economic thought, fearing that population would outrun the food supply, groped toward a rule of wages which was clearly expressed by about 1825. You may remember the belief was that workers could not, as a class, permanently improve their standard of living. This was because there was only so much of economic capital set aside to be paid in wages. You arrived at the average wage by dividing the number of workers into this so-called wage fund. If the number of workers was temporarily small, the average wage might increase, but only for a short time, because then the birth rate would be stimulated, more children would reach maturity, the number of workers to be divided into this wage fund would be greater, and the average wage would fall. Similarly, there was no use for workers to form labor unions because, if one group of workers, through this means, succeeded in getting more for themselves, it simply meant less was left for others. This dismal doctrine held sway for about 50 years. Its best known advocate was the distinguished economic and political philosopher, John Stuart Mill, who was the teacher of Parliament and public. It was unquestioned that wages and profits were antithetical. They were like buckets in a well. If wages went up, profits went down; and the way to increase profits was to reduce wages. Since capital was held to be more essential to social progress, capital must be encouraged and conserved, and as little as possible dissipated in payments to workers. Wages, it was believed, were paid from capital. The relation between wages and profits was cut and dried, susceptible of very arithmetical demonstration. If workers got more, unless their numbers were diminished, it was self-evident that proprietors would get less, the accumulation of capital would be retarded, and the future of society would suffer.

About 1870 came a startling new view. Some practical men who had observed the workings of labor legislation and trade-unionism brought forward inescapable arguments against the old doctrine of wages. They saw that the standard of living of workers was improving; that unions were springing up on every hand, and were securing more for greater numbers of workers; that millions of immigrants could pour into a country like ours without more than temporarily threatening the level of wages. They urged their objections with such effect that even a man like John Stuart Mills recanted his old dogma and acknowledged that he had been mistaken for 50 years. Thus, it was nearly three-fourths of a century ago that able economists perceived a sympathic relation between wages of labor and profits of enterprise. They saw that the two could increase together. The prospect of a rising standard of living opened before the world. Our economic life was seen as dynamic—not static. It was no longer viewed as a pussy-in-the-corner game in which the safety of one was bound to be the peril of another; all could prosper together.

It is essential to recognize that the American economy particularly

is flexible, susceptible of enormous beneficial changes. When statutory minimum wages were proposed in this country, many were laboring under the incubus of out-moded economic ideas. They wondered whether the industry of America could afford to pay minimum wages sufficient to support workers in merest decency. Budgets were drawn up to determine what would be necessary in food, clothing, shelter and a modicum of education and recreation to sustain workers in health. These budgets were very narrowly inspected, and all that could be omitted was dispensed with. They applied only to women workers. Economic objections to these budgets were reinforced by legal hostility so that the statutory minimum wage was for years suspended. Since then, we have moved forward in experience and thought. Instead of drawing up a budget which will enable the individual worker to exist, we realize the importance of a minimum wage high enough to permit the entire economy to function. We no longer talk about the number of calories, the allowance for laundry, the item for room rent, the pennies for newspaper, and so forth which make up the minimum requirement every week for the individual employee. We have shifted our emphasis from the problem of consumption to that of production. We are wondering how much purchasing power will be necessary to achieve and maintain full employment. We have come from individual health to social health. The true concern of lawmakers in establishing a minimum wage is not only the security of the workers immediately affected, but also the well-being of the entire economy. In minimum wage legislation, we have passed from the limited authority of the state to the national responsibility of Congress.

Much of this change in purpose has come since the 40-cent minimum was established in the Fair Labor Standards Act. At that time, the clients were workers immediately affected. In the few years since then, taught by wartime miracles of production, we have learned the imperative importance of enlarging the general buying power.

I am pleading here for fairness to those who receive less among American workers; but I am pleading no less for fairness to the owners of American industry. Large purchasing power is the means by which our productive system can operate effectively. Mr. William H. Davis, recently director of the Office of Economic Stabilization, gave a press interview reported in the newspapers of September 5, 1945, in which, according to reports, he declared that real wages may be markedly increased, that is, money wages of workers may be raised without raising the cost of living or the general price level. This a modern and an enlightened view, all the more noteworthy because it was expressed by a public officer who for several years, under the stress of war conditions, was charged with the responsibility of restricting wage advances. The end of the war meant that an eager new consumer market must be substituted for the enormous demand that had previously existed. This demand, Mr. Davis proposed to furnish through additional buying power of American workers. Mr. Davis' doctrine was soon rejected by the President of the United States and the Secretary of Labor, and Mr. Davis was rebuked. I want to tell you that in my judgment Mr. Davis was right and his critics were and are wrong. I do not say this because I now have the honor to speak in the name of a great labor union; I say it as an economist who is in duty-bound to regard the welfare of the American people.

A study by the Brookings Institution, published in 1940, indicates that in general, output per man-hour increased in the 1930's more rapidly than total output of goods with a resultant decline in employment. Labor's gains from increased productivity were merely in the form of leisure; for, although the hourly rates of pay increased, weekly wages were lowered by shortening the workweek. The failure of production to increase as man,hour productivity increased resulted in slack employment and partial utilization of plant capacity. The potential benefits of increased efficiency have not been fully realized by either labor or capital. In other words, our increasing skill to turn out larger quantities of goods and services has to a consiberable extent been nullified. The possibilities have not fully materialized in national income.

In order to insure that output will expand as workers' productivity increases, it is necessary to pay labor a wage sufficient to maintain a level of purchasing power and consumption conducive to full production. Our return to a civilian economy has entailed losses in overtime and various bonus payments in addition to loss of jobs. Unemployment has risen and may continue to rise to still greater proportions. To compensate for these losses entailed by reconversion and maintain the purchasing power of our working population, we have to decide now between raising wages, and public spending on relief, public works, and so forth.

Today there is discussion about our national debt and its reduction. It seems wiser to limit our national debt by avoiding public spending on relief and public works, and to sustain purchasing power through an adequate minimum wage so that we will not suffer another depression with its loss of national income.

Average hourly earnings in the major branches of the women's apparel industry are already far above the proposed minimum as can be seen in table I. (See p. 584.) The highest-paid workers, those in the women's coat, suit, and dress industries, receive average hourly earnings of $1.56 and $1.14, respectively, and constitute 71.9 percent (an overwhelming majority) of the total employed in our industry. The lowest-paid workers—those in the cotton dress, uniform and apron industry—receiving 67.4 cents per hour, comprise only 18.7 percent of the total employment in the women's apparel industry.

The majority of garment workers are organized in the International Ladies' Garment Workers' Union, which has a membership of over 300,000. Examination of our prevailing union wage rates reveals that most wage scales are much higher than 65 cents, so that wage adjustments which may be necessitated by the proposed 65-cent minimum are small. In New York City, where a majority of apparel workers are located, the guaranteed union minimum hourly rates in the dress industry range from 67 cents to $1.57, depending on craft. In the cloak industry in New York City, basic union rates range from 85 cents to $1.82 an hour depending on craft. Since the majority of apparel workers earn above 65 cents an hour, it follows that compensatory wage increases necessitated by wage differentials will be relatively small. The payment of less than 65 cents an hour to garment workers today (considering the small number involved) perpetuates labor conditions which constitute an unfair method of competition.

Labor is but one item in the price of the finished product. In the women's-apparel industry the percentage of wages to total value of product is comparatively small, varying from 14 percent in some branches to 20 percent in other branches as shown in table II. (See p. 584.) Improving equipment and plant efficiency can offset wage increases. The business acumen of management, its ability to stimulate and forecast consumer demand, are far more important factors than wage rates in determining the margin of profits in the women's-apparel industry. Moreover, the adjustments following on higher wage rates can be made without affecting the quality of the product. It is interesting to note that despite the rising level of wages from 1929 to 1939, the unit price per garment has declined as a whole over the period.

The data on prices and wages presented thus far show that a 65-cent minimum is necessary to prevent unfair competition, will not curtail employment, and will have but little effect on the wage structure in the women's-apparel industry. This is also borne out by actual experience with minimum wages under various State laws, the NRA codes, and the Fair Labor Standards Act.

If minimum wage legislation in the several States had a detrimental effect on industry, there would have been a migration of plants to areas without minimum wage laws or displacement of women and minors by workers to whom wage orders did not apply.

Summarizing the experience with State minimum wage legislation, the United States Department of Labor comments significantly:

> In regard to women's employment, the usual experience has been that it continues to increase regardless of whether or not there is minimum-wage legislation, and in the State where the highest minimum was maintained over a long period of years women's employment increased considerably more than in the country as a whole. The constant changes in employment that are occurring are attributable to many factors not connected with the minimum wage and there is no evidence that such legislation has any general or controlling effect toward inducing the replacement of women by men.

Similar experiences in the apparel industry with minimum-wage orders are recorded for Rhode Island, Illinois, and New Jersey.

The introduction of minimum wage scales under the NRA codes did not limit employment or sales in our industry. While there were increases of 34.4 to 53.7 percent in wages paid in various branches of the garment industry, employment simultaneously increased from 2.4 to 18.5 percent. Over the 2-year period of 1933 to 1935, pay rolls in the women's-garment industry increased 62.5 percent, while employment increased 36 percent. Between 1933 and 1934, department-store sales in the various branches of women's apparel rose from 3 to 31 percent.

Data on employment and pay rolls in the women's apparel industry demonstrate that the FLSA had no injurious effect on the industry. As can be seen in table III, there were no over-all significant changes in either employment or pay rolls. Table IV shows that department-store sales of women's apparel increases. (See p. 585.)

From March 1940 to March 1941 some plants in the industry registered increases in employment while others showed declines, with no correlation between declines in employment and wage increases being shown (tables V through XI). Both high- and low-wage plants increased their employment of workers. The reverse is also true. In several instances, firms in the lower wage brackets which registered the largest wage bill increases also recorded the greatest gains in

employment. The lack of correlation between declines in employment and wage increases and wage levels is sufficient indication that increasing minimum wage rates do not lead to curtailment of employment.

Experience with state minimum wage legislation, the NRA, and the FLSA shows that employment is not curtailed when minimum wage rates are introduced or increased. In our industry the total increment in the wage bill will be small and can easily be absorbed by improved plant operation. Increasing the minimum to 65 cents is necessary at the present time to eliminate unfair methods of competition, and will not curtail employment.

(Tables I to XI, inclusive, submitted by Mr. Mitchell are as follows:)

TABLE I.—*Women's apparel industry—average hourly earnings by branch of industry United States, 1944*

Branch of industry	Average hourly earnings	Percentage of total employment [1]
	Cents	*Percent*
Corsets and allied garments	73.0	[2]
Knitted outerwear	74.1	[2]
Women's coats and suits	156.4	21.9
Dresses (other than cotton)	114.3	50.0
Cotton garments	67.4	[3] 18.7
Women's garments (not elsewhere classified)	78.3	[2]

[1] Figures computed from U. S. Census of Manufactures, 1939.
[2] Not computed owing to small percentage involved.
[3] House dresses, aprons, and uniform.

Mr. MITCHELL. Now, I would like to make some remarks which need or need not be taken down. In part they will duplicate what I have said in my statement——

Senator TUNNELL. I do not see how we can take up more than half an hour.

Mr. MITCHELL. I will not do that in any case, but I would like to try to summarize it briefly for the committee.

Senator TUNNELL. All right.

Mr. MITCHELL. Many people will have brought to you full figures on the importance of raising statutory minimum wages, and I will not burden you with additional ones, except as they apply to our industry, the women's apparel industry.

Perhaps the best thing I can do, if it would help the committee, is to try to put this kind of proposal in its setting, and I make no apology in going back into our economic and intellectual history a century in order to show where, it seems to me, this fits.

Sometimes those who have come out of academic environments are accused of being impractical and a little beside the point; as a matter of fact we are often a little more in the groove than we are given credit for, I think.

The earliest doctrine of wages that was held by classical economists was that of the subsistence wage. The reason it never got beyond the notion of subsistence was that the early economists were plagued with the notion of dearth.

This was the specter that was chasing mankind constantly. So it destroyed the hope of economists at that time; and of men like Malthus, for example, who was a clergyman, and in every way a warm

personality, and yet was the dreariest of economists, because he was convinced that population would outrun the food supply, and therefore all of the ills of mankind were really blessings from Heaven in disguise.

Senator TUNNELL. He did not want a great increase in population.

Mr. MITCHELL. No; he was afraid and he was certain that population constantly tended to increase faster than the means of subsistence, and that consequently war, disease, crime, and vice were measures of providence to prevent population from outrunning the food supply. Indeed, that if society were able to rid itself temporarily of these ills, it would only mean they would reappear in the form of insufficient food, starvation, and so on; in other words that a permanent improvement in standard of living was impossible.

Now, this notion became hardened into a rule of wages known as the wage fund doctrine which prevailed in both English and American thought from the period from 1825 to 1875.

The middle of the last century, then, was beset with the conviction that it was impossible for workers to improve their condition; it was no longer the equation of food and population; it had altered a little. It was what capitalists were prepared to set aside for the payment of wages as compared with the working population; but essentially it was the old balance. But they were now sure that the only way to increase the average wage was by increasing this wage fund, which would take a long period, or by decreasing the population.

Senator TUNNELL. Anything that would decrease the working population would be helpful; smallpox, for instance.

Mr. MITCHELL. That is right. Incidentally, they scouted the idea of birth control. That was immoral. But a great many social ills were tolerated since, as you suggest, they kept the population within check. This meant there was no elasticity in the economic system. It was an arithmetical calculation and anybody could forecast economic developments in the measurable future.

The man who represented this view more than others was the great economic and political philosopher and logician, John Stewart Mill, who gave intellectual impulse to the social sciences during the century. He was convinced of it. He got it from his father, and his father had got it from Ricardo, and Ricardo had gotten it from Delavigne, and Delavigne had gotten it from Adam Smith. It was a most acceptable and demonstrable view.

Then, about 1870, something happened. The industrial revolution had begun to show its results: production had enormously mounted, and some practical men observed that this doctrine, that if wages increased, profits must suffer—could not hold.

For one thing, labor unions were succeeding all along the line. It had been said before that if a union got more for its group of workers, it simply meant that less remained for some other group.

Now it was being shown that many groups were deriving benefit. Furthermore, it was shown that a country like ours could receive enormous increments in immigration, and at the same time enjoy rising standards of living.

So, about that period, a number of economists and Government officials who had held with labor always, began making at first independent and then concerted attacks on the wage fund doctrine and said that profits and wages can rise together, and that the whole community can benefit by larger production; that wages are not paid

out of capital in the old sense, but out of current profit; that the worker pays himself by efficiency.

Now, that was a great development, because it opened up the future; it turned economics from, as it had been called, a dismal science, into one which was linked to improvement and to hope for the masses of mankind. This was connected, of course, with the major alteration that had taken place in the economic life in the past two centuries, namely, that from a scarcity economy to one of potential or actual abundance and surplus, and that has necessitated a revision of all of our old economic rules.

What suited at the time of Malthus that we speak of was utterly inapplicable in a period in which the machine, coupled with science and giant power, and a new call upon natural resources, opened a vista beyond our capacity to see.

At the time social and labor legislation was proposed in the last century, those who held to the old view of fear, those who had niggardly notions were perfectly honest, were based on balance; they said that if legislation does anything to give more to workers, it is going to imperil the enterprise and private profit upon which the welfare of Britain or of our country depends. That was regularly said.

Some of you no doubt have been in Manchester and have seen the chimneys of factories 150 years old. When I last saw them, I was reminded that these were the same factories that the owners threatened to tumble into the sea if children were prevented from working 15 hours a day, 100 years ago, and that threat was made in all solemnity.

And so, ever since, honest but ignorant people, it seems to me, have said that any attempt to recognize, let alone force a higher standard of living on the part of the masses of the people is going to endanger our economic expansion or even our maintenance in existence. But we get over that.

When minimum wage laws were proposed in the States on a very narrow basis, it was felt that this was an attempt to warp economic forces which ought to be left to take their own course; that there was great favor in a natural economic system, but that it was being interfered with by an oversolicitous legislature and that derangement and disaster were invited.

That was when we were talking about $14 a week for a working woman.

Now that the proposal is on a more generous scale, I hear many of the same objections offered in the same tone, and of the same character.

What I want to draw to the committee's attention is just that fact, that through this whole history of objection and in the face of objection, steady and remarkable progress has been made.

The 65 cents which is proposed as the statutory minimum in this bill will not affect many of the 300,000 workers in the union which I represent, the International Ladies' Garment Workers Union. I am submitting figures indicating that we are well above the 65-cent minimum as a result of collective bargaining, so I am not appealing here for more than a fraction of our members. Those making cotton garments in some instances in newly established shops in rural districts or small towns, will be directly benefited: others will be indirectly benefited, of course, because, as the committee is well aware, there will be necessarily and properly a rearrangement of wages above the floor which is established, in order to preserve, not completely,

but in some measure, the accepted differentials between wages, because, as you well know, workers, it often appears, are quite as much interested in protecting the differences in wages as they are in the absolute amounts.

Senator TUNNELL. What would be the result if there is no statutory provision as to those differentials? Will they be maintained by force of circumstances anyway?

Mr. MITCHELL. Yes; they will be maintained anyway.

The point I am making is, I think this would tend to push the whole range up, and that it is foolish for people to come here and talk about 65 cents only, and not then be candid enough to recognize that it is going to run the impetus upward.

Senator ELLENDER. To what extent?

Mr. MITCHELL. Well, our experience has been that it does not register fully. Dr. Graham of the War Labor Board is here and he knows that there we were permitted to preserve these differentials in part, but they were tapered.

As you get higher up, some of the differentials disappeared.

Senator ELLENDER. By that you mean the increase is not as great as it is in the lower brackets?

Mr. MITCHELL. That is right.

Anyway, it is going to depend on collective bargaining. That part of it is going to be a question of what the workers can get from their employers. There is nothing statutory about that.

Senator ELLENDER. Since you mentioned collective bargaining, what effect do you think the passage of the bill would have on collective bargaining where advisory committees are empowered to classify jobs in all industries and fix differentials for job holders in the upper brackets in line with the minimums that will be established by Congress?

Mr. MITCHELL. I think it will have a strengthening effect on collective bargaining; very much so.

Senator ELLENDER. How do you reason that it will have a strengthening effect, if the wages are fixed by a board authorized by Congress? Will they not remain static?

Mr. MITCHELL. Not at all. What we need are floors. Collective bargaining has progressed along with protective labor legislation. One has supplemented and complemented the other. Workers do a very great deal to enforce our labor legislation.

Similarly, labor unions maintain departments which watch very closely the actions of our governmental administrative agencies touching labor and seek to offer their suggestions and assistance and support of the enforcement efforts of these agencies.

Similarly, since this raises the wages of those who are lowest in the wage scale, it gives us a tremendous assistance with those who are above.

For example, Senator Ellender, you and I as southerners, are familiar with the fact that for a great many years our low standards of wages in the Southern States have been a drag upon standards elsewhere in the country. I think the indictment is not against the South alone, because there are other areas. Sometimes we fall too easily into pointing to the South as the Nation's No. 1 problem, and fail to remember that some others approximate that low standard.

We say we are a section that was ruined in the Civil War and we need to have tolerance in this matter, and our standards must not be

improved too rapidly, or otherwise we will not be able to improve economically, and the result has been that we have pulled down from New England, from the Middle States, great textile industries, for example, and you have the spectacle of cotton manufacturers in Massachusetts, which State has had its labor standards fixed by law, going before the legislature and saying, "Relax, because South Carolina, Georgia, and Louisiana are threatening us, and we cannot compete with 12 hours down there."

We tried to organize the women's apparel workers in New York and in Georgia and Arkansas. Very different wage levels prevail. Even in our union shops in those two areas different levels prevail for the same character of product.

Now, suppose a woman working in a cotton-garment shop in Little Rock, Ark., instead of getting 40 cents, gets 65 cents an hour. It is going to be a very great deal easier for us, the union, to protect the wages of our workers in New York and in Ohio, and in San Francisco, and every other market that competes.

Senator ELLENDER. Will not the tendency be, though, to maintain the existing differentials between those various sections in our country?

Mr. MITCHELL. No; the tendency will be to reduce the differential. Nobody wants to tolerate a substandard wage, and in wiping out substandard wages, you make greater progress than you can make in raising wages above the minimum.

Don't forget, Senator Ellender, we have to get everything above the statutory minimum by agreement with our employers, and it all depends on what the industry is able to offer.

Senator ELLENDER. In that connection, I cannot quite agree with your statement of a moment ago that the fact that these advisory committees will be empowered to do what the unions now do by collective bargaining will not affect a union's ability to bargain. The authority given by law to fix wages will certainly weaken, to my way of thinking, or probably, shall I say, do away with the necessity of unionism. Why should a man want to pay $40 or $50 a year dues, when by law he can obtain the same relief for nothing?

Mr. MITCHELL. We cannot do some of these things which the law can do, or it would take us a very long time to do it, and that is the reason we need the law to do it.

I can give you concrete instances. The women's apparel industry has been spoken of as an industry on wheels. There is very little investment in capital, a few sewing machines, and you can rent them; a vacant room above a store in a small town, and an experienced manager, and a few experienced operators, and consequently any shop can move very rapidly from a center where the union has established excellent conditions to a low-cost or low-paying area—and it is not always the low-cost labor area which attracts.

Right now, with the textile industry having moved so largely from New England and northern New Jersey, hundreds of thousands of square feet of available factory space are empty there. Those towns soon will be having large numbers of unemployed of a sort adaptable to our industry, and industrial engineers and others know of these opportunities.

The chambers of commerce and the city governments are making active efforts to get tenants.

Now, they are likely to pry loose from our union, people in a center like New York, or any other communities that they can. Within

the last year I think about 60 shops have fled—I am not sure they have all gone from New York, but about 60 have appeared in the anthracite district of Pennsylvania, around Wilkes-Barre, Scranton, Hazleton, and Sunbury.

There they get the daughters and wives of men employed in the mines who otherwise would not have any occupation or earnings, and they get them for very much less than workers in New York demand.

Now, it is a terrific job to organize 60 small shops scattered around that area. We do it as rapidly as we can, but they have got one foot on the farm and one in these little factories. They frequently regard themselves as only temporarily in the industry. They are doing unskilled work, and we cannot, even when we organize a shop, raise the wages very much because our manufacturer with whom we have an agreement is beset by others whom we have not organized.

Senator TUNNELL. In the last analysis, what is the threat by which you can force an agreement by collective bargaining?

Mr. MITCHELL. In the last analysis, it is a strike, but we cannot strike effectively in a case of the sort I described, where the immediate result would be that either the shop goes out of existence, by which we would have lost everything we contended for, or he shifts his work to a nonunion shop in the immediate locality, a shop which we are not in a position to strike. We do not want to strike.

Ours is a very old union, and one in which we have excellent machinery for adjusting disputes. What we want to do is to organize and come to an agreement with our employers, and that we do in the main. But we have, of course, a serious problem in the case of shops which have located in hitherto nonindustrial districts.

Senator ELLENDER. As you know, the South has been for quite a while engaged principally in agriculture; what effect would the hiking of wages from 65 to 75 cents have on the ability of farmers to obtain labor so as to be able to run their farms?

Mr. MITCHELL. As you know, Senator Ellender, labor has been leaving the farms for the city for many years.

During the depression we had not only the normally unemployed on the farms, but there were many backed up because they would have gone to the cities if they could, but could not do so during that period. It is my impression that the introduction of the caterpillar tractor in the cotton districts of the South, the tractor and other improved farm machinery has expelled from the South hundreds of thousands of workers, many of whom I saw on the road to southern California in 1939 and 1940. So that if anybody has done without labor in the South, it is the plantation owner, and in that part of the South which you come from, particularly.

Senator ELLENDER. And the result is many of the small farms that used to dot the countryside in my State, as well as many of the other Southern States, have disappeared. These home owners have been taken over by larger operators so that the small farm in the South that was called home by many is being absorbed as time goes on.

Is not that true?

Mr. MITCHELL. I think it is, but I do not think that depletion comes from legislation of this sort. I think it comes from forces that have acted within the farm economy.

Senator ELLENDER. Doctor, do not say that if you have not had the experience. I have had it for 25 years and I think I know. I have a farm down South and I know what has occurred to me as well as to many of my neighbors. We simply cannot live with it. Higher wages in industry raise farm wages to such an extent that labor-saving devices must be resorted to in order to meet competition. We cannot pay a higher wage unless we can sell our crops for a sufficient sum to cover wages. Unless we are able to take care of that phase of the problem, my guess is that within a short period of time the small farmer who cannot afford to own labor-saving devices, will either go out of business or be gobbled up by larger concerns that will be able to.

Mr. MITCHELL. I think that is quite possible.

Senator ELLENDER. And the same thing will occur in respect to small business. Large businesses will gobble up the smaller ones, because the smaller ones cannot survive unless they are in a position to own and operate labor-saving devices. Do you not agree with that?

Mr. MITCHELL. No, sir; I do not. Do I understand you want to hold down industrial wages to the level of what the small farmer can pay?

Senator ELLENDER. No; I don't mean that at all. I believe that the process must be gradual. That is, time for adjustment must be accorded.

Mr. MITCHELL. It is awfully gradual for those in the South, Senator.

Senator ELLENDER. It comes in time. We have raised it from 10 cents to 40 cents, and my hope is we can raise it to a dollar if conditions will permit it; but my contention is if we try to do it by legislation of this character, overnight, we will hurt everybody not covered by the legislation you are fostering.

Mr. MITCHELL. How did we get if from 10 cents to 40 cents? Was that not by legislation?

Senator ELLENDER. Yes; but if it had not been for the war, we would not have gotten it up to 40 cents without seriously affecting quite a few industries. My prediction is that many segments of industry will not be able to bear the burden, unless prices are increased. During the war as I have indicated on many occasions, with the Government being the purchaser of almost 50 percent of our industrial and agricultural production and with full employment, the War Labor Board did not see fit to raise the minimum to more than 55 cents; but what you are trying to do here is to have Congress raise the minimum wage, not to 55 but to 65, and then to 75 cents, in a space of only 2 years.

Mr. MITCHELL. I am overstaying my time, but may I say one thing?

Senator TUNNELL. I have a question yet.

Mr. MITCHELL. One purpose of the 65-cent minimum——

Senator ELLENDER. Seventy-five cents.

Mr. MITCHELL. Call it 75, then. Seventy-five cents, incidentally, will buy three-fifths of what the Government itself says is a minimum adequate budget. Remember that.

The purpose, it seems to me, is not to provide enough for the average family to live in decency, though that is certainly a very great object, but the purpose is not only to support the family, but the economy of the country.

Unless we can have sufficient purchasing power, the enterprises which Senator Ellender speaks of will be in a more desperate plight

than he foresees. I do not say it is possible for the committee or for Congress to contend with all of the differences in efficiency, and in the size of productive units which Senator Ellender raises. Those are historical, but we cannot tolerate substandard conditions anywhere.

Senator ELLENDER. But they are bound to exist, and if, through your process of raising wages you, at the same time raise the cost of the goods that are consumed by those you seek to help, they are in no better condition. Aside from that, every time the Congress passes a law to help a special group, we trample on the feet of others, such as school teachers, clerks in stores, white collar workers, and pensioners. What are you going to do about them?

If it were possible to raise wages without disturbing the present price structure, your argument would stand on firm ground, but that will not result. The cost of living is bound to increase, and in so doing we affect the lives of millions of our people who are not so fortunate as to be within the purview of the bill under consideration.

Mr. MITCHELL. I would like to say in reply to Senator Ellender, that William H. Davis, who quite recently was economic stabilizer and before that was Chairman of the War Labor Board, and who, during the war, accepted the mandate of holding down our wages, said recently in an interview that he believes we can increase the real wages of American workers, that we can increase their money wages, without increasing the cost of living.

Senator ELLENDER. Oh, no.

Mr. MITCHELL. He was sharply rebuked for it, and was dropped from the administration, or at least I suppose it was for that reason, but I believe he is right, and we believe that with anything like full utilization of America's capital, material, and labor resources, we can so increase our efficiency of production that we can have more at the same price.

Senator ELLENDER. That sounds silly, to me.

Mr. MITCHELL. You said if that were true, my argument would hold, and I quote William H. Davis, who was recently Economic Stabilizer——

Senator ELLENDER. He denied it before this committee that he said it in that manner.

Mr. MITCHELL. I do not get that. I had a letter from him recently.

Senator ELLENDER. His testimony is available to you if you want to read it.

Mr. MITCHELL. I would be very happy to; and I think the country has received the same impression that I got from him.

Senator TUNNELL. If you pursue the theory that is advanced by those who think that substandard wages must be enforced in order to keep in business a particular class of people, is that not favoritism?

Mr. MITCHELL. Exactly. If Senator Ellender will permit me to point out here, I am a southerner, and we in the South have too long entered the special plea for ourselves to be allowed to exploit our people and our section because we said we were new in industry, and we had to be encouraged.

Now, that made the South a national liability. Anyone in the union, under this legislation, has got the right to come to the parts of the country which are paying substandard wages and say, "In the interests of America you have to improve your practices."

Senator TUNNELL. Under that theory, there would be forced on the whole Nation a substandard of subsistence.

Mr. MITCHELL. Exactly. It is a question of whether the authority of Congress is going to be exerted positively to give the whole Nation a chance, or whether in default of that the Nation will have to continue to struggle against conditions which unionism, by itself, for a great many years, would not be able to remove.

Senator ELLENDER. You are trying to do by law what the unions have been unable to do since they have been organized, and that is to establish the same rate of hourly pay all over the Nation for those doing the same class of work.

Mr. MITCHELL. There is nothing in this bill that would establish the same hourly pay all over the Nation.

Senator ELLENDER. But you establish a minimum applicable all over the Nation, and advisory committees can be created with the power to classify jobs and fix hourly wages in proportion to the minimum fixed by Congress. If that is not fixing rates, then I do not understand the English language.

Mr. MITCHELL. Hourly wages vary tremendously from 40 cents at the bottom to something very much more at the top. This is the minimum. This does not limit what we will seek to achieve for the more skilled operation and more favorably placed workers above.

If a man is sunk in a quagmire, and you offer him a board on which he can pull himself up and stand, he does not cease to walk because he has got the board. That is the first time he is permitted to take steps.

Now, if we have our legs dragging in this slough of substandard conditions, it prevents what I conceive to be useful action we have taken in other parts of the country.

Senator TUNNELL. Thank you.

Is Dr. Foreman here now?

Dr. FOREMAN. I am sorry I was late, Senator.

Senator TUNNELL. It was your loss and not ours, because we will get to hear you anyhow.

Senator ELLENDER. I might say this is the first committee I have ever attended wherein the chairman is always on time. We lose from 15 to 30 minutes in getting started on many committees. I want to compliment the chairman for his promptness.

Senator TUNNELL. When I came to the Senate they told me the way to lose the most time was to be prompt. So I thought in this case, where I could control it, we would not lose the time.

All right, now, Dr. Foreman.

TESTIMONY OF CLARK FOREMAN, PRESIDENT, SOUTHERN CONFERENCE FOR HUMAN WELFARE

Dr. FOREMAN. I am Clark Foreman, president of the Southern Conference for Human Welfare, which is an educational association of several thousand Southerners of all races, colors, and creeds, that believe in the improvement of the South, both in terms of economic prosperity and democracy.

Senator ELLENDER. Where are your headquarters?

Dr. FOREMAN. In Nashville, Tenn., sir.

I might also say you will hear from our first president, Dr. Frank Graham, who is also president of the University of North Carolina, a little later.

The Southern Conference for Human Welfare wholeheartedly endorses the principle of the 65-cent minimum wage.

The Southern Conference—with members in the 13 Southern States—feels that a 65-cent minimum wage will do much to solve the economic and social problems of the South.

Let me tell you what Governor Ellis Arnall, of Georgia, said in the July 28th issue of Collier's magazine:

> The average American annual income at the time of Pearl Harbor was $604.

Note that. The average American income. Not the average northern income.

Governor Arnall goes on:

> In the South, it was $314.
> The average Negro income was considerably lower.
> No plan to cure the South of its will succeed which does not make that differential its first order of business.
> As long as a large segment of our population is so far down the economic scale, the South will not thrive.

Senator ELLENDER. Do you include in that the farmers?

Dr. FOREMAN. Yes. These are the Governor of Georgia's published figures.

Senator ELLENDER. I see. In that connection, would you want to give to the farmer the same advantages and the same returns per year as you propose to give to industrial labor?

Dr. FOREMAN. Senator, the Southern Conference for Human Welfare is composed of farmers, small businessmen, as well as workers of all sorts, and we are intensely interested in the agricultural problem, and I would like to submit for the record a recent paper which the Secretary of Agriculture——

Senator ELLENDER. You did not answer my question. Do you want to have the small farmer under this bill which you speak of as a 65-cent rate, which is really 75 cents, and that means $30 a week; do you want to allow that to the farmer also, the $30 a week?

Dr. FOREMAN. We want to see that all of the people of this country have the opportunity for a decent living, Senator. We want to see they have a chance to raise their children in health and with education, and that applies to farmers as well as workers and businessmen.

Senator ELLENDER. I have been fighting for that ever since I have been in politics and I have so far failed to do the job as I would like it to be done. Special legislation always affects adversely groups not included.

You still do not answer my question.

Dr. FOREMAN. I do not understand the discussion applies to a minimum wage for farmers.

Senator ELLENDER. But you want to take care of your entire membership, do you not?

Dr. FOREMAN. Yes; and we do that by providing a market in the South for farm goods which will enable the farmer to sell goods at a price which will give him a chance to raise his children in decency.

Senator ELLENDER. But you are not protecting the farmer as you are protecting the industrial laborer.

Dr. FOREMAN. I think this is a long pull toward protecting him, and I think the way to do it is by raising the general standard of living so that we give the farmer a better chance.

I think it has been shown that the farmer goes along with the industrial advance in other parts of the country.

Senator ELLENDER. We have been able to do that by giving the farmer a lot of money from the Federal Treasury. I think we allowed him in the neighborhood of two billion a year during the war.

Dr. FOREMAN. Even before that, I think the record will show the farmer advanced along with the industrial population.

Senator ELLENDER. No doubt; but the advance of the farmer is not in proportion to the advance of industrial labor.

Dr. FOREMAN. I am willing to testify to anything that will help the farmer, and if this is not enough, I will testify to that as well.

Senator TUNNELL. I see the newspapers state that the farmer's income for the present year will be $20,000,000,000 in the United States, which is more than half of the total income of the Nation in 1932.

Senator ELLENDER. That is true. We have been able to maintain that because of the fact that the farmer had a market to sell all that he produced, with the Federal Government purchasing 50 percent of his output.

Dr. FOREMAN. We will not have that opportunity if we have another depression. If we go into another tailspin industrially in the South and in the country as a whole, that opportunity will not be afforded and I think that is the basic issue involved here.

You have heard many ways in which the citizens of the South have suffered from the low-wage rate. You have heard that the draft rejection rate of the South was higher than that of any other part of the country because of the poor health of its citizens. You have heard that there are fewer hospital beds per citizen, fewer doctors per citizen, in the South than in the rest of the country. You know that the illiteracy rate in the South is higher than in the rest of the country—8.8 percent for the Southern States compared to 1.9 percent for the North Central States—because the South cannot afford to maintain adequate schools for all.

There have been many estimates of what income is needed for maintaining health and a decent standard of living for a family of four.

The Heller committee of the University of California estimates that in 1944, a family of four needed an income of $2,956 to maintain health and efficiency. Other estimates scale down from that. The lowest estimate I have seen was based upon the WPA relief program for 1935 and adjusted by the Labor Department to 1943 levels according to Bureau of Labor Statistics cost-of-living increases. The BLS figures have, as you know, been challenged as too low by many individuals and organizations including the CIO and the AFL. However, taking the WPA and Bureau of Labor Statistics figures, a family of four would have needed $1,641.23 a year to live in Atlanta, Ga.—my home town—in 1943 on the emergency level of relief budgets—and $1,590.17 a year to live in Birmingham, Ala., on the same level.

Let's see how the Labor Department breaks down this estimated budget. In Atlanta, the $1,641.23 breaks down to roughly 45 cents per person per day for food—$24.25 a month for housing for the family—about $4 a month per person for clothing, and so on.

In Birmingham the budget breaks down this way: About 45 cents a day for food for each person—$24.50 a month for housing—about $4.50 a month for clothing for each person, and so on.

Senator ELLENDER. Is that $20 per month per person?

Dr. FOREMAN. $24.50.

Senator ELLENDER. That is rather high, is it not, for four people. That would be $80 a month.

Dr. FOREMAN. I do not know anywhere that you can get a decent house——

Senator ELLENDER. For $80.

Dr. FOREMAN. No; $20.

Senator ELLENDER. Per person?

Dr. FOREMAN. No; that is for the four.

Senator ELLENDER. I am sorry.

Dr. FOREMAN. Obviously, this budget would not provide a decent standard of living in 1943, let alone 1945. Where can you find adequate housing in Atlanta for $24.25 a month? How can you buy nourishing food on 45 cents a day?

Yet, the proposed 65-cent minimum wage would not even maintain a family of four at this level if only one member of the family worked. For 65 cents an hour, 40 hours a week, 52 weeks a year, amounts to $1,352. Therefore, far from dumping millions of southerners in the lap of luxury, the 65-cent minimum wage would be but a step toward a decent standard of living for all Americans.

But let's get on to some other questions.

Some opponents of the 65-cent minimum wage have said that it would ruin southern industries—that southern industries could not operate at a profit under the 65-cent minimum wage unless price ceilings were lifted.

Well, let's take a look at three predominately southern industries—textile, tobacco, and lumber—and see how they would fare at present price levels under the 65-cent minimum wage.

In April 1945, according to the Bureau of Labor Statistics, 607,000 workers in the textile industry—about 58 percent of all workers in that industry—received less than 65 cents an hour.

It would cost the whole textile industry $33,000,000 to pay all its employees a 65-cent minimum wage for a peacetime 40-hour workweek. Can the industry afford this? In 1944, the industry's profits before taxes were $871,000,000. Subtract $33,000,000 and the industry would still have $838,000,000 in profits before taxes.

In the cotton-textile industry alone, profits before taxes jumped 800 percent during the war years—from $38,000,000 in 1939 to $340,000,000 in 1944.

Now, take the lumber and timber industry. Some 254,000 workers—about 58 percent of the industry's workers—get less than 65 cents an hour, according to BLS figures for April 1945. Raising those 254,000 to a 65-cent minimum would cost the industry $67,000,000. However, the workers themselves would lose some $49,000,000 in premium overtime pay under peacetime conditions. So the lumber and timber industry would have to pay about $18,000,000 in additional wages—which would have cut 1944 profits before taxes from $156,000,000 to $138,000,000.

How about the tobacco industry? Here we have 49,000 workers—or about 60 percent of the industry total—receiving less than 65 cents an hour. The cost to the industry—under a 40-hour peacetime workweek—would be $7,000,000. In 1944, that would have meant $147,000,000 in profits before taxes instead of $154,000,000.

Therefore, the bulk of southern industry can afford to absorb wage increases without additional price increases. But what will southern industry gain by increasing the wage rate of all its workers?

First of all, it will build purchasing power for its products. Southerners, with their low per capita income constitute the largest undeveloped market in the United States. Second, the 65-cent minimum wage will develop mechanization in the South. Studies have shown that northern and southern workers with the same working conditions have roughly the same efficiency and productivity. Therefore, there is no justification for lower wages in the South on the basis of lower efficiency among southern workers.

If southern industries iron out this North-South differential, they can absorb much of the added labor costs by mechanization. And by mechanization I mean improved management methods, installation of labor-saving machinery, increased sales effort, and so forth.

Southern industry will find another advantage in a 65-cent minimum wage. It will find that skilled and efficient workers of the South no longer need to migrate to the North for higher wages. Low wages and poor working conditions have robbed the South of many of its ablest people. About one child out of every eight born and educated in Alabama or Mississippi contributes his life's productivity to some other State. And nearly half of the eminent scientists born in the South are now living elsewhere.

Senator ELLENDER. You know why that is.

Dr. FOREMAN. It is because they have to go to the North to make more.

Senator ELLENDER. No; the fact is the South produces more children. Do you know that the evidence shows in all cities in this country of over 100,000 persons, with the exception of Salt Lake City, the death rate is much greater than the birth rate?

Dr. FOREMAN. But are you saying we do not need those scientists in the South?

Senator ELLENDER. No.

Dr. FOREMAN. Can we afford to export half of our able, trained scientists?

Senator ELLENDER. I did not want to interrupt you about the schooling a minute ago. I would like to see everybody raised. You know yourself that the schoolteacher of Mississippi is poorly paid——

Dr. FOREMAN. Why? Because, we do not have enough income in the State to pay them decently, and the only way we can get it is to get the people to pay taxes so that teachers can get a decent salary.

Senator ELLENDER. Mississippi is primarily an agricultural State, and if she were to take every cent of taxes now collected, and pay it to her schoolteachers they would each receive less per year than New York is paying to its teachers.

Dr. FOREMAN. Of course, that is because Mississippi has the lowest income of any State in the South.

Senator ELLENDER. But the question is, How will you raise those teachers to the standard you are attempting to raise the industrial worker?

Dr. FOREMAN. It seems to me it is an absolutely logical step, because if you give the workers and farmers adequate pay, they can pay taxes and thereby increase the salaries of the teachers.

Senator ELLENDER. But you are not doing that under this bill. You are helping industrial workers and at the same time making it more difficult for the Mississippi farmer to survive.

Dr. FOREMAN. I am hoping a bill will be passed that will do it, and I think we should have a 65-cent minimum as a step in that direction.

Senator ELLENDER. You mean 75 cents. Don't call it 65, because it is 75 at the end of 2 years.

Dr. FOREMAN. Except for the effect on my figures here, I will be perfectly willing to change it to 75.

Senator ELLENDER. You are wrong in your figures; that is what it is.

Dr. FOREMAN. Another question which has been raised is—What will happen to the southern farmer if wages increase for industrial workers?

We know that the South has one-half of the Nation's farmers, one-third of its land, but only one-fourth of its farm income.

We know that the average income of the southern farm family in 1940 was only $380. The overwhelming majority of southern farmers barely eke out an existence.

Yet, during the war years, the farmers of the South made great progress. Where cotton and tobacco once dominated the land, peanuts, soybeans, sweetpotatoes, vegetables, fruit, and livestock are beginning to flourish. The volume of food production in 1942 was 17 percent higher than in 1935–39. This progress must continue from a one-crop economy to a diversified economy which will reclaim eroded land and raise the living standard of the farmer.

Senator ELLENDER. Do you know how the peanut industry subsisted so well, and made a profit? It was through a Government guarantee to the tune of $110 a ton, or some such figure. Do you think that will continue?

Dr. FOREMAN. What we are saying is that if the people can afford to pay real prices, the farmer will produce, and then the farmer can make a decent living and the farm children can get an education and live under healthy conditions.

Senator ELLENDER. You are talking of the standard of living, and my contention is and has been, that as you increase the prices of farm products which you speak of, it also increases the cost of living, so that those you are trying to help will find themselves in two or three years in the same position as they are now, respecting their standard of living.

As I have said here on two or three occasions, if you can buy today for $5 what would have cost you $8 six months ago, your standard of living is certainly not affected.

Dr. FOREMAN. If you accept that premise; but I have shown you that in the three principal industries, the 65-cent minimum could be put in without materially reducing the profits of the industry.

Senator ELLENDER. We have had it in the record a little differently from that.

Dr. FOREMAN. They are Government figures.

Higher wages for workers will be a stimulus to the progress of southern farmers, rather than a handicap. For higher wages mean higher purchasing power for southern products, both industrial and agricultural. It has been proved again and again that farm income rises along with city income, but that when city income drops, farm income drops faster. And city income will drop with the end of wartime overtime and bonuses, unless measures are taken such as the 65-cent minimum wage. All farmers will suffer with the end of wartime overtime and bonuses—but especially the millions of southern farmers who live on the edge of destitution.

As Secretary of Agriculture Anderson said in his statement before this committee:

> Farmers are interested in all types of legislation which may lead to increased purchasing power among their customers. This proposed amendment will no doubt have an influence in expanding the demand for food and fiber.

For families with incomes below $500 ordinarily consume in a year only a little more than a thousand pounds of food per person. While families with incomes between $1,500 and $2,000 consume about 1,500 pounds of food. And families with incomes of $5,000 and over consume well over a ton of food a year. Furthermore, the higher the income, the more expensive the type of food consumed. Low-income families depend upon such foods as beans, potatoes, and bread—while the high-income families eat much more fruit, meat, dairy products, and vegetables.

In summary, let me say that I believe the South cannot afford to oppose the 65-cent minimum wage. The South should welcome a 65-cent minimum wage as a means of increasing its per capita income.

The South has been richly endowed with physical resources. Yet these resources have never been exploited in such a way as to provide a high standard of living for its people. At present, the per capita income in the South is insufficient to maintain adequate schools and other public services. A higher per capita income would mean better education, better health, better housing. It would mean greater purchasing power for the products of southern farms and factories.

A 65-cent minimum wage would be one of the stepping stones to a new, advancing, postwar South.

Senator TUNNELL. Do you have some other questions, Senator?

Senator ELLENDER. No.

Senator TUNNELL. Your theory is, the more wages one obtains the more he spends and the more he eats and wears?

Dr. FOREMAN. Not only more, but better.

Senator TUNNELL. You said some families consume only a thousand pounds of food per person while those with better incomes consume 1,500 pounds of food?

Dr. FOREMAN. Yes.

Senator TUNNELL. Now, let us take it the other way.

Suppose the theory of low income is the correct one, then why should we not by some sort of statute, or maybe by agreement or collective bargaining reduce the wage to 50 cents a day; if that is the correct theory, why should we not do that?

Dr. FOREMAN. In other words, we have been making a mistake in the last 100 years in trying to raise people's incomes?

Senator TUNNELL. Is not that the opposite theory from this one of yours?

Dr. FOREMAN. It seems to me that is so.

Let us take another example.

Why not make all of the States like Mississippi, instead of making Mississippi like the rest of the States——

Senator ELLENDER. Not all States are agricultural like Mississippi.

Dr. FOREMAN. They do not need to be agricultural. They are introducing industries in Mississippi.

Senator ELLENDER. If you make them all industrial, I wonder where we will get our food supply.

Dr. FOREMAN. We want a balanced economy.

78595—45——39

Senator ELLENDER. You are putting them all in the same boat.

Dr. FOREMAN. We want a balanced economy, whereby the workers make a decent living and the farmers are able to sell their products for a decent price.

Senator TUNNELL. Thank you, Doctor.

I see Dr. Graham here, and I do not have his name on the list. Were you intending to testify this morning?

Dr. GRAHAM. Yes, sir.

Senator TUNNELL. Is Mr. Kaplan here?

Mr. KAPLAN. Yes, sir; but I would be very happy to have Dr. Graham go on ahead of me.

Senator TUNNELL. I appreciate that. I think Dr. Graham should have a chance to testify, if he will.

TESTIMONY OF DR. FRANK GRAHAM, STATE COMMITTEE, SOUTHERN CONFERENCE FOR HUMAN WELFARE

Dr. GRAHAM. My name is Frank Graham. I am a member of the State committee of the Southern Conference for Human Welfare.

Senator TUNNELL. You have some connection with the University of North Carolina; do you not, Doctor?

Dr. GRAHAM. Yes, sir; but I am not appearing in that capacity.

Senator TUNNELL. You are president?

Dr. GRAHAM. Yes, sir. I am president of the University of North Carolina.

Senator TUNNELL. We will be glad to hear from you.

Dr. GRAHAM. Mr. Chairman, and members of the committee, I would like to speak here as a southerner who is proud of the part the South played in the making of this Nation, and I would like to see the South come back into that position of leadership, creative genius, and contribution to this Republic.

We all recall that the men who stirred up the Revolution and who led the Revolution, Washington, Jefferson, and Patrick Henry, were southerners, and that the chief framer of the Constitution was a southerner, and also that the man who made the basic interpretations of that Constitution as they stand up to this hour was a southerner; that the man who promulgated the doctrine of the two hemispheres was a southerner; that the three greatest figures of democracy in America, Jefferson, Andrew Jackson, and Abraham Lincoln, were southerners; that the man who became in a sense the Moses of modern history, Booker T. Washington, was a southerner; and that the major prophet of the destiny of democracy, Woodrow Wilson, was born in the South.

So, as a southerner, I am standing on a great tradition, and have great pride in that tradition.

Yet, it has come about in the course of the decades that the South became, as President Roosevelt said, our economic problem No. 1.

I am not one who thinks he said that in depreciation of the South. I think President Roosevelt said that out of his great heart, in appreciation of the great struggle the southern people were making and are still making to have a larger part in the house their fathers built.

Now, why did President Roosevelt say the South was economic problem No. 1?

Well, we have, perhaps, the finest soils, but we have the most wasted soils, and not only the most wasted soils, but in one sense, the most wasted people.

We have the lowest wage, the lowest purchasing power, the highest illiteracy rate, the highest interest rate, the lowest per capita circulation of books, the lowest number of children in proportion to population in high schools and college.

Senator TUNNELL. One of your witnesses said you had the highest rate of rejections for armed service.

Dr. GRAHAM. This is true of a number of Southern States. I might add, Mr. Chairman, that also from the South came the largest number of volunteers. So, I would connect this rejection rate with that fact, because if vital young men rush to the war, that is going to have some bearing on the proportion of the unfit.

Senator TUNNELL. I do not know whether they were taken from the total including volunteers, or compared only with those who were inducted.

Dr. GRAHAM. You see, Mr. Chairman, so many young southerners rushed off to the war—and I do not say that in any sense of false pride, because I think all of our States did their part magnificently in contribution to the war, and that the workers in all American States combined with our brave allies to win this war.

Well, these facts constitute an economic problem. I am not going to hark back to the Civil War as any alibi, although I think it has its bearing. But also the southern people have worked under great handicaps.

There has been discrimination against the South. Certainly the high tariffs have worked against an agricultural people, and we are still considerably an agricultural people.

Also the freight-rate discriminations have worked against the southern farmer, manufacturer, and merchant, as Senator Ellender has pointed out; and the southern people carry a tremendous educational overload, which, though, can make the South not economic problem No. 1, Mr. Chairman, but the chief hope of this Nation.

I will not go into the matter of Federal aid to the States for schools, but there is a great amount of logic on which the South can stand, not to ask for charity, but only justice.

A child, trained in a school, is trained not only to be a citizen of the State, but of the United States, and even if Senator Lister Hill's bill which you are supporting were to go through the support would still be about 87½ percent by the States.

So, discriminatory freight rates, high tariff rates, educational overload, have all worked to make the South an economic problem for the Nation, and not only so, but the low wages which form the basis of the fact that we have the least purchasing power in the South, have contributed to the fact that we do not have our rightful place in this Nation of States.

Now, I am speaking here, Mr. Chairman, for the principle of higher wages, and for the principle of a minimum wage, a higher minimum wage, just as high as our economy can stand.

Now——

Senator ELLENDER. Could you expand on that, doctor?

Dr. GRAHAM. Yes, sir.

I would say that a minimum wage that would afford a decent level of living, that will give the individual worker more food and more

clothing and therefore a stronger body, and therefore a more alert mind, increases efficiency in production.

It increases efficiency in production, and if you study industrial history, in all the nations as they became industrialized, you will find that with an increase in the minimum of the wage, there is an increase in production.

There are also contributions to efficiency by recognizing skill, and having peg points for increased skill and efficiency. Also, increasing the minimum wage, increases the total wage, and increases the markets for merchants, for manufacturers and for farmers, and this increase in the market therefore increases production which is one of the maximum goals of this age in which we are living, and that increase in production therefore increases the turn-over, and the increase in the turn-over has a tendency, in the long run to decrease costs; and also increase in wages increases the demand for advanced technology which, in turn, reduces hours and releases workers for other industries to make machines made possible by the new technology.

So in the long run, in general, on the basis of industrial history, we find that an increase in wages, an increase in minimum wage, is sound economically, and not only so, but it will have great meaning to the South.

The southern people constitute 32 percent of our American people, and they receive only 8 percent of the national income. That is not as of this hour, but of an hour that I can substantiate.

Senator ELLENDER. That is because we are now and have been primarily agricultural?

Dr. GRAHAM. Well, I would say in part, yes; because for a considerable part of our history, at least since Appomattox, the economy has been lopsided and loaded against the farmer, and let me say, Senator, that in speaking for the industrial workers of America, I am also speaking for the agricultural workers of America.

The farmers of this country constitute 31 percent of our people, and they received as of a date that I can substantiate, only 9 percent of the national income.

Senator ELLENDER. What date is that? You said 8 percent a while ago. Is that prewar?

Dr. GRAHAM. Yes; prewar. I do not have the war figures.

I think in considering our economy, we should have peacetime figures as far as possible.

Senator ELLENDER. We have had some hearings in which I participated, where there was testimony which, in effect, showed that of the billions of dollars that were spent during this war to help the Government to arm itself, 84 out of every 100 dollars found its way into a small northeastern area of our country.

Dr. GRAHAM. Mr. Chairman, I appeared before the Quartermaster General of the Army to protest against any policy that would have any such result, and I did that not only as a southerner, but as an American.

Senator ELLENDER. Your plea fell on deaf ears, though, did it not?

Dr. GRAHAM. Well, it did not get very far.

Senator ELLENDER. I know it did not, because of my own experience.

Dr. GRAHAM. I say we are one whole people. We are 48 States with responsibilities of States, but after all, we are not only a union of States, but a Nation, and everything that will build up the South will build up America.

Senator TUNNELL. In the WPA, the Southern States got $19 compared with $54 in the Northwest.

Dr. GRAHAM. The reason for that is because we had a low-wage rate, and that somewhat condemned us there. We want to get that wage rate raised.

Senator SMITH. Dr. Graham, could I interrupt?

Dr. GRAHAM. Yes, sir.

Senator SMITH. I want to say I heard you testify before the committee considering the educational bill, and I was very much impressed with your whole philosophy, but I want to ask you to what extent, in your judgment, the price element enters in here. If we raise wages, we have had a lot of testimony that in marginal industries prices would have to be raised.

We are still operating under OPA, and there seems to be a feeling that controls must be maintained, but there you get the marginal industries in the big squeeze, pushing up wages and pushing prices down, and I fear we may have unemployment by that route, and then, the demand for Government projects, while we want to get private industry back into full operation.

Dr. GRAHAM. Senator, I get your point and I would say in reply, and not so much by way of rejoinder but by statement, that the biggest thing on the home front now is working out, by the most competent person to do it, a wage basic dollar to fill into this void we have now.

VE-day and VJ-day came so quickly, but even without knowing it was to be that sudden, the War Labor Board recommended in one of the papers that went to the Administration that there be called a conference of the most interested and competent people against the day of the end of the war, so that when the War Labor Board's powers ended—because, after all, it is a war board with the sanctions of the war; and when those sanctions ended for corporations, unions, and the public, we were trusting that new sanctions would be developed on the basis of a tripartite conference of labor, management, and the public, with the backing of the President, if necessary, and with the backing of Congress to fill in that void.

Senator SMITH. I believe in that 100 percent, but how far should Congress go in wage fixing any higher than a minimum wage for a proper subsistence level; beyond that, will it not be a matter of collective bargaining and negotiation?

Dr. GRAHAM. I go along with you there, but the question arises, What is the subsistence point?

The proponents of this bill say it is 75 cents. It may be more than that, but I am not judging that here.

Senator SMITH. I would like to see it higher than that but I do not think we can legislate it higher than that; that is the difficulty.

Dr. GRAHAM. I do not think you will get a Nation-wide minimum wage with the competition by the 15 percent that does not like to play according to the rules that are worked out by trade associations; and Congress has to protect the 85 percent enlightened businessmen against the 15 percent who will cut throats.

So, in order to prevent the cutthroat competition, you have to put under them a floor or a minimum wage for all workers in America.

Senator SMITH. Even though many of our workers are incorporated into unions and can bargain for their position?

Dr. GRAHAM. The unorganized worker should have his day in court, and this bill is to give the unprotected, unorganized worker a floor under which you do not go in cutthroat competition.

Senator SMITH. That is where I agree with you 100 percent. It is the unorganized fellow, the sweatshop person who needs the protection, and we are trying to discover what that ought to be. I am not sure the organized workers that are able to bargain collectively, will will be helped by our legislating wages to any great extent.

Dr. GRAHAM. They would be helped by a minimum wage because that would be for organized workers also; it would be for all workers, whether organized or unorganized.

Senator TUNNELL. What percentage of the workers of America are organized, Doctor?

Dr. GRAHAM. Right now?

Senator TUNNELL. Yes.

Dr. GRAHAM. I would not say with responsibility, but I would say it is over 10,000,000, way over 10,000,000.

Senator TUNNELL. Out of fifty-some million?

Dr. GRAHAM. I think Broadus Mitchell could tell you that exactly. He is a professor of economics, while I am just a layman.

What is the figure, Broadus?

Mr. MITCHELL. We say about 14,000,000.

Dr. GRAHAM. I knew it was over 10,000,000.

Senator SMITH. Out of how many potentials?

Mr. MITCHELL. During the war we have had an enlarged labor force, and it is difficult to say what the potential is, but call it 56,000,000.

Senator SMITH. That includes professional people, farmers, and everyone else.

I am talking about workers in industry where unions are primarily interested. Take the CIO and A. F. of L. who are interested in workers in industry; I thought that figure was around 25,000,000.

Mr. MITCHELL. I cannot give you that, but I think Dr. Kaplan can throw some light on that.

Dr. GRAHAM. I would say less than half of the industrial workers are organized.

Senator SMITH. I think that is about right, Doctor.

My figures were somewhere around 12,000,000 to 14,000,000 in unions out of possibly a 25,000,000 potential.

Senator TUNNELL. Almost one-fourth of the total employed?

Mr. MITCHELL. It may be Dr. Kaplan has some more detailed information.

Senator TUNNELL. Then we will ask him.

First, will you give us your name?

Mr. KAPLAN. David Kaplan, chief economist for the International Brotherhood of Teamsters.

I am now reading from the Monthly Labor Review of December 1944, which shows that the number employed in nonagricultural establishments for the month of October 1944 was 38,481,000; in nonmanufacturing establishments it was 15,724,000.

Senator SMITH. The 38,000,000 is the over-all, outside of the agricultural?

Mr. KAPLAN. Yes, sir.

Senator SMITH. That would include professional men?

Mr. KAPLAN. And clerical white-collar workers.

Senator SMITH. They are not all members of unions are they?

Mr. KAPLAN. These are employees in nonagricultural establishments. They are not privately employed people.

Dr. GRAHAM. Mr. Chairman, I would like to mention at this point for the committee's consideration, the value, at this critical hour in our history, and the necessity of having social mechanisms that keep up with scientific mechanisms. I think all of the American people now are very much troubled about the implications of the atomic bomb, and I am going to suggest a background here for consideration of the influence of scientific mechanisms on the economic and social structure and on history itself, and in doing this, I wish you would keep in mind that when a new scientific mechanism comes, it demands in social self-defense of the people corresponding social mechanisms for the human control of the scientific mechanism.

These little mechanisms, some of them very tiny things, when they come into history have economic, social, intellectual, and even spiritual repercussions that reach around the earth and down into the centuries. and I would suggest for your consideration three great transitions in history.

I am not an economic interpreter of history, but I recognize the economic factor in history, but just as one of the factors. These factors are economic, political, social, psychological, cultural, and spiritual. Perhaps the last is the most powerful of all if we get its basic implications.

Europe had been in what was called the Middle Ages for centuries when there came along a little mechanism.

Before one of these mechanisms comes into history, there is an intellectual revolution which precedes it. The Middle Ages made a great contribution to mankind. It gave parliament, the noble cathedrals, the universities.

Higher learning had been promoted theretofore, but no universities had been established.

The Middle Ages produced universities.

In the great medieval period there were forces and ferments which were going to disintegrate the medieval world and reintegrate the modern world, modernism and commercialism, but we were missing part of that transition in that we overlooked a little mechanism.

Preceding that mechanism came an intellectual revolution—not preceding it, but preceding its perfection was the period called the renaissance, or revival of learning. With the revival of learning came the idea the world was round and not flat.

The medieval man thought there were limits to the earth on which they lived; that there were boiling seas and monsters at the end where you would drop over.

This old Greek idea which came out of Alexandria and Athens was revived after it had been lost for a thousand years or more. That idea was basic, but also the mechanism was basic, and that was the compass, evolved out of the minds, hands, and necessities of many people, the Chinese, northern European, Alexandria, Mediterranean, and then, with the perfections of the Italians and Portuguese, the little compass arrived at a point of comparative perfection about the time of the revival of the idea of the roundness of the earth.

There came through that little mechanism—first you have an intellectual revolution, a great economic revolution called the commercial revolution; ships which had been held within interior seas or close to continental shore lines were released from these interior sets to sail over the outer oceans to discover a new world and new ways to an old world, changing the direction of commerce and the course of business.

That little mechanism, and the propulsion given the commercial revolution by the compass resulted in the rise of a new class in history called the middle class, and this middle class which came from the commercial revolution and from the little compass and scientific ideas back of that little compass, this middle class was a decisive factor in the Renaissance, the commercial revolution itself, the rise of the national state, the scientific and philosophic revolutions, the French Revolution, and those struggles for civil and political liberties which come in an industrial revolution.

So this little magnetic needle became the pivot on which the medieval turned into the modern world.

Senator TUNNELL. When did the telescope come in?

Dr. GRAHAM. That was in the seventeenth century.

Now, sir, your question illustrates the point. It is part of another intellectual revolution. The scientific revolution of the seventeenth century was given impetus by the commercial revolution of the fifteenth and sixteenth centuries. The telescope and microscope gave a new technique to scientific observation, and that changed the fundamental law itself, was in itself an intellectual revolution, and that intellectual revolution, with its idea of latent heat, and its idea of the expansive power of steam which was in the book of a professor named Black in the University of Glasgow. He had a mechanic working in his laboratory and that mechanic took the idea of the latent heat and expansive power of steam and applied it to an old steam engine which for 70 years had been very wasteful in pumping coal in South Wales, and he made it an economic instrument.

Instead of producing power on atmospheric pressure through condensation of steam, he injected a separate condenser and used the direct power of the steam against a piston whose motion was made rotary. His invention of the steam pump revolutionized the modern world.

That brings us to the industrial revolution which was preceded by a new scientific revolution with the invention of a mechanism. This industrial revolution multiplied production beyond anybody's dreams, and also multiplied the population on this earth and was the dynamic impulse to the great labor movement which, in my opinion, is the fourth chapter of the state of democracy in the modern world.

It produced the women's movement, because the women followed the machine, out of the home and into the factories.

The great public education movement for the education of all people regardless of race, color, creed, or economic position also came from it.

All of those things came out of the commercial revolution, and I am suggesting, Mr. Chairman, that this little steam pump which came out of an idea which was the result of a need to meet the new demand of the commercial revolution, and which now included the new world, and making necessary larger production and longer transportation and quicker communication, and which made man in response to necessity use his mind, and these new devices of scientific precision were used to make power engines, steam engines, electric dynamos and turbo-generators and, in our time, gas and oil engines.

That is what that little mechanism did to the world.

But I want to suggest, Mr. Chairman, that with the revolutions, economic, and social, which came with those mechanisms, human society had time to make adjustments. We were quicker on the scientific mechanisms, and slow on social and spiritual development.

You will see what I am coming to.

Here we have an atomic engine on the way, and I wonder how much time we will have to make the necessary adjustments to the social mechanism.

If the industrial revolution demanded such social mechanisms as minimum wage, full production, fair employment practices, abolition of poll tax, Federal aid to states for schools, Federal aid to build hospitals—and one of the tragic needs in America today is hospital beds for low-income people—that would be a social mechanism.

I say, if the industrial revolution made imperative these social adjustments through these social mechanisms what does the atomic revolution demand that we do without waiting around for five or six decades, or even two or three hundred years in slow adjustment to these powerful dynamic revolutions.

This mechanical framework flung around the earth by an industrial revolution picks out a war or a depression or any thing that involves human beings.

Now, it can also pick up an atomic bomb, and that atomic bomb becomes enmeshed in this great mechanical framework, and with it you can destroy 40,000,000 people in one night according to an authority I read in the paper this morning.

Now, we are really in this position: Either we must learn to control our great scientific mechanisms through social mechanisms, and spiritual motives, or this great industrial technological power will destroy mankind in its own unregulated self-destruction.

Senator TUNNELL. Doctor, I could listen to you by the hour, but we really have to hear another witness by 12 o'clock.

Dr. GRAHAM. All right, sir.

I just want to suggest in closing that we see this simple demand here for a minimum wage, whatever the just figure should be, as a social mechanism——

Senator ELLENDER. Whatever what?

Dr. GRAHAM. Whatever the just figure should be, as a social mechanism to meet the demands of scientific mechanisms, America, the home of the atomic bomb, has a great moral responsibility, for that bomb that fell on Hiroshima with the full physical power of the universe is our moral responsibility.

I was going to suggest here another scientific revolution of the last 50 years which preceded this coming atomic revolution, where they reexamined the whole theory of the atom as a bundle of energy which you can protect, keep, and capture, and when you do, you capture nothing less than the power of the universe; and we must develop social mechanisms and supplemental developments in order to save mankind so we are not turned back to an animal species that has not learned not to make mechanisms that it cannot control.

Senator TUNNELL. Thank you. A statement for the record has been submitted by Albert J. Fitzgerald, president of the United Electrical, Radio, and Machine Workers. It will be inserted.

(The statement appears in the appendix.)

TESTIMONY OF DAVID KAPLAN, CHIEF ECONOMIST, INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, AND WAREHOUSEMEN OF AMERICA

Senator TUNNELL. All right, Mr. Kaplan, just tell us your full name and position.

Mr. KAPLAN. David Kaplan. I am the chief economist of the International Brotherhood of Teamsters, Chauffeurs, and Warehousemen of America.

Senator TUNNELL. Now, proceed in your own way, just so it does not take us too far into the senatorial hours.

Mr. KAPLAN. I am going to be quite brief, Senator. I want to place the hearty endorsement of the International Brotherhood of Teamsters, an organization which includes more than 600,000 American workers, behind this measure to increase the minimum wage to 65 cents, and then after 2 years to 75 cents an hour.

I do not want to repeat to you gentlemen the evidence you have already heard with respect to the inadequacy of even these rates per hour to provide a decent American health and decency standard. I do, however, want to point this out, that in 1938, the Congress provided a rate of 40 cents per hour to be reached in 1945; that history has played a cruel hoax on the most unfortunate and the most defenseless of our wage-earner group by so increasing living costs that the 40-cent rate that they ultimately achieved barely brought them back to the rate which was the original point of the minimum wage rate—about 25 cents.

Living costs on the average for families who have about $1,600 to spend went up on the basis of conservative Government-industry estimates about 30 percent.

For these lower-paid income families who have to spend a much larger proportion of their incomes for food and clothing, the elements in the cost of living index which went up the highest, the percentage increase would be substantially above the 30 percent estimated by Government authorities.

So in part, what you will be doing by raising the minimum to 65 cents, and then permitting it to be increased to 75 cents in 2 years, is to restore to these workers what Congress had already vouchsafed to them back in 1938, to restore to these workers some of the security and protection that Congress had given to them back in 1938.

Senator ELLENDER. At that point, we have testimony that shows that the rate of 55 cents fixed last February about equals the 40-cent rate that was obtained during or just before the war.

Mr. KAPLAN. Yes. I said you would restore it in part to them, and I think the 55 cents is about what it would take.

Senator ELLENDER. But you said 65 to 75.

Mr. KAPLAN. I said what you would be doing would be to restore what they already had, and by raising it to 65 would increase that rate, and that is what we want to accomplish.

Senator ELLENDER. Yes, I know.

Mr. KAPLAN. I am not going to take up a lot of your time. However, I would like to address a few brief remarks in answer to some of the arguments I have heard by opponents of the bill, one to the effect that there is a conflict here between the interests of farmers and the interests of these lower-paid wage earners, whose wage rates would be increased by this measure.

I think that that is a completely fallacious argument. There is no real conflict between the interests of urban wage earners and the interests of farmers as far as a minimum wage is concerned. The best potential market for the farmers, as has been pointed out by previous witnesses, are these lower standard wage earners, because it will be they who will buy more food.

A person who is better situated in life does not increase his demand for the big staples that our farmers produce when he earns more money, but the poor man who has a substandard existence now, of necessity increases his demands for the great staple products that our farmers produce.

Take, for example, the cotton farmer. Where could he find a better market than among the lower paid workers who use cotton garments?

If they had more to spend they would spend it on more and better cotton garments. That is what the farmer needs.

He needs good domestic markets, and that is what this bill would help to provide for the farmer.

Senator ELLENDER. Have you any idea of how much the farmer would have to sell his cotton at per pound in order to give him the same returns that you are trying to allow to the industrial worker?

Mr. KAPLAN. I don't know, Senator, what that is, but I would——

Senator ELLENDER. I know you do not.

Mr. KAPLAN. But I would venture to state this, that the farmer would get a much better price for his cotton, and would be able to sell more of it, if these people had a more adequate wage.

Senator ELLENDER. But the point is, though, your philosophy, as I understand it, is to help everybody.

Mr. KAPLAN. As far as basic minimums are concerned, it certainly is.

Senator ELLENDER. Yes. You would like to see the farmers and school teachers and others provided for at about the same rate we are trying to establish for the industrial laborer, here, would you not?

Mr. KAPLAN. I certainly would.

Senator ELLENDER. It is my view that if you were to afford that to the cotton farmer, it would probably be that he would have to sell his cotton at about $1.25 a pound.

Mr. KAPLAN. I could not answer you on that Senator. I do not know what the price of cotton is, and how much more a farmer would have to have to get that income.

Senator ELLENDER. That is the trouble with you economists. You figure the problem out as it would affect the particular group you represent, but you do not think it through as to what effect wage increases would have on other groups who are not included in the legislation.

Mr. KAPLAN. If you would like me to make some calculations and make up some figures, I will submit them for the record.

Senator ELLENDER. I would like you to give for the record the price farmers would have to sell five of our basic crops,—corn, wheat, cotton, tobacco, and rice—per bushel or per pound in order to give them the same yearly return you are now trying to allow to industrial workers.

Mr. KAPLAN. I say at no matter what price he would have to sell it, he is entitled to that, and the point I want to make is you cannot help the farmer by keeping low standard wages and you cannot help the farmer by depressing wages.

Wages have actually been depressed in this country as far as real wages are concerned for this particular group of wage earners. That does not help anybody, Senator, and it seems to me, least of all the farmer.

Senator SMITH. Mr. Kaplan, if you approve Senator Ellender's suggestion, that you would like to raise the standards of the farmer on cotton, hogs, wheat, and so forth, that would mean you would have to raise the prices of those products and increase the cost of living?

Mr. KAPLAN. I do not concede that.

Senator SMITH. That is what I want you to address yourself to—how you would maintain the prices and still raise the standards.

Mr. KAPLAN. That brings me to the second point. Some of the opponents of this bill claim that all this bill will be doing will be to increase the cost of living so that in the end the wage rate will really not benefit those it was intended to benefit but will just require them to pay more for the goods they buy and will leave him no better off than he is now.

Senator SMITH. What they call the inflationary spiral?

Mr. KAPLAN. Yes. There are quire a number of factors involved in costs.

For example, the amount of labor it takes to go into any certain product is one factor. Another factor involved in cost is the question of how much any concern can produce, and that brings us down to the matter of demand. A lot of manufacturers sometimes have their pricing policies geared on a production level which is very far from capacity production.

My firm conviction is that if we are able to get full employment and we are able to get capacity production, that raising the minimum to 65 or 75 cents will not increase costs.

Senator SMITH. Of course, that is the big debate. Every witness has a different view on that point.

Mr. KAPLAN. That is my conviction on that entire matter.

Senator SMITH. I am glad to get your judgment. Does that go Nation-wide in every industry?

Mr. KAPLAN. I would not say in every industry but the general level of the commodities that go into the cost of living. I will state that as my firm conviction.

Senator SMITH. You think the general wage raise which would come from raising the minimum can come before we steam up production?

Does it not have to come out of the very production before you can guarantee it?

Mr. KAPLAN. Before you can get the production you have to have a demand exerted for that production or it will not be produced.

Senator SMITH. That brings up the old philosophy—which came first, the hen or the egg? It is the same old story, and there is the same difference of opinion as to how we can bring that about. We all want to raise production and raise the return to the worker. We do not want high prices, because we want to spread everything among our people. There is no difference between us, but just a matter of method—which is the first step and which is the second.

Mr. KAPLAN. Yes; and I would rely on history to prove that the first step is getting adequate wages and sufficient purchasing power; guaranteeing sufficient purchasing power will guarantee production.

As far as the war is concerned, what happened? The Government went to these concerns and said, "We are going to pay you for so much production."

What did they do?

They accelerated the demand.

Senator SMITH. The Government was the market there.

Mr. KAPLAN. That is correct.

Senator SMITH. I am not questioning your testimony, and I am very much impressed with it, but we do have to consider very carefully whether we should raise the wage and hope production will follow.

Other witnesses say you have to get your production going; and as you reduce unit cost, you can raise wages.

To my mind, it is a matter in which order it will come.

Mr. KAPLAN. I think as far as these low-standard workers are concerned, the benefit of the doubt should be given to them.

Senator SMITH. And if industry cannot pay it—we do not want to throw them out of employment.

Mr. KAPLAN. That is what the opponents of the original act said in 1938.

Senator SMITH. Of course, the war permitted that.

Mr. KAPLAN. Even before the war, employment levels went up after this act was passed.

Senator ELLENDER. That was because of the great demand from England and Russia, as pointed out here in previous testimony.

Senator SMITH. I do not think it is fair to take war figures.

Mr. KAPLAN. Let us go back to 1933 to 1937. We did not have the war demand on at that time. The New Deal came in and raised wages, and we began to get an upward trend in our employment.

Senator SMITH. I am not sure I agree with you on that. I think we had a desperate employment situation until the war began.

Senator TUNNELL. We did in 1929.

Senator SMITH. Yes.

Mr. KAPLAN. We had a rise in the level of employment.

Senator TUNNELL. After the passage of this act, in the remainder of 1938, 1939, and '40, and nearly all of 1941, before we were in the war?

Mr. KAPLAN. That is correct.

Senator SMITH. We had the foreign demand.

Senator TUNNELL. We have the foreign demand now.

Senator SMITH. I am not negativing the suggestion.

Mr. KAPLAN. May I make the point that certainly we should not base wage rates on what any marginal firm could pay, because otherwise we would be on a dangerous level all of the time and we would really have to dub economics as the dismal science.

Senator TUNNELL. Thank you.

We will adjourn until tomorrow morning at 10 o'clock in the same place.

(Whereupon, at 12 m., the committee was adjourned until 10 a. m., tomorrow morning, Friday, October 19, 1945.)

AMENDMENT TO THE FAIR LABOR STANDARDS ACT

FRIDAY, OCTOBER 19, 1945

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE
ON EDUCATION AND LABOR,
Washington, D. C.

The subcommittee met, pursuant to adjournment, at 10 a. m., in room 424, Senate Office Building, Senator James M. Tunnell (chairman) presiding.

Present: Senators Tunnell, Ellender, and Smith.

Also present: Charles Kramer, consultant to the committee.

Senator TUNNELL. The hearing will come to order. Is Mr. Lane here?

Give your name and position to the reporter.

TESTIMONY OF HAROLD LANE, SECRETARY-TREASURER, FOOD, TOBACCO, AGRICULTURAL, AND ALLIED WORKERS UNION OF AMERICA (CIO)

Mr. LANE. My name is Harold J. Lane, international secretary-treasurer, Food, Tobacco, Agricultural, and Allied Workers Union of America (CIO).

Senator TUNNELL. Now, proceed in your own way, Mr. Lane.

Mr. LANE. Thank you, sir.

Mr. Chairman and members of the committee, the organization for which I am speaking represents directly some 80,000 workers under union contract in the food, tobacco, and fiber processing industries.

Our members come from canneries, fruit and vegetable packing houses, tobacco factories, cotton compresses and warehouses, cottonseed oil mills, and similar types of establishments. The workers employed in these industries total close to a million.

Hundreds of thousands of these workers are not earning enough money at the present time to provide them and their families with even a bare minimum standard of living. These have historically been low-wage industries. We find, moreover, that during the war hourly earnings of food and fiber processing workers have lagged behind those of higher-paid industries; that is, that gap between their hourly earnings and those of other industries has widened during the last 5 years.

More than 400,000 workers in these industries now are paid less than 65 cents an hour.

Senator TUNNELL. Let's get what you mean by that. You say you represent 80,000, and then you refer to 400,000.

Mr. LANE. We refer to a total figure of 1,000,000 employed in the industry.

Senator TUNNELL. You don't represent all of the million?

Mr. LANE. No, sir; not in our organization.

Large numbers are not paid time and one-half after 40 hours, as the result of exemptions in the present Fair Labor Standards Act. I have with me workers from several of our plants, who can give you first-hand information on wages and overtime in some of these industries.

Passage of the Pepper bill will, of course, directly benefit hundreds of thousands of food and fiber processing workers by guaranteeing them a bare $26 a week for a 40-hour week and by bringing them closer to the minimum American standard of time and one-half after 40 hours a week. That is good. But the interest of the entire Nation, also, is at stake.

Raising of minimum wages and removal of exemptions is urgent in order to help prevent collapse of buying power, unemployment, decreasing farm and factory production, and all the other evils of depression.

While discussing particular cases we must, at the same time, keep the major objective of full employment in mind. We must maintain full production and employment or else face national disaster.

I have here a brief which covers in detail economic conditions in the food, tobacco, and fiber processing industries, the present wage levels, the effect of the establishment of a 65-cent minimum on costs and profits, and the ability of these industries to pay higher minimum wages. These industries can easily pay the proposed increased costs out of profits.
